

### Special Issue on Nematode Symbiosis

#### CONTENTS

Preface. <i>Xenorhabdus-Steinernema</i> and <i>Photorhabdus-Heterorhabditis</i> , entomopathogenic bacterium nematode symbioses by N. Boemare, K.H. Neelson, and R.-U. Ehlers .....	1
Anatomical localization and ultrastructural traits of the bacterial symbionts of entomopathogenic nematodes by N. Boemare (Montpellier, France) .....	5
Review article. Symbiotic interactions in the entomopathogenic nematodes by T.L. Wilkinson and D.B. Hay (Heslington and Guildford, UK) .....	9
Review article. Symbiosis and pathogenicity of nematode-bacterium complexes by N. Boemare, A. Givaudan, M. Brehélin, and C. Laumond (Montpellier and Antibes, France) .....	21
Review article. Identifying culturable and uncultured prokaryotes by E. Stackebrandt (Braunschweig, Germany) .....	47
<i>Xenorhabdus</i> and <i>Photorhabdus</i> : Are they sister genera or are their members phylogenetically intertwined? by E. Stackebrandt, R.-U. Ehlers, and F.A. Rainey (Braunschweig and Klausdorf, Germany) .....	59
Review article. <i>Photorhabdus</i> and <i>Xenorhabdus</i> – Gene structure and expression, and genetic manipulation by B.C.A. Dowds (Maynooth, Ireland) .....	67
Review article. Different lifestyles of human pathogenic prokaryotes and their strategies for phase and antigenic variation by M. Fussenegger (Zurich, Switzerland) .....	85

Phase II variants of <i>Photorhabdus luminescens</i> are induced by growth in low-osmolarity medium by K.C. Krasomil-Osterfeld (Langhorne, PA) .....	155
Simple bacteriological tests for phenotypic characterization of <i>Xenorhabdus</i> and <i>Photorhabdus</i> phase variants by N. Boemare, J.-O. Thaler, and A. Lanois (Montpellier, France) .....	167
Characterization of outer membrane proteins of <i>Xenorhabdus nematophilus</i> by S.A. Forst and G. Leisman (Milwaukee, WI) .....	177
Control of bioluminescence in phase variants of <i>Photorhabdus luminescens</i> Hm and in Hyp, a hyperpigmented mutant obtained from a phase II variant by P.K. Hosseini and K.H. Neelson (Milwaukee, WI) .....	191
New antimicrobial barriers produced by <i>Xenorhabdus</i> spp. and <i>Photorhabdus</i> spp. to secure the monoxenic development of entomopathogenic nematodes by J.-O. Thaler, M.-H. Boyer-Giglio, and N. Boemare (Montpellier, France) .....	205
Forthcoming Events .....	217
Announcements .....	224
