CALENDAR**

IMPORTANT NOTICES

Students are advised that the matters dealt with in this Calendar are subject to continuing review and revision. This Calendar is printed some months before the year for which it is intended to provide guidance. Students are further advised that the content of this calendar is subject to change without notice, other than through the regular processes of Dalhousie University, and every student accepted for registration in the University shall be deemed to have agreed to any such deletion, revision or addition whether made before or after said acceptance. Additionally, students are advised that this calendar is not an all-inclusive set of rules and regulations but represents only a portion of the rules and regulations that will govern the student's relationship with the University. Other rules and regulations are contained in additional publications that are available to the student from the registrar's office, and/or the relevant faculty, department or school.

The University reserves the right to limit enrolment in any programme. Students should be aware that enrolment in many programmes is limited and that students who are admitted to programmes at Dalhousie are normally required to pay deposits on tuition fees to confirm their acceptance of offers of admission. These deposits may be either non-refundable or refundable in part, depending on the programme in question. While the University will make every reasonable effort to offer classes as required within programmes, prospective students should note that admission to a degree or other programme does not guarantee admission to any given class. Students should select optional classes early in order to ensure that classes are taken at the most appropriate time within their schedule. In some fields of study, admission to upper level classes may require more than minimal standing in prerequisite classes.

Dalhousie University does not accept any responsibility for loss or damage suffered or incurred by any student as a result of suspension or termination of services, courses or classes caused by reason of strikes, lockouts, riots, weather, damage to university property or for any other cause beyond the reasonable control of Dalhousie University.

Inquiries should be directed to:

A Statement of the Aims of Undergraduate Education at Dalhousie

Dalhousie University offers undergraduate education enriched by a longstanding institutional commitment to research and to graduate and professional education. The University tries to assist all its undergraduate students to become independent thinkers and articulate communicators, knowledgeable about their chosen disciplines or professions, conversant with a reasonable body of general knowledge, and committed to learning throughout their lives.

Dalhousie assists its students to learn how to think for themselves. Students in all disciplines and professions can expect to develop skills and attitudes crucial for logical and independent thought. The faculty strives to teach students how to think, rather than what to think, and to enable them to make fair-minded enquiries in their fields of study and into the broader ethical, cultural and social issues that shape our lives. An educated person thinks carefully, reconsiders received ideas, and leads an examined life. The development of these habits of mind is the primary goal of undergraduate study.

Dalhousie assists its students to learn to express themselves, orally and in writing with clarity, precision and style. It does so, not only because communication skills permit the efficient transfer of information, but also because they make possible dialogues which lead to new ideas and to deeper appreciation of existing knowledge. Because a communal effort to exchange ideas and information is at the heart of university life, students in all disciplines and professions need opportunities to develop their skills in writing and in speaking at all levels of the undergraduate curriculum.

Dalhousie assists its students to master a combination of specialized and general knowledge. The specialized knowledge acquired by undergraduates at Dalhousie varies from discipline to discipline and even from student to student. Such knowledge should include, not only data skills, but also an understanding of the theories, structures and processes central to the discipline or profession in question, and an awareness of their practical applications and ethical consequences. Undergraduate students at Dalhousie should become familiar with a significant body of general knowledge as well. All should become acquainted with concepts central to our own culture and those of others. All should acquire basic quantitative skills and some knowledge of the principles of science and technology. All should share a sense of history and an appreciation of achievements in literature, philosophy and the arts. Such general knowledge helps us not only to confront the practical demands of work and life, but also to comprehend more fully our experience of the human condition.

Dalhousie assists its students to develop the capacity for commitment to learning throughout their lives. Their educational experiences within and outside the classroom should be rich and diverse. By providing social, cultural, recreational and other opportunities for student involvement and leadership, Dalhousie acknowledges responsibility for promoting both personal and intellectual growth.

Schedule of Academic Dates

1995-96

Classes offered at Dalhousie have one of the letters "A", "B" or "R" following the number. "A" classes are given in the first term of any session, "B" classes are given in the second term of any session, and "R" classes are given throughout the entire session.

1995

May

- 1 Classes begin, Commerce Co-op Summer session
Level I fieldwork (second year, 4 weeks) and Level II fieldwork (third year, 8 weeks) begins, School of Occupational Therapy
Clinical Practice, 2nd year, begins, School of Physiotherapy
- 3 Last day to register without late fee, Spring & Co-op Summer sessions
- 8 Classes begin, Spring session
Outpost Nursing internship begins
- 12 Last day to cancel registration in or to add "A" and "R" classes, Spring session
Last day to register with late fee, Spring session
- 15 Last day to cancel registration in or to add "R" classes Commerce Co-op Summer session
Last day to register with late fee, Commerce Co-op Summer session
- 17 Last day to withdraw without academic penalty from "A" classes, Spring session
- 22 Victoria Day - University closed
- 23-26 Spring Convocations
- 24 Last day to withdraw from "A" classes, Spring session
- 31 "A" classes end, Spring session

June

- 1 "B" classes begin, Spring session
- 2 Last day to withdraw without academic penalty from "R" classes, Spring session
- 7 Last day to cancel registration in or to add "B" classes, Spring session
- 12 Last day to withdraw from "B" classes without academic penalty, Spring session
- 13 Last day to withdraw from "R" classes, Spring session
- 15 Clinical Practice, 3rd year - 2nd session, begins, School of Physiotherapy
- 16 Last day to withdraw from "B" classes, Spring session
- 19 Last day to withdraw from "R" classes without academic penalty, Commerce Co-op Summer session

- 23 Classes end, Spring session
- 28 Last day to register without late fee, Summer session

July

- 3 Canada Day - University closed
- 4 Classes begin, Summer session
Last day to apply to graduate in October
Fieldwork Level III (8 weeks) begins, School of Occupational Therapy
- 7 Last day to cancel registration in or to add "A" and "R" classes, Summer session
Last day to register with late fee, Summer session
- 12 Last day to withdraw without academic penalty from "A" classes, Summer session
- 14 Last day to withdraw from "R" classes, Commerce Co-op Summer session
- 17 Clinical Practice, 3rd year - 3rd session, begins, School of Physiotherapy
- 19 Last day to withdraw from "A" classes, Summer session
- 25 "A" classes end, Summer session
- 26 "B" classes begin, Summer session
- 28 Last day to withdraw without academic penalty from "R" classes, Summer session
Classes end, Commerce Co-op Summer session
- 31 Examinations begin, Commerce Co-op Summer session

August

- 2 Last day to cancel registration in or to add "B" classes, Summer session
- 4 Examinations end, Commerce Co-op Summer session
- 7 Halifax/Dartmouth Natal Day - University closed
- 8 Last day to withdraw from "B" classes without academic penalty, Summer session
Last day to withdraw from "R" classes, Summer session
- 11 Last day to withdraw from "B" classes, Summer session
- 14 Classes begin, Outpost Nursing
- 18 Classes end, Summer session

September

- 4 Labour Day - University closed
- 5 Classes begin, Outpost Nursing and Dental Hygiene
- 8 Last day to register without late fee, Regular session
First instalment of fees due
- 11 Classes begin unless otherwise specified, Regular session
Last day for refund on first instalment of fees - limited enrolment programmes
- 25 Last day to cancel registration in or to add "A" and "R" classes, Regular session
Last day to register with late fee
Last day to apply for Honours Programmes

2 Schedule of Academic Dates

Last day to change from Dalhousie to King's and vice versa

October

- 9 Thanksgiving Day - University closed
- 21 Fall Convocation
- 23 Last day to withdraw from "A" classes without academic penalty
- Last day to change "A" classes from credit to audit and vice versa
- Last day for partial refund of first term fees

November

- 11 Remembrance Day - University closed
- 13 Last day to withdraw from "A" classes
- 15 Last day to apply for admission to Winter term

December

- 1 Last day to apply to graduate in May
- 5 Classes end
- 7 Examinations begin
- 16 Examinations end

1995

January

- 1 University closed
- 2 Classes resume, second term begins
- Fieldwork (4th year) begins, School of Occupational Therapy
- Internship begins, Outpost Nursing
- Classes resume, Outpost Nursing
- 15 Last day to register without late fee, second term
- Payment of second term fees due
- Last day to cancel registration in or to add "B" classes, (except fourth year, Occupational Therapy)
- Last day to withdraw from "R" classes without academic penalty
- Last day to change "R" classes from credit to audit and vice versa
- 31 Last day for partial refund of regular session fees
- Second installment of regular session fees due

February

- 2 Munro Day - University closed
- 12 Last day to drop "B" classes without academic penalty (except fourth year, Occupational Therapy)
- Last day to change "B" classes from credit to audit and vice versa
- Last day for partial refund if registered in second term only
- 19 Study break begins
- 26 Classes resume
- Clinical practice, 4th year, begins, School of Physiotherapy

March

- 4 Last day to add "B" classes, 4th year, Occupational Therapy (except 4418B)
- 11 Last day to withdraw from "B" and "R" classes (except fourth year, Occupational Therapy)
- Last day to drop 4th year Occupational Therapy "B" classes without academic penalty (except OT 4418B)
- 18 Fieldwork Level II (6 weeks) begins, Occupational Therapy

April

- 4 Classes end, Regular session
- 5 Good Friday - University closed
- 10 Examinations begin, Regular session
- 24 Intra-session/clinical practica begin, School of Nursing
- Summer clinical practicum begins in the School of Physiotherapy, third year
- 25 Examinations end, Regular session
- Last day to withdraw without academic penalty, three days after practicum begins, School of Physiotherapy
- 29 Summer clinical orientation, second year, (4 weeks) begins, School of Physiotherapy

May

- 21-24 Spring Convocations

Definitions

The following definitions are intended to facilitate an understanding of the calendar and not to define all words and phrases used in the calendar which may have specific meanings.

Academic Dismissal: A student's required withdrawal from a programme due to unsatisfactory academic performance.

Academic sessions:

- Regular session:..... September - April
- First term:September - December
- Second term: January - April
- Spring session:May - June
- Summer session:..... July - August
- Coop summer session:May - July

Audit Student: A student permitted to attend classes but not expected to prepare assignments, write papers, tests or examinations. Credit is not given nor is a mark awarded for classes. Classes appear on the transcript with the notation "Aud". Audit students must apply, select classes and register in the normal way.

Class: A unit of instruction in a particular subject identified by a name and number.

Co-requisite: Requirement which must be fulfilled concurrently with the class being considered.

Course: The term "class" is used in place of the word course.

Credit: A unit by which University class work is measured. A full year class is normally worth one credit.

Exclusion: Students may not register for a class which lists, as an exclusion, a class the student is also taking or has already passed.

Full-time Students: Those registered for three full classes or more, or the equivalent of three half credit classes or more in either first or second term.

For definition for fee assessment see fee schedule.

Good Standing: Students who meet the required G.P.A. are considered to be in good academic standing. (see Academic Regulation 19)

Grade Point Average (GPA): Weighted sum of the grade points earned, divided by the number of classes enrolled.

Sessional GPA: Classes taken in a single session.

Cumulative GPA: All classes taken while registered in a program.

Matriculation Standing: Senior Matriculation designates the level of studies attained by students who have successfully completed Grade XII in public high school in Nova Scotia or its equivalent elsewhere.

Mature Student: A person who is at least 23 years old, does not meet the usual admission requirements and has been absent from full-time high school study for at least four years.

Part-time Students: Students registered for fewer than three full-credit classes or the equivalent of three half-credit classes in either first term or second term. A full credit class is equivalent to 6 credit hours.

Prerequisite: Requirement which must be fulfilled prior to registering in a specific class.

Probation: Warning to students that their academic performance is unsatisfactory and that they will be dismissed from their programme unless their performance improves by the end of the next regular session. (See Academic Regulation 20)

Special Students: Students who are not candidates for a degree or diploma but who wish to take classes which may be allowed for credit. This is not the same as auditing a class. Special students must satisfy normal admission requirements.

Transcript: A transcript is a complete history of a student's academic record at Dalhousie. Partial transcripts, e.g. a portion of a student's record pertaining to registration in a particular degree or faculty only, are not issued.

Undergraduates: Students who are candidates for an undergraduate degree, diploma or certificate.

University Explorers: Students admitted under the mature students category who are not candidates for a degree.

Visiting Student: A person permitted to take classes at Dalhousie for transfer of credit to another university.

Writing Intensive: Writing Intensive classes, designated by:

 Writing Intensive

in the Format section of a class description, are those which emphasize the process of writing, frequency of writing assignments, and weighting of those assignments in the class grades. A Writing Intensive class is normally taken as a sequel to a Writing Requirement class, but does not satisfy the Writing Requirement.

Course Codes

Numbers

- 1000 level classes are introductory
- 2000 - 4000 level classes are advanced level
- 5000 - 6000 level classes are Graduate Level

Term Codes

- R - Sept. to April, Spring or Summer session
- A - Sept. to Dec. or first half of a Spring or Summer session
- B - Jan. to April or second half of a Spring or Summer session

Credit Hour Extension (examples only, other possibilities exist)

- .06 credit hours = 1 full credit
- .03 credit hours = 1/2 credit

4 Dalhousie University

Dalhousie University

For over 129 years, Dalhousie University has played a crucial role in Nova Scotian higher education. Building upon a strong undergraduate base, the University has developed internationally recognized programmes of graduate and professional studies. The scope of its research is far-reaching, as is its public and community service. The range of the University's programmes, and in particular the obligations it has assumed for professional and graduate education, give it a unique role in higher education in Nova Scotia and in the Maritime region.

Dalhousie's enrolment stands at over 11,500 students. To accommodate them, Dalhousie occupies more than 60 acres in a residential area of Halifax. University facilities include buildings for teaching and research, libraries, residential housing for students, a Student Union Building, an Arts Centre for music, theatre, and an art gallery and facilities for physical recreation. The Nova Scotia Archive building, the Atlantic Regional Laboratory of the National Research Council, major provincial hospitals, and the Dr. D.J. MacKenzie Laboratories are located close to the University. Dalhousie benefits from a variety of arrangements for teaching and research collaboration with hospitals and federal and provincial research laboratories.

The University of King's College, situated adjacent to Dalhousie campus, is an affiliated institution, and its students in Arts and Science receive Dalhousie degrees in the name of both institutions. By agreement with Mount Saint Vincent University students have access to various courses and services. Cooperative arrangements for engineering and computer science studies have been made with the Technical University of Nova Scotia. By arrangement with the Nova Scotia Teachers College, graduates of that institution may complete education degree requirements at Dalhousie. Cooperation in a number of academic programmes, in administrative services, and in use of library resources is provided for in working arrangements with Saint Mary's University and other institutions in Halifax. Degrees in agriculture, awarded to students of the Nova Scotia Agricultural College, are awarded by Dalhousie in cooperation with the College.

Dalhousie University is a non-denominational co-educational university. Founded in 1818, the University is a member of the Association of Universities and Colleges of Canada, the Atlantic Association of Universities, and the Association of Commonwealth Universities.

Executive Officers

President and Vice-Chancellor

(to June 30, 1995)

Board of Governors

Under the University's statutes, the Board of Governors is responsible for the operation of the University. The Board consists of representatives named by the Government of Nova Scotia, the alumni, the Student Union and certain other bodies. Internal regulation of the University is the primary concern of the Senate, subject to approval of the Board of Governors.

The President and Vice-Chancellor is the Chief Executive Officer of the University, responsible to the Board of Governors and Senate for supervision of the University's administrative and academic work.

Chancellor

Sir Graham Day

Chancellor Emeritus

Lady Beaverbrook, LLD

Officers

Dr. Howard C. Clark, BSc, MSc, PhD, ScD,

President & Vice-Chancellor (to June 30, 1995)

Dr. Thomas D. Traves, BA, MA, PhD (eff. July 1, 1995)

Senate

The Senate consists of the President, Vice-Presidents, Deans of Faculties and academic department heads, Registrar, full professors, other members of the academic staff elected from and by each Faculty, six students elected by students, and certain other persons.

Subject to the general approval of the Senate, faculties are responsible for supervision of programmes of study, of teaching and research, and for the recommendation of candidates for degrees, diplomas, and university prizes.

Chair of Senate

Kenneth A. Durn, BSc, MSc, PhD

Vice-Chair of Senate

J.E.D. Conrod, BComm, MBA, CA

Secretary of Senate

Robert N. Bérard, BA, BEd, MA, PhD

** Please note: Admission to the BEd, MEd, MAT and MA in Education have been suspended for the 1995-96 academic year.

8 College of Arts and Science

College of Arts and Science

Introduction

The College of Arts and Science, established in 1988, consists of the Faculty of Arts and Social Sciences, the Faculty of Science, and the School of Education. The College of Arts and Science meets to discuss matters of concern common to its units, in particular those relating to academic programmes and regulations. The Dean of Arts and Social Sciences and the Dean of Science alternate, year by year, as Provost of the College. The Provost chairs College meetings and prepares the agenda for those meetings. Administrative responsibility for what is decided in College meetings remains in the two Faculties and School of Education. There are thirteen Departments and several interdisciplinary programmes in the Faculty of Arts and Social Sciences, and eleven Departments in the Faculty of Science. The School of Education is dedicated to the professional training of schoolteachers and to the study of education as an academic discipline. There are several interdisciplinary programmes of instruction in the College, the responsibility for which is shared among members from different Departments.

The College of Arts and Science is responsible for the curriculum of Bachelor of Arts, Bachelor of Science, Bachelor of Education, Bachelor of Music and Bachelor of Music Education degree programmes, for diploma programmes in Engineering, Meteorology, and Costume Studies, and for certificate programmes in Costume Studies and Educational Administration. The College is also responsible for the establishment of regulations governing students registered in its programmes.

The College of Arts and Science consists of several groups: some 5,500 undergraduate students who typically spend three or four years in the College, nearly four hundred full-time teaching and research faculty and staff as well as a number of part-time teachers and teaching assistants, and a support staff of secretaries and technicians. The student's academic role is to learn - from teachers, from laboratory experience, from books, from other students, and from solitary contemplation. Students learn not only facts but concepts, and what is most important, they learn how to learn.

Through intellectual interaction with other members of the academic community, undergraduate students should gain the background knowledge, the ability and the appetite for independent discovery. Their acquisition of these components of liberal education is marked formally by the award of a Bachelor's degree. The academic faculty has two

equally important roles: to teach the facts, concepts, and methods that the student must learn; and to contribute to the advancement of human knowledge through research and through scholarly or artistic activity.

BA and BSc degree programmes in the College are of three types: the four year or twenty credit degree with Honours; the four year or twenty credit degree with an Advanced Major; and the three year or fifteen credit degree with a Major.

The goal of the Bachelor's degree is to produce educated persons with competence in one or more subjects. Such competence includes not only factual knowledge but, more importantly, the ability to think critically, to interpret evidence, to raise significant questions, and to solve problems. A BA or a BSc degree often plays a second role as a prerequisite to a professional programme of study.

The College is particularly proud of the Honours programmes that it offers in most subjects to able and ambitious students. The BA or BSc with Honours is distinguished from the BA or BSc with Major or Advanced Major in that a higher standard of performance is expected, a greater degree of concentration of credits in one or two subjects is required, and at the conclusion of the programme each student must show a grade which is additional to those for the required twenty classes. Frequently Honours students obtain this grade by successfully completing an original research project under the supervision of a faculty member. Completion of a BA or BSc with Honours is an excellent preparation for graduate study at major universities throughout the world. Dalhousie is distinguished among Canadian universities in offering BA programmes with Honours in most subjects in which it also provides BSc Honours programmes and in providing BA and BSc degree programmes with Combined Honours in an Arts and a Science subject.

Provost of the College

W.C. Kimmins, PhD (London)

Introduction

The Faculty of Arts and Social Sciences (FASS) consists of those units that study and teach in the humanities, languages, social sciences, and the performing arts. In addition there are interdisciplinary programmes of study leading to the BA degree.

The central role of the Faculty of Arts and Social Sciences is the education of those wishing to comprehend the heritage of the past, recognize the complexities of the present, and use that understanding to plan for the future. The undergraduate programmes of the Faculty stimulate and refine the processes of critical analysis, disciplined speculation, and artistic expression. To understand more fully the conventions, history, and traditions of one's society is to understand more about oneself. Study and teaching in the Faculty of Arts and Social Sciences frequently involves questioning and analyzing why things are as they are, as well as understanding what they are. Some Departments in FASS teach and evaluate performance. The values associated with study and research in the Faculty of Arts and Social Sciences have long been recognized as central to a liberal education.

Introduction

Dalhousie's Faculty of Science, the primary centre in the region for science education and research, is part of the College of Arts and Science and consists of eleven Departments. The principal mission of the Faculty is the discovery, organization, dissemination and preservation of knowledge and understanding of the natural world. The Faculty is dedicated to excellence in the pursuit of this mission. Students in the Faculty of Science are assisted to develop the capacity for inquiry, logical thinking and analysis, to cultivate the ability to communicate with precision and style, and to acquire the skills and attitudes for lifelong learning.

Undergraduate students in the Faculty of Science normally develop these abilities by concentrating their studies in one or two of the following fifteen subjects: biochemistry, biology, chemistry, computing science, earth sciences, economics, engineering, marine biology, mathematics, meteorology, microbiology, neuroscience, physics, psychology, and statistics. Both BSc and BA degree programmes are available in most of these subjects. Details concerning particular programmes of study are found in the departmental entries.

School of Education

Location: Education Building
Telephone: (902) 494-3724
FAX: (902) 494-2319

Introduction

As part of the College of Arts and Science, Dalhousie's School of Education offers programmes designed to enable students to take a critical approach to Education as a field of study. The professional preparation of school teachers is a primary goal of the school. Specific areas of study to which students are admitted include: Drama, English, French, Math, Science, Geography, Social Studies, and Music. Details concerning particular programmes are provided in the School of Education section of this calendar.

Administrator

Cole, Lorna J.

Administrative Coordinator

Read, Della H.

Policy Statement on Affirmative Action

The Faculty of Health Professions recognizes that action is required to increase the number of graduates from underrepresented Indigenous minority groups of the Maritime and Atlantic Provinces, particularly Blacks and First Nations people. Therefore, the Faculty, through its constituent units, will develop and implement affirmative action policies that are approved by the Human Rights Commission. Further, the Faculty will work to identify and develop recruitment and support systems that will ensure that members of these underrepresented groups apply and graduate.

12 Faculty of Management

Faculty of Management

Location: 6152 Coburg Road
Telephone: 494-2582

Introduction

The Faculty of Management includes four schools - School of Business Administration, School of Public Administration, School for Resource and Environmental Studies, and School of Library and Information Studies.

Undergraduate programmes are offered in the School of Business Administration in Commerce (BComm) and in the School of Public Administration (CPA). As of September 1991, the Bachelor of Commerce has been changed to a mandatory co-operative education programme.

Students wishing to enrol in programmes offered by the Faculty should address themselves directly to the Schools concerned for further information or for help in planning courses of study.

Henson College of Public Affairs and Continuing Education

Introduction

Henson College was established as a new senior academic unit at Dalhousie in 1984. Building on a 50-year tradition of action oriented research, community development and outreach and adult education, the College combined the Institute of Public Affairs and the Office of Part-Time Studies and Extension.

The mandate of Henson College is to serve as a bridge between the University and the communities it serves, using the tools of teaching, extension, conferencing, consulting and research in making the University's resources available to constituencies far beyond its traditional student population.

The College thereby continues to reinforce the long-standing partnerships that have been built between it and the community groups, professional organizations, governments at all three levels and leading individuals in seeking regional social, cultural and economic development.

Distance Education Courses

The Advanced Management Centre is a diverse and full service organization dedicated to meeting the needs of the business community across Canada and beyond through ongoing

human resource education and development. By designing and developing programs and services that are innovative, informative and enjoyable, AMC has established a national reputation.

The success of AMC's training and consulting is best demonstrated by the number and variety of individuals and organizations which participate annually in our programs. Each year we draw nearly 3,000 participants with diverse backgrounds, job and business experiences representing all types of private and public organizations from an international audience.

In the almost 20 years since we started management development through distance education, we have established our commitment to providing access to education to those who seek alternatives to scheduled classroom learning.

We have also established our commitment to life long learning. We believe that life long learning is the critical technology that individuals and organizations need to cope with increasingly rapid change and is the key to achieving economic competitiveness.

The Centre for Public Management has contributed to the quality of public sector management through a variety of educational programs and services since 1965. Through the provision of distance education programs, seminars and conferences, we continue to meet the professional development needs of public sector administrators at all levels of government across Canada.

In part, this has been accomplished through our excellence in public sector consulting, a skill we have acquired through our experience with a wide range of organizations. In this capacity, CPM's ultimate goal is to empower the client with the ability to tackle similar problems in the future. In turn, CPM incorporates the knowledge it gains into its education programs, which are offered across Canada and in the United States.

The Centre for Public Management develops educational programs that are responsive to current trends in public sector administration. Partnerships with other organizations at the federal, provincial, and municipal levels have enabled us to develop programming to increase the awareness of issues pertaining to race, First Nations, and multicultural relations and to environmental continuing education. By offering programs that enable public sector managers to deal effectively with change and diversity, the Centre for Public Management can truly contribute to the quality of public administration in Canada and abroad.

The Advanced Management Centre and the Centre for Public Management have combined distance education programs to offer broader selections and more options to their clients. These courses are:

- Certificate in Business Management

- Certificate in Financial Management
- Certificate in Fire Service Administration
- Certificate in Local Government Administration
- Certificate in Municipal Governing
- Certificate in Organization Management
- Certificate in Personnel Management
- Certificate in Police Leadership - Level 1
- Certificate in Public Sector Management
- Certificate in Small Business Management
- Certificate in Volunteer Fire Service Leadership
- Diploma in Public Management

For a full description of the training and professional development opportunities available, please contact the Registrar at (902) 494-8838 and ask for a free program calendar.

Transition Year Programme

Director

B. Johnson, BA, BSW, MSW (Dal)

Student Advisor and Researcher

P. Doyle-Bedwell, BA, LLB (Dal)

Instructors

- L. Choyce, BA (Rutgers), MA (Montclair), MA (CUNY)
- T. Fairfax, BSc (Dal)
- B. Johnson, BA, BSW, MSW (Dal)
- T. Sabattis, BSW (Dal)
- I. Saney, BA, MA (SMU)
- A. Surovell, AB (Boston), MA (Mass)

The Transition Year Programme is a one-year programme designed for African-Canadian and First Nations students who wish to enter university but who may not yet meet standard entrance requirements. The TYP was established to redress historic educational disadvantages to members of the Mi'kmaq and Black Nova Scotian communities.

While preparing its members for full admission to regular programmes at the beginning of their second year on campus, the programme introduces students to the university in a wide variety of ways. Its curriculum, which includes a variable number of credit classes, can be adapted to individual needs and objectives. The TYP core curriculum includes classes in Black and Native Studies, Study Skills, English and Mathematics. Students may also choose a regular first-year elective that is of personal interest to them. Classroom instruction is complemented by an orientation week, special lectures, campus tours, workshops and field trips.

The programme's staff are drawn from the Dalhousie University community as well as the Nova Scotian Black and First Nations communities.

African-Canadian, non-status Native and Metis students accepted into the programme are eligible for university bursaries during their transition year. If they successfully complete this qualifying year, they become eligible for continued financial assistance as long as they remain in good academic standing and progress towards a first degree.

Status Native students attending the programme are funded through the Confederacy of Mainland MicMac, the Department of Indian Affairs or by individual band councils.

Enrolment is limited to ensure that each student receives personal attention and individual programming. Highly motivated First Nations and African-Canadian students of all ages and educational backgrounds are encouraged to apply. The TYP welcomes applications from students who did not complete high school or the courses required for university entrance and students who completed a general or mixed high school programme.

The admission criteria are somewhat flexible, and the Admissions Committee considers each case comprehensively on its own merits. The candidate's overall maturity and seriousness of purpose are vitally important.

Please note that any monies which the University may make available is to be reported to the Department of National Revenue. Students are reminded to retain letters of award (e.g., bursaries, prizes or scholarships) in order that students can readily respond to governmental audits concerning Income Tax.

For further information or application forms, please contact:

Ms. Beverly Johnson
Director
Transition Year Programme
Dalhousie University
Halifax, Nova Scotia B3H 3J5
(902) 494-3730

Deadline for receipt of applications for the following September: March 15th.

Non-Credit Computer Education

A wide variety of computer courses are offered through Henson College in cooperation with Academic Computing Services. Most courses are 10 hours long, 50% classroom presentation, 50% hands-on. Courses are offered during the day, evenings and occasionally weekends.

For further information or assistance in course selection, plus information on course schedules, call the registration desk at 494-2375.

Programmes and Services for Full- and Part-Time Mature Students

Who is a Mature Student?

Mature student is a person at least 23 years old, does not meet the usual admission requirements and has been absent from full-time high school study for at least four years.

Pre-Admission Counselling

Many mature students find it helpful to sit down and discuss their educational plans with a student advisor. All full and part-time mature student candidates are encouraged to contact Henson College for pre-admission counselling with our Mature Student Advisor. Call 494-2375 for more information or to make an appointment.

Mature Student Admission Programme

The University Exploration programme is one way for mature students who do not meet the regular admission requirements to be admitted to Dalhousie University as undergraduates.

Pre-University Courses

Often, mature students decide they require upgrading prior to starting their university career, while other mature student applicants may be required by the University to upgrade prior to admission to Dalhousie. What ever the case, Henson College offers several pre-university courses designed with the needs of the mature student in mind. Pre-University English, Pre-University Biology, Pre-University Chemistry, Math Foundations and Pre-Calculus Math are all offered by Henson College.

Mature Student Orientation

The "Returning to Learning" orientation is an opportunity for mature students to learn more about University services, tour the university campus and meet other mature students. The orientation is offered the first Saturday in September, after classes begin.

Test Prep Courses

Henson College offers Kaplan preparatory courses designed to help students prepare for the LSAT, MCAT, GMAT, GRE, GRE (PSYCH), SAT, and NCLEX (RN) tests.

For further information on any of the programmes and services offered for mature students please call Henson College at 494-2375.

Special Institutes

A number of special institutes for study and research in specific fields are based at the University. Among these are:

Atlantic Health Promotion Research Centre

Director: Dr. M. Stewart

Co-ordinator: S. Crowell

The AHPRC was established in the spring of 1993 and is dedicated to research which can improve the health of individuals and communities - physically, mentally, socially, and spiritually. The AHPRC provides assistance with the development of health related research ideas. The main goal is to encourage health promotion research initiatives. The AHPRC works with community groups, individuals, academic researchers and health professionals to improve the quality of life in Atlantic Canada.

Atlantic Institute of Criminology

Director: D.H. Clairmont, BA, MA, PhD

The Atlantic Institute of Criminology has been established to provide a centre for research in the areas of criminology, policing, and other concerns of the justice system. In this focus and in its contribution to the associated career development, the Institute is equivalent to those existing in other regions of the country. Research awards for graduate students in Criminology are available. Seed funding is also available for research relating to the justice system.

Policy for the Atlantic Institute of Criminology is developed with the assistance of an Advisory Board comprising representatives from the academic and professional community of the region.

Associate memberships are available to interested and qualified persons. Workshops and training courses also provide opportunities for professional development for employees of the Criminal Justice system in the Atlantic Region.

Atlantic Region Magnetic Resonance Centre

Director Chair, Department of Chemistry

Manager: D.L. Hooper, BSc, MSc, PhD

Established in 1982 with assistance from the Natural Sciences and Engineering Research Council, the Centre is concerned with teaching and research programmes in magnetic resonance. The Centre has modern nuclear magnetic resonance (NMR) and electron spin resonance (ESR) instruments including Bruker AC 250 and AMX 400 NMR instruments and a Bruker MSL 200 NMR for solid state studies.

In addition to providing well-equipped laboratories and instrumentation for resident and visiting faculty, research scientists and students, the Centre provides NMR spectra and expertise to scientists of eleven universities and research institutes in the Atlantic Region.

Atlantic Research Centre

Director: H.W. Cook, MSc, PhD

Established in 1967, the Centre conducts basic biomedical research and population studies in the fields of human genetics, cell membranes, neurobiology, and developmental nutrition. It also provides education in these fields to undergraduate and graduate students and the general public. Special tests and consultative services for the prevention and treatment of diseases causing metabolic disorders and mental handicap are provided by the Centre. The Centre's professional staff hold appointments in various departments of the Faculty of Medicine. Its work is supported by grants from agencies such as the Medical Research Council of Canada, the Dalhousie Medical Research Foundation, the governments of the three Maritime provinces, and the Neuroscience Network of Centres of Excellence, and by private donations.

Centre for African Studies

Director: J.L. Parpart, MA, PhD

This Centre, established in 1975, coordinates instruction, publication, research and development education programmes in African Studies. Associated faculty hold appointments in departments and units concentrated in the social sciences and humanities. The Centre organises academic and informal seminars and public policy conferences on Africa and encourages interdisciplinary interaction at all levels on African subjects and issues. It cooperates with the International Development Studies programme and with the Pearson Institute and International Students Centre.

Centre for Foreign Policy Studies

Director: Timothy M. Shaw, PhD

Established in 1971 the Centre is concerned with teaching, research, publication, policy advice and other professional activities in the various aspects of foreign policy, security studies and international politics. It is funded through the Military & Strategic Studies Programme of the Department of National Defence and other foundations, government agencies and contracts.

The Centre's work is concentrated in the area of Canadian and comparative maritime policy and strategy but it also deals with international political economy and regional and global development. Its geographical specialisations include foreign policy in Canada, Europe, Third World (especially Africa, Asia and the Caribbean), and the U.S. The Centre encourages activities in these areas by Research & Doctoral

16 Special Institutes

fellows and advances communication among local and international communities in these fields through seminars, workshops, conferences and colloquia, often co-sponsored by local, national and/or international organizations. It publishes occasional papers and monographs plus a monthly Defence Newsletter on Canadian defence and security policy issues.

The Centre is an integral part of the Department of Political Science. Centre faculty offer courses through the Department in foreign and defence policy, international relations and development, and maritime affairs at both undergraduate (majors & honours) and graduate (MA and PhD) levels. They also supervise masters and doctoral theses in these fields.

Centre for International Business Studies

Director: M.R. Brooks, BOT, MBA, PhD

The Centre was established in 1975 and is funded by Department of Foreign Affairs and International Trade. Its purposes include the provision of specialist training in international business studies, research and outreach activity in international business. It carries out these functions within the administrative framework of the School of Business Administration.

Centre for Marine Geology

Director: Paul T. Robinson, BSc, PhD

The Centre for Marine Geology was founded in 1983 to promote the interdisciplinary study of the continental margins and the sea floor. The Centre draws on the faculty and resources of the Departments of Earth Sciences, Oceanography and Physics and others. The objectives of the Centre are: (1) to expand the university's leading role in international studies of the oceanic crust, (2) to participate with industry and government in the geological aspects of oil and gas development on Canada's east coast and (3) to continue research on sedimentation and the recent history of the Canadian offshore.

Dalhousie Health Law Institute

Interim Director: Robert G. Elgie, QC, BA, LLB, MD, FRCS(C)

Assistant Directors: Stephen G. Coughlan, BA, MA, LLB, Ph.D., Diana E. Ginn, BA, LLB, LLM

The Health Law Institute is an interdisciplinary Institute which conducts, facilitates and coordinates research and teaching in the Faculties of Law and Medicine, and in Dentistry and Health Professions as well. The Director and his Faculty Associate are cross-appointed to the Faculties of Law and Medicine. They work with colleagues in those and other Faculties on grant and contract funded research, teach, facilitate and coordinate the teaching of law as it applies in the broad field of health to students in Dentistry, Health

Professions, Law and Medicine, supervise graduate students; and conduct continuing education courses for health professionals on a contract basis.

Lester Pearson Institute for International Development

Acting Director P. Rodez, BA, MBA

Associate Director: B. Lesser, BComm, MA, PhD

The Lester Pearson Institute (LPI) was founded in 1985 to promote Dalhousie's involvement in international development activities. In mid-1987, LPI was merged with the Centre for Development Projects and was given responsibility for guardianship of all externally financed international development programmes and projects at Dalhousie. In mid-1994, the Institute's mandate was expanded to also include a broader responsibility of international activities and the internationalization of the University. Toward this end, LPI supports the Dalhousie community's involvement in international activities by facilitating student exchange opportunities with overseas partners and by building better networks among those with international experience and interest at the University. LPI also undertakes major activities such as a development education programme for the campus and local community, a lecture and seminar series, conferences, research, and a publications programme. Although LPI is not a degree granting arm of the University, it encourages and supports the study of international issues; serves as a resource centre for students, faculty and staff; houses the Lester Pearson Chair in Development Studies; and maintains a roster of associates known as Pearson Fellows who serve as advisors to the Institute in their particular area of expertise.

Neuroscience Institute

Interim Director: I.A. Meinertzhagen, BSc, PhD

The Neuroscience Institute was founded in 1990 to promote and coordinate research in neuroscience, the modern interdisciplinary study of the brain and nervous systems. The development of the Institute parallels the establishment of many such Institutes throughout the world and marks dramatic recent progress in understanding the workings of the brain, as signalled for example by U.S. President Bush's declaration of the 1990's as the Decade of the Brain.

Currently housed in the Life Sciences Centre, the Institute serves as an umbrella organization to foster research and training in neuroscience at Dalhousie. A major objective is to increase understanding of the functions of the nervous system in health and disease and, to this end, the Institute coordinates the activities of neuroscientists in the Faculty of Medicine and of Science, facilitating collaboration between clinical and basic scientists in the two Faculties.

Some foci of current research activity include: the autonomic nervous system; development and plasticity of the nervous system; and, sensory physiology. The Institute also provides a vehicle to seek new sources of funding, and will encourage new initiatives in all areas of neuroscience research at Dalhousie. In addition, the Institute promotes and coordinates training programmes in neuroscience currently offered through constituent departments at both the undergraduate and graduate levels. Associated with the latter it sponsors a seminar series annually.

Oceans Institute of Canada/Institut canadien des océans

Executive Director: Judith Swan, BA, LLB, LL.M

The Oceans Institute of Canada/Institut canadien des océans is a federally incorporated, non-profit organization established in 1976 and dedicated to promoting responsible management of the world's oceans.

The Institute serves the public and private sectors at national and international levels. Work is carried out by a permanent staff and experts drawn from a multidisciplinary panel of associates.

The location of its head office in Halifax promotes full collaboration with many other establishments concerned with ocean affairs, including Dalhousie University. The Institute has a Pacific Office in Vancouver.

Trace Analysis Research Centre

Director: L. Ramaley, BA, MA, PhD

With the assistance of a grant from the National Research Council, the Centre was established in 1971 to train analytical chemists and, through research, to contribute to the advancement of analytical chemistry. A major facility of the Centre is a low-power nuclear reactor (SLOWPOKE) which is available to researchers within Dalhousie and elsewhere.

Resources and Services

Advisory Committee on Sexual Harassment

Sexual harassment is sexually oriented behaviour of a deliberate or negligent nature that adversely affects the workign or learning environment or participation in university life. Sexual harassment can take many forms, from constant joking to assault. It may involve promises of reward, or threats that you could fail in class or lose your job. It may make your work or study environment uncomfortable through continued sexual comments, suggestions or pressures. Sexual harassment may involve unwelcome sexual attention from a professor, a teaching assistant, a staff member, a student, or even a patient or a customer.

Dalhousie University is committed to an environment free of sexual harassment. A policy and procedures exists to deal with complaints of sexual harassment. Responsibility for monitoring the policy and for coordinating educational programming rests with the President's Advisory Committee on Sexual Harassment, which includes representation from student, staff and faculty groups.

If you believe you are being sexually harassed at Dalhousie you are encouraged to discuss your questions or concerns with the Sexual Harassment Advisor, Room #3, Basement of the Arts and Administration Building, 494-1137 or 494-1659. Advice and information about the policy and possible options are available.

Persons found to have engaged in sexually harassing behaviour can be subject to a range of penalties, up to including expulsion or dismissal from the the University.

Alumni Association

The Alumni Association is composed of over 60,000 former students. Chapters scattered across the world keep alumni informed and involved with the Association. It coordinates a number of programmes including homecomings, reunions, branch meetings, sports events, information lectures, a Student Alumni Association, Scholarships and Bursaries, and the Alumni Award for Teaching Excellence and the Outstanding Alumnus Award. The Association publishes the Dalhousie Alumni Magazine which is sent to all alumni and friends.

The alumni play a vital role in the University in a wide variety of ways including representation on the Board of Governors.

Athletics

Athletics and Recreational Services offers a wide range of programmes for every Dalhousie student. More than fifty clubs and intramural programmes offer fun, fitness and companionship while 13 varsity sports provide excitement for players and spectators alike. For those who prefer less competitive activities, there are a great number of fitness, leisure and aquatic instructional programmes.

Recreation facilities on campus include: Dalplex—offering a 50,000 sq. ft. fieldhouse, olympic-size pool, two weight rooms, two hardwood basketball courts, numerous "no-fee" racquet courts, and an indoor jogging track; the Dalhousie Memorial Arena, Studley Gym, and The F.B. Wickwire Memorial Field. For details on fitness and recreation at Dalhousie contact Dalplex at 494-3372 or the Intramural Office at 494-2049.

Black Students

The Black Student Advising Centre is available to assist and support new, prospective and returning Black Students (African, American, Canadian, Caribbean, etc.) The Advisor may organize programme activities which assist Black students in developing contacts with other Black students both on campus and in the Black Community. The Centre is intended to foster a sense of support and community among the Black students, with other students and to increase intercultural awareness.

The Advisor will provide confidential services and programmes individual and/or group assistance, impartial observation, relevant resource materials, along with a referral service which may benefit your academic, personal and social development on and off campus. There is a small lounge area for meeting, peer support, reading and/or studying. Awards, scholarships, employment, community information and upcoming events are also made available.

The position of the Black Student Advisor was created by Dalhousie University to provide information to prospective students, increase access and promote retention of indigenous Black students.

The Centre may be beneficial to all students, faculty and staff as a means of increasing awareness of Black students within the University community.

For further information contact: Office - Black Student Advisor, Student Union Building, Halifax, Nova Scotia, B3H 4J2 (902) 494-6648.

Chaplaincy at Dalhousie

The University provides facilities for chaplains appointed by various churches. There are five chaplains at Dalhousie, representing the Anglican, Baptist, Roman Catholic, Lutheran,

and United Church traditions. In addition, contact ministers are designated by the Jewish, Presbyterian, and Orthodox traditions and can be reached through the Chaplains' Office on campus. The Chaplains' Office is located on the fourth floor of the Student Union Building, telephone 494-2287. Office hours are Monday to Friday 9 - 4. Appointments can be made for other convenient times. The chaplains are available at any time for emergencies. Outside office hours, chaplains may be reached by calling the answering machine at 494-2287 to hear emergency numbers.

Counselling and Psychological Services

The Counselling and Psychological Services Centre offers programmes for personal, career and educational concerns. Counselling is provided by professionally trained Counsellors and Psychologists. Strict confidentiality is ensured. Counselling is available both individually and on a group basis. Topics covered by regularly offered group programmes include Study Skills, Career Decision Making, Exam Anxiety Reduction, Public Speaking Anxiety Reduction, Assertiveness, Resume Writing and Job Search Skills. Information on a wide variety of careers and academic programmes is available in the Frank G. Lawson Career Information Centre. Students wishing to get a first hand view of careers they are considering entering, may contact alumni willing to discuss their career experiences through the Centre's Mentors and Models programme. Interest testing is also available to students.

The Counselling and Psychological Services offices and its Frank G. Lawson Career Information Centre are located on the 4th Floor of the Student Union Building. In addition to regular office hours, the Centre is open three evenings a week during the academic year. Inquire or make appointments by dropping in or calling 494-2061.

Dalhousie Arts Centre

Designed as a multipurpose facility, the Dalhousie Arts Centre is home to four University departments: Dalhousie Arts Centre (Rebecca Cohn Auditorium), Dalhousie Art Gallery, and the two academic departments of Music and Theatre. The Arts Centre remains, after twenty-one years, an integral part of the cultural experience in our community and stands as the only arts complex of its kind in Nova Scotia.

Of the numerous performing arts spaces in the Dalhousie Arts Centre, the Rebecca Cohn Auditorium, or "The Cohn", as it is affectionately called, is the most familiar and prestigious. The 1040 seat concert hall is the home of Symphony Nova Scotia, as well as the venue of choice for a wide variety of performers ranging from The Royal Winnipeg Ballet to Blue Rodeo, The Chieftains, and Reveeni to name a few. Other

performing and visual arts space in the Arts Centre include: The Sir James Dunn Theatre (240 seats), the David MacK. Murray Studio, Studio II, The MacAloney Room, and the Art Gallery.

The Dalhousie Art Gallery offers the public access to national and international touring exhibitions and initiates many ambitious and exciting exhibition programmes.

Further information on the Music and Theatre Departments can be found in their separate listings.

Dalhousie Student Union

Every Dalhousie student is automatically a member of the Dalhousie Student Union. The Student Union is recognized by an agreement with the University Administration and by an Act of the Nova Scotia legislature as the single voice of Dalhousie students. All student activities on campus are organized through the Student Union, and the Student Union is the focus of all student representation. The business of the Student Union is conducted by a Council made up of 60 members. Every student is represented by one or more representatives of their faculty, elected within their faculty in the spring. As well, students who live in residence and international students also elect their own representatives because they are uniquely affected by certain university policies. Also on the Council are the student representatives elected to the Senate and Board of Governors.

One of the most important resources of the Student Union is the Student Union Building located on University Avenue between Seymour and LeMarchant Streets. The SUB, which is exclusively operated by the Student Union and is paid for through Student Union fees, was opened in 1968 as a centre for student activity on campus. Every student has the opportunity to take advantage of the Union's financial, physical and organizational resources. Students have an opportunity to become involved in committees dealing with various student issues. The DSU also offers a full range of clubs, societies and organizations for any student to participate in. All students are invited to satisfy their curiosity by visiting the Student Union Council offices. The Student Council office is located on the second floor of the SUB and is open from 8:30 a.m. to 4:30 p.m. Monday through Friday, phone number 494-1106.

Housing/Residence Services

For the 55 per cent of Dalhousie University students whose homes are outside the Halifax Metropolitan area, where to live while attending university is a major question. The supply of University owned housing does not meet the demand and the vacancy rate in the various private, commercial units is low. It is therefore very important that students planning to attend Dalhousie think well in advance about their accommodation needs.

Students should be aware of the following points in reference to residence accommodation. You must indicate your interest in residence accommodation on your Application for Admission to a programme of study. Upon admission to a programme of study, those students who have indicated an interest will receive a Residence Application Form. It is important to return the Residence Application Form promptly as the applications will be considered as they arrive. Residence Application Forms will not be distributed to, nor received from, individuals who have not gained admission to a programme of study.

Students with disabilities are encouraged to contact the Residence Office at (902) 494-1054, for information and assistance.

The traditional style residences at Dalhousie are chiefly for undergraduate students; very few graduate spaces are allocated and in many cases students pursuing advanced degrees are not prepared to live with the exuberance of first and second year students.

The information below gives a description of A. traditional on-campus residences, B. off-campus housing owned by the university and C. the services offered by the off-campus housing office listing service. For information on housing fees, see the Fees section of the Calendar.

Please Note: Academic acceptance by the University, i.e., admission to a course of study, DOES NOT GUARANTEE admission to University Housing or provision of off-campus accommodation.

It is the responsibility of the individual student in all cases to make separate application for the university housing of her/his choice, or to avail him/herself of the listing services provided by the Off-Campus Housing Office.

As available space in University residences is limited students are encouraged to complete and submit their residence application immediately upon receiving it with their letter of academic admission.

A. Traditional Style On Campus Residence Howe Hall

Centrally located on campus, Howe Hall, provides accommodation for 520 undergraduate students. The sprawling, grey ironstone complex is divided into five houses: Henderson, Cameron, and Studley are for men only; Bronson and Smith Houses are co-ed. Each house has its own distinctive identity and student government. The ratio of seniors to first-year students is approximately 40/60, except in Henderson house which is predominantly for first year students.

The houses offer both double and single rooms with the singles generally reserved for senior undergraduates and the doubles for first-year students. Facilities include two dining rooms, lounges, television rooms in each house,

20 Resources and Services

a canteen, games room, squash courts, weight room, study areas, laundry rooms and computer room.

Shirreff Hall

The women's residence on the Dalhousie campus, Shirreff Hall, provides accommodation for 445 female students. Located in a quiet corner of the campus, it is minutes from classes, the library, Dalplex and other facilities as well as from the scenic Northwest Arm. It is divided into three houses - Newcombe, Old Eddy and New Eddy (which includes the Annex). Old Eddy and New Eddy have both single and double rooms while Newcombe has single rooms only. The Annex houses only 14 senior students and is distinct from the remainder of Shirreff Hall in that it has a separate outside entrance and is not directly accessible from the main residence.

Shirreff Hall offers a dining room, an elegant library and visitors' lounge, study hall, study area, games room, television lounges, exercise room, kitchenettes, canteen, laundry room and reception desk. Students have access to two pianos.

Eliza Ritchie Hall

Opened in 1987, Eliza Ritchie Hall is a co-ed residence. It provides traditional residence accommodation for 84 students in predominantly single rooms.

The three-storey building of powder blue clapboard is located close to the Dalplex and to Shirreff Hall, where students take their meals. Facilities include study rooms, a multipurpose room, reception area, laundry facilities and leisure lounges with kitchenettes.

B. Off Campus, University Owned Housing Fenwick Place

Dalhousie's 33-storey Fenwick Place offers students the privacy and some of the independence of apartment living. Located in Halifax's south end, it is only a 15-minute walk or a short bus ride from the campus. Because Fenwick houses both single and married students, the mix of people provides a harmonious living environment.

Many of the 252 apartments in Fenwick Place are furnished to accommodate students in groups of two, three or four. Priority is given to students who apply in groups and who are currently living in a Dalhousie residence. Each of these apartments has a full kitchen and bathroom, furnished living room and dining area and a balcony. Bedrooms have desks and a mate-style bed. Heat, hot water, electricity, and satellite television are included in the residence fee.

Fenwick also has a number of unfurnished bachelor, one and two-bedroom apartments which are rented to married and single students.

Each of these apartments has a full kitchen and bathroom. Heat, hot water, and satellite television are included in the rent.

Laundry facilities are available on every floor of Fenwick Place. The front desk is open 24 hours a day with staff available to provide security, information and advice to students.

Glengary Apartments

Located on the campus on Edward Street, Glengary Apartments is a four-storey brick building offering co-ed accommodation to 52 students. Preference is given to students in second and third year and especially to those who apply in groups of four.

Glengary has 12 furnished apartments, each with space for four students. The apartments feature two single rooms, double room, kitchen, living room and bathroom. There are also four bachelor apartments which are always in high demand. Laundry facilities are located in the basement, where there is also a limited amount of storage space.

Coordinators are available for security and administrative services and also act as a resource for students who may need advice or assistance.

Co-ed Apartment Units

Dalhousie has two co-ed apartment buildings which are open to students in graduate programmes. Located on University Avenue, on the main campus, the buildings include bachelor, one and two-bedroom apartments and accommodate a total of 20 students.

Each apartment has a living area and kitchen facilities with a fridge, stove and sink, a full bathroom and ample cupboard space but is otherwise unfurnished. A laundromat is located in the neighbourhood. Heat and hot water are included in the rent.

Residence Houses

Dalhousie also has 8 residence houses, five of which are now co-ed. All were once single family homes, and have their own kitchens, living rooms and bathrooms. The character of these homes has been maintained as much as possible. The houses are all on campus. Although they are generally occupied by students in graduate programmes or professional schools, a few of the 90 spaces are reserved for undergraduates.

Two of the houses are designated as 24-hour quiet areas for students who want a particularly quiet environment in which to live and study. One of the houses is designated as a French house, reserved for male and female students who would like to live in a French-speaking environment.

All of these houses have both single and double rooms, each with a bed, dresser, study desk, lamp and chair. Linen, cooking utensils and small appliances are not provided. Students share kitchen and living room areas which are

maintained by the cleaning staff. A trained senior student acts as a house coordinator and liaises with the Howe Hall Residence Co-ordinator and Facility Co-ordinator to provide administrative and resident-related services.

Living Off-Campus

Dalhousie's Off-Campus Housing Office assists students who do not want to live on campus or who have been unable to find a place in residence or in University apartments and houses. Located in the Student Union Building, this office is designed to help students find privately-owned accommodation.

The Off-Campus Housing Office provides centralized information on available housing in the Halifax metro area, including apartments, rooms, condos and houses. Up-to-date computerized printouts of these listings are available for viewing as well as telephones for calling landlords and material such as maps and transit schedules.

Although the housing staff cannot arrange, inspect or guarantee housing, they will do everything they can to help students find accommodation that is pleasant, inexpensive and close to campus.

Because of the low vacancy rate in Halifax, it is advised that students start looking for off-campus housing well ahead of the academic year.

General Information

- Application forms must be accompanied by an application fee and a deposit in Canadian funds, payable to Dalhousie University. Deposit amounts are listed on the application form.
- Acceptance into an academic programme does not mean that application for a place in residence has been approved.
- To live in any of the University-owned buildings, students must maintain full-time status at Dalhousie throughout the academic year.

For further information on living at Dalhousie, or for additional copies of the residence application form, do not hesitate to contact:

Instructional Development and Technology

The Office of Instructional Development and Technology (OIDT) is mandated to initiate, lead, and coordinate activities which encourage reflection upon and improvement in teaching and learning at Dalhousie.

Workshops - To fulfil this primary goal, the OIDT develops and presents a variety of sessions and workshops to faculty and teaching assistants at Dalhousie. Annual events include the Orientation to Teaching at Dalhousie for new faculty and the Graduate Teaching Assistant Orientation for new GTAs. During the year, workshops are presented monthly or bi-monthly and are open to the Dalhousie community. The OIDT also cooperates with other universities in Nova Scotia to disseminate information about teaching improvement.

Publications - Focus on University Teaching and Learning, the OIDT newsletter, is published five times a year. Three other publications - Recording Teaching Accomplishment: A Dalhousie Guide to the Teaching Dossier; University Teaching and Learning: An Instructional Resource Guide for Teaching Assistants at Dalhousie University; Learning Through Writing: A Compendium of Assignments and Techniques - may be purchased or borrowed from the OIDT. The extensive bibliography of materials available for loan includes both print and video resources on topics related to teaching. These may be borrowed by faculty, teaching assistants, and students.

Instructional Media Services - To complement its primary goal, the OIDT also has responsibility for the provision of instructional media services to the campus (excluding Medicine and Dentistry). These services include audiovisual equipment, videotaping, photography, and graphics. Facilities for borrowing discipline-specific audio and video tapes are located in the Learning Resource Centre in the basement of the Killam Library.

Distance Education - Through its support for the development of distance education courses, primarily in the Health Professions, the OIDT assists Dalhousie to respond to the needs

22 Resources and Services

of those who wish to upgrade their education. General inquiries about these courses should be directed to the Registrar's Office.

Information, teaching resources, and private consultations are available through the Office of Instructional Development and Technology. The Office is located in the Killam Library Courtyard (494-1622).

International Student Centre

The International Student Centre provides services and programmes for Dalhousie's students from around the world. It is a resource and activity post for international students, and is dedicated to ensuring that international students make the most of their stay in Canada.

The Centre provides information and advice on financial, legal, immigration, employment and personal matters and acts as a referral point to other services on campus. It organizes reception and orientation programmes that assist international students in adjusting to the new culture and in achieving their educational and personal goals. A variety of social, cultural and educational programmes are also held throughout the year. The Centre coordinates activities that facilitate fostering of relationships with the university and city communities.

The Centre has a lounge where students can meet and a reading room where students can study or read international publications. For further information, contact: The Advisor, International Student Centre, Student Union Building, 6136 University Avenue, Room 120, Dalhousie University, Halifax, N.S., Canada, B3H 4J2 or phone (902) 494-7077.

Libraries

The Dalhousie University Library System is organized to accommodate the needs of the undergraduate teaching programmes, graduate and faculty research projects, and professional schools. The system is made up of the following components: the Killam Memorial Library - Humanities, Social Science, and Sciences, the Sir James Dunn Law Library, and the Kellogg Health Sciences Library.

As of April 1, 1994, the total Dalhousie University Library System holdings include over 1,489,000 volumes of books, bound periodicals, documents, and bound reports, 452,000 microfiche microcards, maps, and other media. Approximately 10,000 serials titles are currently received, and dead title holdings number over 11,000.

Dalhousie libraries participate in Novanet, a network which shares a single automated online catalogue of the holdings of the member libraries (Mount Saint Vincent University, Nova Scotia College of Art & Design, Saint Mary's University, Technical University of Nova Scotia, University College of Cape Breton, University of King's College, the Atlantic School of Theology

and the Victoria General Hospital). Users borrow from Novanet libraries upon presentation of their University ID card.

Ombud's Office

The Dalhousie Ombud's Office offers assistance and advice to students experiencing problems while at Dalhousie, including difficulties associated with finances, academics, or accommodations. The Ombud's Office can help students resolve particular grievances and also attempts to ensure that existing policies are fair and equitable. Jointly funded by the University and the Dalhousie Student Union, the Ombud can provide information and direction to students on any University-related complaint. Students retain full control over any action taken on their behalf by the Ombud's Office, and all inquiries are strictly confidential.

The Dalhousie Ombud's Office is located in the Student Union Building, Room 403. Regular office hours are posted on the door at the beginning of each Semester. The Ombud's Office can also be reached by calling 494-6583. If no one is available to take a call, students are requested to leave a message on voice mail.

Registrar's Office

The office is responsible for high school liaison, admissions, awards and financial aid, registration, maintenance of student records, scheduling and coordinating formal examinations, and convocation. Of greater significance to students, however, is the role played by members of the staff who provide information, advice, and assistance. They offer advice on admissions, academic regulations and appeals, and the selection of programmes. In addition, they are prepared to help students who are not quite sure what sort of assistance they are looking for, referring them as appropriate to departments for advice about specific major and honours programmes or to the office of Student Services or to specific service areas such as the Counselling Services Centre.

Among the staff are people with expertise in financial aid and budgeting who are available for consultation.

The summer advising programme for first year students in Arts and Social Sciences, Management, Engineering and Science is directed from the Registrar's Office. Prospective students may arrange a tour of the campus through this office.

The fact that the Registrar's Office is in contact with every student and every department means that it is ideally placed to provide or to guide students and prospective students to the source of the advice or assistance they need.

Services for Students with Disabilities

Dalhousie University is committed to providing an accessible environment in which members of the community can pursue their educational goals. Ongoing efforts consistent with a reasonable and practical allocation of resources are being made to improve accessibility and provide special services.

The Advisor provides support and advocacy for students with disabilities. In co-operation with faculty, staff, and other student services at the university, the Advisor endeavours to provide appropriate support services as needed by the student. Students are encouraged to contact the Advisor as early as possible, (902) 494-2836, TTY (902) 494-7091).

Student Advocacy Service

The Student Advocacy Service was established by the Dalhousie Student Union and is composed of qualified students from the University. The main purpose of the Service is to ensure that the student receives the proper information when dealing with the various administrative boards and faculties at Dalhousie. An Advocate may also be assigned to assist students with appeals or in a disciplinary hearing for an academic offence. Our goal is to make the often unpleasant experience of challenging or being challenged by the University less intimidating.

The Advocates may be contacted through:
 Student Advocacy Service
 Room 402
 Dalhousie Student Union Building
 Telephone: (902) 494-2205

Student Clubs and Organizations

Students seeking information on clubs and societies should call the GET INVOLVED LINE 494-3527.

Extracurricular activities and organizations at Dalhousie are as varied as the students who take part in them.

Organizations range from small informal groups to large well organized ones; they can be residence-based, within faculties, or university-wide.

Some are decades old with long traditions, others arise and disappear as students' interests change.

The Student Handbook publishes a list of clubs, societies and organizations, and every fall new students are encouraged to select and participate.

Student Employment Centre

The main function of the Dalhousie Student Employment Centre is to aid Dalhousie students in their efforts to obtain permanent, summer, or

part-time employment. It is located on the fourth floor of the Student Union Building, and operates Monday through Friday from 9:00am to 4:30pm. Telephone: (902) 494-3537.

The Employment Centre also has useful information on résumé preparation, interview techniques, and job-search skills.

Interviews for graduating students are arranged with employers who visit Dalhousie each year (mid-October to mid-November are usually the busiest months).

Summer employment listings are received as early as October, while new part-time jobs are posted daily for both "on campus" and "off campus" locations.

Student Services

Located at 1234 LeMarchant Street, Student Services provides a point of referral for any student concern. The Vice-President is the chief Student Services officer and coordinates the activities of Athletics and Recreational Services, the Dalplex, the Bookstore, Student Counselling and Psychological Services, Health Services, Housing and Conference Services, Office of the Registrar, Writing Workshop and the Ombud Office. Student Resources including Black Student Advising, Advising for Students with Disabilities, Chaplaincy, International Student Centre, the Student Employment Centre and the Volunteer Bureau are coordinated out of this office as well. Students who experience difficulties with their academic programmes or who are uncertain about educational goals, major selection, workload management, social or personal matters affecting their academic performance, inadequate study skills, or conflicts with faculty and regulations can seek the assistance of the Academic Advisors in the Vice-President's office.

University Bookstore

The University Bookstore, owned and operated by Dalhousie, is a service and resource centre for the university community and the general public. The Bookstore has all required and recommended texts, reference books and supplies, as well as workbooks, self help manuals and other reference material. The general book (trade) department carries an assortment of bestsellers, classics, magazines and books by Dalhousie authors.

The Health Sciences department has the largest and most complete medical book section in Atlantic Canada, with over 2000 titles in stock. Thousands of other titles are specifically ordered annually, and the department ships out books to medical personnel and hospitals throughout the region.

The Stationery department carries all necessary and supplementary stationery and supplies, including scientific and engineering items. The Campus shop carries gift items, mugs, clothing and crested wear, cards, jewellery, class

24 Resources and Services

rings, backpacks, novelties, briefcases, and general University paraphernalia. A Special Order department is located in the office area and will order and ship books worldwide.

The Bookstore is situated on the lower level of the Student Union Building on University Avenue, and is open year round, Monday to Saturday (Hours vary throughout the year).

University Computing and Information Services

University Computing and Information Services (UCIS) provides computing and communication services for students, faculty, and staff for instructional, research, and administrative purposes. It is responsible for all centrally managed computing and communications facilities.

UCIS manages a campus-wide communications network which interconnects office systems, laboratories systems, departmental computers, and central facilities. This network is connected to the Nova Scotia Technology Network, which in turn is connected to the national network CA*net which has worldwide connections. UCIS is also responsible for University telephones.

Central computer systems include digital VAX4500 and two IBM RS/6000 computers which are used primarily for academic purposes; an Alliant FX/2816, which is a powerful parallel processing system used for research; and an IBM 4381 and two IBM RS/6000 computers supporting the university's central administrative systems. UCIS also manages numerous micro computer teaching laboratories which are situated throughout the campus, including laboratories in the School of Business, Education, Engineering, English, History, Sociology, Law, Political Science, Physics, Biology, Earth Sciences, Dentistry, Psychology, and at the central Computer Centre in the basement of the Killam Library.

All students may have access to these computing facilities on an individual basis or in conjunction with the classes that they take.

UCIS also manages the campus computer store (PCPC); provides short, non-credit computer related courses in conjunction with Henson College; and offers a hardware maintenance service for micro-computers.

University Health Services

The university operates an out-patient service, in Howe Hall, at Coburg Road and LeMarchant Street staffed by general practitioners and a psychiatrist. Further specialists' services are available in local hospitals and will be arranged through the Health Service when indicated. All information gained about a student by the Health Service is confidential and may not be released to anyone without signed permission by the student.

Appointments are made during the clinic's open hours, from 9 a.m. to 10 p.m. In the event of emergency, students should telephone the University Health Service at 494-2171 or appear at the clinic in person. The university maintains health services on a 24-hour basis with a physician on call.

All students must have medical and hospital coverage approved by the Health Service. All Nova Scotia students are covered by the Nova Scotia Medical Services Insurance. All other Canadian students must maintain coverage from their home provinces. This is especially important for residents of any province requiring payment of premiums. All non-Canadian students must be covered by medical and hospital insurance prior to registration. Details of suitable insurance may be obtained from the University Health Service prior to registration. Any student who has had a serious illness within the last 12 months, or who has any chronic medical condition, should contact and advise the Health Service, preferably with a statement from the doctor.

The cost of most medications prescribed by a physician is recoverable under a prepaid drug plan administered by the Student Union.

Writing Workshop

The Writing Workshop programme recognizes that students in all disciplines are required to write clearly to inform, persuade, or instruct an audience in term papers, laboratory reports, essay examinations, critical reviews and more. This English language resource centre offers classes in language and writing, a tutorial service, guidelines for acceptable standard language usage, and provides information about sources for reference. For more information about the Writing Workshop, please call 494-3379.

Winter Term

Diploma/Outpost & Community Health Nursing for RN's		October 1
BA and BSc programmes only ³		November 15
BSc (Nursing) for Post RN only		November 15
Returning Dalhousie Students ⁶		November 15

¹ Late applications may be considered up to August 1.

² Of year preceding commencement of programme

³ Part-time and transfer students only

⁴ All supporting documentation must be submitted by the appropriate deadline.

⁵ For students currently registered at Dalhousie wishing to change degree programmes.

⁶ For students returning to BA or BSc programmes, or attending as Special Students in any faculty.

⁷ Effective for students applying for admission for September of 1995, the deadline will be April 1 for all programmes in the School of Recreation, Physical and Health Education, including Kinesiology.

⁸ Admission to the BEd, MEd, MA in Education and MAT programmes has been suspended for the 1995-96 academic year pending finalization of provincial government education reforms.

Note: In order to be considered for entrance scholarships, applications for admission (from high school students) must be received by April 1.

Admission Requirements

Dalhousie University is an affirmative action and equal opportunity educational institution.

Please note: Not all courses listed in the calendar are offered each year. Contact the Registrar's Office for a timetable of available classes for each term.

Acceptable Classes

Please note that the following are acceptable classes; admission requirements for specific programmes are listed beginning on page 29.

Students from Nova Scotia high schools

Students wishing to study at Dalhousie should take at least five university preparatory classes designated as 44* or 54* or 12. Course distribution should be as follows:

- Category 1: English
- Category 2: At least two of Biology, Chemistry, French, German, Global History, History, Latin, Mathematics or Physics.
- Category 3: The remaining classes may be from those listed above or from Comparative Religion, Computer-Related Studies, Economics, Geography, Geology, Global Geography, Law, Modern World Problems, Music, Political Science, Sociology, Spanish, or Theatre.

Any special or experimental class must have been previously approved by Dalhousie if it is to be used as one of the credits needed for admission.

Special attention will be paid to grades in English and Mathematics. Students are expected to have an overall minimum average of 70%. Final grades in individual university preparatory classes, other than Math and English must be at least 60%. Final grades in Math and English must be at least 65%.

For admission requirements to specific programmes, please refer to the Basic Requirements listed on page 29. Please note: fulfillment of admissions requirements does not necessarily provide the prerequisite background for all first year classes. Please consult the class description section of this calendar for specific class requirements.

Students from outside Nova Scotia

Students are admitted from other provinces and countries with preparation as shown below. The distribution should be as for Nova Scotia.

Newfoundland and Labrador, New Brunswick, Prince Edward Island, Manitoba, Saskatchewan, Alberta and British Columbia: Grade 12.

Quebec: First year CEGEP with minimum 70% overall average, with no individual academic subject below 65%.

Ontario: Five O.A.C. or Grade 13 credits.

U.S.A: Strong B average in Grade 12; submission of SAT scores of 1100 or better.

The United Kingdom, West Indies, West Africa: General Certificate of Education (GCE) with "C" standing in at least five subjects, of which one must be English and at least two must be at the Advanced Level.

Hong Kong: GCE as for Great Britain, or University of Hong Kong Matriculation Certificate under same conditions as for GCE.

Bangladesh, India, Pakistan: Bachelor's degree with first or second-class standing from a recognized university; or in certain circumstances, first-class standing in the Intermediate examinations in Arts and Science, provided the candidate has passes at the university level in English, Mathematics, and a language other than English.

Regions not mentioned above: Write to the Registrar's Office, Dalhousie University, Halifax, N.S., B3H 4H6, for further information.

Note: This standing is not sufficient for admission to the sequential BEd programme at Dalhousie.

Mature students and others without usual admission requirements

If you are at least 23 years old and have been out of full-time high school study for at least four years and have not attended university, you may apply for the University Exploration Programme under the "mature student" category.

Dalhousie's Henson College provides a wide variety of services to mature and/or part-time students and welcomes the opportunity to discuss your special needs with you. It is advised that prospective students meet with an advisor well in advance of their intended registration as upgrading classes may be required. Contact Henson College at (902) 494-2526. If you apply as a mature student, you should enclose a letter indicating your activities since leaving high school and your reasons for expecting to successfully complete a university programme if you are admitted.

Transfer Students

Students wishing to apply for transfer credit should consult Academic Regulation 8 on page 86 of this calendar as well as any additional requirements that may be listed herein under the appropriate degree heading. Certified copies of original documents or relevant sections of

28 Admission Requirements

documents (e.g., calendar pages) are acceptable in lieu of originals. Certificates in languages other than English or French must be accompanied by certified translation into English.

International and Exchange students attending Dalhousie as a Visiting Student

International students must meet the following requirements:

- (a) Good academic and financial standing at the home institution.
- (b) Have written academic approval from the appropriate department head, Dean or designate (e.g., Registrar) to undertake course work at Dalhousie (letter of permission).
- (c) Have the required student visa to study in Canada
- (d) Provide official proof of English language proficiency if the first language is not English. A score of 580 on the Test of English as a Foreign Language (TOEFL) or 90 on the Michigan English Language Assessment Battery (MELAB) is required. See section on English Language Tests below.
- (e) Provide proof of adequate health insurance for the duration of the stay in Canada.

Students studying for less than one full academic year are not able to take full-year "R" courses. (See Definitions and Course Codes, page 3)

Marks for completed coursework will be forwarded to the universities within Atlantic Canada following each academic session. Students attending from institutions outside Atlantic Canada must request that an official transcript be sent from the Registrar's Office.

Application submissions

It is the responsibility of each applicant to ensure that the application file is complete. The following must be submitted by each applicant to the Office of the Registrar:

- (a) a completed application form; forms not properly completed will delay processing.
- (b) the appropriate application fee for the programme (refer to Application for Admission form).
- (c) an official record of high school work,
- (d) an official academic transcript from all previous post-secondary institutions (if applicable).
- (e) evidence of competency in English for applicants whose native language is not English (see below).
- (f) supplementary information as required for specific programmes, and
- (g) mature applicants should also enclose a letter as indicated in the preceding section.

Documents, once submitted, become the property of Dalhousie University and cannot be returned.

January Admissions

Admission is normally for classes beginning in September. Except in special circumstances the university does not admit full-time, first-year students in January because the number of "B" term classes available is very limited at the introductory level. Part-time students and transfer students, however, may be admitted for classes beginning in January. The application deadline for January admission is November 15.

Response to applications

Dalhousie will respond to your application as promptly as possible and will advise you of any documentation still required.

When documentation is complete, applications are forwarded to the appropriate admissions committee. Although every effort is made to obtain decisions quickly, there will be some delay at times, particularly with programmes where competition for places is keen.

As soon as decisions are made, whether admission, deferral or rejection, applicants will be advised.

Please note that admission to many programmes is limited. Therefore, possession of minimum requirements does not guarantee admission.

Early acceptance

Applicants currently attending high school, who have good records, i.e., a strong B average, may be given early acceptance, conditional on satisfactory completion of work for which they are currently enrolled.

Final acceptance

Applicants must successfully complete high school classes in the required subjects with a minimum B average. Admission will then be offered in Bachelor of Arts, Bachelor of Science, or Bachelor of Commerce programmes provided there is space.

English Language Tests

Dalhousie accepts minimum TOEFL results of 580 and minimum MELAB results of 90. Information may be obtained by writing to the English Language Institute, Testing and Certification Service, Ann Arbor, Michigan 48104, USA OR TOEFL Box 899, Princeton, New Jersey 08540, USA.

International Baccalaureate and Advanced Placement classes

If you are taking any of these classes, you may qualify for advanced standing. Contact the Registrar's Office for specific information.

Basic Admission Requirements

Faculty of Arts and Social Sciences

Bachelor of Arts

- minimum of 65% in Grade 12 English
- distribution as outlined under Acceptable Classes section above.
- In addition to classes listed in category three, the following university preparatory class will be accepted: Business Organization and Management

Bachelor of Music and Bachelor of Music Education

Students wishing to enrol in a degree programme offered by the Department of Music must fulfil the following admission requirements:

- satisfy the requirements for admission to the Faculty of Arts and Social Sciences
- demonstrate their proficiency as instrumental or vocal performers in an audition-interview
- demonstrate knowledge of the basic rudiments of music theory (equivalent to Grade II Theory, Royal Conservatory of Music in Toronto) and aural dictation: each is assessed through written diagnostic tests as part of the audition-interview.
- submit the supplementary application form for the Department of Music. It is recommended that students apply early for purposes of admission, audition, and music scholarship consideration. Audition dates are listed with the supplementary application form. All audition procedures should be completed no later than June 30.

Applicants who, in the estimation of the Auditioning Committee, show considerable musical talent but are in need of more emphasis on preparatory skills will be required to take some foundational classes. Applicants with severe background deficiencies will be advised to seek further preparation through private instruction before reapplying.

Students wishing to transfer from another institution into the second or third year of their chosen Music programme must take validation examinations in history, theory, aural and keyboard skills, and their applied major instrument before transfer of credits can be considered. Failure to pass an examination will necessitate enrolment in the appropriate first or second year class. Validation examinations must be written at the same time as the audition-interview. Transfer applications are subject to the June 30 deadline as stated above.

Note: All students entering the first and second years of Music Studies are required to register in the Bachelor of Music programme. Upon successful completion of the two-year core

curriculum, students may either proceed to the third year of BMus or apply to the BMusEd or BMusEd/BED programmes.

Certificate in Costume Studies (2 years), Diploma in Costume Studies (3 years)

- minimum of 65% in Grade 12 English
- distribution as outlined under Acceptable Classes on page 27.
- Applicants are asked to submit a brief letter outlining their interest in the programme and their background in sewing, costume study/design and/or the theatre.

Faculty of Science

Bachelor of Science and Bachelor of Science Co-op

- minimum of 65% in English and Mathematics 441 or equivalent
- distribution as outlined under Acceptable Classes on page 27.
- It is recommended that students interested in Science programmes take two science subjects in addition to pre-calculus math and English.
- programme may be combined with a Diploma in Engineering

Diploma in Engineering

- Grade 12 Chemistry and Physics (60% minimum)
- minimum of 65% in English and Mathematics 441 or equivalent
- distribution as outlined under Acceptable Classes above.
- programme may be combined with a major in an Arts or Science subject (BA or BSc degree)

Diploma in Meteorology

Please note: Admission to the Diploma in Meteorology has been suspended for the 1995-96 academic year. Please contact the Registrar's Office for further details concerning applications for 1996-97.

BSc with major in Physics or other appropriate subject is required; strong background in Mathematics and Physics is necessary, and classes taken should also include Statistics and Computing Science. Specific recommended classes for admission to the Diploma in Meteorology include:

- PHYC 1100.06, 2000.03, 2005.03, 2010.03, 2015.03, 3160.03/3170.03;
- MATH 1000.03/1010.03, 2000.06, 2030.03/2040.03, 2070.03/2080.03, 3110.03/3120.03; and
- COMP 1400.03/1410.03.

School of Education

Please note: Admission to the BEEd programme has been suspended for the 1995-96 academic year. Please contact the Registrar's Office concerning application for the 1996-97 academic year or for information concerning any programme that is combined with a BEEd.

30 Admission Requirements

Bachelor of Education (sequential)

Along with the regular undergraduate application, applicants must submit:

- supplementary application form for the Department of Education
- two reference forms: one academic and one professional

After initial consideration of the applications by the Admissions Committee, interviews are arranged with promising candidates.

Final selection is based on:

1. **Academic record:** Applicants must have a BA or BSc by September in the year of application. As space in the programme is limited, applicants presenting a 3 year BA or BSc degree may not be competitive. Successful candidates often have breadth of academic preparation as represented by a 4 year degree, an honours degree or some type of further study. Candidates with other bachelor degrees should contact the Secretary of the BEd Programme.
 - Candidates for the BEd secondary programme normally should have a minimum of a "B" average in their major subject, comprising at least five full credit classes (four beyond the 1000-level). This major should be in a "teachable" subject, i.e. English, Drama, Mathematics, Science, French, Social Studies, or Music. Psychology and Sociology are not teachable subjects.
 - Individual methods/field experience professors may have more specific requirements for admission. For example, candidates for French and Music must pass an audition/interview in their area. Candidates should consult the Calendar (under Field Experience), the School of Education Programme Planning Guide or the relevant professor.
2. References;
3. Responses to questions on supplementary application form; and
4. Interview

BPE/BEd Integrated

BPE students may apply for admission to the School of Education at the end of their second year. Specific requirements include:

- the completion of a minimum of one full credit above the 1000-level in the teachable subject with minimum of a "B" average obtained,
 - an overall "B" average in Arts and Science courses, and
 - a "C" or better average in FHSE/KINE classes.
- recommendation of the School of Recreation, Physical and Health Education

Secondary level students must complete four full credits in their teachable subject before they may take the methods course. Students in the elementary track must complete a minimum of five full classes from English, History,

Mathematics and the Sciences. It is recommended that courses be selected from each area.

BMusEd/BEd Integrated

- two years of BMus at Dalhousie with at least a "B" average

Faculty of Management

Bachelor of Commerce Co-op

- minimum of 65% in English and Mathematics 441 or 442 or equivalent
- in addition to courses listed in category three, one of the following university preparatory courses will be accepted:
 - Accounting
 - Business Organization and Management
- Transfer admission to the Bachelor of Commerce Co-op will not be allowed after second year.
- The work term requirements of the Bachelor of Commerce Co-op may involve placement problems for visa students. Subject to approval by the School, students may be permitted to arrange their own work term positions. Some visa students may prefer to select admission to the Bachelor of Arts or Bachelor of Science with a minor in Business programme or to a university which does not have a mandatory Bachelor of Commerce Co-operative Education programme.
- Please be advised that students who transfer into the BComm programme will be assessed a co-op transfer fee which consists of the co-op fee which would have been assessed in the first year of the programme. Please refer to the Fees section of this calendar for further details.

Certificate in Public Administration

The programme leading to the Certificate in Public Administration is available to persons who meet the undergraduate admission requirements of Dalhousie University and who are not enrolled in a programme leading to a first degree. Those not meeting the formal admission requirements may apply for admission under the "mature student" category. Prospective students should submit the following documentation to the Registrar's Office:

- application for admission
- application fee
- letter outlining work experience and other activities
- high school transcripts

Please note that an interview may be required.

Faculty of Health Professions

Some of the programmes in the Faculty of Health Professions have been established to meet the needs of the Maritime or Atlantic provinces. Admission of applicants outside the preferred region is either severely limited or, in the case of Physiotherapy not granted.

Deposit

Due to the large numbers of applicants to limited enrolment programmes in the Faculty of Health Professions, a non-refundable deposit of \$200.00 (applicable to tuition fees) is required from accepted students as proof of intent to register. The \$200.00 is payable within three weeks of notification of acceptance.

Note: This applies to all programmes within the Faculty of Health Professions, excluding the Bachelor of Recreation.

School of Nursing

Bachelor of Science (Nursing) - Basic

- Grade 12 English, Chemistry, Mathematics and Biology.
- A 70% overall average and 70% in the required subjects.
- Mature applicants require GED, Grade 12 Chemistry, and Grade 12 Mathematics.
- International applicants whose native language is not English will be required to pass either the TOEFL exam with a score of 580 or the MELAB exam with a score of 90 or successful completion of the pre-technology program at the Nova Scotia Community College - Institute of Technology.

Transfer Students:

Students transferring from other university programmes must have a minimum grade point average of 2.5.

Priority consideration will be given:

- first to permanent residents of Nova Scotia
- second to permanent residents of other Canadian provinces.
- third to all other applicants.

All students must be able to meet the demands of clinical practice.

Bachelor of Science (Nursing) - for Registered Nurses

The requirements for admission to the BScN for registered nurses are as for the BScN basic programme with these additional conditions:

- nurse registration as an active practising member in Nova Scotia or province/country of residence
- successful completion of RN examination or equivalent
- Mature applicants will be considered on an individual basis. Upgrading in certain required subjects, e.g. Chemistry, Mathematics, may be recommended.

Outpost and Community Health Nursing (Diploma)

- Nova Scotia Grade 12 or equivalent;
- Current registration in a province or territory in Canada or recognized equivalent;
- At least one year of work experience as a registered nurse and recent acute-care hospital experience is desirable;
- Demonstrated leadership potential

Admission preference is given to nurses currently employed by Medical Services Branch, Health and Welfare Canada or the government of the Northwest Territories. Other nurses are considered for admission if they agree to employment in a Canadian outpost setting upon completion of the programme. All applications must be approved by the Nursing Division, Medical Services Branch or the Northwest Territories' Government Education Leave Committee.

School of Occupational Therapy

Bachelor of Science (Occupational Therapy)

Application to the School of Occupational Therapy should be made during the academic year in which it is expected that prerequisites will be completed.

Students considering Occupational Therapy should consult with the School of Occupational Therapy before their first registration. In Arts and Science at Dalhousie University the required first-year classes are:

- PSYO 1000.06, 1010.06 or 1500.06
- SOSA 1000.06, 1050.06, 1100.06, or 1200.06
- one elective (writing class)
- two classes in different subject areas from: BIOL 1000.06, 1001.06; CHEM 1010.06, 1020.06, 1030.06, 1040.06, or PHYC 1100.06 or 1300.06
- Although not a requirement for admission, it is recommended that students complete STAT 1060.03 (or equivalent) prior to admission.

Students who complete the equivalent prescribed first-year programme at any recognized university will be given equal consideration for admission into the School of Occupational Therapy.

Since enrolment in the programme is limited, applicants should note that admission is on a competitive basis with preference given to residents of the Atlantic Provinces. The provincial quota system currently allocates 9 positions to New Brunswick, 8 positions to Newfoundland, 16 positions to Nova Scotia, and 2 positions to Prince Edward Island. Selection is based on completion of prerequisites, academic achievement and personal suitability for Occupational Therapy. Selection procedures may require an interview and personal evaluation.

A completed application for the School of Occupational Therapy consists of the required submissions, with the exception of an official record of high school work, listed in the Basic Requirements section on page 29 earlier in this section as well as:

- an autobiographical letter as described in the supplementary application material available from the Registrar's Office.
- a confidential assessment by a class professor (as described in the supplementary application materials) sent by the professor to the Registrar's Office.

32 Admission Requirements

College of Pharmacy

Bachelor of Science (Pharmacy)

Applicants to the College of Pharmacy must fulfil the requirements of a first year BSc student at Dalhousie University as outlined in the Degree Requirements section of this calendar. Equivalent subjects from other universities will be given equal status for purposes of determining admission.

Classes required for admission are the following Dalhousie classes:

- Chemistry 1010.06 or equivalent;
- Mathematics 1000.03 and 1010.03 or equivalent (one full year) Calculus;
- One of Physics 1000.06, 1100.06, 1300.06 or equivalent OR Biology 1000.06 or equivalent;
- One Humanities or Language;
- One Social Science

One of the above classes must be a writing class as described in the "Degree Requirements" section of this calendar. The same class/subject cannot be used to satisfy both the Humanities/Language and the Social Science requirement. Examples of Humanities/Language and Social Science classes are given in "Degree Requirements" section of this calendar.

Information regarding credit for advanced classes may be obtained from the Registrar's Office. Incomplete applications and applications submitted after the deadline indicated in the Final Dates for Admission section will not be considered.

Selection Criteria:

The selection criteria used by the Admissions Committee include:

- place of residence,
- academic performance,
- scores on the Pharmacy College Admissions Test (PCAT), and
- interviews

A maximum of 60 admission points is assigned to academic performance, 10 admission points to PCAT, and 30 admission points to interviews. The top 66 applicants constitute the first year class and the next 12 applicants are placed on the waiting list.

Place of Residence:

Because this is the only College of Pharmacy for the Maritimes, preference is given to Maritime applicants. Attendance at a Maritime university does not, by itself, constitute having established residence in the Maritime provinces.

Applicants are considered to be from the Maritimes if:

- the principal residence of the applicant's parent(s) or guardian is located in the Maritime provinces, or
- the applicant (or spouse) has been employed full-time in the Maritime provinces for the preceding 12 consecutive months.

Applicants whose parent(s), guardian or spouse do not meet the residency requirements as a direct result of a recent employment transfer either into or out of the Maritime provinces would not necessarily be expected to conform to the above guidelines.

Exceptions to the above guidelines will be considered on an individual basis. Residency will be determined for each applicant on February 1st of the year for which admission is being sought.

No more than three students from outside the Maritimes are accepted into the first year class each year.

Academic Performance:

Academic grades of applicants and/or the university classes chosen form the basis of the evaluation of academic performance. Applicants should note that admission is on a competitive basis so that the ability to obtain consistently better than average grades would definitely be an asset for the applicant. An academic record containing failures or poor grades makes the prospect of admission very unlikely.

Pharmacy College Admission Test:

Applicants must write the Pharmacy College Admission Test (PCAT). Information on test dates, testing centres and test format may be obtained from the Registrar's Office or by writing to PCAT, Psychological Corporation, 555 Academic Court, San Antonio, Texas 78204. Applicants are required to write the test no later than the February sitting in the year prior to which the applicant is seeking admission (e.g. February 1995 for admission September 1995).

Interviews:

Only those applicants who have obtained a high level of academic performance are invited for an interview.

In the interview, the following non-academic criteria are assessed.

- Motivation;
- Ability to Relate to Others;
- Self-Appraisal;
- Maturity; and
- Professional Attitude.

Notification:

Applicants will be informed of the status of their applications no later than late July. Those applicants who are put on the waiting list may expect to hear about acceptance as late as two weeks into the start of the academic term.

Deposit Fee:

In addition to the deposit requirement outlined on page 31, the following guidelines have been established for the College of Pharmacy: if the deposit is not received, the place will be offered to another applicant without any further notice. Students who have paid their deposits but who have not appeared at

the College by the third day of classes will be considered to have withdrawn from the College unless they have written permission from the Admissions Committee.

Special Cases:

In exceptional circumstances, special consideration may be given by the Admissions Committee to applicants who do not meet all the admission requirements.

School of Physiotherapy

Affirmative Action Policy

The School has an affirmative action policy to increase the number of qualified physiotherapists who belong to the Black, Mi'kmaq or Inuit groups of the Atlantic region.

Bachelor of Science (Physiotherapy)

The minimum academic requirement for entry into the first professional year of the BSc (Physiotherapy) programme is successful completion of first year in Arts and Science at Dalhousie University or the equivalent at another University (see Academic Requirements). Students studying at universities other than Dalhousie are requested to ensure that the prerequisite classes they are taking are equivalent to the classes listed below by contacting the Registrar's Office.

- One credit from Chemistry or Biology. Acceptable classes are: CHEM 1010.06, 1020.06, 1030.06, 1040.06; BIOL 1000.06 or 1001.06.
- One credit in Physics. Acceptable classes are: PHYC 1100.06 or 1300.06
- One credit from Psychology or Sociology and Social Anthropology. Acceptable Dalhousie University classes are PSYO 1000.06 or 1010.06 or 1500.06; SOSA 1000.06 or 1050.06 or 1100.06 or 1200.06.
- One-half (½) credit introductory Statistics.
- The equivalent of 1½ credits in Arts or Science electives. (One credit must fulfil a writing requirement, see list in Degree Requirements section of this calendar)
- CPR (Cardiopulmonary Resuscitation) Certification must be completed by the end of Year 2.
- A limited number of places may be made available for students who already possess a graduate degree in a discipline considered by the Admissions Committee to be relevant to Physiotherapy and whose course work may not include the prerequisite courses as described above. Such candidates are evaluated on an individual basis.
- The Admissions Committee will determine each year which applicants will be interviewed. A limited number of interviews will be conducted.
- All applicants must sign a declaration regarding their physical and emotional suitability to undertake Physiotherapy.

Since the demand for admission exceeds the number of places available, candidates are judged on a competitive basis. The decision of the Admissions Committee is final.

Quota System:

The School of Physiotherapy at Dalhousie University is the only School serving Atlantic Canada. Due to the shortage of physiotherapists in the Atlantic provinces, a provincial quota system has been implemented. The provincial quota system means that a specified number of places which are determined annually will be allocated to each Atlantic province.

Residency must be established by March 1 in the year for which application is being sought.

Transfer Students:

- Students who wish to transfer to the School of Physiotherapy from another University programme in Physiotherapy must submit a written request for transfer to the Chair of the Admissions Committee of the School of Physiotherapy and enclose official transcripts from all colleges and universities attended as well as the calendar descriptions of all courses taken. Such requests are assessed on an individual basis. Admission is subject to the availability of a place. In order to obtain the BSc (Physiotherapy) degree from Dalhousie University, any transfer student admitted into the School must conform with Faculty Regulations.
- Students with previous elective academic work seeking exemption from classes are assessed on an individual basis. Prospective candidates are strongly advised not to include classes of similar description and content as those offered in the second, third, and fourth (professional) years.

School of Recreation, Physical, and Health Education

Bachelor of Physical Education

In addition to the distribution as outlined under Acceptable Classes above, admission from high school requires an average of 70% or better in five grade XII subjects including:

- English 441
- a minimum of two of Biology, Chemistry, Mathematics and Physics
- Students applying to the BPE/BEd programme and selecting the secondary track must have the appropriate Grade XII credit in their second teachable subject.

Note: Mathematics 441 is a required prerequisite for many classes in Mathematics, Science and Computing Science at Dalhousie University.

The remaining classes may be from those listed above or from the classes listed in Category 3 at the beginning of this section. In addition, a senior class in Physical Education may be considered for admission to the BPE/BEd programme.

34 Admission Requirements

Admission with Advanced Standing:

Students may be admitted to the undergraduate programme with advanced standing if they have completed Arts and Science classes at Dalhousie or at a recognized university.

BPE/BEEd (Integrated) See note on page 29.

- Students are reminded that this is a limited enrolment programme.
- Students may apply to this programme at the end of their second year. For consideration, students must have met the BEEd admission requirements, plus have completed the first two years in Physical Education. In particular, PHSE 1195.03 and PHSE 2295.03 must have been completed, as well as the Arts, Social Science and Science electives listed in the first two years. Applications must be submitted to the Co-ordinator of the Field Experience Program in Physical Education by the end of February of the second year for consideration that Spring. Please refer to the BEEd section for specific requirements.
- **Advanced Standing:** Students who have completed the three year Associate degree at the Nova Scotia Teachers' College, Truro, may be admitted with advanced standing, provided they satisfy the usual admission requirements for the Bachelor's Degrees in Physical Education and Education at Dalhousie. The decision on granting credit depends on whether an acceptable level of accomplishment has already been demonstrated in a comparable class.

Bachelor of Recreation

The minimum requirement for entry into the Bachelor of Recreation programme is:

- successful completion of one year of university with a grade point average of 2.3 or higher

High school students or new students wishing to pursue a career in the field of recreation administration should apply for admission into either the Faculty of Arts and Social Sciences or the Faculty of Science. The following courses are recommended for the first year of study:

- Psychology 1000.06 or 1010.06 or 1500.06 or equivalent
- Sociology and Social Anthropology 1000.06 or 1200.06 or equivalent
- Political Science 1100.06 or Economics 1101.03/1102.03 or equivalent
- Any two electives
- Note that as per College of Arts and Science Degree Requirements one of the above courses should be designated a writing course (see "Degree Requirements").
- The Bachelor of Recreation programme will normally be completed in three years after entry into the programme. The programme

may be longer if the student has not completed the recommended prerequisite courses outlined above.

- Selection will be made as soon as the final grades are available. There will be a limit of 40 places.

The Leisure Studies Division has an affirmative action policy to increase the number of students who have a physical disability or who belong to the Acadian, Black and Native minority groups of the Maritime region.

Bachelor of Science (Health Education)

Applicants should have completed Nova Scotia Grade XII (or equivalent) with an average of 70% in five university preparatory subjects, including:

- English and
- Biology or Chemistry.

NOTE: Mathematics 441 is a pre-requisite for many classes in Mathematics, Science and Computing Science at Dalhousie.

Students already engaged in university programmes can transfer into the Health Education programme. Experienced persons in the workplace may be admitted as mature students. Inquiries about admission to this programme should be directed to the Head of the Health Education Division.

Admission Criteria

Thirty students will be selected yearly for the fall term from applicants who have the following minimum requirements:

1. completion of Nova Scotia Grade XII (or equivalent) with a minimum average of 70% in each of five university preparatory subjects, including English, and Biology or Chemistry; or
2. completion of some post-secondary course work with a minimum grade point average of 2.0 in a 4.3 system;
3. completion of a university degree; or
4. qualification as a mature student.

Applicants are asked to submit, along with their application, a letter to the Head of the Health Education Division indicating the applicant's interest in the BSc (Health Education) programme, any work (paid or volunteer) experience, any particular career aspirations, and any other information the applicant thinks may have a bearing on his/her suitability to this programme.

Applicants will be admitted during the winter term of each year and applicants will be informed promptly of the Division's decision about admission. Applications will not be considered after April 1st of each year.

Bachelor of Science (Kinesiology)

Generally admission from high school requires an average of 70% or better in five grade XII subjects including:

- English 441

- a minimum of two of Biology, Chemistry, Mathematics and Physics; (Note: Mathematics 441 is a pre-requisite for many classes in Mathematics, Science and Computing Science at Dalhousie).

Transfer Students:

In order to be admitted to the Kinesiology programme, students transferring from other university programmes are expected to have a minimum GPA of 2.90. The second year program for Kinesiology transfer students is outlined in the Kinesiology section of this calendar.

Maritime School of Social Work

Affirmative Action Policy

The Maritime School of Social Work has an affirmative action policy for applicants from the region's First Nations, indigenous Black and Acadian communities, and disabled persons. The School actively encourages members of the above groups who have five full credits of undergraduate study to apply. Our goal is to admit and graduate the highest possible number of students who are First Nations, Indigenous Black and Acadian, and disabled.

Bachelor of Social Work

To be eligible for admission to the BSW programme, all candidates must meet the following minimum requirements:

- to have at least 5 full credits of general undergraduate study at a recognized university or equivalent institution of higher learning, for which the credits are appropriate for an academic background in Social Work;
- to have a cumulative GPA of 2.70 or an academic average of at least B- or 65%;
- to show evidence of personal maturity and suitability for Social Work.

The first five university credits may be taken in any subject area other than that of Social Work. Preferred classes include:

- Writing class (preferably English) - 1 credit
- Introductory Sociology - 1 credit
- Introductory Psychology - 1 credit
- Introductory Political Science, Women's Studies, Economics, History or other Social Science - 1 credit
- Elective - 1 credit

Due to competition high school and other students entering university for the first time should prepare to complete an initial degree prior to applying for the BSW programme. All potential applicants are strongly encouraged to obtain at least 4.5 additional Social Science credits prior to applying for BSW admission. They may be taken in the second and third years of the BA programme.

The BSW degree requires completion of ten credits in two additional years of study following the first undergraduate degree that provides suitable preparation for Social Work (completed at the minimum required cumulative

average). Other students require from 10.5 to 15 credits, as determined by their academic status on entry. Equal consideration is given to applications for full-time and part-time study.

Admission of University Students

Social Work is a limited enrolment programme. Acceptance for professional training requires a well-developed background, as expressed in above average academic achievement, as well as volunteer and/or paid work experience. Summer or part-time jobs in the social or human services are definite assets, as well as voluntary activities in which there is direct personal contact, preferably with on-the-job training and supervision. Because of the highly competitive nature of admissions, potential applicants are reminded to keep alternate academic career choices open.

Applicants with Related Work and Volunteer Experience

Applicants with two or more years of experience in Social Work and related fields are considered on a combined basis of academic performance and demonstrated ability for Social Work practice.

Completion of at least the five general university credits, with the prerequisite B-average or better, is expected prior to the application deadline date. Demonstrated ability for Social Work includes the nature and length of current or previous employment in social or related human services, and a positive work reference. Other experience in community services may also be considered. Places are offered only to the most qualified candidates with related work experience.

Application Procedure

Applications for admission are assessed once a year. Candidates are considered in relation to others with similar types of academic, work and volunteer experience who apply in the same year. Interviews are not normally required.

In the case of credits currently in progress, decisions are made on the basis of interim grades; acceptances are conditional on receipt of final transcripts.

Dentistry, Law, Medicine, and Graduate Studies

For information concerning admission into these faculties, consult the appropriate calendar, or contact the appropriate faculty office directly.

Fees

Student Accounts Office

The Student Accounts Office is located on the basement level of the Arts & Administration building.

Address: Dalhousie University, Student Accounts (Financial Services), Room 29 Arts & Administration Building, Halifax, Nova Scotia, B3H 4H6

Telephone: (902) 494-3998

Fax: (902) 494-1534

Electronic Mail: Student.Accounts@Dal.Ca

Office Hours: 10:00 - 4:30 Monday to Friday (or by appointment)

NOTE: All the regulations in this section may not apply to Graduate Students. Please refer to the "Faculty of Graduate Studies" section of the Graduate Studies Calendar.

This section of the Calendar outlines the University Regulations on academic fees for both full-time and part-time students enrolled in programmes of study during the fall, winter and regular sessions. A section on University residence and housing fees is also included. Students wishing to register for the Spring or Summer session should consult the Summer School Calendar for information on registration dates and fees. Should you have any questions regarding these regulations or on the payment of fees generally, please contact the Student Accounts Office.

All fees are subject to change by approval of the Board of Governors of Dalhousie University. An Academic Fee Schedule will be available in April. A list of miscellaneous fees is included in Table I.

Students should make special note of the registration deadlines contained in the calendar on pages 1 & 2. Students should also be aware that additional fees and/or interest will be charged when deadlines for payment of fees as contained herein are not met.

Mail Registration

For the convenience of students, registration material and non-cash payments are accepted by mail. Registrations with cheques post-dated to September 8, 1995 will also be accepted. Please allow sufficient time to ensure that material sent by mail is received on or before the specified dates. Please note that after August 25th we are unable to retrieve post-dated cheques.

General Regulations

The following general regulations are applicable to all payments made to the University in respect of fees.

- Fees must be made in Canadian funds by cash, negotiable cheque, or money order.

- If payment is by cheque and returned by the bank as non-negotiable, there will be an additional fee of \$20.00 and the account will be considered unpaid. Furthermore, if the bank returns a cheque that was to cover the first payment of tuition, the student's registration will be cancelled and, if permitted to re-register, a late fee will apply.
- Invoices for fees will not be issued. The receipt obtained from Student Accounts each time a payment is made will show the date and amount of the payment.
- Cash, certified cheque, or money order is required for payment of any account in arrears beyond the current academic year.

Admission Deposit

A non-refundable deposit of \$200 is required by all new students in Specified Limited Enrolment Programmes within three weeks of receiving an offer of a place at Dalhousie. (Please refer to Table II for the definition of Specified Limited Enrolment Programmes.) Further information on the regulations governing the refund of admission deposits is contained in the section below on Changes, Refunds and Withdrawals (page 38).

Foreign Students

Students registering at Dalhousie University who are not Canadian citizens or permanent residents are required to pay an additional fee of \$2,700 referred to as a "Differential Fee". Students registering in their current programme which commenced prior to 1994-95 Academic year will pay \$1,700. There is a proportionate charge for part-time foreign students. The differential fee is payable with the first instalment of fees each year.

Academic Fees

Academic fees are comprised of:

- (a) the tuition fee;
- (b) an incidental fee comprised of Student Union, Society and Athletic fees.
- (c) auxiliary fee (specified Music and/or Theatre classes and Graduate Studies programmes in management studies).
- (d) co-op fee if applicable.

The complete 1995-96 academic fee schedule is not yet available. The Academic Fee Schedule shows the 1995-96 approved tuition and athletic fees, and the 1994-95 Student Union and Society fees. Once all fees are approved for 1995-96 the complete fee schedule will be made available. The official schedule will be included in the registration package.

For purposes of this section of the Calendar, a full-time undergraduate student is one who is registered for the regular session for more than three full credits (21 credit hours or more), or, if registered for only one term, for more than three one-half credits.

Changes from full-time to part-time and part-time to full-time status often have cost implications beyond what the student expects (see table VI). Any part-time student planning to add classes, or full-time students who are considering part-time status (dropping classes) should consult with Student Accounts to determine the impact these changes will have on the fees assessed.

Students registered in more than one programme are required to pay separate academic fees for each programme. Full-time students taking classes not credited towards their degree or programme will be required to pay additional fees for these classes.

Registration

The final step in registration is the payment of fees. A student is considered registered only after financial arrangements have been made with Student Accounts.

All students:

- a) must submit to the Student Accounts Office on or before the specified registration dates the first instalment of academic fees unless they are receiving a scholarship, fellowship, Canada Student Loan, a fee waiver, or their fees are paid by external organizations;
- b) those holding external scholarships or awards paid by or through Dalhousie University must provide at registration documentary evidence of the scholarship or award;
- c) those whose fees are to be paid by a government or other agency must provide a signed statement from the organization at registration. (Please note: upon request, account status information will be made available to the sponsor.)
- d) those whose fees are to be paid by Canada Student Loan must indicate such on the appropriate section of the registration form. (Please note: Students registering by Canada Student Loan must negotiate the Loan or provide the letter of declination issued by Student Aid by September 25. A late registration fee and/or interest will be charged after September 25. Failure to comply or arrange an alternative method of payment may result in deregistration).
- e) those whose fees are paid by a Dalhousie University staff tuition fee waiver must present the approved waiver form and pay applicable incidental fees at time of registration.
- f) those who are Canadian citizens or permanent residents, 65 years of age or over and enrolled in an undergraduate degree programme will have their tuition fees waived but must pay applicable incidental fees.

The completion of the registration process shall be deemed to be an agreement by the student for the payment of the balance of fees unless written notification to withdraw is submitted to the Office of the Registrar. Students withdrawing in person must attend the Office of the Registrar and the Student Accounts Office before the withdrawal process is official. Students in Graduate and Professional programmes wishing to withdraw should initiate formal action to withdraw at the office of the appropriate Dean.

Payment of Academic Fees

The complete 1995-96 academic fee schedule is not yet available. The Academic Fee Schedule shows the 1995-96 approved tuition, auxiliary, co-op and athletic fees, and the 1994-95 Student Union and Society fees. Once all fees are approved for 1995-96 the complete fee schedule will be made available. The official schedule will be included in the registration package.

The payment of academic fees will be received at the Student Accounts Office located on the basement level of the Arts & Administration building.

Fees paid by mail must be received by Student Accounts on or before the deadlines specified below in order to avoid late payment and/or delinquency charges.

The following regulations apply to the payment of academic fees. For further information on regulations regarding withdrawal of registration, please refer to the Changes, Refunds and Withdrawals section. (page 38)

- a) Should students prefer to pay in two instalments, the first instalment is due on or before September 8 and the second instalment is due January 31, or the first subsequent working day.
- b) Students registering for either the fall or winter terms only must pay fees on or before September 8 and January 15, respectively.
- c) Scholarships or awards paid by or through Dalhousie University will be applied to tuition and residence fees.
- d) When Canada Student Loan, Provincial Loan or co-payable bursary is presented at the Student Accounts Office, any unpaid academic, residence fees and/or Temporary Loans will be deducted.
- e) Fees cannot be deducted from salaries paid to students who are employed at Dalhousie University.
- f) Subsequent to August 25, 1995 we are unable to retrieve post-dated cheques.
- g) Any payments received will first be applied to overdue accounts.

Audit Classes

Full-time students may audit classes which are related to their programmes without additional fees. Part-time students auditing a

class pay one-half of the regular tuition. In such cases, the student is required to complete the usual registration process.

A student registered to audit a class and during the session wishes to change to registration for credit must receive approval from the Registrar and pay the difference in class fees plus a transfer fee of \$25.00. This must be done on or before the last day for withdrawal without academic penalty. The same deadline applies for a change from credit to audit.

Late Registration

Students are expected to register on or before the specified registration dates. Students wishing to register after these dates must receive the approval of the Registrar and pay a late registration fee of \$50.00. This fee is payable at the time of registration and will be in addition to the first instalment of fees.

Changes, Refunds and Withdrawals

Please consult Student Accounts for all financial charges and the Office of the Registrar for academic regulations. Refer also to the Academic Fees section (Table III, IV and VI.)

A refund of fees will not be granted unless the following conditions are met:

NON-ATTENDANCE AT CLASSES DOES NOT CONSTITUTE WITHDRAWAL.

- a) Written notification of withdrawal must be submitted to the Office of the Registrar.
- b) After the approval of the Registrar has been obtained, (in the case of graduate and professional school, the appropriate Dean) application for a refund or adjustment of fees should be requested from the Student Accounts Office immediately. For students withdrawing in person, the withdrawal process is official on the date that application for withdrawal is made at the Student Accounts Office. Therefore, the calculation of the refundable portion of fees will be based on this date. (Retroactive withdrawals will not be permitted.)
- c) No refunds will be made for 30 days when payment has been made by personal cheque.
- d) A student who is dismissed from the University for any reason will not be entitled to a refund of fees.
- e) Refunds will not be made to a student who has paid an admission deposit for a Specified Limited Enrolment Programme.
- f) In any Specified Limited Enrolment Programme (See Table II and IV), the first instalment of fees is not refundable after the first day of classes except on compassionate grounds (eg. illness).
- g) Refunds will be made to the Bank if a student has received a Canada or Provincial Student Loan.
- h) Refunds will be prorated on fees paid by Scholarships and/or Fee Waiver.

- i) A valid Dalhousie University ID must be presented in order for the student to receive a refund cheque.

Dates for Refund - Regular Session

A student withdrawing or changing a class after September 25 will be charged full incidental fees and may receive a refund of tuition fees on a proportional basis. Please refer to Tables III and IV.

A student withdrawing or changing a class in January will be charged the full first instalment of fees.

A student changing from full-time to part-time status before February 1, must have the approval of the Registrar and will then be eligible for an adjustment in tuition fees for the remainder of the session.

- No refunds will be made to students withdrawing or changing classes after January 31.

Dates for Refund - First Term

A student withdrawing or changing a class after September 25 will be charged full incidental fees and may receive a refund of tuition fees on a proportional basis. Please refer to Tables III and IV.

- No refunds will be made to students withdrawing or changing classes after October 23.

Dates for Refund - Second Term

A student withdrawing or changing a class after January 15 will be charged full incidental fees and may receive a refund of tuition fees on a proportional basis. Please refer to Tables III and IV.

- No refunds will be made to students withdrawing or changing classes after February 12.

Dates for Refund - Commerce Co-op Summer session

A student withdrawing after May 15 will be charged the BComm Co-op fee and may receive a refund of tuition on a proportional basis. Please contact Student Accounts for complete details.

- No refunds will be made to students withdrawing after June 19.

Delinquent Accounts

Accounts are considered delinquent when the balance of fees has not been paid by September 25 (January 15 for students registered for the winter term only). Where payment in two instalments is permitted, the remaining balance is due January 31 or the first subsequent working day.

Interest at a monthly rate set by the University will be charged on delinquent accounts for the number of days overdue.

At the time of printing the monthly rate of interest is 0.85% (10.25% per annum).

A student whose account is delinquent for more than 30 days will be denied University privileges including access to transcripts and records of attendance. The student will be reinstated upon payment of the fees outstanding, the arrears interest and a \$50.00 reinstatement fee. Students will not be permitted to register for another session until all outstanding accounts are paid in full. Subsequently, if the bank returns the cheque, the student may be deregistered.

Students whose accounts are delinquent on March 15 may not be eligible, at the sole discretion of the University, for graduation at the May convocation. For October graduation the date is September 1.

Accounts which become seriously delinquent may be placed on collection or further legal action may be taken against the individual. Students will be responsible for charges incurred as a result of such action.

Canada Student Loans

Students planning to pay the first instalment of fees from a Canada Student Loan should apply to their Province in April or May so that funds will be available in time for registration. The University will deduct fees/charges from the loan at the time of endorsement. Please contact the appropriate provincial office to determine eligibility as well as course load requirements. A late fee of \$50.00 will apply if the loan is negotiated after September 25, 1995.

Provincial Bursaries and University Scholarships

These cheques are distributed by the Student Accounts Office. Any unpaid Fees and/or Temporary Loans along with charges, if applicable, are deducted and a University cheque will be issued within one week of endorsement for any balance remaining. A valid Dalhousie University ID and Social Insurance Number must be presented in order to receive these cheques. Please contact the appropriate provincial office to determine eligibility as well as course requirements for Provincial Bursaries. For more information on Student Loans, Bursaries or Scholarships inquiries should be directed to the Awards Office located on the first floor of the Arts & Administration building, Room 125. Telephone (902) 494-2416.

Income Tax Credit from Academic Fees

The amount of academic fees constituting an income tax credit is determined by Revenue Canada, Taxation. Currently, the tax credit for students is calculated by deducting the following from Academic Fees: Student Union fees, Society

fees, and Athletic fee. Seventeen percent (17%) of the remaining balance constitutes the tax credit.

A special income tax certificate will be available at Student Accounts annually no later than February 28. Replacement tax receipts or photocopies will be provided within 2 weeks of the request for a charge of \$5.00 per receipt. On request, a replacement tax receipt will be provided within 2 days for a charge of \$10.00 per receipt.

Identification Cards

All full and part-time students should obtain identification cards upon registration and payment of proper fees. If a card is lost, a fee of \$15.00 is charged. Regular academic year ID cards remain valid until the beginning of the following academic year (including summer session).

Laboratory Deposits

A deposit for the use of laboratory facilities in certain departments is required. The deposit is determined and collected by these departments. Students will be charged for careless or wilful damage regardless of whether or not a deposit is required.

Athletic Fee

Membership in Dalplex for 1995-96 is included in the athletic fee for all full-time students at Dalhousie and all part-time students at Dalhousie taking a minimum of three full credit classes. Membership in Dalplex for ALL other part-time students at Dalhousie may be obtained at the office of Dalplex at the prevailing rates.

Student Union Fee Distribution

Every student registered at Dalhousie is automatically a member of the Student Union and is therefore required to pay a Student Union fee as part of their registration procedure. These fees have been approved by students in referenda and, along with other revenue of the Union, are allocated each year by the Student Council in a budget.

What follows is the breakdown of how Student Union fees are spent. If you have any questions or comments please contact the Student Union Office located in Room 222 of the S.U.B. Telephone No. 494-2146

See Fee Distribution details on page 40.

After Feb 12th	0%	0%	0%	0%	0%	0%	0%

- ¹ Applicable to undergraduate students registered in regular session (Sept - Apr) taking more than three credits (21 credit hours or more).
- ² Undergraduate students registered in one term only taking more than three one-half credit classes (more than 9 credit hours). Graduate students registered as "Thesis Only" for one term.
- ³ Applicable to undergraduate students registered in regular session (Sept - Apr) taking less than three and one-half credit classes (less than 21 credit hours). Undergraduate students registered in one term only taking three one-half credit classes or less (9 credit hours or less).

Table IV

Fee Refunds - Specified Limited Enrolment Programmes

Admission Deposit: Non-refundable

Student Union Fee: Non-refundable after Sept. 26 (Second Term Jan 15)

Athletic Fee: Non-refundable after Sept. 26 (Second Term Jan 15)

Society Fee: Non-refundable after Sept. 26 (Second Term Jan 15)

Tuition Fee: As follows:

Withdrawal Date	Regular Session	First Term Only	Second Term Only
Up to August 18	100%	100%	100%
August 19 - September 11 . . .	95%	95%	100%
September 11 - December 14 . .	40%	0%	100%
December 14 - January 2	40%	0%	95%
January 3 - January 31	40%	0%	0%
After Jan. 31	0%	0%	0%

ACADEMIC FEES - 1995-96

The complete 1995-96 academic fee schedule is not yet available. In order to provide some indication of the fee requirements, the schedule below shows the 1995-96 approved tuition and athletic fee as well as 1994-95 incidental fees. Once all fees are approved for 1995-96, a complete schedule showing total academic fees and the minimum instalments will be made available. The official schedule will be included in the registration package.

Notes to Fee Schedule

- (1) Students taking three and one-half credit classes (21 credit hours or more) in regular session (Sept - Apr).
- (2) Nursing students will pay society fee only once per year.
- (3) One term only taking more than 3 classes (1/2 credits).
- (4) King's students may purchase Dalplex membership at an additional cost of \$82.00.
- (5) Undergraduate students taking less than three and one-half classes (less than 21 credit hours) or taking three one-half credit classes or less (9 credit hours or less) in one term only.
- (6) Students transferring into Co-op programme from another faculty pay a transfer fee of \$590.00. This payment is non-refundable.
- (7) #Comm and Science Co-op fees are non-refundable after September 25 (second term January 15).
- (8) Subject to approval by Board of Governors of University of King's College.

Foreign Students - Students registering at Dalhousie University who are not Canadian citizens or permanent residents are required to pay an additional \$2,700 fee referred to as a "Differential Fee". Students registering in their current programme which commenced prior to 1994-95 Academic year will pay \$1,700.00. There is a proportional charge for part-time foreign students. The differential fee is payable with the first instalment of fees each year. Graduate Students please see Section 4.5 of the Graduate Studies Calendar to determine the number of years a student is required to pay the differential fee.

Health Insurance - foreign students (1994-95 rates for information only)

Visa Students Single - \$ 550 Married - \$ 1,100

Postgraduate Medicine Single - \$ 732 Married - \$ 1,464

Audits - Students auditing a class pay one-half the regular tuition fee.

Changes, Refunds and Withdrawals - For all financial charges contact STUDENT ACCOUNTS, or please refer to Tables III & IV. Please note non-attendance at classes does not constitute withdrawal. Written notification of withdrawal is required. Refer also to Academic Fee section (page 42).

Table VI

Fee Adjustments (Class Changes)

Students contemplating a change in class activity should consider the financial implications as well as academic.

Please contact Student Accounts if you have any questions regarding changes, refunds or withdrawals.

Students changing to part-time² from full-time¹ after September 26 will be assessed the same percentage of full-time fees as students withdrawing from the University. Please refer to the refund schedule (Table III) to determine the percentage. Fees for classes remaining will be assessed according to part-time fees less the percentage used to calculate the portion owing for full-time fees.

Part-time students² dropping a class will be assessed the same percentage as part-time students² withdrawing from the University. Please refer to the refund schedule (Table III) to determine the cost of classes being dropped. Additions are assessed according to the fee schedule.

¹ Applicable to undergraduate students registered in regular session (Sept - Apr) taking more than three credits (21 credit hours or more). Applicable to graduate students with full-time status.

² Applicable to undergraduate students registered in regular session (Sept - Apr) taking less than three and one-half credit classes (less than 21 credit hours). Undergraduate students registered in one term only taking three one-half credit classes or less (9 credit hours or less).

44 Fees

Residence Fees

Please note the following are general statements. Given the diversity of residence facilities, available practices vary slightly from locale to locale.

Applications for accommodation in all residences are accepted on the understanding that the student will remain for the whole academic session.

When students who have chosen to live in residence and have secured a room withdraw from residence before the end of the school year, there are serious financial penalties. Written notice to withdraw is always required by the Residence Co-ordinator or Fenwick Facilities Coordinator. Complete information on withdrawal from residence is available from the Residence Co-ordinator or Fenwick Facilities Coordinator and is detailed in the residence lease agreement to be signed by all residence students. No refund will be made to any resident who is dismissed for misconduct. Discretionary power in exceptional circumstances remains with the Director of Housing and Conferences or designate. Residence Application Forms will not be distributed until the student has been accepted by the University for the coming session. To be considered for accommodation, a completed Residence Application Form and the \$125.00 residence application fee and deposit must be received. All residents, new and returning, who have accepted a room assignment, will be required to pay a second rent deposit of \$200.00 by June 30 to reconfirm the assigned space. Failure to make a second deposit by June 30 will result in automatic cancellation of room assignment. Once the \$200.00 deposit is paid it (along with the \$125.00) is not refundable; it is our guarantee of your intention to live in residence.

Deposits may be made by cheque, bank draft, or money order in Canadian funds and payable to Dalhousie University. No reservations will be held on post-dated or "NSF" cheques. Deposits cannot be deducted from scholarships, fellowships, or similar awards.

Payment of Residence Fees

Payment may be made in full at registration, or for an extra charge of \$10.00, in two instalments. Scholarships may be applied to residence charges only after tuition fees for the full session are paid. The first instalment must be paid in full by September 30. Interest at a monthly rate as set by the University will be charged on all accounts outstanding after September 30 and on any second instalment outstanding after January 31. At the time of printing the monthly rate of interest is 0.85% monthly (10.25% per annum). The student will not be permitted to register for another session until all accounts are paid in full. A student whose account is delinquent for more than 30 days will be denied university privileges

including access to transcripts and records of attendance and Dalplex. The student will be reinstated upon payment of the fees outstanding, the arrears interest, and a \$50.00 reinstatement fee.

For Howe Hall, Eliza Ritchie Hall, Shirreff Hall and the Residence Houses fees are paid at the Student Accounts Office. For Fenwick Place and Glengary Apartments and Co-ed Apartment Units fees are paid at Fenwick Place.

Students should make an appointment as soon as possible with the Associate Director of Residence Life, Fenwick Facilities Coordinator, or the Supervisor of Student Accounts if they are having financial difficulties.

Regulations and Additional Charges

The room and board session is defined as being from the Wednesday in September before classes begin in the College of Arts and Science to the last day of regularly-scheduled examinations in the College of Arts and Science in April. Please note that, except at Fenwick Place, students must vacate the residence twenty-four hours after their last exam and that residences are closed over the Christmas holidays.

No reduction in the board charge will be made for meals not taken, except that a rebate of \$200.00 per month may be considered in the case of illness or other cause necessitating absence of four weeks or more.

In Fenwick Place the rental period is based on a 34-week period beginning on Labour Day. For more specific details on dates of semesters, students should contact the accommodations office at Fenwick Place.

In all other cases, an additional fee is payable by all residents who are registered in a Faculty where the academic session commences before or continues after the session of the College of Arts and Science. Special arrangements are to be made with the Residence Co-ordinator or Manager for accommodation for periods prior to or following the session as defined above.

RESIDENCE ROOM AND BOARD RATES 1994/1995 (1)

The residence term for Howe Hall, Shirreff Hall, Eliza Ritchie Hall, Glengary Apartments and the Residence Houses cover the time period from the Wednesday in September before classes begin in the College of Arts and Science to the last day of regularly-scheduled examinations in the College of Arts and Science in April (Christmas vacation excluded).

The residence term for Fenwick Place is as follows: First semester - Labour Day to December 31, 1994; and second semester - January 1, 1995, to April 30, 1995.

Note: Those students wishing to stay beyond the residence term may do so for a daily or weekly rate. Please contact the appropriate residence for details.

The student has two alternatives for payment after the first and second deposit have been paid:

- 1) Pay the balance in full by September 30th.
- 2) Pay the balance in two equal parts, first half by September 30th and the second half by January 31st, plus a \$10 service charge.

	FIRST DEPOSIT AND APP. FEE(3)	SECOND DEPOSIT AT JULY 15 (6)	BALANCE IF PAID IN FULL BY SEPT. 30	OR	PAY IN PART BY SEPT. 30	BALANCE DUE BY JAN. 31	TOTAL (4) (Includes \$10 Service Charge)

3-Person (3-Bdrm)	\$125	\$200	\$3,010	Or	\$1,505	\$1,505	\$3,335
4-Person (2-Bdrm)	\$125	\$200	\$2,655	Or	\$1,325	\$1,325	\$2,980

Meals Only - Special Rate For Session

3 Meals Per Day \$1,925

2 Meals Per Day \$1,860

Meals only plans may be purchased from Beaver Foods Office, Student Union Building.

Please note the following:

- (1) The above fees will be superseded on July 1, 1995, when the 1995/1996 residence fee schedule will be published.
- (2) Howe Hall, Shirreff Hall and Eliza Ritchie Hall rates include a residence council membership fee and the cost for a 21-meal plan per week. If the 14 meal plan option is chosen, the rates will be reduced by \$65.
- (3) For all residences the prepaid deposit of \$125 includes a \$25 non-refundable application fee.
- (4) At Fenwick Place \$100 of the \$125 prepaid is a damage deposit. See application form for details. The \$10 service charge is not applicable.
- (5) The second deposit due on June 30 is a \$200 non-refundable deposit to confirm the room.

Awards

Scholarships, Awards, Financial Aid, & Bursaries

The Awards Office within Office of the Registrar is responsible for:

- Undergraduate Scholarships
- University Bursaries
- University Short-Term Loans
- Canada Student Loans
- Provincial Loans & Bursaries
- Awards and Financial Aid Advice & Information
- Canada Scholarships

IMPORTANT NOTE: The University is reviewing the policy governing undergraduate awards. Consequently, portions of the following statement of policy may be modified or substantially altered and may be implemented during the course of the academic year of this Calendar.

Statement of Scholarship Terms

The above document is given to each awardee at the time of the announcement of a scholarship from the Undergraduate Scholarship Committee. This flyer contains some of the more pertinent policy items for easy reference. Additional scholarship regulations are listed in the following section.

General Policy

Full Class Load

- (a) Entering students to whom an entrance scholarship is awarded must undertake a full class load for the academic year immediately following the award in a designated degree or diploma programme at Dalhousie University proper. A full class load for most such designated programmes consists of not fewer than five full classes (or the equivalent), i.e. 30 credit hours distributed equally between the two terms, unless the prescribed standard credit hour load should be otherwise.
- (b) Continuing regular students are asked to note: To be considered for an in-course scholarship, a student must have carried in the preceding year a full class load (five whole classes or the equivalent, i.e., 30 credit hours, or that stipulated by the designated requirements of the programme).
- (c) Continuing Co-operative Programme students will be considered as are the regular students except that the prescribed period may be either a term or an academic year depending upon where a given Co-op student is within that programme at the time.

Where Scholarships Are Tenable

Dalhousie University scholarships are tenable only at Dalhousie unless the Will or Trust Deed should otherwise permit. (The University of King's College has its own scholarship programme.)

Portability of Undergraduate Scholarships

Entrance and In-course Scholarships are portable amongst the following faculties and schools for the eligible degree/diploma programmes as indicated:

College of Arts & Science:

Bachelor of Arts; Bachelor of Education (integrated); Bachelor of Music; Bachelor of Music Education; Bachelor of Science; Diploma in Engineering

Faculty of Health Professions:

- College of Pharmacy - Bachelor of Science in Pharmacy (in-course scholarships only)
- School of Nursing; Bachelor of Science in Nursing; Bachelor of Science in Nursing (RN) (for in-course scholarships only)
- School of Occupational Therapy - Bachelor of Science in Occupational Therapy (for in-course scholarships only)
- School of Physiotherapy - Bachelor of Science in Physiotherapy (for in-course scholarships only)
- School of Recreation, Physical and Health Education - Bachelor of Physical Education; Bachelor of Recreation (for in-course scholarships only); Bachelor of Science (Health Education); Bachelor of Science (Kinesiology)
- Maritime School of Social Work - Bachelor of Social Work (in-course scholarships only)

Faculty of Management:

- School of Business Administration - Bachelor of Commerce

Faculty of Dentistry:

- School of Dental Hygiene - Diploma in Dental Hygiene (for in-course scholarships only)

When Scholarships Are Tenable

- (a) Undergraduate scholarships to regular full-time students are tenable in the academic year immediately following their award.
- (b) Similarly, undergraduate scholarships to Co-op students are to be taken up in the academic term or year immediately following their award.

Scholarship Payments and Rebates

- (a) Payments: Dalhousie University scholarships are credited towards students' accounts first for tuition and prescribed fees, and secondly for residence fees if and only if you stay enrolled at the University.

- (b) **Rebates:** The portion of such scholarship money in excess of the aforementioned charges will be refunded to the student in one portion. The normal refund time is October, and the refunds are made by the Student Accounts Office.

Scholarship Duration

Undergraduate scholarships normally are tenable for one year. The reintroduction of renewable scholarships has altered this.

In 1988-89 the University adopted renewable scholarships as the norm for its regular higher value awards. The two top tiers of the three-level scholarship plan are renewable for the normal duration of the programme in which the awardee was enrolled at the time of the award. These scholarships are renewable at the same value provided that the scholar attains a competitive level of academic excellence. The bottom level of award is tenable for one year only.

Eligible Classes

The Undergraduate Scholarship Committee considers those Dalhousie classes which are taken for credit in a designated degree/diploma programme during the academic year (or term in the Co-op programme). Beginning in 1992 Summer Session classes will also be considered. These will be assessed at the end of the summer if they should constitute part of the normally five whole class equivalents which heretofore have not yet been considered for in-course scholarships.

Correspondence classes are considered for scholarship purposes.

Please note that classes taken at other institutions are eligible for scholarship assessment if such classes are taken on the basis of Letter-of-Permission towards an eligible degree/diploma here.

Artificial Academic Year

The adoption of the policy of considering full-time and part-time students on the same grounds has necessitated the use of artificial academic years.

Scholarship GPA

Each year of study within each eligible program has a prescribed credit hour load. This figure is used in the calculation of the student's Scholarship Grade Point Average. Please note that the Scholarship GPA and the Sessional GPA normally differ.

The Scholarship GPA, expressed to two decimal places, does NOT show on a student's transcript.

Academic Year and Assessment Timing

The academic year consists of five sessions: Spring, Summer, Fall, Regular (Fall and Winter) and Winter. Although the University will assess students' records twice annually, a given student's record will be assessed only once. The time of the year when assessment for scholarship will normally occur is determined by the study status of the student.

For full-time students the University will normally assess records in mid-June (most programmes, the remainder will be done in October). Those co-op students who completed one academic year's studies as of the end of April will be included. For other co-op students, please see the next paragraph.

For part-time and certain co-op students the University will normally assess records in mid-September for those students who at the end of August achieved the minimum threshold level for in-course scholarship consideration.

Reduced Class Load and Retention of Scholarship

Continuing students to whom an "undergraduate" scholarship has been offered may retain the scholarship whilst undertaking a reduced class load. But, in so doing they are reminded that consideration for subsequent scholarships will occur only after the attainment of sufficient credit hours as determined by the year-of-study and the eligible academic programme.

Students on renewable scholarships are cautioned to ensure that they will complete between September and August the requisite class load to retain eligibility.

Students on Canada Scholarships are reminded that their awards are governed by the Sponsor's rules affecting eligibility through the number of classes, the timing and the percentage of classes which are in acceptable disciplines.

Record of Scholarships

Awards are recorded on the academic records of the students. The University retains the right to reassign the source funding of a student's scholarship as circumstances may warrant (but there would be no reduction in the amount).

Graduation and Scholarships

If you hold a renewable scholarship and if you choose to graduate earlier than originally expected, and then you decide to return for an Honours Certificate or an Advanced Major Certificate, please note that you would FORFEIT eligibility for continuation of said scholarship. In other words, graduation constitutes completion of programme.

Transfer Students

Please note that transfer students are ineligible for scholarships in the year of transfer. After one year, such students would be considered on the same basis as other students.

Taxation and Scholarships

Under the Income Tax Act the University is required to report scholarships. On occasion the government may audit your awards. You should therefore retain copies of award letters so that you can readily forward copies for audit or confirmational purposes.

Student Aid and Scholarships

Provincial Student Aid authorities require that students report their scholarships. On occasion the government may audit your awards. You should therefore retain copies of award letters so that you can readily forward copies for audit or confirmational purposes.

Withdrawing

If it should become necessary to discontinue studies, it is most important that students do so in a formal manner via the Office of the Registrar. Depending upon the time of withdrawal, students MAY be entitled to a prorated portion of the generic scholarship to be credited towards ACADEMIC FEES. Please note that NO portion of said scholarship may be applied against RESIDENCE FEES if one is withdrawing from the University.

Government Notification

Holders of Dalhousie University scholarships are to note that the University is required, upon written request, to report its award winners to the respective Provincial Student Aid Authority.

Entrance Scholarships

Dalhousie University offers scholarships, the values of which range from \$2,000 to \$6,000, to outstanding students who are admitted directly from high school to the first year of study. Depending on the value of the awards they are tenable for one or more years. Renewable Entrance Scholarships which are worth either \$6,000 or \$4,000 are tenable for the duration of the programme to a maximum of four years, provided that the holder achieves a competitive level of academic excellence. Entrance Scholarships worth \$2,000 are tenable for one year.

Non-renewable scholarships for subsequent years are also available and they are described under "In-Course Scholarships." Please note that entering students who may not qualify for an entrance scholarship will be considered for an in-course scholarship upon completion of first year (provided they have carried a full course load), funds permitting.

Please note that applicants will be considered for an entrance scholarship in ONE of four academic program groups, namely that program on record by the deadline date. Although applicants may change their minds, entrance scholarship consideration occurs only once. The program groups are arts, science, health professions and commerce, each consisting of one or more eligible degrees or diplomas. Applicants will be considered automatically for either a renewable scholarship or a non-renewable one, but not both. The number of scholarships allotted to each program group is proportional to the respective populations at Dalhousie. As a direct consequence cut-off averages will vary among the different program groups.

In order that applicants for admission to the University may be considered for scholarships, applicants must arrange with their high school for the submission of a completed Application for Admission Form to be received by the Office of the Registrar - Admissions by 1ST APRIL.

Criteria Summary

The following is a summary of the essential criteria which are used by the Undergraduate Scholarship Committee for their assessment of records of entering students who wish to be considered for an entrance scholarship.

1. The Application for Admission must be submitted in time to be received by the Admissions section of the Office of the Registrar by 1st April.
2. In its assessment of entrance scholarship candidates the University considers (i) admissions average (based on admission requirements); (ii) the degree of difficulty (AP, IB, Enriched, Honours) of courses; (iii) total number of university preparatory courses beyond the minimum five; and (iv) the applicant's position in the graduating class (top 1%-2% or top 3%-5%).
3. The applicants are assessed on a mutually competitive basis for the available funds.
4. Transfer Students are precluded from entrance scholarship consideration.

In the case of nominations for the Canada Scholarships, the office uses the same criteria and, in nominating Canada Scholars, the University gives first preference to those to whom a Dalhousie scholarship has already been offered.

Please note that these criteria are subject to change without notice. Note also that the foregoing is not a definitive statement of criteria or policy.

Entrance Scholarship Funds

The following endowments (without an asterisk) make possible the funding of the aforementioned Dalhousie entrance scholarships. Entries marked with an asterisk are selected by bodies other than the Undergraduate

Scholarship Committee. Unless otherwise noted, these scholarships are administered by the Office of the Registrar.

Robert Bruce Scholarships: The University is a beneficiary of a bequest from the late Robert Bruce of Quebec whereby a portion of the annual income is to be used for both entrance and in-course scholarships, and for bursaries.

James and Abbie Campbell Memorial Scholarships: A bequest from the late Elsie Alma MacAloney of Halifax made provision for the establishment of the James and Abbie Campbell Memorial Fund. The purpose of this fund is to promote the University's music programme through scholarships in music. Academically sound students who have demonstrated competency in music will be selected by the Department for one of several James and Abbie Campbell/Department of Music Scholarships. Other music students will be selected on the basis of their overall academic standing by the Undergraduate Scholarship Committee. The fund provides in-course scholarships also.

***Dalhousie Alumni Association Scholarships:** With a gift of \$20,000 in September 1968 the Dalhousie Alumni Association established an endowment from which the net annual income would provide two major scholarships to students of particular merit. These scholarships are open to students entering the University for the first time directly from high school into a course of study leading to an undergraduate degree or diploma. For further information contact the President, Dalhousie Alumni Association, c/o The Alumni Office, Dalhousie University.

***Dalhousie Alumni Leadership Scholarships:** A small number of these scholarships are open to entering students who have demonstrated scholastic success in high school while maintaining a healthy extra-curricular involvement. For further information contact the Alumni Office.

The Dalhousie Club of New York Scholarships: A fund for this purpose, established by the Dalhousie Club of New York and placed in the hands of the Board of Governors of the University, endows several scholarships open to students entering the University in the College of Arts & Science from high school. The financial need of the candidates will also be considered. The fund provides in-course scholarships as well.

***The Frank R. Davis Memorial Scholarships:** These scholarships are made possible by a fund established by Mrs. Davis in memory of her late husband, the Hon. Frank R. Davis, Minister of Public Health in the government of Nova Scotia and a graduate of this University. The scholarship will be awarded by the University to deserving graduates of the Bridgewater High

School, on the nomination of the Supervisor of Schools and the Senior High School staff. In selecting candidates, the governing considerations will be scholastic standing, unselfishness of purpose, and interest in the common good. The fund may also be used for bursaries.

***Dover Elevator Scholarship:** One tuition scholarship will be awarded annually to a student entering the first year of the engineering or commerce programme. The recipient will have demonstrated high academic standing combined with a history of community involvement and leadership skills, and shown an interest in pursuing a career in business. The scholarship is renewable through second year, provided the recipient maintains a minimum Grade Point Average of 3.70. Please note that the value of the scholarship is that for tuition proper.

***The Rowland C. Frazee Undergraduate Scholarships in Business Administration:** Two scholarships of \$5000 each are to be awarded annually to students entering the Bachelor of Commerce programme. Sponsored by The Royal Bank of Canada, these scholarships honour Mr. Frazee's long and distinguished career with the bank.

E. Ross Faulkner Scholarships: The University received from the Estate of Julia L. Faulkner a bequest to provide scholarships in memory of her husband, Dr. Ebenezer Ross Faulkner.

***C.D. Howe Scholarships in Engineering:** The C.D. Howe Memorial Foundation has established an endowment to provide annual scholarships of not less than \$5,000 each. The scholarships are open to matriculants from Nova Scotia high schools who have achieved high academic standing and who are enrolled full-time in either the Diploma in Engineering or the BSc/Diploma in Engineering programme. Where candidates are deemed to be of equal merit, preference will be extended to female students. The scholarship is renewable on an annual basis for the duration of the programme provided that the holders maintain high academic standing and remain in the engineering programme. One scholarship will be offered initially; additional scholarships will be offered as the Fund matures.

The Percy Bertram Jollota Scholarships: From the Estate of Jean Minerva Jollota came a bequest, the annual income of which is to be used to provide scholarships in memory of her late husband, Percy Bertram Jollota. The awardees must be engaged in studies in engineering or physics.

The E. John Jordan Scholarships: Under the Will of the late E. John Jordan a bequest was left to the University for the purpose of funding entrance and in-course scholarships.

***The A. Murray MacKay Scholarship:** The North British Society has established an annual scholarship of \$500 which is open to a student

50 Awards

entering Dalhousie from Queen Elizabeth High School. The Selection Committee will consider candidates on the criteria of academic ability, financial need and leadership. The criteria are weighted equally. The late Dr. MacKay was chairman of the School Board at the time when QEH was constructed.

Frederick A. MacMillen Scholarships: The late Frederick A. MacMillen bequeathed to Dalhousie University a sum of money, the net income therefrom to be used for scholarships. This fund has been designated for entrance scholarships.

The Hector McInnes Memorial Scholarships: In December 1937, an anonymous donor gave the University \$50,000 for undergraduate scholarships as a memorial to the late Mr. McInnes.

Silvanus A. Morton Memorial Scholarship: The Silvanus A. Morton Scholarship Fund was established in 1972 to endow one or more awards totalling approximately \$800. The awards are in memory of Silvanus A. Morton, Principal of the old Halifax Academy, predecessor of the Queen Elizabeth High School. The scholarship is to be awarded on the recommendation of the principal to one or more graduates of Queen Elizabeth High School upon entrance to Dalhousie University in the College of Arts & Science.

The W. M. Nelson Scholarship: Under the Will of the late Mr. William M. Nelson of Tatamagouche, funds have been made available to provide a scholarship to Dalhousie University open to students attending North Colchester High School.

Nova Scotia Power Scholarship: Beginning in 1995, Nova Scotia Power Inc. will sponsor an annual scholarship in the amount of \$1,500 for full-time study in an undergraduate degree programme. The recipient will have achieved a high level of academic excellence and demonstrated involvement in extra curricular activities. The Scholarship will be renewable for up to three years provided that the student maintains the required academic standing. As part of the award, students are guaranteed summer employment with Nova Scotia Power. Recipients are to be Canadian citizens (or landed immigrants) and residents of Nova Scotia for at least three years.

Harold Oxley Scholarship: A bequest under the late Mr. Oxley's Will makes possible the funding of a scholarship, which has been allotted to the entrance scholarship plan.

Arthur S. Payzant Scholarship: Under the Will of the late Reverend Arthur Silver Payzant a bequest was established for scholarship purposes. The University has allotted this fund to the entrance scholarship plan.

Pictou Academy Scholarship: In recognition of the common origin and close relation existing

between Dalhousie University and the Pictou Academy, the University in 1917 on the occasion of the hundredth anniversary of the academy established a scholarship.

The Harold A. Renouf Scholarship: An endowment has been established to provide an annual scholarship for students entering the Bachelor of Commerce programme.

The Lois J. Robertson Scholarships: The University received a generous bequest from the Estate of the late Lois Robertson. This fund has been allocated to undergraduate scholarships.

***Shatford Memorial Trust Scholarships:** The J.D. Shatford Memorial Trust have established an endowment to provide assistance with the costs of attendance at Dalhousie University. The University's Fund is independent of any other such trusts.

Candidates must fulfil the following conditions: i) be coming directly to Dalhousie from either Forest Heights Community High School or Sir John A. Macdonald High School; ii) be recommended by the appropriate high school confirming that the applicant has been a bona fide resident of the Bequest Area for at least three years; and be undertaking studies leading to their first baccalaureate degree.

Subject to the availability of funds, these awards are renewable to the first degree (or four years maximum), based on satisfactory academic performance. Please note that the value of a holder's scholarship may vary from year to year.

***Alexander Sinclair Scholarship:** Under the Will of the late Evangeline Marlon Winn, the University received an endowment for the purpose of providing scholarship awards to qualifying students from St. Mary's Municipality in the County of Guysborough, Nova Scotia. Candidates are recommended by the St. Mary's Rural High School in consultation with the Awards Office.

Dr. David M. Soloan Scholarship: Under the Will of the late Dr. David M. Soloan the University received a sum of money. The Board of Governors decided that the gift be used to provide one or more entrance scholarships in the College of Arts & Science.

Joseph Duncan Stewart Scholarships: A bequest under the Will of the late Joseph Duncan Stewart has made possible the funding of undergraduate scholarships.

***The I.C. Stewart Trust Fund:** From the Estate of Georgie M. Stewart came a trust fund, the annual income from which is to be used for I.C. Stewart Scholarships to qualifying students from St. Mary's District in the County of Guysborough, Nova Scotia. Candidates are recommended by St. Mary's Rural High School in consultation with the Awards Office.

The J. Douglas Vair Scholarship: This scholarship is available to students entering the

University for the first time from Pictou County, Queen's County, and rural Halifax County, and, failing a candidate from these areas, to a student from other areas of the Province of Nova Scotia at the discretion of the Scholarship Committee. The award shall be based on scholarship and need, making it possible for a promising student to obtain a university education. The scholarship may be continued beyond the first year to students from the three preferred areas if standing is maintained, but only if there is no first-year student eligible for the award.

The Women's Division of the Dalhousie Alumni Association Scholarships: This fund provides up to three scholarships of \$1,000 each. Of the two entrance scholarships, one is named the Margaret Florence Newcombe Scholarship, which commemorates the 100th anniversary of the graduation of the first woman graduate of Dalhousie University in 1885. This scholarship includes a financial need component and consideration of extra curricular activities, in addition to the attainment of high academic standing. The second scholarship is named the Ruth Skilling Murray Scholarship, in memory of a dedicated alumna of the Dalhousie Women's Division. (The third award, the Christine Irvine Scholarship, is open to returning students.)

The Lockward Memorial Scholarships: These scholarships have been established from an endowment by the late Reginald and Anne T. Lockward of Liverpool, N.S. A number of such scholarships, each valued at \$4,000 will be awarded annually; they are tenable for one year. Candidates for Lockward Memorial Scholarships must be attending, or be graduates of, a high school in Nova Scotia and be eligible for admission to the first year of an undergraduate course of study leading to a first degree at Dalhousie University. Preference will be given to students in Queen's County. High schools outside the preferred area but within Nova Scotia may each recommend one student for consideration. Students will be selected to receive Lockward Memorial Scholarships on the basis of academic standing, character and financial need. A student may not hold both a Lockward and another University scholarship simultaneously. Candidates must be recommended by the principal of their high school. Please use the regular admission form, accompanied by letters of reference. Two letters of reference from members of the community who are familiar with the student's character and activities, should be included. The deadline for receipt of nominations is 1 April. Nomination forms and letters of reference should be sent to: The Director of Awards, Office of the Registrar.

Canada Scholarships

The federal government's Canada Scholarships Program awards over 2,500 scholarships annually to students entering undergraduate studies in selected natural

sciences or engineering studies. The scholarship can be worth up to \$10,000 received as \$2,500 annually over four years. Furthermore, outstanding Canada Scholars in their third and fourth years of study in certain disciplines may also be recommended by their faculty to receive an additional award sponsored by the corporate sector. For more information, contact your guidance counsellor, the Awards Office within the Office of the Registrar, or:

The Canada Scholarships Program
Awards Division

Association of Universities and Colleges of
Canada

151 Slater Street

Ottawa, Ontario

K1P 5N1

Telephone: (613) 563-1236

Please note that Canada Scholars who chose early graduation and return (immediately the next year) for either an Honours or an Advanced Major Certificate, are eligible to retain their Canada Scholarship subject to the other criteria. We request that we be included in your plans beforehand so that your scholarship does not automatically become terminated with graduation.

The Canadian Merit Scholarship Foundation

The program was started in 1989 to identify, recognize and reward well-rounded students who combine distinguished talents with character, leadership potential and a commitment to the community. In 1991 Dalhousie University became a participating member of those institutions where the CMSF National Awards are tenable.

The scholarship consists of \$3,000 (paid by the Foundation) and tuition (paid by the University), renewable to a limit of four years of undergraduate study. The scholarships are renewable on the achievement of a Grade Point Average of 3.30 (B+), plus continued evidence of the qualities of character, leadership and service upon which the award is based.

Participating high schools may each nominate one student and are to forward the requisite documents to the CMSF Area Committee to be received no later than the November deadline.

Details of the process and criteria are available from your high school. Nominees must meet the admission requirements for Dalhousie University and the program which the student wishes to undertake.

In-course Scholarships

All Dalhousie students in eligible programmes in the participating faculties who have successfully completed a normal full class

52 Awards

load will automatically be considered for scholarships. The normal full class load will depend upon the requirements of specific faculties and schools. The Undergraduate Scholarship Committee decides the awardees and the amounts of money. The amount of money authorized for a scholar may be met wholly or partially by a Dalhousie University Scholarship and/or one of the named scholarships as described in the following sections.

Please note that the automatic consideration is either for the renewal of an entrance renewable scholarship or for a one-year scholarship, but not both. Holders who fail to re-qualify for their renewable scholarship will be appraised in writing.

(a) General

The Isabel Brown Scholarship: The scholarship was endowed in 1982 by the Brown family under the auspices of the Women's Division of the Dalhousie Alumni Association. The interest provides an annual scholarship ordinarily to a student who is entering the final undergraduate year. Note, however, that this scholarship is portable to programmes outside the list of designated undergraduate programmes as listed earlier.

Minnie F. Burbidge Scholarships: In her Will the late Minnie F. Burbidge bequeathed the residue of her estate to Dalhousie University. In 1945 the sum of \$16,000 was endowed to provide undergraduate, usually in-course, scholarships.

George H. Campbell Memorial Scholarship: In 1917 Mr. and Mrs. G.S. Campbell established the George H. Campbell Scholarship Fund to provide annual scholarships in memory of their late son, George Henderson Campbell.

Marjorie F. Ellis Scholarships: The late Marjorie F. Ellis bequeathed one-half of the remainder of her estate to Dalhousie University for scholarships to worthy students.

W.L. Harper Scholarship: From the Estate of Arts Falconer Harper a bequest to the University makes possible the provision of a number of awards from the annual income.

Christine Irvine Scholarship: The Women's Division of the Dalhousie Alumni Association established this scholarship to honour the memory of a former Dean of Women.

Mackenzie Trust Scholarships: According to the Estate of Thomas George Mackenzie a Trust Fund was established for Archibald F. Mackenzie, and later bequeathed to Dalhousie University to provide (in-course) scholarships.

The Hector McInnes Memorial Scholarships: In December 1937, an anonymous donor gave the University \$50,000 for undergraduate scholarships as a memorial to the late Mr. Hector McInnes.

The Lois J. Robertson Scholarships: The University received a generous bequest from the Estate of the late Lois Robertson. This fund has been allocated to undergraduate scholarships.

Joseph Duncan Stewart Scholarships: A bequest under the Will of the late Joseph Duncan Stewart has made possible the funding of undergraduate scholarships.

The John L. and Glenna E. Towse Scholarships: A bequest to the University provides for a number of in-course scholarships.

Sir William Young Scholarship: This fund was left by Sir William Young for the purpose of endowing scholarships.

(b) Arts and Science

Nathan T. Ashkins Scholarship: Each year the Nathan T. Ashkins fund provides for a scholarship to a student in Arts & Science who is beyond first year.

Robert Bruce Scholarship: Robert Bruce of Banileus, Quebec, made a bequest to the University to establish bursaries and scholarships.

The Charles and Cecelia Zwerling Scholarship: This fund was created by members of the Zwerling family in memory of Mr. and Mrs. Charles Zwerling for scholarship beyond first year.

(c) Arts

Dr. Frederick J. Gaudet Scholarship: Dr. Gaudet bequeathed to the University in 1978 a sum of money to provide for a full tuition scholarship in Arts.

The Hyman I. Jacobson Scholarship: Under the will of the late Hyman Isaac Jacobson a bequest of \$5,000 was given to the University to benefit the Humanities and Social Sciences.

The Khaki University Scholarships: From the Khaki University of Canada and the Young Men's Christian Association Memorial Scholarship Fund, the trustees of Khaki University made a gift to Dalhousie University in 1921 of \$6,500 to endow scholarships.

(d) Science

The Belle Crowe Scholarships in Chemistry: A bequest by the late Belle Chisholm Crowe, formerly of Truro, and a student at the University in 1885-86, enables a number of scholarships to be offered annually. The Undergraduate Scholarship Committee and the Department of Chemistry (see also) share the net annual income equally. The former awards Belle Crowe Scholarships to students in the Honours Chemistry programme which students have qualified in the yearly competition for in-course scholarships. The scholarships are directed to the most promising students entering the third or fourth year in the Honours Chemistry programme.

The L.A. DeWolfe Memorial Scholarship: A fund has been established under the Will of the late Dr. L.A. DeWolfe to provide undergraduate scholarships in Mathematics or Science.

The Percy Bertram Jollota Scholarships: From the Estate of Jean Minerva Jollota came a bequest, the annual income of which is to be used to provide scholarships in memory of her late husband, Percy Bertram Jollota. The awardees must be engaged in studies in engineering or physics.

The Carl Mushkat Memorial Scholarships: The Carl Mushkat Memorial Fund was established at Dalhousie University in 1979 as a bequest under the Will of the late Carl Mushkat. The fund provides scholarships to students in Mathematics or Science.

The Ross Stewart Smith Scholarships: A significant bequest established these memorial scholarships for students who excel in the sciences or mathematics.

The Mr. and Mrs. S.H. Solomon Scholarship in Engineering: This scholarship was made possible by Mr. and Mrs. S.H. Solomon and is to be awarded annually to a student entering the second year of Engineering.

The C.W. Stairs Memorial Scholarship: In 1960, William Stairs, Son & Morrow Limited of Halifax, on the occasion of the 150th anniversary of the firm donated \$10,000 to the University to set up this fund. It provides scholarships to students in Engineering, or in related subjects, who are entering the third year of the course and who, in the opinion of the Committee, are likely after graduation to contribute to the industrial development of Canada.

(e) Other

The following scholarships are administered separately from the regular in-course ones.

Beta Sigma Phi Scholarship to Dalhousie University: The Halifax-Dartmouth City Council of Beta Sigma Phi sorority has established an endowment of \$2,000 whereby the annual income will provide for a scholarship to a student studying towards a degree full-time or part-time at either the undergraduate or graduate level. The successful candidate will be selected from the following categories, listed preferentially: first, an active Member; secondly, a daughter, son or husband of an active Member; and thirdly, some other student chosen by the Undergraduate Scholarship Committee. **NOTE:** this scholarship requires a designated application form which must be submitted to the Awards Office by the May deadline.

The Constance MacFarlane Scholarship: An endowment fund has been established to provide a scholarship to a deserving student in the second or subsequent year of the Honours

programme in either biology or marine biology. Candidates must have completed at least one class in each of ecology and botany.

The W. Andrew MacKay Alumni Scholarship: The Dalhousie Alumni Association established an annual scholarship in honour of Dr. W. A. MacKay, a former president of the University. The scholarship is available to a student entering third year who has demonstrated high academic standing (a Grade Point Average of at least 3.30) and who has shown an excellence in qualities of leadership, citizenship and sportsmanship. The award is tenable for one year in the faculties of Arts & Social Sciences, Health Professions, Management (Commerce), and Science. Candidates are to be nominated by each Department or School in the above list. Nominations are to be received by the Office of the Registrar by 15 May. The Undergraduate Scholarship Committee will select at least three candidates for final consideration by the Alumni Office.

The Alan Pollok Scholarship: This scholarship of \$750 was established by the North British Society in Halifax in memory of the Rev. Dr. Alan Pollok. The awardee will be the student, in second year in the College of Arts and Science at Dalhousie University, who stood highest in a course load of at least five full classes (or equivalent).

The George B. Robertson Phi Delta Theta Fraternity Scholarship: An endowment has been established to provide a scholarship to a student in full-time study in the junior or subsequent years at Dalhousie University. The selection of the awardee is based on several factors including a minimum Grade Point Average of 3.00, demonstrated activity in the Halifax Chapter and financial need.

Sony Science Scholarship: On the occasion of the 35th anniversary of the arrival of the first Sony product in Canada, Sony of Canada Ltd. has established an annual scholarship in the amount of \$3000. It is open to outstanding students in science or engineering.

The Stora Undergraduate Scholarship in Arts & Science: On the occasion of their 25th Anniversary Stora Forest Industries have established an endowment to provide one undergraduate scholarship open to students in Arts & Science. To be eligible candidates must reside in Nova Scotia, have demonstrated academic excellence and have exhibited a desire to learn. Students will be considered after one year at Dalhousie.

Departmental Scholarships

Biology

Hugh P. Bell Scholarship in Biology: In 1968 the Class of 1928 established the H.P. Bell Fund; the income therefrom is to provide one or more annual scholarships. The Biology Department

54 Awards

each year will select the most promising honours biology student who is in Third year and that student shall hold the Hugh P. Bell Scholarship in the fourth year of the honours programme.

The Sarah M. Lawson Scholarships in Botany: At the discretion of the Chairman of the Department of Biology, the University may offer scholarships to students who have shown special ability in botany. This award is open to students at Dalhousie University or the University of King's College, and is given to support summer research projects in botany at either the undergraduate or graduate level.

Chemistry

The Belle Crowe/Department of Chemistry Scholarships: These scholarships are awarded on the basis of academic standing and demonstrated proficiency in chemistry to students in the honours programme.

The E. Walter Todd Scholarship: A bequest from the Estate of Mabel E. Todd in 1958 established a fund to provide a scholarship (and inscribed volume) in memory of her brother, E. Walter Todd, who was for many years a member of the Department.

Earth Sciences

Amoco Canada Undergraduate Scholarship in Earth Sciences: Amoco Canada Petroleum Geology Limited offers an annual scholarship of \$1500 to a deserving student of outstanding merit in the Fourth and final year of an Honours BSc programme with a major in earth science. In addition to scholastic achievement, other criteria may include keen interest in earth science, participation in University and community affairs and economic need.

Canadian Institute of Mining and Metallurgy Earth Science Scholarship for New Brunswick Students: This is awarded to a student entering second or subsequent year in an earth science discipline. Applicants must have been in New Brunswick or resided in New Brunswick for seven years, or have his or her immediate family resident in that province.

Canadian Society of Exploration Geophysicists Scholarship: This scholarship is available to a student applicant who is pursuing a course of studies directed toward a career in exploration geophysics in industry, teaching or research.

Chamber of Mineral Resources of Nova Scotia Scholarship: Senior students from Acadia University, Dalhousie University, St. Francis Xavier University, Saint Mary's University or Technical University of Nova Scotia in a geology or mining-related bachelor degree programme are considered for this scholarship. The selection is based upon the student's contribution to the development of the province's mineral resources sector as well as scholastic achievement.

The James L. Hall Scholarship in Earth Sciences: This scholarship is awarded on the joint recommendation of the Chairs of the Departments of Engineering and Earth Sciences, to a student who has completed his/her first year, who is planning on a career in the field of Mining Geology.

Economics

Professor W. Russell Maxwell Memorial Scholarship: Friends and colleagues of Professor Maxwell have established a fund to provide scholarships to outstanding students entering the second, third or fourth year of the General Degree or Honours Degree programme in Economics. Preference will be given to candidates entering the fourth year of the Honours programme.

Engineering

John R. Kaye Memorial Scholarship: The Founder of this scholarship gave a benefaction of \$10,000 to be invested. From the annual income therefrom, one (later more) scholarship may be awarded to a suitably well qualified Dalhousie graduate who is continuing studies in an accredited programme in engineering at the Technical University of Nova Scotia. The holder shall be a resident, native-born Nova Scotian who has completed the requirements for the Diploma in Engineering. The Selection Committee shall consider good marks, motivation, diligence, capability for making a contribution to the profession, and financial need. The amount of each scholarship shall approximate tuition fee (maximum of \$1,000) in the programme the awardee is to pursue. The scholarship will be paid upon presentation of proof of registration at TUNS.

John Frederick Knodell Engineering Scholarship: An annual award of \$5,000 has been established to honour the memory of J.F. Knodell, a graduate in electrical engineering from Dalhousie and Nova Scotia Technical College. The scholarship is awarded to a male Dalhousie engineering diploma graduate who was born in Nova Scotia and attended schools in the province. The recipient must have achieved excellent academic standing and demonstrated significant improvement from the first to second year of the engineering diploma programme.

School of Education

John Frederick Knodell Education Scholarship: An annual award of \$5,000 has been established to honour the memory of J.F. Knodell, a graduate in electrical engineering from Dalhousie and Nova Scotia Technical College. For several years he taught science and mathematics in Halifax city schools as a teacher and a principal. The scholarship is awarded to a female graduate in the Integrated baccalaureate in education programme at Dalhousie who was born in Nova Scotia and attended schools here. The recipient

must have achieved excellent academic standing and demonstrated significant improvement between her Freshman and Senior years.

English

Allan and Lura Bevan Memorial Scholarship: Colleagues and friends of the late Allan Bevan have established a memorial scholarship fund. The scholarship selection in the first place is to be made by the Department of English to a student majoring in English either at Dalhousie or King's. In the absence of a suitable candidate from English, the selection will be made by the Department of Music.

The Archibald MacMechan Chapter/IODE Scholarship in English: In 1948 the Archibald MacMechan Chapter of the IODE gave the University a scholarship fund. This award is intended for students who have shown special ability in English and who are looking forward to further study in the field. Provided that suitable candidates apply, preference will be given to graduates who intend to study for a Master's Degree in English. Application should be made to the Chairman of the Department of English not later than 31 March.

French

The Ruth Murray Scholarship for French Studies: An endowment fund has been established to honour the memory of Mrs. Ruth Murray by providing scholarships to students in the Department of French. These scholarships are open to undergraduate students who are academically sound and who are participating in one of the following:

- (a) a programme of study at the University of Aix-en-Provence, France, or
- (b) an off-campus summer course in a francophone environment arranged and directed by the Department of French.

In any year when there are no students participating in these programmes, the income may be disbursed as scholarships to academically sound students majoring in French at Dalhousie.

History

The George E. Wilson Memorial Scholarship: On the occasion of the 50th anniversary of the graduation of the Class of 1930, a representative announced the establishment of a scholarship fund. The scholarships, in honour of Professor Wilson, are open to students in history.

Mathematics, Statistics & Computing Science

The Ralph and Frances Lewis Jeffery Scholarship: From the Estate of Frances E. Jeffery came a bequest in 1979 to endow a scholarship which is to be awarded to a student who has completed the final year of an honours

course in Mathematics, and who has maintained at least a second-class standing during the first three years of the course.

Music

The James and Abbie Campbell Memorial Scholarships and the James and Abbie Campbell/Department of Music Scholarships: The Undergraduate Scholarship Committee and the Department of Music make selections of winners for undergraduates. See entry under Entrance Scholarships.

Honourable L.D. Currie Memorial Scholarship in Music: The North British Society established this scholarship in memory of the Honourable Lauchlin D. Currie in 1971. An annual scholarship in the amount of \$750 is available to a Canadian in any year of Music. The successful student, will have demonstrated competence in vocal or instrumental performance. (under review)

Halifax Ladies Music Club Scholarship: The Halifax Ladies Music Club sponsors an annual scholarship of \$300 for a first-year student in Music at Dalhousie.

Elisabeth Meyerhof Scholarship in Music: An annual scholarship of at least \$1,500 awarded to the student entering the Fourth Year of his or her undergraduate degree programme in Music who has achieved a high average in the music classes of the first three years and who in the opinion of the Department has demonstrated exceptional promise for a professional career as an instrumentalist in the performance of classical music (including early music). If no instrumentalist qualifies, a voice student would be considered.

The Effie May Ross Scholarships in Music: An endowment fund of \$25,000 was established under the Will of the late Effie May Ross. The income is to be used to establish yearly scholarships to (a) the most promising vocalist student from the Maritime Provinces or Newfoundland who requires financial assistance; and (b) on recommendation of the Senate of Dalhousie University to the most promising Maritime or Newfoundland student in the playing of the Piano, Organ, Violin or Cello who is in need of financial assistance. Scholarships range in value and in number.

The Don Wright Scholarships in Music Education: The Don Wright Charitable Foundation of Toronto established a generous endowment with which to fund these two scholarships. One scholarship is allocated to Classroom Vocal Music. Recipients of this award must fulfil the following criteria:

- a) be enrolled in the classes in classroom teaching methods and field experience at either the elementary or secondary level
- b) be studying voice
- c) have shown outstanding teaching skills and choral techniques in the Class,

56 Awards

Music 4460A, and in choral practice in the classroom setting, Grades Five to Nine inclusive.

A second scholarship is allocated to Instrumental Music. Recipients of this award must fulfil the following criteria:

- a) be enrolled in classes in instrumental technique, teaching methods and field experience as well as classroom teaching methods and field experience at either the elementary or secondary level
- b) be studying a band or orchestral instrument; and c) have shown outstanding achievement in the above classes.

Spanish

Sonia Jones Scholarship: The first claim upon the expendable income of the Fund is to provide scholarships to advanced students of Spanish (Honours or Major) who are studying abroad in programme approved by the University.

Health Professions

College of Pharmacy

The Burroughs Wellcome Scholarship: This scholarship of \$500 is available to an undergraduate student of outstanding merit in the second-year class.

The Ralph H. Jenkins Memorial Pharmacy Scholarship: This scholarship is awarded by the Prince Edward Island Pharmaceutical Association to a student from Prince Edward Island who has achieved a high academic standing.

The Col. J.D.B.F. MacKenzie Scholarship: This scholarship of \$500 is awarded by the New Brunswick Pharmaceutical Society to a student from New Brunswick who obtains the highest academic standing in the first-year classes of the Pharmacy course.

The Dr. Jessie L. MacKnight Scholarship: This scholarship of \$500 is awarded by the New Brunswick Pharmaceutical Society to the student from New Brunswick who obtains the highest standing in the second-year classes of the Pharmacy course.

The New Brunswick Pharmaceutical Society Scholarship: This scholarship of \$500 is awarded by the New Brunswick Pharmaceutical Society to the student from New Brunswick who obtains the highest standing in the third-year classes of the Pharmacy course.

Searle Summer Research Scholarship: This scholarship in an amount of \$1,650 is made possible by funds from G.D. Searle & Co. of Canada, Limited and is to provide financial support for one undergraduate pharmacy student to take research training during the summer months under the supervision of a faculty member of the College of Pharmacy.

The Upjohn Company of Canada Scholarship: This scholarship of \$500 is provided by the Upjohn Company of Canada to a student in the first-year class. An engraved plaque is also awarded to the recipient.

School of Physiotherapy

Isabel M. Jackson Scholarships: Miss Ida P. Jackson of Middleboro, Massachusetts, established this fund in memory of her sister, Isabel M. Jackson, in 1967 for the purpose of benefiting students with bursaries or scholarships. The fund's current use is the provision of scholarships to those students who have been accepted into the first physiotherapy core year from other universities. Assessment is based on the students' mid-semester examinations at Dalhousie.

Hazel Lloyd Foundation Scholarship: The Hazel Lloyd Foundation has been established by Miss Aphra Lloyd in memory of her sister, Miss Hazel A. Lloyd (1930-1985), Associate Professor, School of Physiotherapy. Friends, associates and alumni have made additional contributions. One purpose of the Foundation is to provide financial support to final year students attending Dalhousie University School of Physiotherapy for studies that will develop physiotherapy services in geriatrics and gerontology, one of Professor Lloyd's areas of interests. Occasionally, the Foundation will support other types of endeavours with an annual award. Written applications for the scholarship and the other types of award submitted to the School of Physiotherapy will be reviewed twice yearly (31st March and 30th September) by the administration committee of the Hazel Lloyd Foundation.

School of Recreation, Physical and Health Education

The Freda N. Wales Memorial Scholarship: This is an in-course award given to a student entering the third or fourth year of study. The student must have a commitment to pursuing a programme specializing in outdoor leadership at Dalhousie University. Selection will be based on academic achievement and professional ability. **Note:** A special application form, available from the Awards Office, is required.

The VIIth Pan American Wheelchair Games Scholarship: This is an in-course award given to a student entering the third or fourth year of study in the School of Recreation, Physical and Health Education. The student must be committed to pursuing study in the area of recreation and leisure for the disabled. Selection is based on academic and professional capability.

Maritime School of Social Work

Bachelor of Social Work

The M. Caroline Prince Scholarship: Under the Will of the late M. Caroline Prince the sum of

\$5,000 was bequeathed to the University for endowment purposes to benefit the Maritime School of Social Work. The Faculty have decided that the endowment should fund one or more scholarships to students who are engaged either in full-time or part-time study leading to the baccalaureate degree.

Management

Bachelor of Commerce Programme

(a) Scholarships through the School

Acadian Lines Limited Scholarship: Acadian Lines Limited has established a fund to provide a scholarship to a student, beyond first year, who has demonstrated superior academic performance in the preceding year(s) of the commerce programme and, who has demonstrated outstanding leadership in the University's programme of intercollegiate athletics.

Barclays McConnell Limited Scholarship: A scholarship in the amount of \$2000 is to be awarded annually to a student entering the Third or Fourth Year in the Commerce degree programme. The recipient will have demonstrated high academic standing and an interest in the investment field.

The Wilfred Berman Scholarship: A scholarship is offered to the student in Commerce who at the end of the second year has attained the highest average mark in Commerce 1101, 1102, 2111. The endowment for this scholarship was provided by friends and co-religionists of the late Professor Berman.

Deloitte and Touche Scholarship: A scholarship of \$400 will be awarded annually to a second-year student in Commerce obtaining a high standing in the course and who plans to enter articles with a practising firm of Chartered Accountants.

Ernst and Young Scholarship: A scholarship of \$500 will be awarded to a third-year student in Commerce who has obtained a high standing on the basis of his/her average marks for a full year's course, of which one class must be in accounting.

Ronald G. Smith Scholarship: In 1981 the Nova Scotia Power Corporation established this scholarship in recognition of the distinguished service rendered by Ronald G. Smith as a member of the Power Corporation's Board of Directors from 1959 to 1981. An amount of \$400 will be awarded to a Nova Scotia student entering the fourth year of the Bachelor of Commerce programme based upon academic achievement, leadership ability and qualities of personality and character.

(b) Scholarships through the USC

Stewart Lockie Gibson Scholarship in Commerce: Several scholarships of varying amounts will be awarded annually to third- and

fourth-year students of scholarship standing and good character who are proceeding to a degree in Commerce.

Samuel S. Jacobson Scholarship: Beginning in 1975 the Samuel S. Jacobson Fund has provided one or more scholarships or bursaries as determined by the selection committee. Preference is to be given to Nova Scotian students who are proceeding towards the Bachelor of Commerce degree.

The Harry Margolian Scholarships in Commerce: A bequest of the late Harry Margolian, of Yarmouth, Nova Scotia, enables one or two scholarships per year to be awarded to students working towards degrees in Commerce. These will normally be awarded to students in their third or fourth years.

McCurdy Printing and Typesetting Limited Scholarship: The Halifax firm of McCurdy Printing and Typesetting Limited established an endowment in 1985 to provide annually for a scholarship in the School of Business Administration. The Scholarship is open to a student, beyond first year, who has distinguished himself or herself scholastically during the preceding year(s) of study in the Bachelor of Commerce programme.

Undergraduate Prizes, Medals, and Awards

General

Alumni Swimming Award: A fund has been established to provide awards to deserving Dalhousie University varsity swimmers. Recipients will be members of the Dalhousie Varsity Swimming Team who have demonstrated leadership and dedication to competitive swimming. They are to have completed at least one year of their academic programme and to have demonstrated above average academic ability. Two awards of equal value will be presented to varsity swimmers, one to a female and one to a male. The Selection Committee will recommend to the Undergraduate Scholarship Committee by 31st May, where appropriate, two candidates for each award. The awards will be tenable the following academic year.

The Annie L. Beer Prize: Under the will of the late Mrs. Thomas (Annie L.) Beer of Charlottetown a bequest was established at Dalhousie University. The net income from the fund provides for an prize which is to be awarded to the youngest student from Prince Edward Island who enters this University in each year. The Awards Section of the Office of the Registrar selects the winner.

Black and Gold Awards: Each year the Dalhousie Black and Gold Club funds a limited number of awards that recognize the

58 Awards

contribution to University life that student athletes make. Candidates must be beyond first year study at Dalhousie, must have a minimum Grade Point Average of 2.00 in four whole classes (or equivalent) and must have participated on a varsity team during the previous year of study. A number of awards up to \$1500 will be offered each year. For information and application forms contact the Department of Athletics, Dalplex. Completed application forms are to be returned to that Department to be received by May 15th. The Department of Athletics will forward nominations to the Selection Committee, which will make announcements through the Awards Office.

Dalhousie Student Development Awards: A limited number of awards of up to \$1,500 will be offered annually. The awards are open to entering or continuing Dalhousie students. Applicants must be engaged in full-time studies, have achieved a minimum Grade Point Average of 3.00 and must have demonstrated leadership ability. Applications forms are available from the Department of Athletics. Completed applications and supporting documents are to be submitted to the Director of Awards, Office of the Registrar, to be received by the end of August.

The Honourable W.H. Dennis Memorial Prizes for Literary Compositions in English: Two Prizes known as the Joseph Howe Prizes are offered each year, a first prize of \$200 and a second prize of \$100, for a poem or collection of poems of any length greater than about one hundred lines. Two prizes known as the James DeMille Prizes are offered each year, one of \$150 for an essay, the other of \$150 for a prose short story. The attention of candidates for these prizes is drawn to the following regulations adopted by the Senate to govern the awards:

1. Candidates for these prizes must be registered full-time undergraduate or graduate students at Dalhousie University.
2. (a) Three copies of each composition must be sent in by the competitor.
(b) These compositions must be typewritten, double spaced and on one side of the paper only.
(c) A pseudonym is to be typed at the end of each typescript and after the pseudonym a statement as to whether or not a first or second or no prize has been previously awarded to the writer.
(d) Compositions are to be accompanied by a sealed envelope bearing the same pseudonym in typewriting to the Jury of Award for either the Joseph Howe Prize or for the James DeMille Prize, as the case may be.
(e) The envelope shall contain in typewriting the pseudonym, the titles of the entries and the candidate's full name and address.

- (f) Candidates submitting more than one prose entry must use the same pseudonym for each; different pseudonyms may be used for prose and poetry.
3. Candidates for the DeMille Prize may submit one entry in each of the essay and short story sections.
4. The winner of a prize in the poetry contest is not debarred from competing in the prose contest, and vice versa.
5. In the poetry contest no winner of a first prize is eligible to compete again, and no winner of a second prize is eligible for a second prize in a subsequent year.
6. In the prose contest no winner of a first prize is eligible to compete again, and no winner of a second prize is eligible for a second prize in a subsequent year.
7. Entries must reach the Department of English on the designated deadline.
8. Entries are adjudicated by a panels of judges which includes a professional writer. The decision of the judges is final.
9. No prize will be awarded for any composition that does not attain to a sufficiently high standard of merit.
10. *The Dalhousie Review* will be offered the first option to publish winning compositions. A copy of each winning composition is deposited in the University archives. Contestants retain ownership of copyright.
11. Contestants are urged to retain a carbon or photostat copy of their typescript(s) since the copies cannot be returned.

The Clare Murray Foosee Poetry Prize: One or more prizes will be awarded for the best poems, of any length, submitted by Dalhousie undergraduates. Total prize money approximates \$400, which is the net income from a fund established by friends in memory of the poetess Mrs. Clare Murray Foosee, BA (1924). Up to five poems may be submitted by each writer. Previous winners are ineligible. No award will be made unless a poem submitted is deemed to be of sufficient merit. Entries should reach the Chairman of the Department of English by 1 March.

The SLT Bruce Galloway Memorial Prize: Friends, family and shipmates of Sub-Lieutenant Bruce David Galloway, a member of the Ship's Company of H.M.C.S. Fraser and a 1983 Arts graduate of Dalhousie, have established a memorial fund. The prize is to be awarded to the student, male or female, attending Dalhousie University on the University Training Plan Men who attained the highest academic standing (not less than a passing standing) in the programme in which he or she is enrolled. A prize is to be awarded in each year in which there is a student attending Dalhousie on the University Training Plan Men who achieves a passing standing. The Awards Section of the Office of the Registrar selects the winner.

The Robert and Katherine MacDonald Award: An endowment has been established to provide an annual prize for Chinese students at Dalhousie. The recipient will be engaged in undergraduate studies and be a member of the Dal-TUNS Chinese Students' Association or its successor. The recipient will have demonstrated good academic achievement combined with leadership qualities and contribution to University life. The Association will recommend a candidate or candidates to the Head of Student Services.

College of Arts and Science Departmental Awards

Biochemistry

University Medal in Biochemistry: The Department of Biochemistry offers a medal to the top First Class Honours graduate in the biochemistry programme. The awardee will be the one who has attained the high scholastic standard of the Department.

Kilmer MacMillan Memorial Book Prize: This prize is awarded annually to the student who attains the highest aggregate mark for the three half-classes, Biochemistry 3200, 3300 and 3400.

Biology

The Aldous Prize: On the occasion of the retirement of Dr. John G. Aldous, friends, colleagues and students established an endowment to provide for an annual prize to be awarded for the best achievement in Biology 4401. (This entry appears here for the information of Biology students. The Fund is administered by the Department of Pharmacology in the Faculty of Medicine.)

B'nai B'rith Prize: Two prizes are available annually to students, one for the highest standing in Biology 1000R and another for the highest standing in Biology 1001R.

David Durward Memorial Prize: This prize is to be awarded to the best student in the *Physiology of Marine Animals* (Biology 3071).

University Medal in Biology: The Department of Biology offers a medal to the top First Class Honours graduate in the biology programme in recognition of superior achievement therein.

University Medal in Marine Biology: The Department established this medal in 1983-84 to be awarded, where appropriate, to the student who stands highest among the First Class Honours graduates in the Marine Biology programme.

Chemistry

The John Hamilton Barrett Prize: This is the gift of his widow, Mrs. Marjorie Barrett. It is offered annually at the end of the fourth year of the course to a student who has shown exceptional ability in Chemistry or some other science.

The Canadian Society for Chemistry Silver Medal: The CSC Silver Medal is provided to each university having a chemistry department and is awarded to the student with the highest standing in chemistry and allied subjects in the penultimate year. The successful student receives a medal and a suitably inscribed certificate.

Walter J. Chute Prize in Chemistry: An endowment has been established to provide an annual prize to a chemistry student, with an outstanding record in organic chemistry, entering his or her final year in the Honours Chemistry programme.

The Hugh Graeme Fraser Memorial Prize in Advanced Chemistry: This award was founded by members of the Class of 1931. The net interest will be awarded annually to that student at the end of his/her third year, who has, in the opinion of the Department, shown such aptitude for Chemistry as to merit the award.

Kenneth and Dorothy Hayes Memorial Prize: This endowment provides an annual prize to the student who has demonstrated interest in physical chemistry. The prize is awarded at the end of the penultimate year in the honours chemistry program to that student who has achieved satisfactory academic standing in Third- or Fourth-Year level classes in physical chemistry.

Dr. Osvald Knop Prize in Chemistry: An endowment provides for an annual prize to the top student (or students in the event of a tie) for the best achievement in both classes and laboratory work in the Second-Year inorganic Chemistry class.

The Society of Chemical Industry, Canadian Section, Merit Award: This award (of an engraved gold key and a subscription to *Chemistry and Industry*) may be made to the Honours graduate in Chemistry with the highest standing. A minimum average of 75% is required.

Undergraduate Award in Analytical Chemistry: The Division of Analytical Chemistry of the American Chemical Society offers a number of gift subscriptions to *Analytical Chemistry*. These awards are intended to recognize students who have completed the third undergraduate year and who have shown an aptitude for a career in analytical chemistry.

University Medal in Chemistry: The Department of Chemistry offers a medal to the top First Class Honours graduate in recognition of superior achievement in Chemistry.

Classics

University Medal in Classics: The Department of Classics offers to the top First Class Honours graduate in the classics programme a medal in recognition of superior achievement in Classics.

Earth Sciences

Amoco Canada Petroleum Company Ltd. Award: The company sponsors an award to a student in the fourth and final year of the Honours Earth Sciences programme who has attained at least a B- average, with a concentration in courses relating to petroleum exploration.

The David Barlow Memorial Award: The family, friends and classmates of David Barlow established in 1984 an endowment fund from which to provide an annual prize in his memory. The Dawson Geology Club in consultation with the Departmental Chairman will select a student in Second-Year Earth Sciences who has demonstrated both a good academic record and leadership qualities.

Canadian Society of Petroleum Geologists Award: The Society sponsors an annual award consisting of a certificate and a one-year student membership to an undergraduate student who has demonstrated outstanding competence in petroleum geology or closely related fields.

Canadian Society of Petroleum Geologists Student Industry Field Trip: The society sponsors a field trip to a third-year Earth Sciences student who has an interest in petroleum geology, sedimentology and stratigraphy. The award consists of travel expenses and most field expenses for a trip to the Sedimentary Basin and Rocky Mountains of Western Canada.

G.V. Douglas Memorial Prize in Earth Sciences: In 1958-59, friends and former students of the late Professor G.V. Douglas, established a memorial fund from which the net interest would provide a prize to be awarded to an outstanding student in first-year Earth Sciences.

Geological Association of Canada Student Prize: Based on overall academic standing this prize is awarded annually to a student entering fourth year. The prize will consist of a one-year free membership in the GAC and a GAC "Special Paper" volume to be chosen by the recipient.

Michael J. Keen Memorial Award: This award was established to encourage greater participation of women in science. It will be awarded to a female student entering the second year earth science programme who shows an interest in and commitment to the pursuit of a career in science and whose performance is of honours calibre.

MacEachern-Ponsford Memorial Award: Family, friends and classmates of Ian Joseph MacEachern and Mark Anthony Peter Ponsford have established a memorial fund. The purpose of the endowment is to provide an annual award from the net income to a student who has completed the second year of a programme majoring in Earth Sciences, whose academic

performance is of an honours calibre and who has been an active participant in student activities. The award is to be made on the recommendation of the Chairman of the Earth Sciences Department after consultation with the Dawson Geology Club and departmental staff.

Mineralogical Association of Canada Student Prize: This prize is open to an undergraduate student who has completed at least second year and has demonstrated excellence in one of mineralogy, crystallography, geochemistry, petrology and mineral deposits. The recipient will receive his/her choice of one of the MAC Special publications.

The Mining Society Centennial Scholarship Medal: The Mining Society of Nova Scotia sponsors annual medals to students who have distinguished themselves during university studies in the mineral, metallurgical or petroleum fields. The Department awards the medal allocated to Dalhousie to the best all round graduating student.

University Medal in Earth Sciences: The Department of Geology offers to the top First Class Honours graduate a medal in recognition of superior achievement.

Economics

The Anonymous Economics Prize: This prize, consisting of a book (or books) and a sum of money, is open to the Dalhousie undergraduate who is not in the final year of study and who has shown through an essay during the second year of study of economics, the best promise of successfully applying economics to the solution of human problems as determined by the selection committee.

University Medal in Economics: The Department of Economics offers a medal to the top First Class Honours graduate in recognition of superior achievement in Economics.

Education, School of

Eric Stanley Hillis Memorial Prize: The annual net income from a bequest to the University provides a prize in memory of Eric Stanley Hillis to a student in Education as selected by the Director of the School. The prize may consist either of one or more books chosen by the student in consultation with the Director or of a sum of money.

Engineering

The Association of Professional Engineers of Nova Scotia Award: The Association of Professional Engineers of Nova Scotia provides an award which is presented each year to that student graduating in Engineering who best demonstrates promise of using outstanding abilities to serve society in an ethical manner as a Professional Engineer. The award winner will be selected by students of the graduating class in

consultation with the Engineering Faculty members. The award will consist of an engraved certificate.

The Walter F. Copp Memorial Prize: In 1979 an Anonymous Donor gave the University the sum of \$2,500 to establish an endowment for the purpose of funding this prize. It is awarded annually to the student graduating with the Diploma in Engineering with the highest average in Engineering classes.

The Kenneth F. Marginson Award: This prize is awarded annually to the student who achieves the highest standing in the first year of the Diploma in Engineering programme. Only students who are enrolled in University for the first time are eligible to receive this award. Presentation of the award takes place when the student enrolls in the second year of the Diploma in Engineering course. This prize is funded from an endowment of \$2,500 which has been established by an Anonymous Donor, in honour of Professor Kenneth F. Marginson, a former Head of the Department.

English

Paul McIsaac Memorial Prize: A memorial gift provides for an annual prize for an undergraduate student, who shows an enquiring and original mind, in the second or third year of study in the Honours or Major programme in English.

Margaret Nicoll Pond Memorial Prize in English: This prize will be awarded to the woman graduate of Dalhousie University who leads her class in English.

The James W. Tupper Graduate Fellowship in English: This fellowship, of an annual value of approximately \$5,500 is awarded by the faculty of the Department of English to a student who proposes to do graduate work in English at a university approved by the faculty. The award need not be held at Dalhousie. Further information may be obtained from the Department of English.

The University Medal in English: Each year the Department of English offers a medal to the top First Class Honours graduate in recognition of superior achievement in the programme.

French

Prix du Consulat de France: The French Consul Prize will be made upon recommendation of the Department of French, to a student graduating with Honours in French.

Prix de l'Ambassadeur de France: A prize in books, offered by the French Embassy in Ottawa, is awarded annually to the graduating student standing highest in the advanced French class.

Prix de l'Ambassadeur de Suisse au Canada: A prize of books, the gift of the Ambassador of

Switzerland in Canada, is awarded to graduating students who have won distinction by their work in the French language.

University Medal in French: The Department of French offers to the top First Class Honours graduate a medal in recognition of superior achievement.

German

Janet Gwendolyn Coade-Dessauer Memorial Prize: A prize, consisting of one or more books, will be offered to a deserving honours or graduate student in recognition of achievement in German language studies.

Prize of the Ambassador of Austria in Canada, Prize of the Ambassador of Switzerland in Canada, and the Prize of the Ambassador of Germany in Canada: The Austrian, German and Swiss embassies in Canada regularly offer German language books to the Department to be awarded to Dalhousie students whose achievement in German is outstanding. Awards are made at various levels of proficiency.

University Medal in German: The Department of German offers a medal to the top First Class Honours graduate in recognition of superior achievement.

History

The Edith and Rose Goodman Prize in History: Under the Will of the late Mrs. Jeanette Goodman a bequest was made to Dalhousie University to fund a prize (or two prizes) for the highest (or the highest and second highest) standing in the class in Canadian History. The prize is awarded on the recommendation of the Department of History.

The Dr. George E. Wilson Prize in History: In 1967 an endowment was established to provide an annual prize to be awarded for the best essay by a First-Year student in a first-year class.

University Medal in History: To the top First Class Honours graduate the Department of History offers a medal in recognition of superior achievement.

International Development Studies

University Medal in International Development Studies: A University Medal has been established for the student with the highest standing among those who graduate with First Class Honours.

Mathematics, Statistics and Computing Science

Bernoulli Prize: The Bernoulli Prize will be awarded annually to the student registered in the Co-op Mathematics Programme who has the best cumulative academic record, subject to the restrictions that the prize can be awarded only

once to a given individual and that the winner must have performed acceptably in all work term assignments.

The Katherine M. Buttenshaw Prize: This prize, being the net interest of an endowment of \$1,000, will be awarded annually to the student standing highest in the advanced Mathematics classes.

Digital Equipment of Canada Limited Award of Merit: Under the Annual Awards Programme of Digital Equipment of Canada Limited an award consisting of a Certificate of Merit and \$250 cash is offered annually. The award is open to the best graduating student in Computing Science.

The Ellen McCaughin McFarlane Prize: A Fund has been established in memory of Ellen McCaughin McFarlane, Class of 1927. Initially, the Fund is to provide an annual prize to an honours mathematics student who at the end of his/her first year* in the honours programme has achieved the highest standing.

* (Normally, this would be upon the completion of the second year at Dalhousie.)

Mobil Oil Canada Award: This is an award to the student enrolled in the Computing Science major or Honours Programme, who shows the best performance in the two third-year core half-courses CS 3690 and CS 3700. The recipient will be chosen on the basis of final grades and on the recommendations of the instructors in the courses and of the Director of Computing Science. Mobil Oil Canada Limited gave the University a gift of \$1,000 to endow this annual prize.

The Waverly Prize: This prize, being the net interest of an endowment of \$1,000 for the purpose, will be awarded annually to student standing highest in Mathematics 1010.

The Sir William Young Gold Medal: Founded by the bequest of the late Sir William Young, this medal will be awarded on graduation to the student who stands first among those taking First Class Honours in Mathematics. (This is the University Medal in Mathematics)

University Medal in Computing Science: In 1983-84 the Department established this medal to be awarded, where appropriate, to the student who stands highest among the First Class Honours graduates in the Computing Science programme.

University Medal in Statistics: The Department established this medal to be awarded to the student who stands highest among the First Class Honours graduates in the Statistics programme.

Microbiology

University Medal in Microbiology: The Department of Microbiology offers to the top

First Class Honours graduate a medal in recognition of superior achievement in the programme.

Music

Dalhousie Alumni Association (Women's Division) Medal in Music: The Women's Division provides an annual medal to the student who achieves the highest cumulative GPA in the programme.

Dalhousie Women's Alumnae Medal: This medal is presented to the graduating student who has achieved the highest cumulative average in Music subjects during the four-year Bachelor of Music degree programme.

James and Abbie Campbell Prize, Campbell Incentive Award: The Department of Music may from time to time award prizes to outstanding students from the James and Abbie Campbell Memorial Fund. The Campbell Incentive Award may on occasion be awarded under special circumstances.

The Beatrice Daviss Music Prize: A fund has been established by members of the Dalhousie community to mark Women's Centennial Year (1985) at this University. The purpose of the fund is to provide an annual in-course prize to a female student in the Bachelor of Music or Bachelor of Music Education programme on the combined basis of high academic standing and performance ability as determined by the Department of Music. The prize is named after the first graduate in music in 1909.

University Medal in Music: The Department of Music offers a medal to the highest ranking student of the year who graduates with the equivalent of a First Class Honours degree in the Bachelor of Music programme.

Philosophy

The F. Hilton Page Memorial Prize in Philosophy: This annual prize is normally awarded to the honours graduate whose Honours Essay is judged to be outstanding.

University Medal in Philosophy: The Department of Philosophy offers a medal to the top First Class Honours graduate in recognition of superior achievement in the programme.

Physics

The Dr. William J. Archibald Prize in Physics: An annual prize will be awarded to a student who, having completed the first year, is considered by the Physics Department to be the most promising among those entering the Honours Physics programme.

The Professor J.B. and Mrs. H.H. French Prize: A prize of \$1,000 is open to a female student at each of the second-, third- and fourth-year levels. An award is to be made only to those maintaining First Class standing in their honours

programme. Consideration of candidates entering the third and fourth year will be made during May once final grades become available. Consideration of second-year candidates will occur in the fall.

The Dr. E.W. Guptill Memorial Prize: This is to be awarded to the undergraduate student who best exemplifies the qualities of Dr. E.W. Guptill in showing initiative, experimental skill, leadership and enthusiasm for Physics, thereby making an outstanding contribution to Physics in this University. This prize will not necessarily be awarded every year.

The Dr. George Henderson Prizes in Physics: Several prizes are awarded to students who have shown special aptitude in Physics.

The James Gordon MacGregor Memorial Prizes: Relatives of the late Dr. J.G. MacGregor contributed to the James Gordon MacGregor Memorial Fund which now provides awards to both undergraduates and graduates in the study of Physics. The undergraduate awards are in the form of prizes.

The Dr. A. Stanley MacKenzie Prizes in Physics: These prizes will be awarded by the Department of Physics to the most promising students in the first two years of the Honours Physics programme. The fund was established under the Will of the late Miss Mary Alice Smith.

The Burgess McKittrick Prizes in Physics: Four prizes of \$100 each will be awarded to undergraduate students achieving the highest standing in each of the four classes, Physics 1000, 1100, 1300, and Physics 2110 and 2120 combined. No student may receive more than one such prize in any one year. The funds for these prizes come from the estate of F.J.A. McKittrick who graduated in 1894 with Honours in Mathematics and Mathematical Physics. He was the first Dalhousie graduate to receive the 1851 Exhibition Scholarship. The prizes are in memory of his brother, Burgess McKittrick, who was graduated in 1877.

Darrell Montgomery Memorial Prize: An endowment has been set up to provide an annual prize to the Third-year student in honours physics who is deemed to have shown a love of experimentation, the qualities of leadership and participation in student activities in physics related areas.

The University Medal in Physics: The Department of Physics offers to the top First Class Honours graduate a medal in recognition of superior achievement in the Physics course.

Political Science

The James H. Aitchison Award: In 1979 colleagues of Dr. J.H. Aitchison established a fund from which an annual prize would be awarded in recognition of the best

undergraduate honours essay. The fund was established to honour Professor Aitchison who was instrumental in founding the Department.

The Eric Dennis Gold Medal: Founded by Senator William Dennis and Mrs. Dennis, this medal will be awarded on graduation to the student who stands first among those taking First Class Honours in Government and Political Science. (This is the University Medal in Political Science.)

The H.B. McCulloch Memorial Prize in Political Science: This prize will be awarded annually to the student who, among all the first and second year students registered in introductory classes in Political Science, is judged to have written the best essay in the second term.

Psychology

Brimer Memorial Prize in Psychology: The Charles J. Brimer Memorial Fund was established during 1971 in memory of the late Dr. Brimer, Acting Chairman of the Department of Psychology. The income from this fund is awarded to a third-year Honours student. Students enrolling for the Honours certificate in Psychology in the year equivalent to the fourth year of the Honours Psychology programme are also eligible for the prize. The Brimer Memorial Prize is restricted to Dalhousie Honours Psychology students and is not open to Joint Honours students from other departments or other universities. The prize will be given to the student who shows the greatest potential as a researcher in experimental psychology.

Frances L. Stewart Memorial Prize in Psychology: A fund has been established to provide a prize to a Fourth Year honours student who shows outstanding potential as a scientist/practitioner in clinical psychology.

University Medal in Neuroscience: To the top graduating student with First Class Honours in the programme the Department of Psychology offers a medal.

University Medal in Psychology: The Department of Psychology offers to the top First Class Honours graduate a medal in recognition of superior achievement.

Dr. Lilyan E. White Prize: A bequest from the Estate of Dr. Lilyan E. White established an endowment to fund a prize to an undergraduate student in Psychology. The Department has assigned the prize for use in recognizing the best performance of a student in second-year.

Russian Studies

University Medal in Russian Studies: The Department of Russian offers to the top First Class Honours graduate a medal in recognition of superior achievement in the programme.

Sociology and Social Anthropology

The Rev. S.H. Prince Prize in Sociology: A bequest under the will of the late Dr. S.H. Prince established a fund to provide an annual prize to be available to students at either Dalhousie or King's.

University Medal in Social Anthropology: The Department of Sociology and Social Anthropology offers a medal to the top First Class Honours graduate in the Social Anthropology programme in recognition of superior achievement.

University Medal in Sociology: The Department of Sociology and Social Anthropology offers a medal to the top First Class Honours graduate in the Sociology programme in recognition of superior achievement.

Spanish

The de Carteret Memorial Prize: The de Carteret Memorial Prize is payable from the net annual income of a fund which was provided as a gift in the memory of the late Norman S. and Heller S. de Carteret and their sister, Phyllis de Carteret Nielsen. The prize is to be awarded on the recommendation of the departmental chairman to an outstanding student in the Department of Spanish.

University Medal in Spanish: The Department of Spanish offers a medal to the top First Class Honours graduate in recognition of superior achievement in the Spanish programme.

Theatre

University Medal in Theatre: The Department of Theatre offers to the top First Class Honours graduate a medal in recognition of superior achievement.

Women's Division - Dalhousie Alumni Association Medal in Costume Studies: This medal is presented annually to the graduating student with the highest cumulative grade point average in the Costume Studies Programme.

Transition Year Programme

Morris Saffron Prize: A bequest under the Will of the late Morris Saffron established an endowment to provide an annual prize to a student in the Transition Year Programme who is judged to have made the greatest academic achievement during the year.

College Awards

Note concerning top medals and prize: The Undergraduate Scholarship Committee adopted the following policy concerning the top medals and top prize, effective with the 1986-87 academic year:

In the event of a student taking a second degree at Dalhousie, then in order to be considered for the Governor-General's Gold Medal [since replaced by the Governor General's Silver Medal, 1988], the University Silver Medal or the Avery Prize, such a student must have completed at least 12 new classes at Dalhousie in the second degree programme and in the calculation of the student's average, only these new classes will be counted. Furthermore, any disciplinary action by the Senate Discipline Committee, which action is recorded on the student's transcript, shall be deemed sufficient cause for such a student to be ineligible for the aforementioned top medals and prize.

The Avery Prize: This prize, being the net interest on the sum of \$500 bequeathed for this purpose by J.F. Avery, MD, will be awarded on graduation to the student standing highest among those being graduated from the general course.

The Governor-General's Silver Medal: Offered by his Excellency the Governor-General of Canada, it will be awarded to the undergraduate student who has achieved the highest academic standing among graduates of baccalaureate programmes. This is interpreted to apply to those students in Honours programmes who are graduated with First Class Honours.

The University Silver Medal: This medal is awarded to the student who is judged to be the leading First Class Honours graduate of the year in either the arts or the sciences, in whichever field the Governor-General's Silver Medal was not presented.

(Please note that Commerce students are eligible for the above three awards and that such students are grouped with Arts students in the assessment process.)

Faculty of Health Professions

College of Pharmacy

The Apotex Inc./PACE Future Leader Award: An award of \$1000 is available annually to the qualifying student who is graduating from the program. The recipient will be selected from among those who have made significant contributions to the student body, who have demonstrated the strong potential to make contributions to the profession, and who have maintained throughout their university studies a satisfactory academic standing.

BMS Pharmacy Award: This award of \$500 is presented annually to the student with the highest standing in second-year classes.

The Dean George A. Burbidge Memorial Award: This prize is awarded by the Nova Scotia Pharmaceutical Society to a student completing third year, from Nova Scotia, for

outstanding qualities of character and pharmaceutical ability at the College of Pharmacy.

The R. Frank Chandler Award: A fund was established by Ortho Pharmaceutical (Canada) Limited in 1989 to support this Award. It will be presented to a student entering the final year of study at the College of Pharmacy. The candidate must have high qualities of character and spirit, must have well developed interpersonal skills, must show an aptitude and proficiency for the profession, must show promise of making future contributions to the profession of pharmacy.

The F.R. Clayden Prize: This prize, in the form of a book, is presented in memory of Mr. F.R. Clayden (Class of 1912) to a deserving student completing the first-year classes of the pharmacy course.

Clinical Pharmacy Award: This award of \$150 is presented to a student in the fourth year therapeutics class. The student must have an aptitude for clinical pharmacy practice and must have achieved a high level of performance during the clinical clerkship.

The Dean J. Esmonde Cooke Award: This award of \$500 is to be given annually to a student who has successfully completed one or more years of the course leading to a degree in pharmacy and who is enrolled in pharmacy at the University for the coming year. Candidates must have attained a good academic standing and must show promise of making future contributions to the profession of pharmacy. The student must be a graduate of a high school in Nova Scotia and should not be the recipient of other concurrent awards. The Selection Committee may also consider the financial need of the candidate. This award is sponsored by the Pharmacy Association of Nova Scotia.

Robert G. Crowell Memorial Pharmacy Award: This award of \$1000 is open to a student who is a resident of Nova Scotia who is entering the fourth year of study at the College. The candidate must have attained a satisfactory academic standing and show promise of making future contributions to the profession of pharmacy. The Selection Committee may consider financial need in the determining of an awardee. The award, sponsored by Crowell's Pharmacy Ltd., honours its founder for his contributions to pharmacy in the province.

Dale Daley Pharmacy Award for Excellence: This award was introduced in 1990 by Shoppers Drug Mart to recognize the many contributions of Dale Daley to the profession of Pharmacy. It is awarded annually to a third year pharmacy student who has demonstrated a good academic standing and whose contributions to undergraduate life at the university excel. The award is valued at \$3,000.00.

The Dalhousie Student Pharmacy Society Book Award: A trust fund from various donations has

been established in the name of the Dalhousie Student Pharmacy Society. The interest accrued each year is used to purchase a suitable book for presentation to a student completing the first year at the College of Pharmacy. The first-year students are asked to select the student who has contributed in an exceptional way to the life and spirit of their class. The main factors for consideration are active participation in student affairs and a keen interest in the profession of Pharmacy.

Robert C. Dickson Memorial Award: This award is presented to a student from New Brunswick on the basis of academic achievement, financial need and participation in student activities at the College of Pharmacy. The Award is made available through a bequest of the late Mr. Charles D. Dickson.

The Sister Frances dePaul Award: This award, consisting of a reference book or a subscription to a professional journal, is offered annually by the Nova Scotia Branch of the Canadian Society of Hospital Pharmacists and is presented to the student who attains the highest standing in the hospital pharmacy class. To be eligible for this award a student must have achieved a GPA of at least 3.00.

Drug Information Award: This award, in the form of a reference book or professional journal subscription, is to be awarded to a worthy student in The Drug Information Class, Pharmacy 4900.03B.

J.G. Duff Pharmacy Award: This award, in the form of a medal, was established by Dr. Duff's former students and associates in recognition of his contribution and devotion to pharmaceutical education in the Maritimes. The award will be presented to a student entering the senior year for outstanding leadership and satisfactory scholastic attainment. A Senior Stick, bearing the names of the recipients, will be kept in trust by the Dalhousie Student Pharmacy Society. The recipient of the award will be selected by the student body.

The Charles E. Frosst Award: This award of \$1000 is presented by Merck Frosst Canada Inc. to an undergraduate student of outstanding merit in the third-year class.

The Charles E. Frosst Medal: This medal is presented by Merck Frosst Canada Inc. to the student who achieves the highest academic standing in the third-year class.

Hoechst-Roussel Canada Inc. Award: An award of \$1,500 is presented annually to an outstanding pharmacy student who has successfully completed one or more years at the College of Pharmacy.

Home Prescription Services Prize: This prize of \$200 is awarded annually to the student who

obtains the highest standing in Physiology 4403.06R. To be eligible for this prize a student must have at least a GPA of 3.00.

The Frank W. Horner Medal: This medal is awarded to the pharmacy student who has attained the highest standing in the third year dispensing class.

The William Killorn Award: This award has been established by Shoppers Drug Mart Associates and the pharmaceutical industry to pay tribute to Bill Killorn in honour of his 46 years of service to pharmacy in Atlantic Canada. The award is presented annually to a pharmacy student who, in the view of the College after consultation with the Killorn family and the pharmaceutical industry, demonstrates strong leadership skills and excels in academic and extracurricular activities.

The Honourable John J. Kinley Pharmacy Award: In order to be considered for the award, candidates must have satisfactory academic standing and show promise of contributing to the profession. The financial need of the applicant may also be considered by the Selection Committee. The net income from an established fund will be used to provide a monetary award as well as a book.

The Lilly Book Award: The firm of Eli Lilly Canada Inc. provides an award for a deserving student in either first or second year pharmacy. The award consists of the sum of \$200 and the current edition of Martindale's Extra Pharmacopoeia.

Dr. Jessie I. MacKnight-Miss Mona W. Fleming Award in Hospital Pharmacy: This award is administered annually to a student from New Brunswick and to a student from Nova Scotia who have completed outstanding work in the hospital portion of the practical training programme and in the third year dispensing laboratory class. It is desirable that the recipients demonstrate an interest in hospital pharmacy practice.

The Helen Corston Marshall Award in Pharmacy: This award is to be given annually to a student (or students) who has successfully completed one or more years of the course leading to a degree in pharmacy and who is enrolled in pharmacy at the University for the ensuing year. Candidates must have attained a satisfactory academic standing and must show promise of making future contributions to the profession of pharmacy. Financial need may be considered.

Medis Atlantic Medal: This medal is awarded annually to the student on graduation who has obtained the second highest aggregate mark during his/her four years at the College of Pharmacy.

Merck Sharp and Dohme Pharmacy Award: This award, consisting of \$1000 and the books,

The Merck Index and The Merck Manual, is presented to the student entering the final year who has attained the highest standing in the pharmaceutical chemistry classes.

New Brunswick Pharmaceutical Society Centennial Medal: In conjunction with its 100th anniversary of incorporation, the Society has established this commemorative medal to be presented annually to the New Brunswick student who has attained the highest aggregate mark during his/her four years at the College of Pharmacy.

The Nova Scotia Association of Certified Dispensers Prize: This prize, in the form of a book, will be awarded annually to the top student in the first year dispensing laboratory. The prize was established in 1984 with the gift of funds to provide the initial award and to set up an endowment to provide subsequent awards.

The Nova Scotia Pharmaceutical Society Centennial Awards: In conjunction with its 100th anniversary of incorporation, the Society has established two awards. Candidates will have a satisfactory academic standing and show aptitude for the profession. The financial need of the student may be considered in selecting recipients for the awards, each of which is \$500.

Nova Scotia Pharmaceutical Society Memorial Award: The Society has established this award in memory of past members and friends of the Society. It is available to a qualifying student who possesses good academic standing and aptitude for the profession. The financial need of the student may be considered in selecting the recipient for the award of \$1000.

Novopharm Pharmaceutics Award: This award of \$500 is presented annually to the student who obtains the highest combined standings in the following classes: Physical Pharmacy (second year), Biopharmaceutics (second year) and Pharmacokinetics (third year).

The Parke-Davis Prize: A prize of \$500 is presented annually to the student with the highest standing in the first-year classes of the pharmacy course.

Practical Training Programme Prize: A prize is presented to a student completing the College of Pharmacy Practical Training Programme who has achieved a high level of performance during the programme. Assessment will be based primarily on submitted assignments.

The B. Trevor Pugsley Memorial Pharmacy Award: This award was established by a bequest from the Estate of B. Trevor Pugsley for an undergraduate student who has completed one or more years of the pharmacy course. The criteria for the selection of the recipient are based on academic standing, aptitude for pharmacy and qualities of character. Financial need may also be considered.

The Mrs. Vera B. Pugsley Award: This award of \$500 will be presented annually to a student who has successfully completed one or more years of the course leading to a degree in pharmacy and who is enrolled in pharmacy at the University for the ensuing year. Candidates must have attained a satisfactory academic standing and must show promise of making future contributions to the profession of pharmacy.

Roche Award: An annual award of \$750 is available to a pharmacy student in any year of study who has achieved satisfactory academic standing, has shown aptitude for the profession, and who may have financial need.

John J. Ryan Pharmacy Administration Award: This award of \$200 and a suitable memento is presented annually to the student earning the highest mark in Pharmacy 4700.03A. This Award was made possible through income from the John J. Ryan Fund.

Sandoz Prize in Pharmacy: This prize is presented annually to the graduating student who obtains the highest standing in fourth year pathophysiology and therapeutics class (PHAR 4500.13). The prize consists of an engraved plaque, a cheque for \$250 and a reference book.

The Leigh Semple Memorial Award: An endowment has been established to provide an annual award to a third-year pharmacy student from Prince Edward Island who has demonstrated strong academic ability and involvement in student activities.

Dr. Samar B. Singh Prize in Anatomy: An endowment fund has been established for the purpose of providing from the net annual income a prize to the highest standing student in ANAT 1010.03 among Nursing and Pharmacy enrollees. The prize, consisting of a book or books to the approximate value of \$100, is a memorial to Dr. Singh, a long-time member of the Department of Anatomy. The awardee will be selected by the Head of the Department.

SmithKline Beecham Pharma Inc. Award: Two awards of \$500 each will be presented annually to a student from Nova Scotia and a student from either New Brunswick or Prince Edward Island who have successfully completed one or more years of the course leading to a degree in pharmacy and who are enrolled in pharmacy at the University for the ensuing year. Candidates must have attained a satisfactory academic standing and must show promise of making future contributions to the profession of pharmacy.

Pharmacy's Canada Centennial Award (External): This award enables a student who is completing the third year to participate in the Canadian Pharmaceutical Association Conference and to visit governmental and industrial institutions. The award is based on acceptable academic achievement, participation, and leadership in student activities. The award

is sponsored by the Canadian Pharmaceutical Association, Shoppers Drug Mart, and the Maritime provincial pharmaceutical societies and association.

University Medal in Pharmacy: This medal is awarded annually to the graduate who has obtained the highest academic standing in the pharmacy programme provided that she or he meets the requirements as set by the Faculty.

Warner-Lambert Self-Medication Award: An award of \$500 is presented by Warner-Lambert to recognize the pharmacy student who achieves the highest standing in course work related to over-the-counter drug products.

Wyeth Award of Excellence in Pharmacy Research: An Award of \$200 and a certificate will be presented to a fourth year student at the College of Pharmacy who completes the best research project in a given academic year. The research will usually be done in Pharmacy 4000.06R, 4010.03A, 4020.03A or B, or 4030.03R, but any paper completed by a fourth year student, which is deemed by the primary supervisor to be worthy of consideration for this Award, will be included in the competition. Each primary supervisor may submit no more than one paper. A committee will evaluate the research presentations in both a written and verbal form.

School of Nursing

Alumnae Award (Nursing): This award is open to graduating students in the Basic or Post-RN programmes. The recipient will have achieved a Grade Point Average of 3.00 or better and have demonstrated clinical competency in the area of medical/surgical nursing in a hospital setting.

Dalhousie Basic Degree Certificate and Dalhousie Post-RN Degree Certificate: Information concerning these certificates may be obtained from the School of Nursing.

Final-Year Degree Award: A prize is awarded to the student in the graduating class who has achieved the highest academic standing. (On account of computer space limitations the older name has been retained on the code directory. In the School of Nursing this award is known as Prize for the Highest Academic Achievement in the Undergraduate Degree Programme.)

The Grace Maternity Medical Staff Association Award for Excellence in Maternal Nursing: Open to graduates from the Basic programme, the recipient of this award will be one who demonstrates excellence in the area of maternal nursing as determined by the faculty member teaching the N3210.04 course or its equivalent.

Halifax Children's Hospital Alumnae Prize: This prize is given by the Izaak Walton Killam Hospital for Children to the student who meets the approval of the criteria as established by the School of Nursing and the Izaak Walton Killam

68 Awards

Hospital for Children in recognition of the student's work in the paediatric sector of the community.

R.M. MacDonald and R.C. Dickson Prize in Outpost Nursing: A prize is awarded for the student achieving the highest academic record in the graduating class of Outpost Nursing students.

C.V. Mosby Book Prize: This award is given in recognition of a student's high academic standing and participation in the School.

Anna Trenholm Memorial Prize: A cash award has been donated by the family of the late Anna Trenholm (Diploma in Outpost Nursing, 1970; BN 1976). The prize is to be awarded annually to the student graduating from the Outpost Nursing Programme whose achievement in clinical practice has been outstanding.

W.B. Saunders Award (Nursing): This prize is presented to the student in the graduating class who has demonstrated progressive academic achievement and general proficiency. It is a one-year subscription to *Nursing Clinics of North America*.

Dr. Samar B. Singh Prize in Anatomy: An endowment fund has been established for the purpose of providing from the net annual income a prize to the highest standing student in ANAT 1010.03 among Nursing and Pharmacy enrollees. The prize, consisting of a book or books to the approximately value of \$100, is a memorial to Dr. Singh, a long-time member of the Department of Anatomy. The awardee will be selected by the Head of the Department.

The Stern Award: This prize was established to recognise the contribution of a graduating student to increased knowledge and participation of School members in an interdisciplinary international role.

University Medal in Nursing: This medal is awarded annually to the graduate who has obtained the highest academic standing in the Nursing programme provided that she (or he) meets the requirements as set by the Faculty.

School of Occupational Therapy

(a) For Graduating Students

The Canadian Association of Occupational Therapists Book Prize: This prize is awarded annually to the graduating student with the highest academic standing in the theory of occupational therapy.

Class of '85 Award: This prize is awarded annually to a graduating student (as chosen by the members of the graduating class) who has made an outstanding contribution to activities of the class, School, University and community.

T.B. Clift Ltd./NLAOT Leadership Award: This award is presented annually to the fourth-year occupational therapy student who

has demonstrated leadership qualities in extracurricular involvement within the community at large while enrolled in the occupational therapy program. Students must apply for this award by submitting to the president of NLAOT an autobiographical letter highlighting her/his involvement.

Dalhousie Women's Alumnae Medal: The Women's Division of the Dalhousie Alumni Association sponsors an annual medal to be awarded to the graduating student with the highest cumulative grade point average in the occupational therapy program.

Foundation Travel Award: This award was established to recognise the founding of the School of Occupational Therapy. Presented annually to the President of the Dalhousie Occupational Therapy Student Society, the award provides funding to cover the cost of attending the annual Occupational Therapy Atlantic Conference. Funds for the award are provided by the professional organizations of occupational therapists in the four Atlantic provinces.

C.V. Mosby Book Prize: This prize is awarded annually to the graduating student with the second highest standing in the final year of the Occupational Therapy programme.

New Brunswick Association of Occupational Therapists Award for Achievement in Fieldwork: This prize is awarded annually to the graduating student who has shown outstanding achievement in fieldwork.

1992 Tenth Anniversary Award: This award will be presented annually to a graduating student who has demonstrated an outstanding level of personal growth and professional development while in the occupational therapy program.

Nova Scotia Society of Occupational Therapists Student Society Award: This prize is awarded annually to the graduating student who has contributed most to the Occupational Therapy Student Society.

Newfoundland and Labrador Association of Occupational Therapists Book Prize: This prize is awarded annually to the student entering fourth year who achieved the highest standing in third year Therapeutic Procedures classes (OCCT 3305.02, OCCT 3306.02, OCCT 3307.04 and OCCT 3308.03).

PEIOTS and PELAOT Award for Community Occupational Therapy: This prize is awarded annually to the graduating student with outstanding academic achievement in Advanced Professional Practice (OCCT 4419.06) as well as an interest and involvement in community practice.

The Sammons Award: This prize is awarded annually to the graduating student with the highest overall standing in statistics (MATH

1060.03), research methods (OCCT 4407.03) and Independent Study (OCCT 4421.06). Mr. F. Sammons gave the University a gift to be used at the discretion of the School, which decided to endow an award for a graduating student.

Sammons Research Award for Clinical Tutors: An endowment has been established to provide an annual prize to the clinical tutor who has assisted the graduating student who won the Sammons Award for their independent research project.

W.B. Saunders Book Prize: This prize is presented annually to the graduating student with the second highest cumulative grade point average in the Occupational Therapy programme.

Smith & Nephew Award: This \$500 annual award is open to graduating students who have by their innovative and creative contributions shown promise for the profession and who have demonstrated academic performance.

Fourth-year students who by the end of their third-year have a cumulative GPA of not less than 3.3 are invited to submit by April 15 a summary of their contributions to the advancement of occupational therapy to the Chair of the Student Awards Committee.

University Medal in Occupational Therapy: This medal is awarded annually to the graduate who has obtained the highest cumulative academic standing in the occupational therapy programme provided that she or he meets the requirements as set by Faculty.

Williams and Wilkins Book Prize: This prize is awarded annually to the student entering fourth year with the highest cumulative academic standing.

(b) For Other Students

The Cardwell/Robinson Prize: An endowment has been established from which the net annual income will support a prize. The award is presented to a student entering fourth year who has achieved the highest standing in courses dealing with psychiatry and mental health (OCCT 3302.05 and OCCT 3307.04).

The Norma Cassidy Prize: This award is presented annually to a student entering fourth year with the highest academic standing in Therapeutic Procedures (Rehabilitative, OCCT 3305.02).

T.B. Cliff Ltd./NLAOT Academic Achievement Prize: This prize is presented annually to the student entering Third Year who is a Newfoundland resident with the highest GPA in the second year of study.

Dalhousie Occupational Therapy Student Involvement Award: This award was established by the Occupational Therapy Student Society from a donation by the Dalhousie Student Union through their Capital Campaign pledge. The prize will be presented annually to a

student entering the fourth year who shows financial need and who has been actively involved in the Occupational Therapy Student Society and other School activities. One award of \$500 will be made from income generated by the endowment.

Nova Scotia Society of Occupational Therapists Book Prize: This prize is awarded annually to a student entering third year who has been selected by classmates on the basis of outstanding contribution to activities in both the School and the community, interpersonal skills and general scholarship proficiency.

School of Occupational Therapy Prize in Kinesiology: This prize will be presented annually to the student entering Third Year with the highest standing in class OCCT 2210.03 (Kinesiology).

School of Physiotherapy

Fourth Year

Canadian Physiotherapy Association Award: A certificate and first-year membership in the Canadian Physiotherapy Association constitute this annual award. It is presented to the graduating student who has achieved the highest aggregate percentage in academic and clinical physiotherapy subjects during the entire programme.

The Patricia Stanfield Covert Award in Physiotherapy: An endowment has been established to provide an annual prize to a physiotherapy student who is entering the final year of the programme. The recipient is to be nominated by classmates on the basis of extra curricular activities, interpersonal skills and scholarship proficiency.

Morris B. Kohler Award in Physiotherapy: This prize is awarded to the student in the graduating class who has demonstrated the greatest interest in the treatment of long-term rehabilitation patients, while attending the Nova Scotia Rehabilitation Centre.

Hazel Lloyd Foundation Book Prize: The Hazel Lloyd Foundation has been established by Miss Aphra Lloyd in memory of her sister, Miss Hazel A. Lloyd (1930-1985), Associate Professor, School of Physiotherapy. Friends, associates and alumni have made additional contributions. The purpose of the Foundation is to foster interest in geriatrics and gerontology, Professor Lloyd's major areas of interest. The Hazel Lloyd Foundation will award an annual Book Prize to the student with the highest marks in PT 4120.03A, Gerontology and Geriatrics.

Jean McAloney Memorial Prize: This prize is awarded annually to the student in the graduating class who has demonstrated the highest clinical standing. The prize is sponsored by the New Brunswick Association of Physiotherapists.

70 Awards

Newfoundland and Labrador Physiotherapy Association Prize: This prize is awarded to the member of the graduating class who has attained the highest standing in Neuroscience. It is sponsored by the Newfoundland and Labrador Physiotherapy Association.

Nova Scotia Neurosciences Section Book Prize: The Nova Scotia Section of the Neurosciences Division of the Canadian Physiotherapy Association established a prize of \$50, effective with the 1984-85 session. The prize will be presented to the fourth-year Physiotherapy student with the highest combined grade from (1) the practical exam in third-year neurology course and (2) the average grade of the third-year and fourth-year clinical neurology placement(s). The recipient will be selected by the Dalhousie Professor who is managing the neurology course.

University Medal in Physiotherapy: This medal is awarded annually to the graduate who has attained the highest academic standing in the physiotherapy programme, provided that he or she meets the requirements approved by the Senate of Dalhousie University.

Third Year

Canadian Physiotherapy Cardiorespiratory Society Book Prize: This prize is awarded annually to the Physiotherapy student who has attained the highest standing in the Cardiorespiratory in the Third Year.

Newfoundland and Labrador College of Physiotherapists Prize: This prize is awarded to the physiotherapy student who has attained the highest standing in Orthopaedics. It is sponsored by the Newfoundland and Labrador College of Physiotherapists.

Nova Scotia College of Physiotherapists Book Prize: The College sponsors an annual cash prize for books to the third-year physiotherapy student who has demonstrated the greatest degree of leadership within her/his class during the second and third years within the School of Physiotherapy.

Nova Scotia Physiotherapy Association Prize: This prize is awarded annually to the student who shows the greatest overall improvement during the third year of the BSc Physiotherapy programme.

Second Year

Prince Edward Island Physiotherapy Association Prize: This prize is awarded annually to the student who has attained the highest academic standing in Gross Anatomy.

School of Recreation, Physical and Health Education

Beaver Foods Awards: Under the sponsorship of Beaver Foods Limited the School of Recreation, Physical and Health Education is able to offer a limited number of entrance

awards between \$500 and \$1000 to students registering in this School for the first time. Winners will be selected from applicants who possess a strong background in academic performance, leadership activities and extra-curricular activities, especially varsity athletics. Further information may be obtained from the Director of the School of Recreation, Physical and Health Education.

Anthea Bellemare Award for Excellence in Student Teaching: The School selects for this award the graduating student in the Bachelor of Physical Education/Bachelor of Education programme who has demonstrated the highest degree of performance in student teaching activities.

The E.G. Belzer Jr. Prize: In 1986 colleagues and former students of Dr. E.G. Belzer Jr. established a prize that is to be awarded to the undergraduate health education major who is adjudged to have written the best paper among those submitted to health education courses. The adjudication is held annually, at mid-April. The prize will be a book chosen by Health Education Division faculty members. The prize is also open to graduands.

Canadian Society for Exercise Physiology: The Society provides an annual medal to the School to be awarded to an outstanding student in the Bachelor of Science in Kinesiology programme. The recipient will be the graduating student who has achieved the highest cumulative Grade Point Average over the duration of her/his academic record.

Canadian Association for Health, Physical Education and Recreation Student Award: This award is presented to a second- or third-year student who has demonstrated a significant involvement in the SAPHER organization and by so doing has demonstrated a commitment to the advancement of professional principles supported by CAPHER.

The Dr. M.J. Ellis Award: This award was established to give recognition to a graduating student who demonstrated exceptional interest and ability in research in one of the four undergraduate degree programmes.

Duane Ervanowitz Memorial Award: This memorial book prize is awarded to the graduand in the Recreation programme who is deemed to have an exceptional interest in and dedication to conservation and outdoor recreation.

Health Education Awards: Consisting of one-year subscriptions to a Health Education journal of the student's choice, there are two awards, one for each of years One and Two of the BSc Health Education programme. The awards are made to the student in each year who has achieved the highest GPA.

Leisure Research Congress Award: The Fifth Canadian Congress on Leisure Research set up

an endowment to provide an annual award to a student who has graduated from the Bachelor of Recreation programme. The recipient will have attained a cumulative Grade Point Average of 3.00 or higher and will have demonstrated an aptitude for research related to recreation and leisure. The awardee must be planning to register in a graduate programme in Leisure Studies at Dalhousie University in the academic year following receipt of the award.

The Dr. Hugh A. Noble Award: This award is given to a graduating student from one of the four undergraduate degree programmes in the School of Recreation, Physical and Health Education. The awarding is based on academic accomplishments, qualities of citizenship as shown by involvement outside the University, leadership qualities as demonstrated in activities inside the University, and an estimate of the candidate's potential for contributing to the profession.

John C. Fooley Sportsman Award: This award is presented to the student who has contributed significantly to the development of a sport.

Thomas Family Prize: The Nova Scotia Heart Foundation and the Thomas family have established an award which is open to graduating students in the Health Education programme (BSc or MA). Candidates will have shown dedication to the field of heart health through volunteer work in community health promotion, demonstrated a commitment to a healthy lifestyle, and achieved a commendable level of academic performance.

University Medal in Recreation, Physical & Health Education: This medal is awarded annually to the graduate who has obtained the highest academic standing in the physical education programme provided that she or he meets the requirements as set by the Faculty.

The Women's Division of the Dalhousie Alumni Association RP&HE Medals: Four awards are available to students in the School of Recreation, Physical and Health Education. For the students who achieve the highest standing in each of the Bachelor of Physical Education, the Bachelor of Recreation, the Bachelor of Science in Health Education and the Bachelor of Science in Kinesiology degree, the Women's Division sponsors of a medal.

Maritime School of Social Work

Dalhousie University Women Alumnae Medal: This medal is presented annually to the graduating student with the highest cumulative grade point average in the baccalaureate programme in the Maritime School of Social Work.

Faculty of Management

Commerce

The Wilfred Berman Memorial Prize: The Wilfred Berman Memorial Prize is payable from the income of a fund provided by former students of the late Professor Wilfred Berman to the student obtaining the highest mark in the class in first-year Accounting.

Commerce Alumni Association Awards: The Commerce Alumni Association sponsors four annual awards to recognize academic achievement. There is one award for each of Accounting, Finance, Management and Marketing.

The Stewart Lockie Gibson Memorial Prize: The School of Business Administration offers a prize to the graduating student in the general Bachelor of Commerce programme who has achieved the highest standing.

University Medal in Commerce: The School of Business Administration offers to the top First Class Honours graduate in the Bachelor of Commerce programme a medal. The awardee will be one who has fulfilled the high scholastic standard for this award.

Financial Aid, Loans, and Bursaries

Government Student Loans

IMPORTANT: Please note that federal and provincial student loan regulations include stipulations for the Borrower in terms of the minimum class load, expressed as a percentage of the normal class load at the University, which the Borrower **MUST** carry in order to benefit from the program. Furthermore, this minimum **MUST** be maintained throughout the academic year. By way of example, a student who wishes to receive either money or interest-free status under the Canada Student Loan Plan for the entire academic year **MUST** carry not fewer than 60 per cent of the normal class load (expressed in credit hours) for EACH term. At Dalhousie, the normal credit hour load for student loan purposes is 30. Thus, the Borrower must carry not fewer than 18 credit hours, distributed equally between the terms, i.e., 9. If your particular program does not conform to this scheme, you should apply to Student Aid for funding for **ONLY THAT TERM** in which your class load would fulfil this regulation. Your attention is drawn to the fact that federal and provincial rules can **DIFFER** on this matter.

Addresses of Provincial Student Aid Authorities

Canadian students, other than Quebec residents, are to apply for government assistance to the appropriate agency in that province or territory in which the applicant is a bona fide

72 Awards

resident. The addresses for Canada Student Loan authorities of those provinces and territories participating in the plan are listed below:

Short-Term Loans

For Dalhousie Students Generally

Temporary Loans: The University has established a temporary loan programme to assist registered Dalhousie students with certain types of short-term financial difficulty when no other reasonable resource is available. Students must provide at the time of application documentary proof of their ability to repay the loan within the time period. (Such loans are not made for fee payment, however.) These loans have a short interest-free period, after which interest will be charged. Refer to the information sheet attached to the Temporary Loan Application for further details. Applications may be picked up in the Office of the Registrar, Room 133, A&A Building and handed in to the Information Centre, Room 123, A&A Building.

For Occupational Therapy Students

Short-Term Loans for Occupational Therapy Students for Fieldwork: Full-time students in Third Year or Fourth Year are eligible to apply for loans up to \$500. The first priority is for Third-Year students who are about to undertake fieldwork 4420 A or B; the second priority is for Fourth-Year students who are about to undertake fieldwork 4421R. Students who seek such assistance are to apply to: Office of the Registrar, Awards, and to present a letter of support from either the Director of the School or the Fieldwork Co-ordinator of the School. Further information is available at the Awards Office or the School of Occupational Therapy.

Dalhousie Bursaries

Students who are eligible under the Canada Student Loans Act must have applied for a Canada Student Loan in order to be considered for a Dalhousie bursary.

Application forms are available at the Office of the Registrar, Room 133, Arts & Administration Building, after October 1st. until the end of the regular session (April 15th).

Students may apply for University bursaries during the Summer Session beginning May 1st. and ending August 15th.

Please submit your completed, documented and signed bursary application forms to the Information Centre, Room 123, Arts and Administration Building. You will be appraised by message on the computers in the Information Centre of the decision. Bursary applications are batched and assessed on a comparative basis for available funds.

Please note that most University undergraduate bursaries are restricted to Canadian citizens and permanent residents.

It should be noted that Canada Student Loans (with or without provincial bursaries and/or loans) are expected by provincial

authorities to meet the financial deficiencies of the students. Bursaries subsequently awarded by the University must be reported and are liable to be deducted (in part or in whole) from the amounts originally allocated under the Canada Student Loan Plan or provincial aid programme.

The University has at its disposal funds which are selectively awarded as bursaries to students who may unexpectedly find themselves in need of financial assistance. While these bursaries are awarded primarily on the basis of demonstrable need, satisfactory academic standing is also expected. Except under exceptional circumstances, bursaries will not be awarded to fulltime students who have not availed themselves of assistance under the federal/provincial student aid programmes.

In the event that the applicant may be eligible for a restricted bursary, he/she should annotate the application.

Government Notification

Holders of Dalhousie University bursaries are to note that the University is required, upon written request, to report its award winners to the respective provincial Student Aid Authority.

Arts & Science Specified as Year First Year

Alfred George Darville Memorial Bursary: This fund provides one bursary to a qualifying Dalhousie student. Applicants must be matriculants of Halifax West High School, be enrolled in first-year studies in an undergraduate programme (as commonly understood), and demonstrate financial need to the satisfaction of the Selecting Body.

The John Dunlop Memorial Bursary: An endowment was established to provide bursaries in first year.

The Rev. Kenneth Mackenzie Bursary: Mrs. Harriet Mackenzie Morrison of Stornoway, Scotland, daughter of the Rev. Kenneth Mackenzie of Pictou County, bequeathed \$1,000 to the university in 1887 to be used as a bursary fund. Candidates of the name of Mackenzie, MacLean, or Fraser are to be given preference.

Elizabeth McKenna Bursaries: The Elizabeth McKenna Scholarship Fund was established in 1928 for the purpose of providing what are known today as bursaries. Applicants must be bona fide residents of one of the Maritime Provinces and be entering the first year in the College of Arts & Science.

North British Society Bursaries: Eight major bursaries are open to candidates from provincial high schools who have been accepted for full-time study in the College of Arts and Science.

The bursaries are provided by the North British Society which for many years has been dedicated to the preservation of the Scottish tradition in Nova Scotia. The association

between the Society and Dalhousie University derives in particular from the role of Scots in the foundation and development of the University during its first sesquicentennial. The following bursaries each in the amount of \$500 are available: the Sir Joseph A. Chisholm Bursaries (two), the NBS Centennial 1868 Bursary (one), the NBS 1958 Bursary (one), the NBS 1963 Bursaries (two), and the NBS 1984 Bursaries (two).

Fourth Year

Prof. W. Russell Maxwell Memorial Bursaries: Any residual income remaining in the Fund after the annual scholarships have been determined may, after consultation with the Department of Economics, be used to fund one or more bursaries for deserving students entering the fourth year of the Honours programme in Economics.

Unspecified as to Year

John David and Ellen Matheson Allen Endowment Fund: The bursaries to be known as John David and Ellen Matheson Allen bursaries, are in memory of John David Allen and his wife, Ellen Margaret Allen, both graduates of the Department of Education of the University. The bursaries are for students in the Arts and Science faculties and the School of Education of Dalhousie University. In the selection of the recipients of the bursaries, priority is to be given to Canadian Indians and Inuit, but where no such persons apply, the bursaries are to be given to other applicants as determined by the appropriate office of the University.

Ernest Brehaut Memorial Bursaries: These bursaries were established by the gift of Mrs. Ernest Brehaut of Colorado Springs, USA, in memory of her husband, a distinguished graduate of Dalhousie, Harvard and Columbia. These bursaries are to be awarded by the Awards Office of the University, which will take into consideration any financial need of the applicant, to students from Prince Edward Island. Preference is to be given to relatives of the late Dr. Brehaut. The bursaries are to be continued throughout the courses of the students if they maintain creditable academic standing and show genuine need.

The Robert Bruce Bursaries: Several bursaries tenable in the third year of an Arts or Science course, will be awarded to students of promising abilities but of straitened circumstances.

James and Abbie Campbell Bursaries: Dalhousie students who are engaged in studies in one of our music programmes are eligible for consideration for a bursary from this fund.

Dalhousie Science Society Bursary: The Dalhousie Science Society provides \$1,500 to support three bursaries of \$500 each to students who are enrolled in Year III or IV of a program leading to a Bachelor of Science degree.

Recipients will have demonstrated financial need, satisfactory academic standing, and involvement in extra curricular activities at the University. Applicants may use the regular University Bursary Application form to which they should append a letter wherein pertinent information of extra curricular activity is clearly stated. Applicants must have achieved eight Whole Class Equivalents at Dalhousie. The deadline for receipt of applications is 30th November.

Audrey-Lea Dawson Memorial Bursary: A memorial bursary is open annually to one or more female students enrolled in the Bachelor of Science program who have demonstrated financial need and satisfactory academic standing.

David Andrew Dougall Memorial Bursary: The intent of this award is to encourage and assist one or more students whose academic and financial status merit consideration. The Department of Biology administers the fund.

Wilfred E. Hillis Bursary: The late Mrs. Olga Munro Hillis made provision for the establishment of the Wilfred E. Hillis Bursary Fund. The income derived therefrom is to be used as bursaries for worthy Arts and Science students who are in need of financial assistance.

The J. Winston MacDonald Bursary: This endowment provides for an annual bursary to a student enrolled in the engineering program who demonstrates financial need and satisfactory academic standing. This bursary honours the memory of John Winston MacDonald, a native of Balmoral Mills, N.S., who, after graduation from Dalhousie University in 1929, pursued a noteworthy career in engineering in Canada and British Guyana.

Annie S. MacKenzie Class of 1911 Bursary: Under the Will of the late Emelyn L. MacKenzie the University has been given a bequest to provide bursaries in Arts & Science, Dentistry and Law. One-third of the net income is allotted to the College of Arts and Science for the purpose of funding a bursary to one or more students. The recipient must be a bona fide resident of and domiciled in the County of Victoria (as defined by the boundaries then extant in AD 1900), Nova Scotia. Character and financial need are the main criteria.

The Kenneth and Lloyd McDonald Bursary: A gift of the McDonald family in 1976 makes possible the funding of an annual bursary to a deserving and needy student.

Reverend J.W.A. Nicholson Bursaries: This Fund was established in commemoration of the unselfish life of a distinguished Dalhousie graduate (BA 1897). One of his concerns was to help young people discover their talents. About half the annual income is used to assist Nova Scotia Blacks who are full-time students in the

College of Arts & Science at Dalhousie, and the balance is added to the fund's capital. Awards are made at the discretion of the Awards Office.

Divinity Candidates

Dr. Alexander E. Kerr Bursary: The Alexander E. Kerr Foundation Fund was established to provide a biennial bursary of \$500 to qualifying students to continue their theological studies within three years of having been graduated from Atlantic School of Theology and Dalhousie University. A Committee on Awards shall select one person from the applicants who must have been accredited candidates for the Ministry of the United Church of Canada. Each bursary shall be for one academic year. Additional information is available at Atlantic School of Theology and the Awards Office at Dalhousie University. Applications must reach the Director of Awards, Office of the Registrar by the first Monday in April. [Under review]

Robert Archibald MacDonald Bursaries: Candidates must be properly qualified students taking the Arts course in Dalhousie with a definite intention of proceeding to Theology at the Atlantic School of Theology in preparation for a ministry in the United Church of Canada. The bursaries are awarded by a committee of Dalhousie and Pine Hill representatives. First preference will be given to students from Cape Breton and then to those from Pictou Presbytery. [Under review]

R.B. and Annie J. MacLennan Bursaries: Candidates must be registered as students at Dalhousie University and must be certified as intending to pursue their studies in Theology at the Atlantic School of Theology in preparation for a ministry in the United Church of Canada. Those students who are awarded a bursary may be eligible for a renewal of the award in a succeeding year. [Under review]

The Ross Millar Bursary: Under the will of Dr. Ross Millar the sum of \$10,000 was bequeathed to the Board of Governors in trust to set up a bursary to be awarded annually. It is stipulated that "Other things being equal the recipient shall be an undergraduate in Arts or Letters who is qualifying himself for the Ministry of the Presbyterian Church in Canada by taking the Arts or Letters degree at Dalhousie." The Synod of the Presbyterian Church in the Maritime Provinces will present the names of the candidates to the Awards Office, and the necessary scholastic requirements will be decided either at the matriculation examinations or by ability as shown by the sessional examinations.

Faculty of Health Professions

College of Pharmacy

Please note that the College administers the following bursaries. Applications are available

directly from the College of Pharmacy and, upon completion, must be submitted thereto by 1st June.

Boehringer Ingelheim (Canada) Ltd. Pharmacy Bursary: This bursary of \$500 is awarded to a pharmacy student entering third- or fourth-year classes who demonstrates financial need.

The Bert and Betty Collins Bursary: A fund has been established to award an annual bursary to a deserving pharmacy student from New Brunswick who demonstrates financial need and who has attained a satisfactory academic standing.

The Jack Kidd/ANCA Bursary: This award was established (as a scholarship until 1986-87) in 1982 to recognise 43 years of service of Mr. Jack Kidd, a pharmaceutical sales representative, with Anca Inc. It is awarded to a student from New Brunswick or Prince Edward Island who has successfully completed one or more years of the course leading to a degree in pharmacy and who is enrolled in pharmacy at the University for the ensuing year. The student must have a satisfactory academic standing and demonstrate financial need.

Lawtons Drugs Bursary: This bursary of \$500 is awarded to a second, third or fourth year student from the Atlantic Provinces, who has attained a satisfactory academic standing and who demonstrates financial need.

George MacDonald Bursary: This Bursary is awarded to a deserving pharmacy student, from the Atlantic Provinces who has satisfactorily completed at least one year of study at the College of Pharmacy and who demonstrates financial need.

New Brunswick Pharmaceutical Society Bursaries: The New Brunswick Pharmaceutical Society offers four bursaries to be awarded to the students from New Brunswick completing the first, second, and third years of the Pharmacy course. The amount of each bursary is \$500. The bursaries are awarded on the basis of need to those students whose academic achievement, promise, and character are acceptable.

Apotex Inc./P.A.C.E. Bursaries: Two bursaries of \$750 each are offered annually by Apotex Inc. for students who have completed at least one year at the College of Pharmacy. The students must have a satisfactory academic standing and demonstrate financial need.

The Pfizer Bursary: This bursary of \$500 is awarded to a deserving student who demonstrates financial need and who has attained a satisfactory academic standing.

Shoppers Drug Mart Community Pharmacy Bursaries: Shoppers Drug Mart will sponsor three bursaries of \$600 each to awardees selected by the College. The selection committee will consider candidates on the basis of financial need, student involvement, academic proficiency

and potential for contributing to the pharmacy profession. Normally, successful applicants will have completed the first year.

School of Occupational Therapy

Phyllis Kennedy Memorial Bursaries: The Phyllis Aida Daly du Freane Kennedy Memorial Bursary Fund was established in 1983 to provide from the annual income one or more bursaries to assist a student or students in Occupational Therapy in the fourth year. The applicants must show financial need, must have achieved a minimum GPA of 3.00 in each of the second and third years, and must demonstrate interest in their studies and the School.

NOTE: Students who need assistance with their fieldwork costs are referred to the entry on short-term loans.

School of Recreation, Physical and Health Education

The Jeff Bredin Memorial Bursary: An endowment has been set up to provide bursaries to deserving students. Preference will be given to a varsity athlete at Dalhousie who has successfully completed at least one year of study at this University. In any one year the maximum award given to any student will be \$1,000. Consideration is based on financial need, contribution to varsity sport and academic standing. Apply to the School of Recreation, Physical & Health Education.

Denton Hurdle Memorial Bursary: An endowment has been established to honour the memory of Denton Gordon Clifford Hurdle (B.Phys. Ed. '80) by providing a bursary to a student in the School. The student must be a Bermudian citizen and, preferably, a graduate of Warwick Academy, Bermuda. The student must have achieved an academic average of at least 80% (or the equivalent in the Bermudian School system) in the year in which application is made. The student must have demonstrated a capacity to contribute to the University community through qualities of leadership and athletic ability.

Maritime School of Social Work

The following bursaries are administered by the Office of the Registrar.

Hannah G. Matheson Bursaries: These bursaries are open to students enrolled in studies in the Maritime School of Social Work at either the undergraduate or graduate level.

Lloyd MacInnis Memorial Bursary: The Lloyd Y. MacInnis Memorial Award Fund was established to provide an annual bursary to a qualifying student who is continuing his or her studies at the School in the baccalaureate programme beyond first year.

Jane Wisdom Memorial Bursary: When Jane Wisdom began her caring work in Halifax

shortly before the Great Explosion of 1917, she was truly a pioneer in what has come to be known as Social Work. It is in recognition of her distinguished service that Anonymous Donors in 1977 established an endowment fund whereby one or more annual bursaries to one or more deserving students would be granted to students in the baccalaureate programme of the Maritime School of Social Work at Dalhousie University.

The following bursaries are administered by the School

The Maritime School of Social Work Alumni Bursary: This bursary was established at the time of Mary Lou Courtney's retirement as a tribute to her more than 30 years of devoted teaching and work on behalf of the School, the University and profession. The Alumni Bursary will be awarded annually to a BSW students who demonstrates financial need and who best exemplifies the qualities of humanity, community and service which characterized Mary Lou Courtney's work.

The Sonja R. Weil Memorial Bursary: Family and friends established this endowment as a memorial to Sonja Weil and in tribute to her work as a social worker and psychotherapist. This bursary is open to students in the MSW and BSW programmes who demonstrate financial need, satisfactory academic standing and interest in those areas which most closely reflect Sonja Weil's work in child and family therapy.

Faculty of Management

Bachelor of Commerce Programme

Barclays McConnell Limited Bursary: This Company sponsors an annual bursary of \$1000 to be awarded to a student in the Bachelor of Commerce programme on the basis of financial need. The recipient will have achieved satisfactory standing. Apply through the School of Business Administration.

Unspecified or Selected Faculties

The following bursaries, unless indicated otherwise, are administered by the Office of the Registrar.

The Eva and David Ashkins Memorial Bursary: The donors established this fund for the purpose of assisting pupils who have matriculated from selected high schools to enter Dalhousie. These high schools are (first) the North Queen's Rural High School or Bridgewater High School, and (secondly) other high schools in the province of Nova Scotia. The recipient may be considered in subsequent years for further assistance.

The Birks Family Foundation Bursaries: The Birks Family Foundation has established a plan of annual contributions to the Student Aid Fund of recognized Canadian universities for the creation of the Birks Family Foundation Bursaries. The Bursaries are awarded by the Foundation on the recommendation of the

Awards Office and are not restricted to faculty or year and may be renewed. The number and amount of such awards may vary annually, depending upon the funds available for the purpose from the Foundation.

The Jotham Blanchard Bursary: The New Glasgow Literary and Historical Society in 1912 established this bursary in memory of Jotham Blanchard. The bursary will be awarded to a student of meritorious standing who is in the sophomore year of an undergraduate programme.

George Boyd Bursary: The income from the George Boyd Trust will provide an entrance bursary. Preference is to be given to a needy student from the Sydney area.

Enid Hager Clarke Textbook Fund: A bequest from the Estate has set up an endowment from which to award bursaries to assist students from certain geographic areas of New Brunswick. Students who are domiciled in King's and Saint John counties are eligible under the terms of the bequest.

The Rebecca Cohn Bursary Fund: A gift of \$4,000 by the executors of the Estate of the late Rebecca Cohn provides an endowed bursary fund for needy students.

Lenore Smith Cumming Bursary: From the Estate of Charles Gordon Cumming came a bequest of US \$10,000 to endow a bursary fund to assist needy students. Mr. Cumming expressed a preference for matriculants from Naparima College in Trinidad should such students attend Dalhousie.

Dalhousie Alumni Association Bursaries: The Alumni have established an endowment to provide bursaries for first-year undergraduate students and refugee students at Dalhousie University. Six bursaries of \$500 each will be awarded annually. Four of the bursaries will be awarded to first-year undergraduates who are not in receipt of any other University awards or bursaries and who satisfy the following criteria:

- i) achieved a minimum 75% average in his/her last year of high school;
- ii) shown considerable extracurricular involvement and leadership; and
- iii) demonstrated financial need.

The remaining two bursaries will be awarded to refugee students sponsored by the University. If, in any year, there are no refugee students attending Dalhousie, these two awards shall be made in the same way as the other four. [Note: This fund is administered by the Alumni Office.]

Dalhousie Leadership Bursaries: A limited number of bursaries are available annually to students who have exhibited a record of considerable leadership achievement. Candidates must also demonstrate consistent satisfactory academic accomplishment. The Selecting Committee may consider such other

matters as financial need, service to the University and the community, and character. Application forms are available at the Office of the Registrar.

Dalhousie Memorial Bursary Fund: From time to time at Dalhousie contributions have been made to the University as a memorial subscription in honour of some student or former student. Until now there has been no proper place into which these funds could be channelled. Because of these occurrences a Dalhousie Memorial Bursary Fund has been established. The existence of the fund will be commemorated by a book of remembrance to be located in a prominent place in the Killam Library. Names of persons in whose memory contributions have been made by relatives, friends, individuals or groups, to the Memorial Fund will be recorded in the book, along with the date of their birth and death. The pages would be turned on a regular basis. All money contributed to the Fund will be invested by the Board of Governors and only the investment income will be awarded. The award will be available to any full-time Dalhousie student, already registered and in attendance at classes, who can show a need for additional support. A student in straitened financial circumstances may be considered for possible assistance by making application on the standard undergraduate bursary application form which is available from the Office of the Registrar.

All contributions to the Memorial Fund are directed through the Dalhousie Annual Fund. For further information please contact the Development Office, Dalhousie University.

The Frank R. Davis Memorial Bursaries: The terms of this fund have been revised in consultation with the donor's family. Now income from this fund may be awarded on the basis of financial need. One or more bursaries may be made in consultation with the Supervisor of Schools for Bridgewater, Nova Scotia.

Annie M. Harrison Bursary: The annual income from the bequest of \$5,000 from the Estate of Annie M. Harrison provides a number of bursaries.

Alice M. Havenstock Bursary: From the Estate of Gertrude H. Fox came a bequest to endow a bursary fund in the name of Alice M. Havenstock.

Frances Havergal Grant Bursaries: An endowed bursary fund was established under the Will of the late Constance Patricia Hamilton in the amount of \$18,900, the income from which is to be used to assist students.

The Annette S. Hill Bursaries: The University received an endowment under the Will of the late Annette S. Hill to set up a fund, the income therefrom to be used to assist needy students.

The Nell and Jessie Matheson Bursaries: Established under the Will of Miss Margaret J. Matheson, Truro, the income from this fund

provides several bursaries. Students from the rural districts of Pictou County are to be given preference.

Military District No. 6 Provost Corps Bursary: The Number 6 Provost Mutual Association established this bursary fund to assist descendants of those members of the Canadian Provost Corps who served in Military District No. 6. Applicants must fulfil the Corps' selection criteria, show satisfactory academic progress and demonstrate financial need.

The Warren Publicover Class '25 Memorial Bursary: The Warren Publicover Class '25 Memorial Fund was established in memory of Warren Publicover. The annual income from this fund is to be awarded in the form of a bursary for an individual who has successfully completed one year of university work at Dalhousie and is continuing as a full time student at this University. The bursary is to be awarded on the basis of satisfactory academic performance and demonstrated financial need, and is subject to renewal provided that the original requirements are maintained. It is a condition of the gift that applicants for this bursary need not have availed themselves of governmental funding as is usually required by the University.

3M Canada Bursary: Since 1980-81 3M Canada Inc. has sponsored an annual bursary of \$500 to assist an outstanding student in commerce or science. The bursary has been assigned to entrance.

Dr. Gerald Turner Bursary: An endowment has been established to provide a bursary to assist a needy student from Cape Breton in First Year.

Women's Division Bursaries: A number of bursaries, based on financial need, will be offered directly from the Women's Division of the Dalhousie Alumni Association. Application forms will be available at the Awards Section of the Office of the Registrar. Applicants are to forward their completed forms to the Chair of the Scholarship Committee, Women's Division, c/o Alumni Office, Dalhousie University, 6250 South Street, Halifax. Applications are to be submitted by either mid-October or the end of January.

Continuing Education Awards and Bursaries

Students who are engaged in part-time studies for credit are eligible to be considered for awards and financial assistance. Each of these is described briefly below.

The Frederick Thomas Parker Award for Part-Time Studies: This award will provide an appropriate and flexible means of encouraging students intending to undertake degree or diploma studies at Dalhousie on a part-time basis. The selection committee will take into

account both academic performance and financial need, depending upon circumstances. Applications are available at Henson College.

Canada Student Loan for Part-Time Students: This particular federal loan is intended to help students who have a small cash-flow problem at the beginning of their studies. In order to qualify on the basis of class load for a standard academic year, a student must be planning to take not greater than the equivalent of 2.5 whole classes. The application form is available from Nova Scotia Student Aid Office, and is to be completed in part by both the Student Accounts and Awards Offices. Please note that repayment of the loan begins 30 days following the borrowing of the funds, and payment must be completed within 24 months.

Canada Student Loans Plan: Some students who are "part-time" by the University criterion are still eligible for the regular Canada Student Loan. The class-load criterion for this loan is to enrol and to maintain a class-load of not fewer than three whole classes or the equivalent. Repayment of the loan normally begins six months after the time one ceases to be a "full-time" student according to governing regulations. During the summer months application kits will be available at the Awards Office on a pick-up basis. (These kits are available for pick-up or mail-out directly from Student Aid throughout the CSL assistance period.) Interested individuals may seek further details from the Office of the Registrar - Awards (telephone 494-2416).

Dalhousie University Bursaries: Students who are engaged in part-time studies for credit will be considered for bursaries. Application is to be made at the Office of the Registrar - Awards. Please note that most University bursaries are restricted to Canadian citizens or permanent residents.

Dalhousie Temporary Loans: Students who are engaged in part-time studies for credit will be considered for temporary loans. Such loans are intended for short-term needs, and repayment begins after the expiration of a predetermined grace period. Application is to be made at the Office of the Registrar.

University Regulations

General

1. The Senate is charged with the internal regulations of the University, including all matters relating to academic affairs and discipline, subject to the approval of the Governors. Within the general policies approved by Senate, academic requirements are administered by the Faculty concerned.
2. All students must agree to obey all the regulations of the University already made or to be made; in addition to the above University regulations, students must also comply with the regulations of the Faculty in which they are registered, and pay the required fees and deposits before entering any class or taking any examinations. Additionally, students are advised that this Calendar is not an all-inclusive set of rules and regulations but represents only a portion of the rules and regulations that will govern the student's relationship with the University. Other rules and regulations are contained in additional publications that are available to the student from the Registrar's Office and/or the relevant Faculty, Department or School.
3. For the purpose of admission to the University, the place of residence of a student is the place of domicile. This is normally presumed to be the place (country, province, etc.) where the parents' or guardian's home is located. That place remains unchanged unless the Registrar is satisfied that a place of residence is established elsewhere. No person under sixteen years of age is admitted to any class except on the specific recommendation of the admissions committee of the relevant Faculty or School, which shall take into account all aspects of the applicant's preparedness for the class or programme involved, and which may attach such conditions to the applicant's admission as the committee judges appropriate.
4. All students must report their local address while attending the University to the Office of the Registrar, on registration or as soon as possible thereafter. Subsequent changes must be reported promptly.
5. Students taking classes in another Faculty as part of an affiliated course must conform to the regulations of that Faculty with respect to these classes. It should be noted, however, that regulations pertaining to the degree programme are those of the "home" Faculty.
6. In the interests of public health in the University, students are encouraged to have a tuberculin test. This is compulsory for Dental, Dental Hygiene, Physiotherapy and Nursing students. Facilities for testing are arranged by the University Health Services.
7. Except for university purposes, transcripts, official, or unofficial, will be issued only on the request of the student on payment of the required fee. A student may receive only an unofficial transcript. Official transcripts will be sent at a student's request to other universities, or to business organizations, etc.
8. Students withdrawing voluntarily from the University should consult the individual faculty regulations and the Fees section of this Calendar.
9. When the work of a student becomes unsatisfactory, or a student's attendance is irregular without sufficient reason, the faculty concerned may require withdrawal from one or more classes, or withdrawal from the Faculty. If a student is required to withdraw from a Faculty such a student may apply to another Faculty. However, in assessing the application, previous performance will be taken into consideration.
10. Any graduating student who is unable to appear at the convocation is expected to notify the Registrar in writing prior to May 1, for Spring convocations (or October 1 for Fall convocations), giving the address to which the diploma is to be mailed. Students whose accounts are delinquent on May 1 will not receive their degree/diploma parchment nor their transcripts. For October graduation the date is September 1.
11. Students should be aware that certain classes at the University involve required laboratory work where radioactive isotopes are present and are used by students. Since there are potential health risks associated with the improper handling of such radioactive isotopes, Dalhousie University requires that, as a condition of taking a class where radioactive isotopes are to be used, students read and agree to comply with the instructions for the safe handling of such radioactive isotopes. In the event that students do not comply with the instructions for the safe handling of radioactive isotopes, students will receive no credit for the required laboratory work unless other acceptable alternatives are arranged with the instructor. In many cases, alternate arrangements are not possible and students should consider enrolling in a different class.

Release of Information About Students

1. Disclosure to students of their own records
 - (a) Students have the right to inspect their academic record. An employee of the Registrar's Office will be present during such an inspection.

- (b) Students will, on submission of a signed request and payment of the appropriate fee, have the right to receive transcripts of their own academic record. These transcripts will be marked "ISSUED TO STUDENT". The University will not release copies of transcripts if students owe monies to the University.

2. Disclosure to Faculty, Administrative Officers, and Committees of the University

Information on students may be disclosed without the consent of the student to University officials or committees deemed to have a legitimate educational interest.

3. Disclosure to Third Parties

- (a) The following information is considered public information and may be released without restriction:

- Name
- Period of Registration
- Certificates, Diplomas, Degrees awarded

- (b) Information will be released without student consent to persons in compliance with a judicial order or subpoena or as required by federal or provincial legislation.

- (c) Necessary information may be released without student consent in an emergency, if the knowledge of that information is required to protect the health or safety of the student or other persons. Such requests should be directed to the Registrar.

- (d) Other than in the above situation, information on students will be released to third parties only at the written request of the student, or where the student has signed an agreement with a third party, one of the conditions of which is access to her/his record (e.g. in financial aid). This restriction applies to requests from parents, spouses, credit bureaus and police.

Intellectual Honesty

1. A University should epitomise the quest for intellectual honesty. Failure to measure up to the quest for such a standard can involve either academic offenses at one end of the spectrum or substandard work warranting lowered or failing grades at the other. The seniority of the student concerned, the presence of a dishonest intent, and other circumstances may all be relevant to the seriousness with which the matter is viewed.

2. Plagiarism or Self-Plagiarism

Dalhousie University defines plagiarism as the presentation of the work of another author in such a way as to give one's reader

reason to think it to be one's own. Plagiarism is a form of academic fraud.

Plagiarism is considered a serious academic offence which may lead to loss of credit, suspension or expulsion from the University, or even the revocation of a degree.

In its grossest form plagiarism includes the use of a paper purchased from a commercial research corporation, or prepared by any person other than the individual claiming to be the author.

Self-plagiarism is the submission of work by a person which is the same or substantially the same as work for which he or she has already received academic credit.

3. Irregularities in the Presentation of Data from Experiments, Field Studies, etc.

Academic research is predicated on the presentation of accurate and honestly derived data. The falsification of data in reports, theses, dissertations and other presentations is a serious academic offence, equivalent in degree to plagiarism, for which the penalties may include revocation of degrees, loss of credits or suspension or expulsion from the University.

4. Inaccurate or Inadequate Attribution.

The University attaches great importance to the contribution of original thought to scholarship. It attaches equal importance to the correct attribution of authorities from which facts and opinions have been derived.

The proper use of footnotes and other methods of attribution varies from discipline to discipline. Failure to abide by the standards of the discipline concerned in the preparation of essays, term papers and dissertations or theses can result, at the discretion of the instructor or faculty member involved, in lowered grades. It can also lead to the requirement that an alternative assignment be prepared. Such grading penalties can be involved even in the absence of any INTENTION to be dishonest.

Students who are in any doubt about the proper forms of citation and attribution of authorities and sources should discuss the matter in advance with the faculty member for whom they are preparing assignments. In many academic departments, written statements on matters of this kind are made available as a matter of routine or can be obtained on request.

Discipline

1. Members of the University, both students and staff, are expected to comply with the general laws of the community, within the University as well as outside it.

2. Alleged breaches of discipline relating to student activities under the supervision of the Dalhousie Student Union are dealt with by the Student Union. Alleged breaches of discipline relating to life in the residences are dealt with by the appropriate Dean or Director of Residence in consultation with the relevant Residence Council. Senate is charged with the authority to deal with cases of alleged academic offenses (as delegated to the Senate Discipline Committee), as well as with certain other offenses that are incompatible with constructive participation in an academic community.

3. Examples of Academic Offenses

Plagiarism

As indicated above, plagiarism and self-plagiarism are considered serious academic offenses which can lead to loss of credit and suspension from the University.

Irregularities in Presentation of Data

As defined above, the presentation of falsified data in reports, theses, dissertations and other presentations is a serious academic offense, equivalent in degree to plagiarism for which the penalties may include revocation of degrees, loss of credits, or suspension or expulsion from the University.

Irregularities in Admissions Procedures

A person who gains admission or assists any other person in gaining admission by any irregular procedure, for example, by falsifying an academic record or by forging a letter of recommendation or by impersonating any other person, commits an academic offense and is liable to a penalty (see Senate Discipline Committee).

Irregularities in Evaluation Procedures

A member of the University who attempts or who assists any other person in an attempt to obtain, by irregular procedures, academic standing in a course related to any degree, diploma or certificate programme, commits an academic offence and is liable to a penalty. Without limiting possible irregularities in evaluation procedures that may be considered by the Senate Discipline Committee, the following examples shall be considered irregular procedures:

- (a) arranging for or availing oneself of the results of any personation at any examination or test, or,
- (b) attempting to secure or accepting assistance from any other person at any examination or test, or,

- (c) having in one's possession or using any unauthorized material during the time that one is writing any examination or test, or,
- (d) without authorization procuring a copy of an examination, test or topic for an essay or paper, or,
- (e) in the absence of any enabling statement by the Faculty member in charge of that course, submitting any thesis, essay, or paper for academic credit when one is not the sole author, or,
- (f) without authorization submitting any thesis, essay or term paper that has been accepted in one course for academic credit in any other course in any degree, diploma or certificate programme.

4. On report of a serious breach of the law, or a serious academic offence deemed by the President, or in his or her absence by a Vice-President or the Dean of a Faculty, to affect vital University interests, a student involved may be temporarily suspended and denied admission to classes or to the University by the President, Vice-President or Dean, but any suspension shall be reported to the Senate, together with the reasons for it, without delay.
5. No refund of fees will be made to any student required to lose credit for any course taken, required to withdraw or who is suspended or dismissed from any class or any Faculty of the University.

Official Examination Regulations

1. Candidates will not be admitted to the Examination Room more than thirty minutes after the beginning of the examination. Candidates will not be permitted to leave the examination within the first thirty minutes.
2. Candidates are required to present their valid Dalhousie ID card at all examinations scheduled during the official examination periods and sign the signature list.
3. No articles such as books, papers, etc. may be taken into the examination room unless provision has been made by the examiner for reference books and materials to be allowed to the students. All books, papers, etc. not specified on the printed paper must be deposited with the invigilator. Calculators may be used at the discretion of the instructor.
4. Smoking is not permitted in the examination room.
5. Candidates may not leave their seats during an examination except with the consent of the invigilator.
6. Answers to questions must be written on the right hand pages and properly numbered. The left hand pages may be used for rough work, but no sheets may be detached.

82 University Regulations

7. Each question should be started on a separate page.
8. If more than one book is used, the total number should be marked in the space provided above. The other books should be properly marked and placed inside the first book. All books supplied must be returned to the invigilator.
9. Candidates found communicating with one another in any way or under any pretext whatever, or having unauthorized books or papers in their possession, even if their use be not proved, shall be subject to expulsion.
10. After the first thirty minutes have elapsed, students may hand in their examination book(s) to an invigilator and quietly leave the examination room. Candidates may not leave the examination room during the last fifteen minutes of the examination.

Senate Discipline Committee

1. Composition

Academic Offenses are dealt with by the Senate Discipline Committee, which consists of five members, three of which are members of the Senate and two of which are students.

2. Terms of Reference

- (a) The Senate Discipline Committee is vested with original jurisdiction to consider all complaints or allegations respecting offenses or irregularities of an academic nature, including those relating to admissions procedures and evaluation procedures, and to impose penalties in cases where the Committee finds an offence or irregularity has occurred.
- (b) The Senate Discipline Committee shall assume jurisdiction when a complaint or allegation respecting offenses or irregularities of an academic nature are brought to its attention by the Secretary of Senate.
- (c) The Senate Discipline Committee, when it finds that a member of the University who is a student has committed an academic offence or irregularity may impose one or more penalties as indicated in 3. below.
- (d) The Senate Discipline Committee shall report its findings and any penalty imposed to the Secretary of the Senate. The Secretary of the Senate shall forward a copy of the report to any member of the University community whom the Senate Discipline Committee has found to have committed an offence or irregularity and if the member concerned be other than a student a copy shall also be sent to the Vice-President (Academic).
- (e) If the member of the University found to have committed an offence or irregularity is a student, she/he may

appeal to Senate any finding or any penalty imposed by the Senate Discipline Committee by advising the Secretary of the Senate in writing within 30 days of receipt of the report by the student.

3. Academic Penalties

- (a) loss of all credit for any academic work done during the year in which the offence occurred;
- (b) suspension of rights to attend the University for a specified period;
- (c) dismissal from the University;
- (d) such lesser penalty as the Committee deems appropriate where mitigating circumstances exist.

Please note: Transcripts will not be issued for a student while a Senate Discipline case is pending.

Guide to Responsible Computing

In recognition of the contribution that computers can make to furthering the educational and other objectives of the University, this Guide is intended to promote the responsible and ethical use of University computing resources. It is in the best interests of the community as a whole that these resources be used in accordance with certain practices which ensure that the rights of all users are protected and the goals of the University are achieved.

This Guide applies to all computer and computer communication facilities owned, leased, operated, or contracted by the University. This includes word processing equipment, micros, mainframes, minicomputers, and associated peripherals and software, regardless of whether used for administration, research, teaching, or other purposes.

It should be noted that system administrators of various campus computing facilities and those responsible for the computer access privileges of others may promulgate regulations to control use of the facilities they regulate. System administrators are responsible for publicizing both the regulations they establish and their policies concerning the authorized and appropriate use of the publicly available equipment for which they are responsible.

Basic Principles

Individuals should use only those University computing facilities they have been authorized to use. They should use these facilities:

- a. with respect to the terms under which they were granted access to them;
- b. in a way that respects the rights of other authorized users;

- c. so as not to interfere with or violate the normal, appropriate use of these facilities;
- d. so as not to impose unauthorized costs on the University without compensation to it.

Failure to do so may be grounds for cancellation of computer access privileges.

Elaboration

- 1). Individuals should use only those University computing facilities they have been authorized through normal University channels to use. They should use these resources in a responsible and efficient manner consistent with the objectives underlying their authorization to use them.
- 2). Individuals should respect the rights of other authorized users of University computing facilities. Thus, they should respect the rights of other users to security of files, confidentiality of data, and the benefits of their own work. Users should respect the rights of others to access campus computing resources and should refrain from:
 - (a) using the computer access privileges of others without their explicit approval;
 - (b) accessing, copying, or modifying the files of others without their permission; and
 - (c) harassing others in any way or interfering with their legitimate use of computing facilities.
- 3). Individuals should respect the property rights of others by refraining from the illegal copying of programs or data acquired by the University or other users or putting software, data files, etc. on University computers without the legal right to do so.
- 4). Individuals should not attempt to interfere with the normal operation of computing systems or attempt to subvert the restrictions associated with such facilities. They should obey the regulations affecting the use of any computing facility they use.

Disciplinary Actions

Reasonable suspicion of a violation of the principles or practices laid out in this Guide may result in disciplinary action. Such action will be taken through normal University channels.

Nothing in this Guide diminishes the responsibility of system administrators of computing services to take remedial action in the case of possible abuse of computing privileges. To this end, the system administrators with the approval of the President and with due regard for the right of privacy of users and the confidentiality of their data, have the right, to suspend or modify computer access privileges, examine files, passwords, accounting information, printouts, tapes, and any other material which may aid in an investigation of possible abuse. Whenever possible, the cooperation and agreement of the user will be sought in advance. Users are expected to cooperate in such investigations when requested.

Academic Regulations

These regulations apply to all students in the College of Arts and Science and the Faculties of Health Professions and Management. Students in the Faculty of Health Professions should also consult the regulations specific to their school or college found in the appropriate sections of this calendar.

Please Note:

- a) A student is governed by the regulations in place at the time of initial enrolment as long as the degree is completed within the time permitted (see section 17, p. 92), and that subsequent changes in regulations shall apply only if the student so elects. Students applying the old regulations should consult the calendar of the appropriate year.
- b) It is a student's responsibility to maintain documentation of registration and subsequent changes. For environmental and financial reasons, the Registrar's Office will rely solely upon computer records and will not maintain paper records of changes

- History
- Mathematics, Statistics and Computing Science
- Microbiology and Immunology (also in the Faculty of Medicine)
- Multidisciplinary Studies Centre
- Music
- Oceanography
- Philosophy
- Physics
- Political Science
- Psychology
- Russian Studies
- Sociology and Social Anthropology
- Spanish
- Theatre

2.2 Faculty of Health Professions

- Nursing
- Occupational Therapy
- Pharmacy
- Physiotherapy
- Recreation, Physical, & Health Education
- Social Work

2.3 Faculty of Management

- Business Administration
- Public Administration

1. Definitions

For definitions of some commonly used terms, see page 3.

Within these regulations, reference to the Student Appeals Committee should be interpreted as the Student Affairs Committee in the Faculty of Arts and Social Sciences, as the Committee on Studies and Appeals in the Faculty of Science, the Bachelor of Education Committee in the School of Education, the Undergraduate Committee on Studies in the Faculty of Health Professions, and the Undergraduate Academic Appeals Committee in the Faculty of Management.

2. Faculties/Colleges

2.1 College of Arts and Science

- Biochemistry (also in the Faculty of Medicine)
- Biology
- Chemistry
- Classics
- Comparative Religion
- Earth Science
- Economics
- Education
- Engineering
- English
- French
- German

3. Class Selection

3.1 Numbering of Classes

Classes are numbered to indicate their general level. Those in the 1000 series are introductory classes at Dalhousie. Classes in the 2000, 3000, and 4000 series are usually first available to students in the second, third, and fourth years, respectively. Often these classes have prerequisites. Some departments/schools/colleges have minimum grade requirements for entry into classes above the 1000-level. Such requirements are listed in the calendar entries for the departments/schools/colleges concerned.

An example of a class identifier is as follows:
ENGL 1000.06R

ENGLsubject code
1000..... class number & level
06.....credit hours
R.....session in which the class is taught

The letters A and B denote classes given in the first and second terms respectively. The symbol A or B indicates a class may be given in the first term or in the second term. Students should consult the academic timetable to verify whether a particular class will be offered in the A or B term in a given academic year. The letter R denotes a class spread over both terms (i.e., given for the full academic year). For the spring and the summer sessions, A denotes a class

given in the first three and one half weeks, B a class given in the second three and one half weeks, and R a class continuing for seven weeks.

Classes with numbers below 1000 normally do not carry credit.

3.2 Academic Advice

At Dalhousie all students are offered academic advice prior to registration. First-year students, particularly those in BA and BSc programmes, may wish to consult with the Office of the Registrar, or with a faculty advisor in an academic department/ school/ college of particular interest. After the first year, students plan their programmes in consultation with faculty advisors in their major department/school/college. Students complete and submit the Class Selection Form to the Registrar's Office.

Please note that the completion and submission of a class selection form does not constitute registration.

4. Workload

4.1 Regular Year

4.1.1 College of Arts and Science

Five full credits per academic year shall be regarded as constituting a normal workload for a student. Written permission from the Student Appeals Committee of the appropriate Faculty or School is required if this workload is to be exceeded, or if the planned workload in any term would amount to the equivalent of six half-credits. In no case may the workload exceed this. Applications from students who give good reasons for wishing to take an overload will be considered. Such permission will not normally be granted to any student in the first year of study, or to any student who, in the preceding academic year, earned a sessional GPA of less than 3.00.

4.1.2 School of Business

Six half credits per academic term in the first year, and five half credits per academic term in the following years will be regarded as constituting a normal workload for the BComm Co-op student.

During the work term, the work assignment shall constitute the normal workload.

There are no limitations on the number of credits taken during summer sessions at Dalhousie (subject to normal workload limitations) that may be counted toward the Bachelor of Commerce Co-op degree. Note that the second and third summers are regular academic and work terms for co-op students.

Students who wish to exceed the normal workload must apply for permission to the Director Academic Programmes, School of Business Administration. Such permission will not normally be granted for more than one half

credit per term, nor to any student who is in his first year of study or who, in the preceding academic term, who earned a sessional GPA of less than 3.00 on a full load of classes.

4.1.3 Faculty of Health Professions

For normal workloads in the Faculty, see the individual School or College section of the Calendar. Written permission from the School or College Committee on Studies is required if the normal workload is to be exceeded.

Applications from students who give good reasons for wishing to take an overload will be considered. Such permission will not normally be granted to any student in the first year of study, or to any student who, in the preceding academic year, obtained a grade point average of less than 3.00.

4.2 Spring and Summer Session

Students may normally take one full credit in each of the spring or summer sessions. Exceptions will normally be granted by the Student Appeals Committee of the appropriate Faculty or School with respect to attendance at a university which operates a trimester system or its equivalent. Students in Co-op programmes in Science may increase the workload to a maximum of 2.5 credits by summer school in any one year with a maximum of 1.5 credits in any one summer session. Spring and summer credits are included in the calculation of the cumulative GPA at the end of the next regular academic year. A sessional GPA is not calculated.

5. Registration

5.1 Registration material and detailed information will be sent to all eligible students. After the Class Selection Form has been completed students may register, either in person or by mail. Students admitted late must register in person.

5.2 A student is registered only after financial arrangements have been made at the Student Accounts Office.

5.3 The final step in registration is obtaining an ID or validating an existing ID from the Office of the Registrar.

An ID Card gives students access to many campus services and activities.

It is University Policy that every student writing an officially scheduled examination must present a current valid ID Card. Students requesting the release of funds from the Awards Office must also present their ID Cards.

6. Class Changes and Withdrawal

6.1 Class Changes

It is recognized that some students may wish to make changes in programmes already arranged. Class changes will normally be completed during the first two weeks of classes. (For Spring and Summer session information, see the Summer School Schedule.) The last dates for adding and deleting "A", "B" and "R" classes without academic penalty are published in the Schedule of Academic Dates at the front of the calendar.

Students may not transfer from full to part-time status by withdrawing from classes after the deadlines listed in the Schedule of Academic Dates. After these dates all classes for which a student remains registered will be recorded. To add or delete a class, students must complete a class selection form which must be approved by the faculty member concerned and submitted to the Registrar. In Health Professions, class selection forms must also be signed by the director, (NOTE: in the case of the School of Recreation, Physical, and Health Education, these are signed by the division heads, not by the Director,) and in the School of Business Administration, by the Director, Academic Programmes. No change is effective until a class selection form is received by the Office of the Registrar.

Please note that the dropping or changing classes may affect your eligibility for student aid.

6.2 Withdrawal

Non-attendance does not, in itself, constitute withdrawal.

Withdrawals are not effective until written notification is received at the Office of the Registrar.

In Health Professions students who wish to withdraw from the University must obtain written approval from the School or College and submit the appropriate forms to the Registrar. Students should not discontinue attendance at any class until their withdrawal has been approved.

7. Counting of Credits for Two Dalhousie Undergraduate Degrees

Students who hold one undergraduate degree from Dalhousie and who wish to gain a second undergraduate degree must fulfil the requirements of the second degree and meet the following stipulations:

- (a) Only credits that are applicable to the programme for the second degree may be counted for credit.

- (b) Each credit carried forward must have a grade of C or higher.
- (c) Grade points must be earned in the new credits as required by Regulations 18 & 19 below.

7.1 College of Arts and Science

For the Honours degree, a minimum of eleven new full credits are to be taken, in accordance with "Degree Requirements" listed elsewhere in this calendar.

For the Advanced Major (20-credit) degree, a minimum of eleven new full credits, or the equivalent, must be taken. At least six of these are to be beyond the 1000-level in a new major subject, and at least three of the six must be beyond the 2000-level.

For the Major degree (15 credits), a minimum of six new full credits must be taken. At least four of these are to be beyond the 1000-level in a new major subject, and at least two of the four must be beyond the 2000-level. Normally, two of these credits will be in a subject other than the new major.

7.2 Management

For the BComm Co-op degree a minimum of eleven (11) new full credits must be taken, of which at least eight (8) must be in the core area and include the three work term half course credits.

7.3 Health Professions

For degrees in Health Professions no more than half the credits required for an undergraduate degree may be carried forward from an earlier degree.

8. Transfer Students

8.1 Transfer Credits - All Faculties

At Dalhousie transfer credits may be granted for classes which are offered by a recognized university or equivalent institution of higher learning and which are judged to be comparable to classes offered at Dalhousie and to be appropriate to a student's academic programme at Dalhousie. Transfer credit grants credit for a class and does not require substitution.

Transfer credits are subject to the approval of the appropriate department/school/college. For classes not within the purview of a Dalhousie department/school/college, the Registrar's Office will assess transfer credits. Students may appeal, in writing, a negative decision and should justify the inclusion of such classes in the student's proposed programme. Photocopies of calendar descriptions are necessary. Such descriptions are not normally included with university transcripts, and it is the student's responsibility to provide them.

To obtain a first degree or diploma, at least half of the credits, including at least half in the field of concentration, must normally be taken at Dalhousie.

In the Faculty of Health Professions to obtain a first degree, all or most of the advanced work of the programme (i.e. at least half the credits taken in the second and subsequent years of study) must be taken at Dalhousie.

8.2 Transfer Credits from Dental Hygiene

Students who have completed the Diploma in Dental Hygiene may receive credit towards a BA or BSc with a major in Biology for Biology 2100.03 and Biology 4403.06. These classes are to be included within the 10 full credits which the Dental Hygiene students are eligible to receive as credit towards a BSc or BA degree upon completion of the current diploma requirements.

8.3 No Transfer Credits

No credit will be given for any work used as the basis for admission.

No transfer credit will be granted for any class in which a final mark of less than C (or the equivalent in Dalhousie terms) was obtained.

Credits that are more than ten (10) years old may not be used to fulfil degree requirements unless a waiver is granted.

No classes taken at another institution will be counted towards fulfilment of the major, advanced major or honours requirement of the Bachelor's degree without specific advance approval from the appropriate department/ school/ college at Dalhousie.

No credit will be given for any classes taken at another university while a student is not in good standing at Dalhousie.

8.4 Procedures

As soon as the student's record has been assessed the Office of the Registrar will inform the student which credits have been awarded. The number of credits which have been approved, and which Dalhousie classes may not be taken, will be included in the letter. If more credits have been approved than can be applied to the student's programme, the student will choose the credits to be used. If the student fails to do so, the Registrar's Office will decide the appropriate transfer credits. Transfer credits awarded on admission appear on a Dalhousie transcript as credits only; no marks are shown.

If by registration time the student has not received written confirmation of transfer credits, the student should check with the Office of the Registrar. Information, although incomplete, may be available and may be helpful in choosing Dalhousie classes.

Before selecting classes the student should consult with the appropriate department/

school/ college to determine how the transfer credits will fit into the student's specific academic programme at Dalhousie.

8.5 Classes Taken at Other Universities on Letter of Permission

A student who wishes to take classes at other institutions while registered at Dalhousie must obtain approval in advance on a form available in the Office of the Registrar. A letter of permission will be provided if approval for the classes is given by the appropriate department/school/college. The workload at the other institution must conform to Dalhousie's limitations. (For details, see Regulation 4.)

The departments of French, German, Russian, and Spanish have special arrangements whereby up to a total of 5 full credits taken at other universities may be considered as part of a student's programme at Dalhousie. (See Regulation 15.)

The class fee will be paid by Dalhousie if:

- the student is registered and has paid fees as a full-time student at Dalhousie,
- the classes are approved as part of the student's programme, and
- the class is not part of a spring/summer school programme.

9. Advanced Placement

Students possessing advanced knowledge of a subject will be encouraged to begin their studies in that subject at a level appropriate to their knowledge, as determined by the department/school/college concerned. However, such students must complete, at Dalhousie, the full number of credits required for the particular credential being sought.

10. Part-Time Students

Part-time students are reminded of University policy that limits programmes of study to 10 years from the date of initial registration. Note also, the regulation above concerning the number of credits that must be completed on campus at Dalhousie.

10.1 College of Arts and Science

Part-time students are admitted to most of the programmes offered in the College of Arts and Science. Admission requirements and regulations are the same for all students. Part-time students are encouraged to consult with Henson College for advice on their academic programmes and other matters (see Continuing Education).

10.2 School of Business

The School is committed to providing students with the opportunity to obtain a degree through full-time study. However, the School will consider applicants for part-time study.

10.3 Faculty of Health Professions

Because of the restriction in the duration of undergraduate studies (see Regulation 17), the opportunity for part-time study is limited in the majority of programmes.

The exceptions are the undergraduate programmes in the School of Recreation, Physical and Health Education, the Maritime School of Social Work, and the Bachelor of Science (Nursing) programmes for Registered Nurses.

11. Audit of Classes

Students who have been admitted to a Faculty may audit many of the classes offered with the permission of the instructor. Students auditing classes will not be eligible to write examinations in the audited class and will not in any circumstance be granted credit for it. For those who are not full-time students, fees are payable as indicated under Fees. A class may not be changed from credit to audit or from audit to credit status after the last date for dropping classes without penalty (see the schedule of academic dates). In order to change from audit to credit prior to the deadline an additional fee is required. It is essential that procedures as given in section 6 be followed.

12. Experimental Classes - College of Arts and Science

Experimental classes, on any subject or combination of subjects to which arts or sciences are relevant, and differing in conception from any of the classes regularly listed in departmental offerings, may be formed on the initiative of students or faculty members.

If formed on the initiative of students, the students concerned shall seek out faculty members to take part in the classes.

Whether formed on the initiative of students or on the initiative of faculty members, the faculty members who wish to take part must obtain the consent of their department/school/college.

The class may be of one-year length or half-year length.

A class shall be considered to be formed when at least one faculty member and at least eight students have committed themselves to taking part in it for its full length.

Classes may be formed any time before the end of the second week of classes in the fall term to run the year or first half-year, or any time before the end of the second week of classes in the spring term. If they are formed long enough in advance to be announced in the Calendar, they shall be so announced, in a section describing the Experimental Programme, if they

are formed later, they shall be announced (a) in the *Dalhousie Gazette*, (b) in the *Dal News*, (c) on a central bulletin board set aside for this purpose.

One faculty member taking part in each experimental class shall be designated the rapporteur of the class with responsibility for (a) advising the Curriculum Committee of the applicable Faculty or School of the formation and content of the class; (b) obtaining from the appropriate Curriculum Committee a ruling as to what requirement or requirements of distribution, concentration, and credit the class may be accepted as satisfying; (c) reporting to the Registrar on the performance of students in the class; (d) reporting to the appropriate Curriculum Committee, after the class has finished its work, on the subjects treated, the techniques of instruction, and the success of the class as an experiment in pedagogy (judged so far as possible on the basis of objective comparisons with more familiar types of classes).

Students may have five one-year length experimental classes (or some equivalent combination of these with half-year length classes) counted as satisfying class for class any of the requirements for the degree, subject to the rulings of the relevant Curriculum Committee (above) and (where relevant) to the approval of the departments.

13. Coordinated Programmes - College of Arts and Science

Students may in their second and third years follow a two-year integrated programme, or two one-year integrated programmes, of study. If two one-year programmes are chosen, they may be in different departments. All such coordinated programmes have been explicitly approved by the Curriculum Committee of the relevant Faculty or School. A department or group of departments offering coordinated programmes may structure them as it wishes, consistent with sound academic practice and subject to the following guidelines:

- (a) that the equivalent of five credits constitutes a normal year,
- (b) that the function of each programme form part of the Calendar description of each programme,
- (c) that each two-year programme permits students at least one credit of their own choice in each of the second and third years,
- (d) that two-year programmes normally not be exclusively in a single discipline,
- (e) that the normal prerequisite for entry into a departmental one-year or two-year programme be the introductory class of the department/school/college in question, or an equivalent that the

department/school/college considers acceptable, and not more than one introductory class in a related subject.

A student considering a Coordinated Programme should consult as early as possible with the departments concerned.

14. Correspondence and Summer School Classes Taken at Other Universities

14.1 Faculty of Health Professions

In the Faculty of Health Professions, up to six credits (36 credit hours) from summer school and correspondence classes may be accepted towards the requirements of a degree. No student may receive more than two full credits (12 credit hours) by correspondence courses. In total, no more than six full credits in summer school and correspondence may count towards a degree.

See section 8.5 for information on classes taken at other institutions on letter of permission.

14.2 Spring and Summer Session

Dalhousie currently offers a Spring and a Summer session of approximately seven weeks each, in May-June and in July-August. See Regulation 4 for permitted work-load. Those interested in the Spring and Summer sessions may request a summer schedule from the Office of the Registrar, Dalhousie University.

15. International/Exchange Programmes

The College of Arts and Science and the Faculty of Management and the School of Recreation, Physical and Health Education offer a number of programmes which enable students to pursue part of their studies in another country and culture, often in a foreign language environment. These include:

- (a) Up to one full year of study in a foreign-language environment. In recent years students have studied at the Université de Provence (Aix-Marseilles) in France (consult the Department of French).
- (b) Up to one full year of study at a francophone university in Québec (consult the Department of French).
- (c) One term of study at Colegio de España, Salamanca, Spain (Consult the Co-ordinator in the Spanish Department).
- (d) One term of study at the Moscow Pedagogical Institute or St. Petersburg University (Consult the Administrator of the Russian Studies Programme in the Department of Russian).

- (e) A reciprocal exchange programme with the Chelsea School of Human Movement (U.K.), the Frostburg State College (Maryland, U.S.) and the State University of New York permits students of the School of Recreation, Physical and Health Education to study abroad. Contact the School of Recreation, Physical and Health Education.
- (f) Up to one full academic year at one of eighteen (18) universities in the New England States. Consult the Registrar's Office.
- (g) Up to one full academic year at Instituto Tecnológico Autónomo de México (ITAM). Consult the School of Business Administration or the Registrar's Office.
- (h) Up to one full academic year at Institut Supérieur de Commerce a Dunkerque (ISCID). Consult the School of Business Administration for details.

Students interested in the programmes listed (a) to (e) above should refer to the appropriate departmental listing in this calendar for more details. For details regarding classes taken at other universities see Regulation 19.4.

16. Preparation for Other Programmes

Work in the College of Arts and Science is prerequisite for various programmes in other Faculties and other institutions. A brief summary of the academic work required for admission to certain programmes is given here. Further information may be found later in this calendar, or in the separate faculty calendars.

Graduate Studies: Able and ambitious students are encouraged to consider seriously entering a graduate programme at Dalhousie or elsewhere. The normal requirement for admission to a graduate programme is an Honours degree or the equivalent.

Architecture: Two years of work, including at least one credit in mathematics, are required for entry to a programme in Architecture at the Technical University of Nova Scotia. For details, apply to the Faculty of Architecture at TUNS.

Dental Hygiene: Completion of 5 full credit university level classes of one academic year's duration in the following: Biology, Psychology, Sociology, a writing class, and one elective. For details, see the Dentistry, Law and Medicine calendar.

Dentistry: See the Dentistry, Law and Medicine calendar.

Design: Students completing one year in the College of Arts and Science at Dalhousie may be admitted into the second year of the four year programme leading to the Bachelor of Design

degree in Communication Design or Environmental Design at the Nova Scotia College of Art and Design.

Education: The normal requirement for admission to the Bachelor of Education programme at Dalhousie is a BA or BSc degree with Honours. For details, please see the Education entry in this calendar.

Engineering: The Diploma in Engineering qualifies a student for entry to the Technical University of Nova Scotia to study Engineering.

Law: At least two years of work leading to one of the degrees of BA, BSc, BComm. For details, please see the Dentistry, Law and Medicine calendar.

Medicine: A BA, BSc, or BComm degree. For details, see the Dentistry, Law and Medicine calendar.

Occupational Therapy, Physiotherapy, Pharmacy, Recreation, and Social Work: One year of work in the College of Arts and Science, or the equivalent elsewhere, is required for admission to these five programmes. For details, see the Admissions Information section of this calendar.

Veterinary Medicine: Normally three years of work at Dalhousie are required for admission to the Atlantic Veterinary College of the University of Prince Edward Island. Dalhousie credits should normally include COMP 1400.03; MATH 1000.03 and 1060.03; one of CHEM 1100.06, 1110.06, or 1200.06; CHEM 2400.06; BIOC 2200.03; one of PHYC 1000.06, 1100.06 or 1300.06; ENGL 1000.06; BIOL 1000.03, 2030.03, 2100.03 and 3323.06; and an additional two and a half credits from the humanities and social sciences.

17. Duration of Undergraduate Studies

17.1 College of Arts and Science/Faculty of Management

Students are normally required to complete their undergraduate studies within ten years of their first registration, and to comply with the regulations in force at the time of that registration. This is also the normal limit for transfer credits. However, the student appeals committee of the appropriate Faculty or the School may grant permission to continue studies for a reasonable further period, subject to such conditions as the committee deems appropriate and with the stipulation that the student must meet the degree requirements in force when the extension is granted.

17.2 Faculty of Health Professions

With the exception of the undergraduate programmes in the School of Recreation, Physical and Health Education and the Maritime School of Social Work to which Regulation 17.1

applies, students in the Faculty of Health Professions are normally required to complete their undergraduate studies within six years of first registration in professional classes or within five years in the post-diploma degree programme in Physiotherapy. This rule applies to such classes for transfer credits as well. The School or College Committee on Studies may grant permission to continue studies beyond this period subject to conditions specified by the Committee.

18. Assessment

18.1 Method

Examinations may be oral, written (closed or open book) under supervision, or take-home. To gain credit toward a degree or diploma, students must appear at all examinations, prepare such essays, exercises, reports, etc., as may be prescribed, attend the classes of their prescribed course to the satisfaction of the instructors and, in classes involving field or laboratory work, complete such work satisfactorily.

Within two weeks of the first meeting of a class, each instructor shall make available a written description of the method of evaluation to be used in the class.

Within four weeks after the beginning of each term the department/school/college head or programme co-ordinator must report to the Dean the method of evaluation to be used by each instructor in each class.

18.2 Examinations and Tests

Tests are normally scheduled during class time. Mid-term tests scheduled outside class time are restricted to one per term between mid-October to mid-November or mid-February to mid-March.

Periods of approximately three weeks in the spring and one and one-half weeks in December are set aside for the scheduling of formal written examinations by the Registrar. Instructors wishing to have examinations scheduled by the Registrar for their classes must so inform the Registrar at the beginning of the third week of classes in the fall and winter terms. Instructors may also arrange their own examinations at times and places of their choosing during the formal examination periods, with the understanding that in cases of conflict of examinations for an individual student, the Registrar's examination schedule takes priority.

No tests or examinations worth more than 50% of the final grade in an "A", or "B" class, or more than 25% of the final grade in and "R" class may be held in the last two weeks of either term, without the explicit approval of the appropriate governing body of the Faculty or School. No tests may be held between the end of classes and the beginning of the official examination period with the exception of those activity modules and

laboratory classes in Health Professions in which special facilities are required. Students may contact the Dean's/Director's Office of the appropriate Faculty/School/College for assistance if they are scheduled for more than two examinations on the same day.

18.3 Grades

Grades in the A range represent excellent performance, grades in the B range represent very good performance, and those in the C range represent satisfactory performance. A grade of D represents marginally acceptable performance except in programmes where a minimum grade of C is specified. See the calendar entries for specific programmes where a minimum grade of C is specified. The passing grades are A+, A, A-, B+, B, B-, C+, C, C-, D and P. (C+, C, C-, D not available for graduate classes). Other grades, including INC, FM and F, are non-passing grades (see regulation 19). ILL, assigned for compassionate reasons or illness, is neutral.

18.4 Submission of Grades

On completion of a class, the instructor is required to submit grades to the Registrar. Such grades are to be based on the instructor's evaluation of the academic performance of the students in the class in question.

18.5 Incomplete

Students are expected to complete class work by the prescribed deadlines. Only in special circumstances (e.g. the death of a close relative) may an instructor extend such deadlines. Incomplete work in a class must be completed by:

Fall term classes (A)	Feb 1
Winter and Regular term classes (B or R)	June 1
Spring term classes (A, B, or R)	Aug 1
Summer term and Commerce Co-op Summer session classes (A, B, or R)	Oct 1

Exceptions to this rule will normally be extended only to classes which require field work during the summer months. At present the list of these classes consists of

- Biology 4800.03 and 4900.06;
- Music 3470.03 and 4470.03;
- Education 8490.06;
- Health Education 1495.02, 1595.02;
- Leisure Studies 4496.06;
- Physical Education 3398.06, and 3402.06;
- Nursing 2220.06, 3240.03 and 3250.03;
- Pharmacy 3000.00;
- Occupational Therapy 2221.00, 3319.00, 3321.00, and 4420.00;
- Social Work 3020.06, 4020.15, and 4030.12;
- Physiotherapy 3500.00.

Students taking any of these classes in their final year should note that they will not be able to graduate at the spring convocation.

The Office of the Registrar is not permitted to accept a late clearance of INC or late grade changes other than those due to errors. If there are exceptional circumstances, a recommendation should be forwarded to the undergraduate coordinator or the Committee on Studies of the appropriate Faculty/School. Unless INC is changed it counts in the GPA and has a grade point value of 0.00 - it is a failing grade.

18.6 Marginal Failure

Faculty of Health Professions

On re-examination the grade awarded for the class will be recorded on the student's transcript along with a notation that the grade was earned by supplemental examination. The highest grade that can be awarded is C for professional classes and D for other classes. Only the supplemental grade will be included in the grade point average. Supplemental exams will be administered by participating school/college. Students should check directly with their school/college for detailed information on the awarding of FM grades and eligibility for supplemental examinations.

18.7 Correction of Errors in Recorded Grades

Students must request correction in the calculation or recording of final grades by March 1 for first-term grades, July 1 for second-term grades, Sept 1 for spring session grades and Nov 1 for summer term grades and grades for the co-op summer session.

18.8 Reassessment of a Grade

Students who have questions about final grades that are assigned are encouraged to discuss them with the class instructor. In addition, students may consult the Chair of the Department, Director of the School/College, Dean of the Faculty, the Student Advocate or the Ombud. If their concerns cannot be resolved, students may also use the formal process that follows for the re-assessment of final grades.

Once a final class grade has been submitted to the Registrar, a student who wishes to have a final grade re-assessed should make a written request to the Registrar and pay the requisite fee of \$25.00. The request must identify the specific component which the student wishes re-assessed and the grounds for the request. Such requests must be made by March 1 for first-term grades, July 1 for second-term grades, Sept 1 for spring session grades and Nov 1 for summer session grades and for the co-op summer session. When such a request is received, the Registrar will forward it to the Dean of the Faculty or Director of the School/College offering the class. The re-assessment will be conducted according to procedures developed for the purpose by the Faculty or School/College. These should reflect the nature of the academic disciplines and

92 Academic Regulations

assessment involved, and should provide for a review of the assessment by a qualified person or persons not responsible for the original evaluation

The student will be notified, by the Office of the Registrar, of the outcome of the re-assessment. If the re-assessment results in the assignment of a grade that is different (higher or lower) from the original one, the new grade will replace the original one.

Students who wish information about grade re-assessment procedures should contact their Faculty or School/College office.

18.9 Special Arrangements for Examinations, Tests and Assignments

At the discretion of the instructor, alternate arrangements for examinations, tests or the completion of assignments may be made for students who are ill, or in other exceptional circumstances.

Where illness is involved, a certificate from the student's physician will be required. This certificate should indicate the dates and duration of the illness, when possible should describe the impact it had on the student's ability to fulfil academic requirements, and should include any other information the physician considers relevant and appropriate. To obtain a medical certificate, students who miss examinations, tests or the completion of other assignments should contact the University Health Services or their physician at the time they are ill and should submit a medical certificate to their instructor as soon thereafter as possible. Such certificates will not normally be accepted after a lapse of more than one week from the examination or assignment completion date.

For exceptional circumstances other than illness, appropriate documentation, depending on the situation, will be required.

Requests for alternate arrangements should be made to the instructor in all cases. The deadline for changing a grade of ILL is February 1 for "A" classes and June 1 for "B" and "B" classes for the Regular session. For the Spring and Summer sessions the deadlines are August 1 and October 1 respectively. Requests to change grades after these deadlines must be submitted in writing to the appeals committee of the appropriate school or faculty.

19. Academic Standing

Students' academic standing is normally assessed at the end of the Regular session.

BComm Co-op students will be assessed after two consecutive academic terms or after a single academic term which is followed by a work term.

19.1 Grade Point Average (GPA)

The Grade Point Average is calculated by summing the values obtained by multiplying the credit points obtained in each class in accordance with the scale in 19.1.1, by the number of credit hours of each class then dividing that sum by the total credit hours attempted. A Sessional GPA includes only those classes attempted in the prior regular and spring/summer sessions; and the Cumulative GPA includes all classes attempted while registered for the current degree or carried forward from a previous degree.

19.1.1 Scale

Grade	Grade Points
A+	4.30
A	4.00
A-	3.70
B+	3.30
B	3.00
B-	2.70
C+	2.30
C	2.00
C-	1.70
D	1.00
F	0.00
FM**	0.00
INC(Incomplete)*	0.00
W(Withdrew after deadline)	Neutral
ILL(Compassionate reasons/illness)	Neutral
P (Pass for credit classes)	Neutral
T(Transfer credit on admission)	Neutral

* see 18.5

** see 18.6

19.2 Grade Points in the Spring/Summer Session

Students enrolled in classes during the Spring/Summer session will earn grade points which will be included in their cumulative GPA and the sessional GPA for the next regular academic session. A sessional GPA will not be calculated for spring and summer sessions.

19.3 Grade Points on Admission

Transfer credits on admission count as credits without grade points, i.e. they are neutral in the calculation of the GPA.

19.4 Grade Points on Letter of Permission

The grade earned in a class taken at another institution on a letter of permission is recorded and the appropriate Dalhousie grade points are assigned. For institutions which do not use letter grades, the Registrar's Office translates the grade into a Dalhousie grade and assigns the corresponding grade points.

19.5 Repeating Classes for which a Passing Grade has been Awarded

With the permission of the department/school/college concerned, a student may repeat any class for which a passing grade has previously been awarded. The original passing grade will nevertheless remain on the transcript and a second entry will be recorded with the new grade and the notation "repeated class." No additional credit will be given for such a repeated class, but both grades will be included in the calculation of the sessional and cumulative GPA.

20. Probation

20.1 College of Arts and Science

20.1.1 Students with a cumulative GPA of less than 1.70 and greater than or equal to 1.00 who have completed at least four full credits will be placed on academic probation.

20.1.2 Students on probation are allowed to continue to register on probation provided their sessional GPA is at least 1.70. Students will be returned to "good standing" when they achieve a cumulative GPA of 1.70. Students on probation who do not achieve a sessional GPA of 1.70 will be academically dismissed for a 12-month period.

20.1.3 Students who are returning from a 12-month period of academic dismissal are allowed to register on probation. They are allowed to continue to register on probation provided their sessional GPA is at least 1.70. Students will be returned to "good standing" when they achieve a cumulative GPA of 1.70. Students who do not achieve a sessional GPA of at least 1.70 will be dismissed academically for the second time for a 36-month period.

20.1.4 Students require a cumulative GPA of 1.70 to graduate. Therefore, no one will be allowed to graduate while on probation.

20.2 Faculty of Health Professions and Faculty of Management

20.2.1 Students with a cumulative GPA of less than 2.00 and greater than or equal to 1.70 who have completed at least four full credits will be placed on academic probation.

20.2.2 Students on probation are allowed to continue to register on probation provided their sessional GPA is at least 2.00. Students will be returned to "good standing" when they achieve a cumulative GPA of 2.00. Students on probation who do not achieve a sessional GPA of 2.00 will be academically dismissed.

20.2.3 Students require a cumulative GPA of 2.00 to graduate. Therefore, no one will be allowed to graduate while on probation.

21. Academic Dismissal

21.1 Academic Dismissal - College of Arts and Science

21.1.1 Students with a cumulative GPA of less than 1.00 who have completed at least four full credits will be academically dismissed for a 12-month period.

21.1.2 Students on probation who do not achieve a sessional GPA of 1.70 or greater will be academically dismissed for a 12-month period.

21.1.3 Students who have been academically dismissed for the first time may re-register on probation after a 12-month period.

21.1.4 Students who have been academically dismissed for the second time will not be allowed to apply for re-admission for at least three calendar years.

21.2 Academic Dismissal - Faculty of Health Professions and Faculty of Management

21.2.1 Students with a cumulative GPA of less than 1.70 who have completed at least four full credits will be academically dismissed for a 12-month period.

21.2.2 Students on probation who do not achieve a sessional GPA of 2.00 or greater will be academically dismissed for a 12-month period.

21.2.3 Students who have been academically dismissed will not be allowed to apply for re-admission for at least twelve months.

21.2.4.1 Faculty of Health Professions: Students who have been academically dismissed for the first time and have subsequently been re-admitted after an absence of a 12-month period may re-register on probation.

21.2.4.2 Faculty of Management: Students who have been academically dismissed and have subsequently been re-admitted after an absence of a 12-month period may re-register on probation.

21.2.5 Faculty of Health Professions: Students who have been academically dismissed twice will not be allowed to apply for re-admission.

22. Graduation Standing

22.1 Minimum Cumulative GPA

22.1.1 A minimum cumulative GPA of 1.70 is required for the awarding of a degree in the College of Arts and Science except for Honours programmes. Please see the Degree Requirements section for details on Required Standing for Graduation for Honours programmes.

94 Academic Regulations

22.1.2 A minimum cumulative GPA of 2.00 is required for the awarding of an undergraduate degree in the Faculty of Health Professions and the Faculty of Management.

22.2 Graduation with Distinction

A cumulative GPA of at least 3.70 is required to graduate with distinction. For the purpose of determining whether a student will graduate with Distinction, all classes taken while at Dalhousie, including repeated classes, and classes for which non-passing grades were obtained, are included. At least half of the classes must be completed at Dalhousie.

22.3 Scholarship Standing

Please see Awards Section, Scholarship GPA (page 47) for information on the GPA required for scholarship purposes.

23. Graduation

In order to graduate students must submit a Request to Graduate to the Office of the Registrar by the deadlines indicated below:

Graduation Month	Deadline
May	December 1
October	July 1

In cases where requests can be accommodated after the deadline, a \$50 fee will be charged.

24. Change from BA to BSc Programme and Vice Versa

All students who have completed all the requirements for a BSc degree have automatically completed all the requirements for a BA degree, provided they have included a language credit. Similarly most students who have completed all requirements for a BA degree in a science subject will have automatically completed all requirements for a BSc degree, provided they have completed the mathematics requirement. However, students who are registered for a BSc degree and wish to be awarded a BA degree or vice versa must do so by submitting an admissions application to the Office of the Registrar by September 25.

25. Deans' and Directors' Lists

25.1 College of Arts and Science and Faculty of Management

Students who have completed first, second, third or fourth year (where year is defined as the number of classes or credit hours deemed by the Faculty/School/College to be the normal yearly workload in the student's degree programme) and have achieved a sessional GPA of 3.70 in the

last five credits or equivalent credit hours will be placed on the Dean's or Director's List of the Faculty or School. The notation "Dean's List" or "Director's List" will appear on the student's transcript. Normally, fewer than fifteen percent of students are on the Deans' and Director's Lists.

25.2 Faculty of Health Professions

For those programmes enrolling full-time students, the Dean's list will be considered annually on a minimum (and no maximum) number of credits designated by the School/College as a normal yearly workload. For those programmes where there are part-time students, see 25.1 for the method used.

26. Appeals

26.1 College of Arts and Science/Faculty of Management

Any students who believe they will suffer undue hardship from the application of any of the academic regulations may appeal for relief to the academic appeals committee of the applicable Faculty or School. Students wishing to appeal a decision based on College regulations may obtain copies of the document "How to appeal a College of Arts and Science regulation". Such appeals must be addressed in writing to the Chair of the appropriate appeals committee, c/o Office of the Registrar and must clearly state the arguments and expectations of the petitioner.

An appeal from a student, arising from a required withdrawal from the faculty should be addressed to the Assistant Dean of the appropriate Faculty for students in the College of Arts and Science or the Director of Academic Programmes in the School of Business.

Students who wish to appeal on matters other than those dealt with by College or Faculty regulations can obtain copies of the document "A Procedure for special Academic appeals in the College of Arts and Science".

Both documents can be obtained from the Office of the Registrar or any departmental office.

26.2 Faculty of Health Professions

Students may appeal decisions pertaining to the College's or a School's interpretation of academic rules and regulations to the Faculty of Health Professions Undergraduate Committee on Studies. Normally, appeals to this committee occur after appeal procedures at the School or College level have been exhausted.

In the case of appeals initiated by students the following procedures shall normally be followed:

1. The student prepares and presents a written statement to the Dean requesting an appeal hearing and stating clearly which regulation is in question and the remedy being sought. The statement is to contain an outline of the

circumstances that necessitate the appeal to the Faculty level and the expectations of the appellant. The student will also provide a telephone number and address through which the student can be reached.

2. The request for an appeal must be presented by the student to the Dean of the Faculty of Health Professions within thirty calendar days of notification of the student by the School/College of the disputed academic decision. The Dean will then ensure that the request for an appeal is forwarded to the Chairperson of the Committee on Studies within two business days.
3. Before acting upon the request for an appeal, the Chairperson of the Faculty Undergraduate Committee on Studies shall determine if School/College appeal procedures have been exhausted and that all the evidence presented to him/her has in fact been considered by the School/College Committee on Studies. If the Chairperson of the Undergraduate Committee on Studies is from the appellant's School/College, the Vice-Chairperson will preside over the appeal process.
4. When the Chairperson or Vice-Chairperson has determined that the Faculty Committee should hear the case, he/she will place the matter on the agenda of the next regularly scheduled meeting, unless in the judgement of the Chairperson there is reason to hold the hearing at an earlier date. The case must be heard within thirty calendar days of receipt by the Dean of a written request for appeal.
5. The Chairperson shall notify the student by telephone and by registered mail of the date, time, place of the appeal hearing, and of the student's right to appear before the Committee, either alone or with an advocate of his/her choice.
6. Documentation in support of the appeal must normally be distributed to the Committee with the agenda seven days prior to the meeting. The chairperson is to ensure that an identical package of all materials is made available to the appellant, the appellant's advocate and the School/College.
7. The members of the Committee whose decision is under appeal have the right to be present and to make representations before the Faculty Committee with, or without, an advocate of their choice and/or other School/College personnel.
8. After the student's appeal has been heard, the Committee will continue the meeting in camera to reach a decision. Other persons from the School/College (as noted in 7 above) and the appellant and his/her advocate will be required to leave prior to the in camera deliberations.
9. The decision of the Faculty Undergraduate Committee on Studies will be dispatched directly to the appellant by the Chairperson of the Faculty Undergraduate Committee on

Studies in writing within 72 (seventy-two) hours of the hearing by registered mail. A copy of the decision will also be sent to the Director of the School/College in question and to the Dean of the Faculty.

10. Should the Committee decide against the student's appeal, the Chairperson of the Faculty Undergraduate Committee on Studies will advise the student of the right to appeal to Senate.
11. In the case of appeals initiated by the School/College on behalf of a student, the School/College will be responsible for providing all documentation. Correspondence or communications from the Chairperson of the Faculty Undergraduate Committee on Studies, as described in procedures 3, 5, 6, 10 and 11 above, shall be with the Director of the School/College.

27. Changes in Regulations

In general, any change which affects a currently registered student adversely will not apply to that student. Any student suffering undue hardship from application of any of the regulations may appeal for relief to the appropriate academic appeals committee as in Section 26, 26.1 and 26.2 above.

Degree Requirements

Following is a list of the faculty requirements needed to satisfy degree programmes at Dalhousie University. Details of these requirements can be found on the pages following these lists. Departmental requirements can be found in the appropriate departmental listing in this calendar. Please note that students must satisfy both departmental and faculty requirements. Before registering for the second year, each student must declare an area of concentration and obtain programme advice from a faculty advisor in the appropriate department.

Requirements for degree programmes not listed here can be found in the appropriate department/school/college listing.

BA, BSc Major (3 year)

- First Year - first five credits
 - no more than three (3) full credit equivalents may be in a single subject
- One credit in a writing class (see 1.2.1., page 101)
- One credit in a single language/humanities subject (see 1.1.1., page 100)
- One credit in a single social science subject (see 1.1.2., page 100)
- One credit in a single life or physical science subject (see 1.1.3., page 100)
- One credit in a single language for Bachelor of Arts (see 1.2.3., page 101)
- One credit in math for Bachelor of Science (see 1.2.2., page 101)
- Minimum of four (4), maximum of eight (8) credits in the major subject beyond the 1000 level, including two (2) credits beyond the 2000 level. Chemistry majors and students enrolled in the combined Diploma in Engineering and 15 credit major programme in Math or Chemistry need take only one credit beyond the 2000 level.
 - Bachelor of Arts Major - subjects: Classics, Comparative Religion, Economics, English, French, German, Greek, History, International Development Studies, Latin, Music, Philosophy, Political Science, Russian, Sociology and Social Anthropology, Spanish, Theatre, Women's Studies or any of the BSc major subjects.
 - Bachelor of Science Major - subjects: Biology, Chemistry, Computing Science, Economics, Earth Science, Mathematics, Physics, Psychology, or Statistics.
- Within the last ten (10) credits, complete one (1) credit in each of two subjects other than the major.
- Total credits required above 1000 level - 7
- Total credits required for degree - 15
- Required GPA for graduation - 1.70
 - Graduation with distinction - 3.70

Advanced Major Programmes

Students who do not wish to attempt an Honours programme are encouraged to enter an Advanced Major programme which also requires 20 credits but with a lesser degree of concentration in a single subject. Such students are advised to seek detailed information from the department in which they wish to concentrate. Unlike the Honours degree, the Advanced Major degree may not provide appropriate training for consideration for admission to a one-year Master's programme.

Programmes in Co-operative Education

The aim of Co-op degree programmes is to enable students to combine their studies with work experience. The programmes are thus year-round, including Spring and Summer School, and will normally require from forty-eight to fifty-two months for completion.

Co-op degree programmes conform to the requirements for the Advanced Major degree.

The following Departments currently offer Co-op programmes: Biology, Chemistry, Earth Sciences, Mathematics, Statistics and Computing Science, and Physics. For details of these programmes, consult the Calendar entries for the Departments.

BA, BSc Advanced Major (4 year)

- First Year - first five credits
 - no more than three (3) full credit equivalents may be in a single subject
- One credit in a writing class (see 1.2.1., page 101)
- One credit in a single language/humanities subject (see 1.1.1., page 100)
- One credit in a single social science subject (see 1.1.2., page 100)
- One credit in a single life or physical science subject (see 1.1.3., page 100)
- One credit in a single language subject for Bachelor of Arts (see 1.2.3., page 101)
- One credit in math for Bachelor of Science (see 1.2.2., page 101)
- Minimum of six (6), maximum of (9) credits in the major subject beyond the 1000 level, including three (3) credits beyond the 2000 level.
 - Bachelor of Arts Advanced Major - subjects: Classics, Comparative Religion, Economics, English, French, German, History, International Development Studies, Philosophy, Political Science, Psychology, Russian, Sociology and Social Anthropology, Spanish, or Women's Studies or from any of the BSc Major subjects.

- Bachelor of Science Advanced Major - subjects: Biochemistry, Biology, Chemistry, Computing Science, Economics, Earth Sciences, Marine Biology, Mathematics, Microbiology, Physics, Psychology, or Statistics.
- Within the last fifteen (15) credits, complete one credit in each of two subjects other than the major.
- Total credits required above 1000 level - 12
- Total credits required for degree - 20
- Required GPA for graduation - 1.70
 - Graduation with distinction - 3.70

BA, BSc Advanced Major Co-op (4 year)

Requirements are as for the regular Advanced Major programme with the addition of the following:

- Four (4) co-op workterms

Advanced Double Major

Students interested in the advanced double major are advised to consult the departments concerned, before enrolling in the programme, to determine when required classes will be offered.

BA, BSc Advanced Double Major (4 year)

- First Year - first five credits
 - no more than three (3) full credit equivalents may be in a single subject
- One credit in a writing class (see 1.2.1., page 101)
- One credit in a single language/humanities subject (see 1.1.1., page 100)
- One credit in a single social science subject (see 1.1.2., page 100)
- One credit in a single life or physical science subject (see 1.1.3., page 100)
- One credit in a single language for Bachelor of Arts (see 1.2.3., page 101)
- One credit in math for Bachelor of Science (see 1.2.2., page 101)
- Minimum of ten (10) and a maximum of thirteen (13) credits in the major subject beyond the 1000 level are to be in the two allied subjects, with no more than nine (9) and no fewer than four (4) in either, including at least 2 credits beyond the 2000 level in each of the two major subjects.
 - Bachelor of Arts Advanced Double Major - subjects: Classics, Comparative Religion, Economics, English, French, German, History, International Development Studies, Philosophy, Political Science, Psychology, Russian, Sociology and Social Anthropology, Spanish, or Women's Studies or from any of the BSc Major subjects.

- Bachelor of Science Advanced Double Major - subjects: Biochemistry, Biology, Chemistry, Computing Science, Economics, Earth Sciences, Marine Biology, Mathematics, Microbiology, Physics, Psychology, or Statistics or by choosing both subjects from the BSc major subjects listed above or by combining one of the BSc major subjects with one of the BA major subjects, provided that the larger number of advanced major credits is from a science subject.
- Within the last fifteen (15) credits, complete one (1) credit in a single subject other than the two major subjects.
- Total credits required above 1000 level - 12
- Total credits required for degree - 20
- Required GPA for graduation - 1.70
 - Graduation with distinction - 3.70

Upgrading of a BA or BSc to an Advanced Major

A person who holds a Dalhousie BA or BSc (15 credit) degree may apply through the Registrar's Office for admission to an Advanced Major. On completion of the required work with proper standing, a certificate will be awarded which has the effect of upgrading the degree to Advanced Major status.

Honours Programmes

Able and ambitious students are urged to enter Honours Programmes. These programmes require a higher quality of work than is required by the other undergraduate programmes of the College (15-credit Major and 20-credit Advanced Major). There are three types of Honours programmes: concentrated, combined and multidisciplinary.

Applications for admission to Honours programmes must be made to the Departments concerned on forms available in Departments and at the Office of the Registrar. The Registrar may be consulted by those considering multidisciplinary honours.

Students should apply before registering for the second year. If application is made later, it may be necessary to make up some work not previously taken.

For each individual student the entire Honours programme, including elective credits, is subject to supervision and approval by the Department or Departments concerned, or in the case of multidisciplinary honours, by an interdisciplinary committee.

Note: The last day to apply to an Honours programme is September 25.

Honours Programmes in Co-operative Education

Co-operative Education programmes are also available for the Bachelor of Arts and Bachelor of Science Honours degrees. The requirements for Co-op degrees conform to the regular Honours programmes which are described below.

Joint Honours: Dalhousie-Mount Saint Vincent

Special arrangements exist under which students may be permitted to pursue an Honours programme jointly at Dalhousie and Mount Saint Vincent Universities. Interested applicants should consult the appropriate Department of their own university at the beginning of the second year. Prospective joint honours students must be accepted by the Honours Departments concerned at both institutions. These Departments supervise the entire programme of study of accepted applicants. Students should be aware that not all classes available for credit at Mount Saint Vincent can be given credit at Dalhousie and vice versa. In order for students to obtain a joint honours degree they must satisfy all requirements of both institutions.

BA, BSc Concentrated Honours (4 year)

- First Year - first five credits
 - no more than three (3) full credit equivalents may be in a single subject
- One credit in a writing class (see 1.2.1., page 101)
- One credit in a single language/humanities subject (see 1.1.1., page 100)
- One credit in a single social science subject (see 1.1.2., page 100)
- One credit in a single life or physical science subject (see 1.1.3., page 100)
- One credit in a single language for Bachelor of Arts (see 1.2.3., page 101)
- One credit in math for Bachelor of Science (see 1.2.2., page 101)
- Two credits in a minor subject - not taken within first year, grade must be "C" or better
- Minimum of nine (9), maximum of eleven (11) credits in the honours subject - grade must be "C" or better, otherwise class will not count towards degree.
 - Bachelor of Arts Concentrated Honours subjects: Classics, Economics, English, French, German, History, International Development Studies, Philosophy, Political Science, Russian, Social Anthropology, Sociology, Spanish, and Theatre or any of the BSc Honours subjects.

- Bachelor of Science Concentrated Honours subjects: Biochemistry, Biology, Chemistry, Computing Science, Economics, Earth Sciences, Marine Biology, Mathematics, Microbiology, Neuroscience, Physics, Psychology and Statistics.
- Two (2) to four (4) - depending on the number selected in the major subject - elective credits, at least one of which must be in a single subject other than the major or minor.
- Honours Qualifying Examination: At the conclusion of an Honours programme a student's record must show a grade which is additional to the grades for the classes taken to obtain the required twenty credits. This grade may be obtained through a comprehensive examination, the presentation of a research paper (which may be an extension of one of the classes), or such other method as may be determined by the committee or department supervising the student's programme. The method by which this additional grade is obtained is referred to as the Honours Qualifying Examination. Departments may elect to use a pass-fail grading system for this examination. Unless pass/fail grading is employed, the grade must be "B-" or better for Honours, and "A-" or better for First Class Honours.
- Required standing for graduation:
 - Arts and Social Science Subjects require a GPA of 2.70 on classes in the major and minor.
 - Science subjects (Biochemistry, Biology, Chemistry, Computing Science, Economics, Earth Sciences, Marine Biology, Mathematics, Microbiology, Neuroscience, Physics, Psychology and Statistics) require a GPA of 3.00 in the major and minor classes.

BA, BSc Combined Honours (4 year)

- First Year - first five credits
 - no more than three (3) full credit equivalents may be in a single subject
- One credit in a writing class (see 1.2.1, page 101)
- One credit in a single language/humanities subject (see 1.1.1., page 100)
- One credit in a single social science subject (see 1.1.2., page 100)
- One credit in a single life or physical science subject (see 1.1.3., page 100)
- One credit in a single language for Bachelor of Arts (see 1.2.3., page 101)
- One credit in math for Bachelor of Science (see 1.2.2., page 101)
- Minimum of eleven (11); maximum of thirteen (13) credits beyond the 1000-level in two allied subjects, not more than seven (7) nor fewer than four (4) credit being in either of them.

• Two (2) to four (4) - depending on the number selected in the major subject - elective credits in subjects other than the two offered to satisfy the requirement of the preceding clause.

• Bachelor of Arts Combined Honours - subjects: Classics, Contemporary Studies, Economics, English, French, German, History, International Development Studies, Music, Philosophy, Political Science, Russian, Social Anthropology, Sociology, Spanish, and Theatre or any of the BSc Honours subjects.

• Bachelor of Science Combined Honours subjects: Biochemistry, Biology, Chemistry, Computing Science, Economics, Earth Sciences, Marine Biology, Mathematics, Microbiology, Neuroscience, Physics, Psychology and Statistics or by combining one of the BSc honours subjects listed above with one of the BA Honours subjects, provided that the larger number of Honours credits is from a science subject.

• Honours Qualifying Examination: see Concentrated Honours programme above for details.

• Required standing for graduation:

• Arts and Social Science Subjects require a GPA of 2.70 on classes in the major.

• Science subjects (Biochemistry, Biology, Chemistry, Computing Science, Economics, Earth Sciences, Marine Biology, Mathematics, Microbiology, Neuroscience, Physics, Psychology and Statistics) require a GPA of 3.00 in the major.

BA, BSc Multidisciplinary Honours (4 year)

• First Year - first five credits

• no more than three (3) full credit equivalents may be in a single subject

• One credit in a writing class (see 1.2.1., page 101)

• One credit in a single language/humanities subject (see 1.1.1., page 100)

• One credit in a single social science subject (see 1.1.2., page 100)

• One credit in a single life or physical science subject (see 1.1.3., page 100)

• One credit in a single language for Bachelor of Arts (see 1.2.3., page 101)

• One credit in math for Bachelor of Science (see 1.2.2., page 101)

• Twelve (12) credits beyond the 1000 level in three or more subjects. No more than five (5) of these may be in a single subject; no less than six (6) nor more than nine (9) may be in two subjects. Grade must be "C" or better, otherwise the class will not count towards degree.

• Bachelor of Arts Multidisciplinary Honours - at least ten (10) credits of the twenty selected must be from the following subjects: Classics, Economics, English, French, German, History, International Development Studies, Philosophy, Political Science, Russian, Social Anthropology, Sociology, Spanish, and Theatre or any of the BSc Honours subjects.

• Bachelor of Science Multidisciplinary Honours - at least eight (8) credits of the twenty selected must be from the following subjects: Biochemistry, Biology, Chemistry, Computing Science, Economics, Earth Sciences, Mathematics, Microbiology, Neuroscience, Physics, Psychology and Statistics.

• Three (3) elective credits.

• Honours Qualifying Examination: See Concentrated Honours programme above for details.

• Required standing for graduation:

• Arts and Social Science Subjects require a GPA of 2.70 on classes in the major.

• Science subjects (Biochemistry, Biology, Chemistry, Computing Science, Economics, Earth Sciences, Marine Biology, Mathematics, Microbiology, Neuroscience, Physics, Psychology and Statistics) require a GPA of 3.00 in the major.

BA, BSc Honours Co-op (4 year)

Requirements are as for appropriate Honours programme with the addition of the following:

• Four (4) co-op workterms

Upgrading of a BA or BSc to an Honours Degree

A person who holds a Dalhousie BA or BSc (15- or 20-credit) degree may apply through his/her department advisor or, for Multidisciplinary Programmes, their Coordinator, for admission to an Honours programme. On completion of the required work with proper standing, a certificate will be awarded which has the effect of upgrading the degree to Honours status.

Bachelor of Arts Programmes with Minor in Business

Bachelor of Arts Advanced Major with Minor in Business

• First Year - first five credits

• no more than three (3) full credit equivalents may be in a single subject

100 Degree Requirements

- COMM 1000.03, 1501.03, ECON 1101.03/1102.03
- One credit in Mathematics
- One credit in a writing class (see 1.2.1., page 101)
- One credit in a single language/humanities subject (see 1.1.1., page 100)
- One credit in a single social science subject (ECON 1101.03/1102.03)
- One credit in a single life or physical science subject (Mathematics)
- One credit in a single language (see 1.2.3., page 101)
- Required Advanced Commerce classes:
 - COMM 2101.03, 2301.03, 2401.03 and 1.5 other Commerce classes above the 1000 level; one (1) Commerce credit above the 2000 level.
- Minimum of seven (7), maximum of nine (9) credits above the 1000 level in the major, at least three (3) of which must be above the 2000 level.
 - Bachelor of Arts Advanced Major - subjects: Classics, Comparative Religion, Economics, English, French, German, History, International Development Studies, Philosophy, Political Science, Psychology, Russian, Sociology and Social Anthropology, Spanish, or Women's Studies or from any of the BSc Major subjects.
- Two (2) to four (4) elective credits, at least one (1) of which must be in a single subject other than Commerce and the major.
- Total credits required above the 1000 level - 12
- Total credits required for degree - 20
- Required GPA for graduation - 1.70
 - Graduation with distinction - 3.70

Bachelor of Arts Honours with Minor in Business

- First Year - first five credits
 - no more than three (3) full credit equivalents may be in a single subject
- COMM 1000.03, 1501.03, ECON 1101.03/1102.03
- One credit in Mathematics
- One credit in a writing class (see 1.2.1., page 101)
- One credit in a single language/humanities subject (see 1.1.1., page 100)
- One credit in a single social science subject (ECON 1101.03/1102.03)
- One credit in a single life or physical science subject (Mathematics)
- One credit in a single language (see 1.2.3., page 101)
- Required Advanced Commerce classes:
 - COMM 2101.03, 2301.03, 2401.03 and 1.5 other Commerce class above the 1000 level; one (1) Commerce credit above the 2000 level.

- Minimum of seven (7) and a maximum of nine (9) credits beyond the 1000 level in the Honours subject - grade must be a "C" or better or credit will not count towards degree.
 - Bachelor of Arts Concentrated Honours subjects: Classics, Economics, English, French, German, History, International Development Studies, Philosophy, Political Science, Russian, Social Anthropology, Sociology, Spanish, and Theatre or any of the BSc Honours subjects.
- Two (2) to four (4) - depending on number selected in major - elective credits, one full credit of which must be in a single subject other than Commerce and the Honours subject.
- Honours Qualifying Examination: see Concentrated Honours programme for details.
- Required standing for graduation:
 - Arts and Social Science Subjects require a GPA of 2.70 on classes in the major and minor.

Individual Programmes

In cases where students feel their academic needs are not satisfied under the above requirements, individual programmes may be submitted to the Student Affairs Committee of the Faculty of Arts and Social Sciences or to the Curriculum Committee of the Faculty of Science or the School of Education prior to or during the student's second academic year. The Dean shall act as advisor for such students.

1. College of Arts and Sciences

1.1. Subject Groupings in the College of Arts and Sciences

The various subjects in which instruction is offered are grouped as follows:

1.1.1. Languages and Humanities:

Classics, Comparative Literature, Comparative Religion, English, French, German, Greek, History, King's Foundation Year, Latin, Music, Philosophy, Russian, Spanish, Theatre, and Women's Studies.

1.1.2. Social Sciences:

Canadian Studies, Economics, Education, History, International Development Studies, King's Foundation Year, Political Science, Psychology, Sociology and Social Anthropology, and Women's Studies.

1.1.3. Life Sciences and Physical Sciences:

Biochemistry, Biology, Chemistry, Computing Science, Earth Sciences, Economics, Engineering, Mathematics, Microbiology, Neuroscience, Oceanography, Physics, Psychology, Science and Statistics.

Please Note:

- (1) In cases where a subject is listed in more than one of the groupings, any credit taken in that subject may be used to satisfy only one of the grouping requirements. A second credit in the same subject cannot be used to satisfy another subject grouping requirement. The exceptions are the Dalhousie Integrated Science Programme and King's Foundation Year Programme. King's Foundation Year Programme satisfies the Humanities-Languages and Social Science groupings and students must take a full credit in a single Life / Physical Sciences subject to complete the subject grouping requirements. The Dalhousie Integrated Science Programme satisfies the Science and Social Science requirements and students must take a full credit in a single language/ humanities subject to complete the subject grouping requirement.
- (2) The subject groupings requirement should normally be completed in the first ten credits.

1.2.1. Writing Class

One of the five classes chosen must be selected from a list of classes in which written work is considered frequently and in detail. These writing classes are approved by the Writing Across Curriculum Committee and are listed below.

- Chemistry 1000.06;
- Classics 1000.06, 1010.06, 1100.06;
- Comparative Religion 1301.06;
- English 1000.06;
- German 1000.06, 1050.06;
- History 1400.06;
- King's Foundation Year;
- Music 1010.06;
- Philosophy 1010.06;
- Political Science 1103.06;
- Russian 2051.03/2052.03 (both RUSS 2051.03 and 2052.03 must be successfully completed in order to satisfy the Writing Requirement);
- Science 1500.30;
- Theatre 1000.06.

Classes which satisfy the Writing Requirement are identified by the following symbol and notation in their format description:  Writing Requirement

Please note: Classes identified as Writing Intensive do not satisfy the Writing Requirement.

1.2.2. Mathematics Requirement

In order to qualify for a BSc degree candidates are required to complete successfully at least one full University credit in Mathematics other than Mathematics 1001.03A/1002.03B,

Mathematics 1110.03A/1120.03B. A class taken to satisfy this requirement cannot also satisfy the requirement of a class from section 1.1.3.

Students may also satisfy this requirement by completing the Science Foundation year or passing the test which is administered by the Department of Mathematics, Statistics & Computing Science. Such students must nevertheless complete 15 or 20 credits in order to graduate.

1.2.3. Language Class

Students should consider becoming fluent in French. BA students are required to obtain one credit from the following language classes:

- Classics 1700.06, 1800.06;
- French 1000.06, 1001.06/2001.06, 1020.06, 1040.06; 1060.06;
- German 1000.06, 1010.06, 1050.06, 1060.06;
- Russian 1000.06, 1050.06;
- Spanish 1020.06, 2000.03, 2010.03.

For students with advanced language skills, upper-level language classes may be substituted. Consult the Office of the Registrar if you require further information. A class taken to satisfy this requirement cannot also satisfy the requirement of a class from section 1.1.1.

Students may satisfy this requirement by passing one of the tests administered by the language departments. Such students must nevertheless complete 15 or 20 credits in order to graduate.

BA students who choose to major in Economics, International Development Studies, Philosophy, Political Science, Psychology or Sociology and Social Anthropology may substitute for a language class at least one full class in Mathematics or Statistics, other than Mathematics 1001.03/1002.03 or Mathematics 1110.03/1120.03, to meet this requirement; or they may meet it by passing the test administered by the Department of Mathematics, Statistics & Computing Science. A class taken to satisfy this requirement cannot also satisfy the requirement of a class from section 1.1.3.

Students who have not completed their first year but wish to enrol for further study, must first complete the first-year requirements.

1.2.4. Cross-listed Classes

Please note that cross-listed classes will count as one subject only for the purpose of satisfying degree requirements, e.g. Economics 2260.03 cross-listed with Mathematics 2060.03 may count either as part of the Mathematics requirement or as part of a major in Economics, but not both.

1.2.5. Arts and Science Electives

Students may choose electives from any of the classes listed by departments offering major or honours programmes in the College of Arts and Science. In addition up to three credits may be obtained from the following:

102 Degree Requirements

- (a) Architecture 1000.06R;
- (b) Education Foundation Offerings (classes with numbers below 4400); classes numbered 4400 and above are not available as Arts and Science electives;
- (c) Classes in Engineering and Oceanography. The restriction on Engineering electives does not apply to students in the Diploma in Engineering Programme who combine their studies with a programme leading to a BA or BSc in the College of Arts and Sciences. (See the Engineering entry in this calendar).
- (d) Classes in Music. Note: Music classes 1000.06, 1001.03, 1002.03, 2007.06, 2008.06, 2010.06, 2011.06, 2012.06, 2013.06, 2021.06, 2087.06, and 3064.03 are available as normal electives, but other classes in Music may be taken by special permission of the Department of Music.
- (e) The following approved classes from other Faculties and institutions: all Commerce classes and Health Education 4412.03.

Note: Students enrolling in elective classes must meet normal class prerequisites.

1.3. Bachelor of Music and Bachelor of Music Education

For the special requirements of these degrees, see the entry for the Department of Music.

1.4. Diploma in Engineering

For details of the requirements for the diploma, see the entry for the Department of Engineering.

1.5. Bachelor of Education

Please note: Admission to the BEd programme has been suspended for the 1995-96 academic year. Please contact the Registrar's Office concerning applications for the 1996-97 academic year or for any programmes combined with a BEd.

Admission to this programme normally requires that the applicant holds a prior undergraduate degree, or is simultaneously enrolled for one. There is, however, an arrangement under which it is possible to obtain a BEd in association with the Nova Scotia Teachers' College as a first degree.

For details about BEd programmes, see the entry for the School of Education.

1.6. Certificate and Diploma in Costume Studies

Study for these credentials is entirely within the Department of Theatre. See the entry for that department for detailed information.

1.7. Diploma in Meteorology

Details of the requirements for this diploma may be found in the entry of the Department of Physics.

Please note: Applications are not being accepted for the Diploma in Meteorology for the 1995-96 academic year. Please contact the Registrar's Office for further details concerning applications for 1996-97.

2. Faculty of Management

2.1. School of Business

The Bachelor of Commerce Co-op is a four-year programme comprising 7 academic terms and 3 work terms. The equivalent of 20 full credits (40 half credits) are required for graduation. Note: all classes are half-credits except those designated as "R", which are full credits.

The work term requirements of the Bachelor of Commerce Co-op may involve placement problems for Visa students. Subject to approval by the School, students may be permitted to arrange their own work term positions. Notwithstanding, the best interests of most Visa students may be better served by seeking admission to a university that does not have a mandatory Co-op programme.

The classes in the programme are divided into five categories, as follows:

2.1.1. Required Core Area Classes

The equivalent of ten full credits (twenty half credits) COMM 1000.03, 2101.03, 2102.03, 1501.03, 2201.03, 2301.03, 2401.03, 2501.03, 2502.03, 2601.03, 2701.03, 2302.03, 3501.03, 4350.06R; (ECON 1100.06, 2200.03, or 2201.03; MATH 1000.03 and 1010.03, or 1110.03 and 1120.03*

Note: MATH 1110.03 and 1120.03 are specifically designed for the Commerce programme, and are not normally accepted as the prerequisites for upper level Mathematics or Computing Science classes.

2.1.2. Core Area Electives

The equivalent of four full credits (eight half credits) to be selected from offerings in the core areas of Commerce, Economics and Mathematics (including Computing Science).

2.1.3. Non-Commerce Electives

The equivalent of three full credits (six half credits) to be selected from all classes offered in the university except those designated as Commerce classes.

2.1.4. Free Electives

The equivalent of one and one-half full credits (three half credits) chosen, subject to the approval of the School of Business Administration, from all classes offered in the University above the 1000 level.

2.1.5. Work Term Requirements

The equivalent of one and one-half full credits (three half credits) requires the satisfactory completion of three work terms.

Students are expected to ensure that the classes taken comply with the above.

The Bachelor of Commerce Co-op is a structured programme, with most of its classes assigned to specific years and terms. The chart below summarizes the degree requirements and class sequencing through all seven of the academic terms and three work terms that constitute the Bachelor of Commerce Co-op Programme. It will be noted that Commerce 1000.03 and Commerce 1501.03 will be offered in the Spring to permit students an opportunity to make up academic deficiencies and proceed to Year II of the Bachelor of Commerce Co-op.

2.1.6. Competency in the English Language

All students in the Commerce programme must satisfy the School as to their competency in the English Language. This requirement is satisfied by successfully completing the Business Communication Course, Commerce 2701.03, which is a required course in second year. The School recommends, but does not require, that students take at least one course in first year, from their electives, in which written work is considered frequently and in detail. These writing classes are approved by the Writing Across Curriculum Committee and are listed as follows:

- Chemistry 1000.06;
- Classics 1000.06, 1010.06, 1100.06;
- Comparative Religion 1301.06;
- English 1000.06;
- German 1000.06, 1050.06;
- History 1400.06;
- King's Foundation Year;
- Music 1010.06;

- Philosophy 1010.06;
- Political Science 1103.06;
- Russian 2051.03/2052.03 (both RUSS 2051.03 and 2052.03 must be successfully completed in order to satisfy the Writing Requirement);
- Science 1500.30;
- Theatre 1000.06.

Classes which satisfy the Writing Requirement are identified by the following symbol and notation in their format description:
✍ Writing Requirement

Please note: Classes identified as Writing Intensive do not satisfy the Writing Requirement.

2.2. School of Public Administration

Please refer to the Public Administration entry in this calendar

3. Faculty of Health Professions

For degree requirements for programmes in the Faculty of Health Professions, refer to the entry in this calendar for the appropriate school or college.

Dalhousie University Co-op Bcomm

Term	Fall Sept./Dec.	Winter Jan./April	Co-op Summer May/Aug.
Year I	MATH 1000.03 or 1110.03 (1) COMM 1000.03 (1) ECON 1101.03 (1)	MATH 1010.03 or 1120.03 (1) COMM 1501.03 (1) ECON 1102.03 (1)	
	3 Non-commerce Electives (6) *		COMM 1000.03 (1) COMM 1501.03 (1)
Year II	COMM 2101.03 (1) COMM 2301.03 (1) COMM 2401.03 (1) COMM 2501.03 (1) ECON 2200.03 or 2201.03 (1) Seminar *	Work Term (1)	COMM 2101.03 (1) COMM 2201.03 (1) COMM 2502.03 (1) COMM 2701.03 (1) COMM 2302.03 (1)
Year III	Work Term (1)	COMM 2601.03 (1) COMM 3501.03 (1) 3 Core Electives (3) *	Work Term (1)
Year IV	COMM 4350.06 (2) 5 Core Electives (5) 3 Free Electives (3)		

* Student's academic standing will be assessed at the end of this academic term (see sections 20, 21, and 22, Academic Regulations).

African Studies

Location: Pearson Institute Halifax, N.S.
 Telephone: (902) 494-3814
 Advisor: Jane Parpart 494-3667/2011
 Fax: (902) 494-2176

Dalhousie University offers a set of classes in different disciplines which focus on Africa. Its Centre for African Studies, established in 1975, coordinates teaching, seminar, research, community and publications programmes in African Studies. Its faculty associates hold appointments in the social sciences, humanities and professional schools. Undergraduate classes on Africa are usually available in Economics, History, International Development Studies and Political Science. Other classes with a broader Third World focus, which usually includes African content, are offered in Comparative Religion, English, Education, Health Law, and Sociology and Social Anthropology.

Students interested in Africa are encouraged to select classes from these several disciplines which concentrate on the continent. These could be included in single or combined major or honours programmes in Economics, History, International Development Studies, Political Science and/or Sociology and Social Anthropology.

Anatomy and Neurobiology

Location: Sir Charles Tupper Medical Building, 13th floor, Halifax, N.S. B3H 4H7
 Telephone: (902) 494-2052
 Fax: (902) 494-1212

Head of Department

D.A. Hopkins

Professors

R.W. Currie, BSA, MSc, PhD (Man), Graduate Studies Co-ordinator
 D.H. Dickson, BA, MSc, PhD (Western)
 D.A. Hopkins, BSc (Alta), MA, PhD (McM)
 J.G. Rutherford, BA (Cornell), MS (Syracuse), PhD (SUNY), Associate Dean, Faculty of Graduate Studies
 K. Semba, BEd, MA (Tokyo), PhD (Rutgers)
 J.M. Walker, BPT, MSc (Man), PhD (McM), major appointment in Physiotherapy
 R.J. Wassersug, BSc (Tufts), PhD (Chicago)

Associate Professors

R.E. Clattenburg, BSc, MSc (Acadia), PhD (Western)
 M.M. Hansell, BSc (Tor), PhD (Calif)
 I.G. Mobbs, BSc (Aberdeen), MSc (McMaster), PhD (Western)
 P.E. Neumann, BA, MB (Brown)

Assistant Professors

G.V. Allen, BSc, PhD (Dal)
 H.H. Ellenberger, BA, MSc, PhD (Miami)
 T. Hagg, BSc (Amsterdam), MD, MSc (Leiden), PhD (UCSD)
 W.B. Mathieson, MSc (Carleton), PhD (Ottawa)
 F.M. Smith, BSc, PhD (UBC)

The Department of Anatomy and Neurobiology provides facilities for advanced study and research in Neuroscience, Histology, Embryology, Cell Biology, Neuroendocrinology and Evolutionary Biology.

Classes Offered

ANAT 1010.03 R: Basic Human Anatomy. This course is offered by the Department of Anatomy and Neurobiology and is reserved for students in Nursing and Pharmacy. The course uses a systems approach to examine the cellular and gross anatomy of the body. There are no formal laboratory sessions. There are forty-seven (47) hours of scheduled classroom lectures plus review sessions from September to April.

Format: Lecture 2 hours
 Instructor: G.V. Allen
 Restriction: Restricted to Nursing and Pharmacy students

ANAT 1020.03 R: Basic Human Anatomy. This course is offered by the Department of Anatomy and Neurobiology to Dental Hygiene, Recreation, Physical and Health Education and Kinesiology students. The course uses a systems approach to examine the cellular and gross anatomy of the body. There are no formal laboratory sessions. There are forty-seven (47) hours of scheduled classroom lectures plus review sessions from September to April.

Format: Lecture 2 hours
Instructor: G.V. Allen
Restriction: Restricted to Dental Hygiene, Recreation, Kinesiology, and Physical and Health Education students.

ANAT 1030.03B: Gross Anatomy. This course is taught by the Department of Anatomy and Neurobiology in the Faculty of Medicine and designed especially for Dental Hygiene students, and deals with detailed gross anatomy of the head and neck. This course complements ANAT 1020.03 and PPHYL 1010.06.

Format: Lecture/lab 2 hours
Instructor: R.W. Currie
Restriction: Restricted to Dental Hygiene students.

ANAT 2100.03B: Neuroanatomy. A survey of the histology, development and organization of the central nervous system, with emphasis on the developmental and structural relationships between spinal cord and brainstem. The organization of cranial nerves and microanatomy of the brain stem is discussed. The organization of sensory and motor systems is presented in detail. The cerebral cortex, cerebellum, basal ganglia, and limbic system are also covered.

Format: lecture and laboratory 3 hours
Instructor: D.A. Hopkins (Anatomy and Neurobiology Dept.)

Prerequisite: BIOL 2020.03 or 2015.06 or permission of instructor
Cross-listing: BIOL 3440.03, NESC 3440.03

Restriction: Restricted to Occupational Therapy and Physiotherapy students. (BIOL 3440.03 and NESC 3440.03 do not have this restriction).

ANAT 2160.03A: Introduction to Human Histology. Histology is the study of the structure of cells, tissues and organ systems, and utilizes information derived from both light and electron microscopy. It complements studies in anatomy, cell biology, physiology and biochemistry, broadening the understanding of how organisms function.

Format: lecture 2 hours, laboratory 2 hours

Instructor: D.H. Dickson (Anatomy and Neurobiology Dept.)

Prerequisites: BIOL 2020.03A or permission of instructor

Cross-listings: BIOL 3430.03A

Restriction: Restricted to Physiotherapy students. This restriction does not apply to the cross-listing.

ANAT 2170.06R: Gross Anatomy. A regional study of human gross anatomy with emphasis on functional anatomy of the back and limbs. Laboratory work/study includes radiology, osteology, living (surface) anatomy and dissection of the human body. Biology students, please see BIOL 3435 description for further details.

Format: lecture 3 hours, laboratory 4 hours

Instructor: R.E. Clattenburg

Restriction: Restricted to Occupational Therapy and Physiotherapy students. This restriction does not apply to the cross-listing.

Cross-listings: BIOL 3435.06R

ANAT 3421.03B: Comparative Vertebrate Histology. An advanced histology course surveying the whole range of vertebrate tissues and organs.

Format: lecture 2 hours, lab 2 hours

Instructor: TBA (Anatomy and Neurobiology Dept.)

Prerequisite: BIOL 3430.03A

Cross-listed: BIOL 3421.03B

Architecture

ARCH 1000.06R: Introduction to Architecture. An introductory class showing architecture as a bridge between the Arts and Science providing an insight into professional architectural studies. In the first term discussion centres around some components of architectural design; in the second term, architecture in present day life. Available as an elective in the general degree programmes in Arts and Social Sciences and Science. This class is held at TUNS.

Instructor: Staff
Format: Lecture/seminar 1 hour,
practical 2 hours

Arts and Social Sciences Interdisciplinary

ASSC1000.03A: Using Computers: An Introduction for Students in the Arts and Social Sciences. This class is designed to introduce students in the BA programme to emerging information technologies and their practical value for the fine arts, humanities, and the social sciences. After a brief review of computer literacy, the class will focus on two fundamental computer applications: word-processing and communications. Students will learn the essentials of text-editing on both the PC and the Mainframe, how to use electronic mail, and how to access and retrieve information on both the Internet and CD-ROM. Previous knowledge of computers is desirable but not required.

Instructor: Phil O'Hara
Format: Lectures 2 hrs/wk; Lab 1 hr/wk

Prerequisites: Desirable that students (in Arts/Social Sciences): know how to turn on computer, boot up; know how computer uses bits & bytes to process information; know how to format diskettes, how they store information and how to care for them.

Exclusion: Students may receive credit for only one of COMP 1000.03, COMM 1501.03 or ASSC 1000.03.

Restriction: Restricted to students enrolled in the BA programme

Biochemistry

Location: Sir Charles Tupper Medical Building College Street

Lecturers

S.S. Reddy, BS, MD (Memorial)
 D.C. Riddell, BSc, PhD (Kingston)

Introduction

Biochemistry is the study of biological function at the molecular level. Although biochemical processes follow the basic laws of physics and chemistry, living organisms, because of their complexity, operate on a set of distinct principles that are not found in simple isolated chemical systems. The goal of biochemistry is to elucidate these principles. The department offers an integrated series of classes that will provide students with an up-to-date view of modern biochemistry ranging from structure-function relationships in

macromolecules to the dynamic aspects of metabolism. A set of classes has been identified to meet the needs of honours Biochemistry or Microbiology students who hope to pursue further study in molecular and genetic approaches to fundamental problems. These classes provide solid grounding in bacterial and eukaryotic gene structure and function, regulation and evolution, and both practical and theoretical presentations of current and developing methodology (genetic engineering). The classes can be fully integrated with training in metabolism, enzymology, bacteriology, virology and immunology provided by the two departments, as they provide a good practical grounding in the recombinant DNA methods which have become essential in fields as diverse as genetic diagnosis and gene therapy, forensics, industrial microbiology, and molecular evolution.

Degree Programmes

Note: Students interested in a Biochemistry degree should obtain from the department a special booklet that describes all of the programmes available and the special requirements relating to them. Degree programmes should be planned in consultation with the undergraduate coordinator (Dr. J.A. Verpoorte), or another faculty advisor (Dr. F.B. Palmer, Dr. C.J.A. Wallace).

There is no three-year programme with a Biochemistry major. Students wishing to include Biochemistry in other programmes are welcomed. Students cannot obtain credit for both Biochemistry 2200.03 and 2020.03 and the Biochemistry 2000.06 and 2600.03 offered previously. Note that all Biochemistry classes have prerequisites.

For general Degree Requirements, please see the Degree Requirements section in this calendar.

BSc with Honours in Biochemistry

This is a special concentrated Honours Programme. Because Biochemistry and Chemistry are closely interwoven both conceptually and experimentally, the list of major classes required includes both subjects to a total of 10.5 credits. Additional chemistry classes may be taken as electives, or by choosing Chemistry as a minor subject. Students should consider Mathematics 1060.03 or 2060.03. For entrance to Biochemistry 2200.03, students require minimum grades of C in Biology 1000.06 and Chemistry 1010.06 (or equivalent). Honours students must meet the general degree requirements of the faculty.

Departmental Requirements

Classes required in Honours:

2000 level: Biochemistry 2020.03, 2030.03, 2200.03, Chemistry 2201.03, 2301.03, 2302.03, 2400.06

- 3000 level:** Biochemistry 3200.03, 3300.03, 3400.03, Chemistry 3403.03 and 3402.03 or Microbiology 3033.03
- 4000 level:** Biochemistry 4602.06, 4603.03. Three more credits in Biochemistry including .5 in 43** series, .5 in 44** series and .5 in 47** series

Other required classes:

Chemistry 1010.06, Biology 1000.06 (with grade of C or better); Physics 1100.06, Math 1000.03 and 1010.03

Other requirements:

Two credits in a minor subject. Honours Qualifying result.

A minor subject (see Degree Requirements) should be chosen in consultation with the department's Advisor. Elective and minor classes need not be taken in the order stated.

Laboratory exercises, many of the classes offered by the department of Biochemistry include a laboratory component. The laboratory exercises provide an opportunity to develop laboratory skills, as well as to illustrate the theoretical principles taught in class. This process culminates in fourth year, when both an advanced laboratory class and a supervised research project are required for honours Biochemistry students. Although no exercise involves live animals, experiments may use materials derived from animal sources, as well as from plants and micro-organisms. Laboratory experiments will often be performed in groups, but the writing of reports is expected to be an individual effort, meeting the guidelines on plagiarism set out in the University Regulations in the Calendar.

BSc with Combined Honours in Biochemistry and Another Science

Biochemistry may be chosen along with one of Biology, Chemistry, Mathematics, Microbiology, Physics, Psychology, or possibly another subject, for a Combined Honours Programme.

Departmental Requirements

Biochemistry 2020.03, 2030.03, 2200.03, 3200.03, 3300.03, 3400.03 and one full credit from 43XX, 44XX, and 47XX and also Chemistry 2400.06.

Consult the Undergraduate Advisor, Dr. C.J.A. Wallace, for details of recommended courses of study.

BSc Advanced Major in Biochemistry

The department offers a four-year, 20-credit programme of study leading to an Advanced Major Degree. The programme, while not designed as a preparation for graduate study in

Biochemistry, nevertheless introduces students to all main aspects of the subject. As well as meeting the general degree requirements of the faculty.

Departmental Requirements

Classes required in Advanced Major:

- 2000 level:** Biochemistry 2020.03, 2030.03, 2200.03, Chemistry 2201.03, and 2400.06
- 3000 level:** Biochemistry 3200.03, 3300.03, 3400.03
- 4000 level:** Three full credits in Biochemistry at 4000 level

Other required classes:

Chemistry 1010.06 and Biology 1000.06

Students who have not passed Nova Scotia grade 12 Physics or its equivalent must include a 1000-level Physics class among their first ten credits.

Co-op Programme

This programme consists of 8 academic and 4 work terms in laboratories in government and industry. The work terms, each of 4 months duration, would provide the students with work experience and enable them to make more intelligent career choices.

The work-study programme.

Year	Fall	Winter	Summer
1	Acad	Acad	—
2	Acad	Acad	W1
3	Acad	Acad	W2
4	W3	Acad	W4
5	Acad		

Consult the department for details.

Classes Offered

The Department also teaches students in Dental Hygiene, Dentistry, Medicine, Nursing and Pharmacy; these classes are described in the appropriate sections of the Calendar. Classes marked * are not offered every year; please consult the current timetable.

BIOC 1420.03B: Introductory Biochemistry. Topics discussed are structure, biosynthesis, and function of carbohydrates, lipids, proteins and nucleic acids; enzyme kinetics; genetic engineering; nutrition. Medical aspects are stressed.

Instructor: Consult department
Format: Lecture 3 hours, Lab 2 hours
Prerequisite: Chemistry 1410.03A or permission of Instructor
 this class cannot be used as a prerequisite for any other biochemistry class.

Exclusions: BIOC 2020.03A or B: Cell Biology. See class description for BIOL 2020.03, in the Biology section of this calendar.

BIOC 2030.03A or B: Genetics and Molecular Biology. See class description for BIOL 2030.03A or B, in the Biology section of this calendar.

BIOC 2200.03B: Introductory Biochemistry. This class will survey basic topics and concepts of Biochemistry. The structures, properties and metabolic inter-relations of proteins, carbohydrates and lipids will be considered together with an introduction to nutrition and metabolic control. Although mammalian examples will predominate some consideration of special aspects of biochemistry of microbes and plants will be included. In the laboratory, fundamentals of peptides, proteins and enzymes will be explored.

Instructors: C.W. Helleiner and C. Too
Format: lecture 3 hours, tutorial 1 hour alternating with Lab 4 hours
Prerequisites: Biology 1000.06, Chemistry 1100.06, grades of C. Students are advised to also take Chemistry 2400.06

Cross-listing: BIOL 2010.03

Exclusions: No credit will be given together with credits for previous classes BIOC 2000.06 and 2600.03

SCI 3000.06R: Science Fundamentals. See class description in Science, Interdisciplinary section of this calendar.

BIOC 3101.03A and 3102.03B: Introductory Biochemistry for Pharmacy Students. These classes deal with general aspects of biochemistry and include the chemistry of natural products. Classes are restricted to Pharmacy students.

BIOC 3200.03, 3300.03, and 3400.03 are half-credit classes, each of which deals with one important aspect of biochemistry. The level of instruction is such that adequate preparation is essential. These classes are described below.

Prerequisites: Chemistry 2400.06, Biochemistry 2020.03, 2030.03, 2200.03, or instructor's consent

BIOC 3200.03A: Biological Chemistry. This class deals with chemical principles governing biochemical systems. We discuss the factors that determine how readily a given metabolic reaction proceeds and describe how these factors may be expressed quantitatively. Basic principles of protein structure, carbohydrates and lipids are discussed. The ways in which proteins bind other molecules are described. A discussion of enzyme catalysis emphasizes relationships between macromolecular structure and biochemical function, enabling us to explain the striking effectiveness and high specificity with which these catalytic proteins carry out their functions.

Instructors: A.H. Blair and J.A. Verpoorte
Format: lecture 3 hours; lab 3 hours
Prerequisites: see above
Cross-listing: BIOL 3012.03

BIOC 3300.03B: Intermediary Metabolism. Emphasis is chiefly on metabolic pathways common to all organisms, notably the reductive synthesis and oxidative catabolism of carbohydrates, lipids, and some nitrogen compounds. Other pathways, significant in certain tissues or organisms, are included. Metabolic regulation is surveyed, and factors influencing the rate at which compounds flow through selected pathways are examined. Students learn how pathways are compartmentalized, interrelated, and affected by abiotic chemical changes in the environment. Laboratory exercises demonstrate the strategies and techniques used to study metabolic pathways.

Instructors: F.B. Palmer and W.C. Kimmins (Biology)
Format: Lecture 3 hours, Lab 3 hours
Prerequisites: see above
Cross-listing: BIOL 3013.03

BIOC 3400.03A: Nucleic Acid Biochemistry and Molecular Biology. This class focuses on the relationship of structure to function in RNA and DNA. Methods for studying the primary, secondary, and tertiary structures of nucleic acids are explored in lectures and in the laboratory. Enzymic mechanisms for biosynthesis, rearrangement, degradation, and repair of nucleic acid molecules are studied, as are the processes of replication and transcription. In this context, nucleic acid biochemistry is emphasized as a basis for understanding storage and transfer of biological information.

Instructors: M.W. Gray and M. Dobson (Biochemistry) and J.M. Wright (Biology)
Format: Lecture 3 hours, Lab 3 hours
Prerequisites: see above
Cross-listing: BIOL 3014.03

4300 Series: Intermediary Metabolism and Control. These half-credit classes continue the study of metabolism begun in Biochemistry 3300.03, and introduce also some specialized topics of particular interest. Emphasis is on how metabolic systems are related and how the systems and their relations are controlled. Appraisal of experimental evidence and interpretation of data are stressed. Students are asked to note the prerequisites stated in each class description.

BIOC 4301.03B: Biochemical Communication. Membranes, Neurotransmitters, and Hormones: This class examines current ideas of biochemical communication mechanisms, especially in the nervous and endocrine systems. The topics include membrane biogenesis, structural and functional relationships between cytoskeleton and membranes, intra- and intercellular trafficking and signal transduction. Recent advances in our knowledge of hormonal

regulation of gene expression are emphasized and the mechanisms of action of peptide and steroid hormones and neurotransmitters are discussed in depth.

Instructors: D.M. Byers, H.W. Cook, C.B. Lazler and N. Ridgway

Format: Lecture 3 hours

Prerequisites: BIOC 3200.03, 3300.03, and 3400.03 or instructors' consent

Cross-listing: BIOC 5300.03

BIOC 4302.03A: Biochemistry of Lipids. The biochemistry and metabolism of a variety of lipids is studied, especially of those, such as fatty acids, glycolipids, eicoanoids, steroids and phospholipids, with specialized physiological or lipid-second messenger functions. Heavy emphasis is given to intracellular and inter-tissue transport and regulatory processes. The chemistry and physics of insoluble lipids in an aqueous environment are explored and problems in the interaction of lipids with soluble and insoluble enzymes are considered.

Instructors: H.W. Cook, F.B. Palmer and N. Ridgway

Format: Lecture 3 hours

Prerequisites: BIOC 3200.03 and 3300.03

Cross-listing: BIOC 5301.03

BIOC 4304.03B: Integration and Control of Metabolism. Topics include: generation and regulation of membrane potentials, roles of membrane potentials in energy generation and in modulating pathways requiring movement of metabolites among cellular compartments, adaptation of metabolic pathways to meet special needs or circumstances, and assessment of flux through competing pathways. Specific mechanisms by which metabolic pathways respond to both internal and external signals such as direct metabolite control, covalent and non-covalent modification of enzymes, enzyme translocation among cellular compartments and enzyme turnover are considered in detail. Interpretation of experimental data is emphasized.

Instructors: W.C. Breckenridge and P.J. Dolphin

Format: Lecture 3 hours

Prerequisites: BIOC 3200.03 and 3300.03

Cross-listing: BIOC 5304.03

4403.03B & 4404.03A: Molecular Biology of the Gene. These half-credit classes consider the duplication, transfer, and expression of genetic material. The experimental evidence for current concepts of gene structure and function is stressed. Students study the language of molecular biology and learn about the experimental techniques peculiar to it. Lectures adopt a historical perspective so that students come to appreciate how the discipline of molecular biology has developed.

BIOC 4403.03B: Genes and Genomes. This course discusses the organization of genes into genomes. It deals with (i) compartmentalization of genetic material in nuclear and organellar

genomes, (ii) the structure, behaviour and origins of components of both nuclear and organellar genomes which are not genes (transposable and other repetitive elements, introns), (iii) genetic and physical methods for mapping genomes, and (iv) the significance of genetic organization and higher order chromosomal structure and function. The methodology and prospects of the human genome project will be discussed at some length.

Instructors: P. Liu and W.F. Doolittle

Format: Lecture 3 hours

Prerequisites: BIOC 2030.03, 3400.03 & 4404.03 and MICR 3033.03

Cross-listing: MICR 4403.03, BIOL 4011.03, BIOC 5403.03

BIOC 4404.03A: Gene Expression. The different mechanisms for regulation of gene expression in bacterial and eukaryotic cells, and their viruses, are emphasized. Particular topics include genomic, transcriptional, and post-transcriptional modes of regulation.

Instructor: R.A. Singer

Prerequisites: BIOC 3400.03 or instructor's consent

Cross-listing: MICR 4404.03, BIOL 4010.03, BIOC 5404.03

BIOC 4602.06R: Honours Project & Thesis. This class requires laboratory research, at least one day per week and an interim report at the end of the first term. A final report must be submitted at the end of the academic year.

Coordinator: C.J.A. Wallace

Format: lab 1 day per week

Prerequisites: Permission by coordinator and a member of the department who will serve as supervisor. At least a B average for BIOC 3200.03, BIOC 3300.03 and BIOC 3400.03.

Exclusions: In exceptional cases the research project can be done outside the biochemistry department, prior approval must then be obtained from the class coordinator.

BIOC 4603.03A: Advanced Laboratory in Biochemical Techniques. The class will consist of a series of laboratory modules (each of 4 weeks' duration, 1 day per week or 72 hours total, with limited flexibility to accommodate the need to attend other classes). The class is organized collaboratively by the Departments of Biochemistry, Biology and Microbiology. Several modules will be offered in 3 sections covering techniques used in the study of molecular biology, protein structure-function, and specific metabolic processes. Students in a concentrated Honours Biochemistry programme must complete 1 module from each section. Students in advanced major or other programmes may select their three modules from any section or sections, subject to availability of space. Such students should consult the department regarding prerequisites.

Instructors: C.J.A. Wallace and members of the departments of Biochemistry, Biology and Microbiology

Format: Lab 1 day

Prerequisites: BIOC 3200.03, 3300.03, and 3400.03

Cross-listing: BIOL 4012.03/5012.03 and MICR 4601.03/5601.03, BIOC 5603.03

BIOC 4700.03A: Proteins. Selected aspects of the chemistry of proteins are discussed. Topics include relations between structure and activity, the stabilizing forces in protein structure, and interactions between proteins and other compounds. Chemical and physical methods for protein isolation and study of properties are also considered.

Instructor: J.A. Verpoorte

Format: lecture 3 hours

Prerequisites: BIOC 3200.03 and CHEM 2301.03 and 2302.03 or instructor's consent

Cross-listing: BIOC 5700.03

BIOC 4701.03B: Enzymes. Our current understanding of enzymic catalysis and its experimental basis are examined. The relationship between structures of catalytic and regulatory sites and their functions is considered for selected enzymes. The kinetics of enzyme-catalysed reactions are studied, as is the way in which binding of regulatory molecules influences kinetic behaviour and thereby regulates cellular metabolism.

Instructor: A.H. Blair

Format: lecture 2 hours, tutorial 1 hour

Prerequisite: 3000-level classes in biochemistry, bioorganic chemistry and CHEM 2301.03 and 2302.03, or instructor's consent

Cross-listing: BIOC 5701.03

***BIOC 4800.06R: Clinical Medical Biochemistry.** Not offered in 1995-96.

***BIOC 4802.06R: Principles of Instrumentation.** For information consult with Dr. Dymond - 496-2863, Camp Hill Medical Centre, Halifax Infirmary, 1335 Queen Street, Halifax, NS, B3J 2H6

Instructor: L.C. Dymond

BIOC 4804.03A: Introduction to Pharmacology I. See class description for BIOL 4404.03A, in the Biology section of this calendar.

BIOC 4805.03B: Introduction to Pharmacology II. See class description for BIOL 4405.03B, in the Biology section of this calendar.

BIOC 8700.00 A: Co-Op Seminar (non-credit)

BIOC 8880.00: Honours Qualifying Examination. Honours students must fulfil the requirements of this class (see Degree Requirements 1.3.5) by presenting two

additional reports on their work in BIOC 4602.06. The first is a Progress Report, and the second an oral presentation and defence at a special year-end Departmental Seminar.

BIOC 8891.12 R: Co-Op workterm 1

BIOC 8892.12 R: Co-Op workterm 2

BIOC 8893.12 R: Co-Op workterm 3

BIOC 8894.12 R: Co-Op workterm 4

 Johnston, D. Patriquin, M. Willison

Degree Programmes

The department offers the following degree programmes: 15 credit (3 year) BSc and BA Major; 20 credit (4 year) BSc and BA Advanced Major; concentrated, combined, or unconcentrated BSc and BA Honours; and, 20 credit BSc Advanced Major (Co-op or Regular) and BSc Honours (Co-op or Regular) in Marine Biology.

Consult the "Degree Requirements" section of this calendar for full details.

Honours Biology, BA, BSc

Honours Advisors:

G. Hicks (494-3563)

J. Wright (494-6468)

P. Collins (administration, 494-3847)

Students contemplating doing honours are encouraged to consult annually with an honours advisor to ensure that their class selection is correct. One may normally officially register for an honours biology programme anytime after receiving Christmas grades in the 2nd year, and before the end of the 3rd year. To register for a programme, meet with one of the honours advisors (listed above) to complete an application and have it approved.

It is the responsibility of all students to arrange for supervisors for their thesis research. Honours theses may be supervised by a faculty member within the Biology Department, or by an external scientific investigator, subject to the approval of the honours committee. Students should begin to search for a potential supervisor during their 3rd year of study and should have completed arrangements by May of their 3rd year. If students wish to be supervised by someone external to the department, they must consult with their honours advisor to determine the potential supervisor's eligibility. Those with a cumulative GPA of 4.00 - should consider applying for a NSERC Undergraduate Research Scholarship to start their honours research with a supervisor during the summer. The deadline for applying for these scholarships is usually in early January of each year.

Departmental Requirements

Students following a Concentrated Honours programme in Biology must take a minimum of 9 and a maximum of 11 credits in Biology, including a research project and thesis. At least 3 of the 9 required credits must be at, or above, the 3000 level. Some students may wish to choose a Combined Honours Programme and should consult the "Degree Requirements" section of this calendar. Students entering 1st year in September 1994 must include the following Biology classes in ALL Biology Honours programmes, concentrated or combined. Students presently in their 3rd and 4th year of University should follow the old departmental regulations described in earlier calendars. In addition to the overall University requirement for a minimum "B" average (GPA of 3.00) in the classes of the Major and Minor of an honours programme, Biology Honours students must obtain a minimum of a "B" average in the following Biology classes. (Also see "Academic Regulations", including the "Graduate Standing" section, and "Degree Requirements")

Classes required in Honours:

- 1000 level:** BIOL 1000.06 or 1001.06 or Science Foundation Year, SCIE 1500.30 (with a minimum grade of B-)
- 2000 level:** BIOL 2020.03; 2030.03; 2060.03, two from: BIOL2001.03, 2002.03 and 2101.03
- 3000 level:** BIOL 3041.03 and at least one class from: BIOL 3030.03, 3070.06, 3071.06, 3073.03 and 3077.06
- 4000 level:** BIOL 4900.00 and Honours Qualifying exam (graded as Pass/Fail: based on participation in BIOL 4900.00 class and the Cameron Conference for Honours students)

Other Required Classes

CHEM 1040.06 or 1010.06 or 1500.06

Two full credits above the 1000 level in any other subject for the Minor requirement.

Other Recommended Classes

PHYC 1300.06 or 1000.06 or 1100.06 or 1500.03 and 1550.03

MATH 1000.03 and 1060.03

Advanced Major in Biology

Departmental Requirements

Classes required in Advanced Major:

- 1000 level:** BIOL 1000.03 or 1001.03 or SCIE 1500.30 (with a minimum grade of B-)
- 2000 level:** BIOL 2020.03; 2001.03 or 2002.03 or 2101.03; 2060.03; 2030.03; plus

one other Biology credit at or above the 2000 level not including the classes listed below.

3000 level: minimum three credits at or above the 3000 level

Major in Biology

Departmental Requirements

Classes required in Major:

1000 level: BIOL 1000.06 or 1001.06 or SCIE 1500.30 (with a minimum grade of B-)

2000 level: BIOL 2020.03; 2101.03 or 2001.03 or 2002.03; 2060.03; 2030.03

3000 level: At least two credits at or above the 3000 level

Honours and Advanced Major in Marine Biology

The Biology Department recognizes the special needs of the rapidly expanding marine field and offers BSc Honours and Advanced Major Degrees in Marine Biology, including a Co-operative Education Programme.

Details of the Marine Biology programme will be found under a separate listing for Marine Biology at the end of the Biology section.

Classes Offered

The normal entry requirement for admission to upper level classes in Biology is a grade of B- or better in BIOL 1000.06, 1001.06, or Science Foundation Year (SCIE 1500.30). Students with a grade lower than B- and extenuating circumstances may appeal to the department Undergraduate Coordinator.

Note: Due to the combined pressures of student numbers and a dearth of available space in some classes, the names of students not appearing on the first day of class may be deleted from class lists. Students are advised that being signed into a class is no guarantee of late admission.

Classes marked with an asterisk (*) are offered in alternate years. Consult timetable for current year.

Biology classes are grouped into four general categories:

1. 1000 - Level classes: BIOL 1000.06 This class is intended to be introductory university-level classes in biology.

SCIE 1200.06 may be of interest to non-biologists.

2. 2000-Level Classes: All Biology majors (15, 20 credit and Honours) are required to take a core program at the 2000 level. Students should normally complete these core classes in their second year. The core programme is designed to provide a basis for more advanced studies in Biology as well as to ensure that all majors are exposed to the general discipline or subject areas

of biology. A variety of skills including writing, oral presentation, computer literacy, library use, and problem solving are integrated into the curriculum of these core classes along with 'hands-on' activities in the laboratory or field. The second-year core programme covers four discipline areas; some evolutionary biology and some physiology will be included in these four areas:

I Cell Biology

- 2020.03

II Diversity of Organisms (animals, plants and microbes)

- 2001.03

- 2002.03

- 2101.03

III Ecology

- 2060.03

IV Genetics and Molecular Biology

- 2030.03

All students majoring in Biology are required to take a minimum of 4, 2000-level, half-credits, with one half-credit class being selected from each of these 4 discipline areas.

Students interested in biochemistry are advised to take the second year biochemistry class offered by the Biology and Biochemistry departments. This class is not part of our core-programme but is a pre-requisite for entry into some higher level classes.

Students majoring in subjects other than Biology can design their own programmes and will not have to conform to these 2000-level core requirements. All students should ensure they have the necessary prerequisite classes required for entry into 3000-level classes.

3. 3000-Level Classes: These classes are mainly for second and third year students. No biology major will be allowed to register in any 3000 or 4000-level class without having completed, or being registered in 2000-level classes in biology totalling at least two full credits.

4. 4000-Level Classes: These classes are primarily for honours or advanced major students. They are open to others with the permission of the Instructor. Where biology classes are identified as being given in another department (e.g. Anatomy), that department should be consulted for details.

5. Microbiology: The following classes given in the Microbiology Department may be taken as a Biology credit toward BA, BSc, and BSc (Hons) Biology degrees even though they are not cross-listed with Biology: MICR 2100.03, 3033.03, 3114.03, 3115.03, 3118.03, 4026.03, 4027.03, 4037.03, 4038.03, 4114.03, 4115.03, 4118.03, and 4301.03.

BIOL 1000.06R: Principles of General Biology. This class surveys the fundamental principles of biology and prepares students for second year biology classes. The class emphasis is on those features common to all organisms. It examines

the requirements for life, its biochemical base, and its cellular organization. These are related to the function of whole organisms, their diversity, and evolution. Knowledge of high school level mathematics and chemistry is recommended.

Format: lecture, 3 hours/week;
laboratory/tutorial, 3
hours/week.

Instructors: C. Corkett, P. Harding, R.W.
Lee, A. Mills, D.G. Patriquin and
other faculty

Exclusion: BIOL 1001.06 (no longer offered)

SCIE 1200.06R: An Overview of the Cosmos, Earth, and Life. See class description in Science, interdisciplinary section of this calendar.

BIOL 2001.03A: Marine Diversity. (Area II) The sea was the cradle of life and the origin of most plants. This class explores the enormous variety of living and fossil organisms from the sea and looks at the special problems and adaptations of benthic, planktonic and nektonic species. It examines functional and taxonomic relationships using lectures, laboratories with living organisms, and a field trip.

Format: lecture 2 hours, tutorial 1 hour,
laboratory 3 hours

Instructors: A.R.O. Chapman, C. Corkett, R.
O'Dor, R. Scheibling

Prerequisite: BIOL 1000.06R or 1001.06R or
SCIE 1500.30 (Grade B- or better)

BIOL 2002.03B: Terrestrial Diversity. (Area II) A survey of the terrestrial organisms. The class emphasizes the restrictions imposed on terrestrial adaptations by the aquatic origins of the colonizers, discusses the physiology of living in a terrestrial environment, looks at the domestication of plants and animals by man, and speculates on the future diversification of the earth environment and its inhabitants.

Format: lecture 2 hr, tutorial 1 hr, lab 3 hr

Instructors: M. Johnston, M. Leonard and
A.H.Mills

Prerequisite: BIOL 1000.06 or 1001.06 or SCIE
1500.30 (Grade B- or better)

BIOL 2010.03B: Introductory Biochemistry. See class description for BIOC 2200.03B, in the Biochemistry section of this calendar.

BIOL 2020.03A or B: Cell Biology. (Area 1) An introduction to the eukaryotic cell. Major cell components and activities are described at ultrastructural and molecular levels with emphasis on mammalian systems. The concept of the cell as an integrated structural, functional unit is developed.

Format: lecture 3 hours, laboratory 3
hours

Instructors: T.H. MacRae, B. Pohajdak, and
B. Retallack

Prerequisite: BIOL 1000.06 or 1001.06 or SCIE
1500.30 (Grade B- or better)

Cross-listing: BIOC 2020.03

Exclusion: BIOL 2015.06, BIOC 2000.06

BIOL 2030.03A or B: Genetics and Molecular Biology. (Area IV) Genes contain the biological information that specifies the cell and the organism. Therefore, genetics, the study of genes, is a means to understand the function and propagation of cells and organisms. The power and prominence of modern genetics have grown from a blend of classical and molecular approaches; both of these approaches are emphasized in this class. Major topics discussed include: the structure and function of DNA, the nucleic acid that comprises genes and chromosomes; transmission genetics, concerned with the propagation of genetic information; gene function, the expression of genetic information; and manipulation of DNA (genes) by genetic engineering. A range of organisms is considered, including bacteria, single-celled and multicellular eukaryotes, and viruses.

Format: lecture 3 hours, laboratory &
tutorial 3 hours

Instructors: O. Kamra, C. Helleiner
(Biochemistry), R. Singer, R.
Staples, J. Wright, B. Zouros

Prerequisite: BIOL 1000.06R or 1001.06R or
1500.30 (Grade B- or better)

Cross-listing: BIOC 2030.03

Exclusion: BIOL 2035.06 (last offered in
1989-90)

BIOL 2060.03A or B: Introductory Ecology. (Area III) Ecology is the study of the interrelationships of organisms and their environments. The broad subject of ecology focuses upon the interactions of plants and animals, including humans, with each other and with their non-living world. Three levels of ecology are studied: (1) Individuals, (2) Populations, (3) Communities and Ecosystems. Assignments and tutorials enlarge upon concepts presented in lectures. Students are instructed in elementary computer techniques and use the computer for most assignments. This class provides an overview of the science of ecology for the informed citizen, and also a good foundation for further work in ecology, marine biology and environmental studies.

Format: lecture 3 hours,
laboratory/tutorial 2 hours

Instructors: C. Beauchamp, R. Doyle, R.
Scheibling

Prerequisite: BIOL 1000.06R or 1001.06R or
SCIE 1500.30 (Grade B- or better)

Exclusions: BIOL 2066.03, BIOL 2046.06

BIOL 2101.03B: Microbial Diversity. (Area II) An introduction to the basic concepts of microbiology through lectures, laboratory sessions and demonstrations. The diversity and uniqueness of different microorganisms is emphasized, in addition to their structure, growth, metabolism and interactions. The involvement of microorganisms in fields such as medicine, industry and ecology is also discussed. Students who plan to repeat the class must obtain permission from the instructor before they register in the class. This class serves as a

pre-requisite for all third-year Microbiology classes offered in the Biology and Microbiology departments. Students can take this as well as MICR 2100.03 as content is different.

Format: lecture 2 hours, laboratory 3-4 hours

Instructors: J. Breckenridge, B. Pohajdak

Prerequisite: BIOL 1000.06R or 1001.06R or SCIE 1500.30 (Grade B- or better) or permission

SCIE 3000.06R: Science Fundamentals. See class description in Science, Interdisciplinary section of this calendar.

BIOL 3012.03A: Introduction to Biological Chemistry. See class description for BIOC 3200.03, in the Biochemistry section of this calendar.

BIOL 3013.03B: Intermediary Metabolism. See class description for BIOC 3300.03, in the Biochemistry section of this calendar.

BIOL 3014.03A: Nucleic Acid Biochemistry and Molecular Biology. See class description BIOC 3400.03, in the Biochemistry section of this calendar.

BIOL 3020.03A: Advanced Cell Biology.

Molecular and organellar aspects of cytoplasmic organization in eukaryotic cells are examined. A number of interrelated topics are discussed providing an opportunity to study new concepts in cell biology and to evaluate established ideas in the context of recent findings. Students must supplement lectures with assigned readings and discuss selected subjects in essays.

Format:  Writing Intensive, 3 lectures of 1.5 hours per week

Instructor: T.H. MacRae

Prerequisite: BIOL 2020.03 (with a minimum grade of B-) or instructor's consent

***BIOL 3032.03B: Cytogenetics.** (may not be offered 1995/96) Detailed consideration of certain genetical and cytological mechanisms in relation to chromosomal modifications, gene mutations and evolution.

Format: lecture, 2 hours; laboratory, 3 hours

Instructor: O.P. Kamra

Prerequisite: BIOL 2030.03

***BIOL 3034.03B: Biological Effects of Radiation.** (may not be offered 1995/96) A survey of current knowledge of the effect of ionizing radiation on biological material at three levels: physical, chemical and biological. In addition, methods of dosimetry, autoradiography, somatic and genetic effects, radiometric chemicals and biosensors are discussed.

Format: lecture 3 hours

Instructor: O. Kamra

Prerequisite: 1st year Biology and Chemistry

***BIOL 3039.03B: Human Genetics.** For students of Biology and Medicine with special interest in

human genetics. Topics include human cytogenetics and abnormalities, inborn errors, genetic risk induced by environmental factors; prediction and detection of genetic risk, genetic counselling, genetic and non-genetic factors in behavioral characters and multi-factorial diseases; genetic variability; selection and genetic load in human populations; ethical and social issues associated with manipulation of human genetic pools.

Format: lecture 3 hours; laboratory 2 hours

Instructors: O. Kamra (Coordinator)

Prerequisite: BIOL 2030.03

BIOL 3041.03B: Evolution. Evolution is a comprehensive, integrative class covering a great breadth of topics related to the process of evolution (patterns of diversity and evolutionary history of particular groups are covered in other classes). Topics will include the history of evolutionary thought, Darwinian evolution, the "Modern Synthesis", adaptation, the relationship between evolution and systematics, evolutionary developmental biology, molecular evolution, and current controversies such as the neutral theory of molecular evolution, group selection, non-adaptive evolution, and mass extinctions and chance as major influences on evolution.

Format: lecture 3 hours, tutorial 1 hour

Instructors: B.K. Hall, M. Johnston, M. Ragan, E. Zouros, and staff

Prerequisite: BIOL 2020.03, 2030.03, 2060.03 and one of 2001.03, 2002.03 or 2101.03

Co-requisite: BIOL 3050.03A would be useful, but not mandatory

Exclusion: BIOL 3040.06

BIOL 3050.03A: Developmental Biology. The lectures describe development as a sequence of programmed events, in which 'simple' structures such as the fertilized egg are progressively transformed into complex organisms. These events are governed by a set of developmental 'rules'. Our knowledge of these rules comes from experimental study of developing systems such as sea urchins, frogs, peas, carrots, chick embryos and humans. Laboratories stress the use of live material and give students practice with such techniques as test tube fertilization in echinoderms.

Format: lecture/discussion 3 hours, laboratory 3 hours

Instructors: P. Collins, B.K. Hall, G.S. Hicks

Prerequisite: BIOL 1000.06R or 1001.06R (Grade B- or better)

Co-requisite: BIOL 2020.03, BIOL 2030.03

Exclusion: BIOL 2050.03 (last offered 89/90)

BIOL 3051.03B: Advanced Animal Development. This class is the follow-up to BIOL 3050.03 and deals with the mechanisms and controls which regulate the development of vertebrate and invertebrate embryos. Topics covered include cell determination and differentiation, morphogenesis, mechanisms of

organ formation, inductive tissue interactions, growth, regeneration and wound healing. The two laboratory projects involve experiments designed to explore aspects of cell differentiation and morphogenesis, preparation of laboratory reports, and introduction to microdissection, sterile techniques, tissue recombinations and whole-embryo staining.

Format: lecture 3 hours, laboratory/discussions 3 hours

Instructors: P. Collins, B.K. Hall

Prerequisite: BIOL 3050.03A (with a minimum grade of B-) plus completed or concurrent registration in second year cell/molecular classes from the old or new core.

BIOL 3060.03A: Environmental Ecology. This class considers the ecological effects of pollution, disturbance, and other stressors. Emphasis is on air pollutants, toxic metals, acidification, eutrophication, pesticides, forestry, extinction, resource degradation, warfare, and broader topics such as environmental impact assessment and ecological monitoring and research.

Format: lecture 2 hours, tutorial 3 hours

Instructor: B. Freedman

Prerequisite: BIOL 2060.03A or B (or see instructor)

Cross-listing: BIOL 5060.03

BIOL 3061.03A: Communities and Ecosystems. This class is divided into three sections: (A) introduction, History and Concepts to Community Structure and Stability; (B) Environmental Assessment and Management at the Ecosystem level; and (C) Case Studies and Global Problems.

Format: lecture 3 hours

Instructor: P.A. Lane

Prerequisite: BIOL 2060.03

***BIOL 3062.03A: Behavioral Ecology.** This class examines animal behaviour from an evolutionary perspective. Why do animals do what they do? Using the theory of natural selection as a basis, we will examine foraging, grouping patterns, territorial behaviour, parenting, mating behaviour, social organization, aggression and cooperation. There will be tutorials and essay assignments.

Format: lecture 2 hours, tutorial 1 hour

Instructor: M. Leonard, H. Whitehead

Prerequisite: BIOL 2060.03

BIOL 3063.03B: Resource Ecology. Introduction to sustainable development and the management of renewable resources. Topics vary from year to year but generally include fisheries population models and bioeconomics, wildlife and forest management, biological control strategies and agro-ecology, genetic containment and the protection of genetic diversity.

Format: lectures & seminars 3 hours

Instructors: R. Doyle, B. Freedman, S. Walde

Prerequisites: BIOL 2060.03; MATH 1010.03, 1060.03 or equivalent

BIOL 3066.03A: Plant Ecology. Ecology refers both to the interactions between organism and environment as well as to the formal scientific study of these interactions. In plants these interactions can involve other plants, as in competition, or animals, as in pollination, herbivory, seed predation and seed dispersal. Plants stand still after they have passed the seed stage. Standing still means that plants must survive and make offspring in an environment that is imposed upon them. This class examines the causes and consequences of being a plant from an evolutionary perspective. Ecological interactions both cause natural selection and are themselves the consequences of evolution. The overriding theme of the class, therefore, is that of the ecological theatre and the evolutionary play (in the words of G.E. Hutchinson). This class concentrates on individual interactions, adaptations and processes. Processes, such as nutrient cycling, that occur at the level of communities or ecosystems will receive little attention.

Format: lecture 3 hrs, lab/tutorial 3 hrs, one/two field trips on weekends

Instructor: M. Johnston

Prerequisite: BIOL 2060.03

Cross-listing: BIOL 5066.03

BIOL 3067.03B A: Ecology and Evolution of Fishes. This class will examine selected topics on the ecology and evolution of marine and freshwater fishes. Topics shall include systematics, morphology, evolutionary ecology, behaviour, life history strategies, population biology, and fisheries management.

Format: lecture 3 hours, tutorial/laboratory 1½ - 3 hours

Instructor: J. Hutchings

Prerequisite: BIOL 2001.03, 2060.03

Cross-listing: BIOL 5067.03

BIOL 3069.03B: Population Ecology. (may not be offered in 1995-96) An examination of selected topics in population ecology. Topics include the effect of species interactions (predation, competition, mutualism) on population fluctuations, cycles and extinction. The relevance of theory to particular case studies such as lynx-hare cycles and biological control of winter moth will be discussed. Recent literature will be emphasized. Written assignments and exams will contribute to the final grades.

Format: lecture/tutorial 3 hours

Instructor: S. Walde

Prerequisites: BIOL 2060.03, MATH 1010.03, 1060.03, or equivalent

BIOL 3070.06R: Principles of Animal Physiology. A discussion of the mechanisms which coordinate the activities of cells within multi-cellular organisms and permit such organisms to maintain a stable internal environment in a changing external environment. The emphasis is on the

118 Biology

mechanisms most widely distributed through the animal kingdom. The laboratories are designed to illustrate these "principles of physiology" in a variety of organisms and to demonstrate the experimental approaches used to study physiology.

Format: Writing Intensive, lecture 3 hours, laboratory 3 hours
Instructors: R.K. O'Dor, A. Pinder, M-J. O'Halloran

Prerequisite: BIOL 2001.03 or 2002.03, 2020.03
Exclusion: BIOL 3071.06, 3074.03, 3076.03

BIOL 3071.06R (3074.03A/3076.03B): Physiology of Marine Animals. The problems of animals in a marine environment are quite different from those found in air or fresh water, but the "physiological principles" are similar. This class deals with the same principles as 3070, but emphasizes the special characteristics of marine animals and the techniques necessary to study them in laboratories and tutorials. BIOL 3074.03/3076.03 Physiology of Marine Animals Parts I and II are only open to Marine Biology Co-op (Honours and Advanced Major) students that are unable to take BIOL 3071.06 because of work term schedules. These Co-op students must take both classes, normally BIOL 3074.03 in their 3rd year and 3076.03 in their 4th year. All other students should take BIOL 3071.06.

Format: Writing Intensive, lecture 3 hours, laboratory 3 hours
Instructors: R.K. O'Dor, M-J. O'Halloran, A. Pinder
Prerequisite: BIOL 2001.03 or 2002.03, 2020.03
Exclusion: BIOL 3070.06

BIOL 3077.06R: Human Physiology. See class description for PHYL 4403.06R in the Physiology and Biophysics section of this calendar.

BIOL 3100.03B: Aquatic Microbiology. The main emphasis of this class is on the interactions of microbes and aquatic plants and animals including nutrition, disease, and immunization. The latter part of the class considers the role of microorganisms in nutrient availability and productivity in aquatic environments.

Format: lecture 2 hours, laboratory 3 hours
Instructors: R.G. Brown and D. Cone
Prerequisite: Normally, Biology 2101.03 or Microbiology 2100.03, but Marine Biology Honours students are exempt.

BIOL 3211.03B: Systematic Survey of the Algae. An examination of the taxonomic and evolutionary relationships of the algae.

Considerable emphasis is placed on practical work (field and laboratory) where students become familiar with the algal components of the local flora.

Format: lecture 2 hours, laboratory 3 hours
Instructor: A. Chapman

Prerequisite: grade B or better in BIOL 2001.03 or permission of instructor

***BIOL 3212.03A: Biology of the Algae.** A non-taxonomic examination of the cellular, organismic, population and community organizations of benthic and planktonic algae.

Format: lecture 2 hours, laboratory 3 hours
Instructor: A. Chapman
Prerequisite: grade B or better in BIOL 2001.03 or permission of instructor

BIOL 3215.03A: Systematics of Higher Plants. This class is concerned with an organismal approach to the study of flowering plants: identification, relationship, and evolution. The course focuses on gross morphology rather than internal anatomy. It provides an introduction to basic botanical terminology and to the concepts and the scientific conventions concerned with plant description, classification and nomenclature. Lectures examine the development of systematics from Linnaeus to Darwin, to the advent of modern experimental taxonomy (biosystematics). Laboratory exercises centre on the identification and characterization of flowering plant families through the use of diagnostic keys. For this purpose, students are provided with native and exotic living plants and freshly frozen specimens. Field ecologists, environmental biologists, and naturalists should find the applied approach to this course broadens their general knowledge of plants and enables them to identify plant specimens. Each student submits a small collection of pressed plants. (see instructor, preferably before September, for details).

Format: lecture 3 hours, laboratory 3 hours
Instructor: P. Taschereau
Prerequisite: Biology 2002.03, or instructor's consent

BIOL 3218.03B: Plant Anatomy. Lectures will explore the internal organization of the leaves, stems, and roots of both the flowering plants and the cone-bearing plants, emphasizing the common plan that is found at the tissue system level of organization. All major cell and tissue types will be reviewed in the light of modern evidence which correlates structure with function. These surveys will embrace both the primary and the secondary plant bodies, and developmental aspects will be emphasized. Laboratory exercises will illustrate these concepts, focusing on the study of a variety of economically important woody and herbaceous crop plants.

Format: lecture 3 hours, lab 3 hours
Instructors: P.A. Collins, G. Hicks
Prerequisite: BIOL 1000.06 or 1001.06

BIOL 3220.03B: Land Plants: A Survey. A survey of the biology, systematics and evolutionary history of the main divisions of

land plants including; conifers and their gymnosperm allies; ferns, horsetails, ground pines, club mosses and liverworts. Flowering plants are excluded. A framework for discussion of the comparative morphology of these groups will be alternation of generations. Evolutionary adaptations to the land will be emphasised. Considering the fossil record in some detail, we will evaluate evidence for the origin of leaves, the seed habit, gymnosperm cones and the seed habit. The class may be useful to those students considering the teaching profession, graduate study or who are interested in broadening their general knowledge.

Format: lecture/discussion 3 hours
Instructor: G. Hicks
Prerequisite: BIOL 2002.03 or permission of the instructor

BIOL 3321.06R (BIOL 3301.03A/3302.03B): Invertebrates. Recent fossil findings in the Burgess Shale of British Columbia and elsewhere plus methods of cladistic analysis have profoundly changed our understanding of the relationships between and within the various invertebrate phyla. Thus this class will not only examine the structure, function, and classification of the invertebrates, using live material from the marine environment as much as possible, but will come to terms with some of the new ideas about their phylogenies.
Recommendation: This class is designed not only for honours students in marine biology, but for anyone who loves "mucking about" with some of the world's most beautiful organisms. BIOL 3301.03/3302.03 Invertebrates Parts I and II are only open to Marine Biology Co-op students who are unable to take BIOL 3321.06 because of work-term schedules. These Co-op students must take both classes, normally 3301.03 in their 3rd year and 3302.03 in their 4th year. All other students should take BIOL 3321.06

Format: lecture 3 hours, laboratory 3 hours
Instructor: I. McLaren
Prerequisite: BIOL 1000.06 or 1001.06, 2001.03 (Third and fourth year Geology students interested in paleontology may take this class without any previous biology classes.)

BIOL 3322.03A: Parasitology. (May not be offered in 1995/96) The lectures emphasize the parasite-host relationships, evolution of the parasites and adaptations to the host, modifications of physiology, structure and life cycle for a parasitic existence. Examples are taken from all major animal groups where a parasitic mode of existence has developed beginning with the protozoa. Since the most extensive research pertains to parasites of man, the emphasis is on human parasites.
Recommended for Ecologists and Pre-Meds. The laboratory stresses recognition and identification of parasites.

Format: lecture 2 hours, laboratory 3 hours
Instructor: E. Angelopoulos

BIOL 3324.06R: Entomology. (May not be offered in 1995/96) Entomology is an important branch of academic biology and also one of the largest divisions of applied biology. The class is an introduction to the study of insects dealing with: (1) The classification and evolutionary diversity of insects. (2) The biology, ecology and behaviour of insects. (3) Applied aspects - medical, agricultural and forest entomology, harmful and beneficial insects; biological control of insects.

Format: lecture 2 hours, laboratory 3 hours
Instructor: E. Angelopoulos

BIOL 3326.03B: Vertebrate Design: Evolution and Function. Design of organisms is the result both of evolutionary history and natural selection for function. Organisms have to work, but do not have to be the best possible design. In this class we will analyse current designs found among the vertebrates in terms of vertebrate evolutionary history and functional morphology. This class will be particularly valuable in conjunction with BIOL 3070.06/3071.06.

Format: lecture 3 hours, tutorial 1 hour
Instructor: A.W. Pinder
Prerequisites: Biology second year core

***BIOL 3402.03A: The History of Modern Science.** Science became separated from general knowledge between about 1500 and the early 19th century. It has proved to be a remarkably powerful cultural force from the time of the first Scientific Revolution of the 17th century until our own times. This class examines the ways that science and scientists have given us knowledge of the natural world from the time of Copernicus to the development of evolutionary theory and relativistic physics in the 19th and 20th centuries. It is intended for students interested in interdisciplinary knowledge who are prepared for extensive reading.

Format: lectures, 3 hours
Instructors: E.L. Mills
Cross-listing: HIST 3072.03, SCIE 4000.03

***BIOL 3404.03B: History of Medicine.** This class will examine the state of medicine in 1800, 1850, 1900 and 1950, and the transition of North American medicine from a low status, ineffective and poorly trained group of competing sects to what it is today. For each of these periods emphasis will be placed on education, therapeutics, disease etiology and public health. The class is designed for pre-medical students or those in the health professions.

Format: evening class, 3 hours
Instructor: J. Farley

BIOL 3421.03B: Comparative Vertebrate Histology. An advanced histology course surveying the whole range of vertebrate tissues and organs.

120 Biology

Format: lecture 2 hours, lab 2 hours
Instructor: TBA (Anatomy and Neurobiology Dept.)
Prerequisite: BIOL 3430.03
Cross-listing: ANAT 3421.03

BIOL 3430.03A: Introduction to Human Histology. Histology is the study of the structure of cells, tissues and organ systems, and utilizes information derived from both light and electron microscopy. It complements studies in anatomy, cell biology, physiology and biochemistry, broadening the understanding of how organisms function.

Format: lecture 2 hours, laboratory 2 hours
Instructor: D.H. Dickson (Anatomy and Neurobiology Dept.)
Prerequisites: BIOL 2020.03, or 2015.06 or permission of instructor
Cross-listings: ANAT 2160.03

BIOL 3435.06R: Anatomy. A regional study of human gross anatomy with emphasis on functional anatomy of the back and limbs. Laboratory work/study includes radiology, osteology, living (surface) anatomy and dissection of the human body. Instructor's consent and signature are required.

Format: lecture 3 hours, laboratory 4 hours
Instructor: R.E. Clattenburg (Anatomy and Neurobiology Dept.)
Prerequisites: Must be in 3rd or 4th year and have a GPA of 3.00 (minimum). No formal prerequisites.
Cross-listings: ANAT 2170.06

BIOL 3440.03B: Neuroanatomy. A survey of the histology, development and organization of the central nervous system, with emphasis on the developmental and structural relationships between spinal cord and brainstem. The organization of cranial nerves and microanatomy of the brain stem is discussed. The organization of sensory and motor systems is presented in detail. The cerebral cortex, cerebellum, basal ganglia, and limbic system are also covered.

Format: lecture and laboratory 3 hours
Instructor: D.A. Hopkins (Anatomy and Neurobiology Dept.)
Prerequisite: BIOL 2020.03 or 2015.06 or permission of instructor
Cross-listing: ANAT 2100.03, NESC 3440.03

BIOL 3580.03A or B: Philosophy of Biology. See class description for PHIL 3420.03 in the Philosophy section of this calendar.

BIOL 3601.03B: Nature Conservation. Previously called "Man in Nature", the course traces the development of human economy and the resultant impact on the wild environment. Particular attention is paid to human population dynamics, biotic extinctions and land-use patterns. Having identified the causes of impoverishment of biodiversity the course examines possible cures, including: sustainable

development, conservation science and environmental ethics. Special attention is paid to the establishment and management of protected areas.

Format: Lecture 3 hours/tutorial 1 hour
Instructor: M. Willison
Prerequisites: BIOL 1000.06 or 1001.06 or SCIE 1200.06, or SCIE 1500.30 or permission of instructor
Exclusion: Biol 3410.03 taken in 91/92 or 92/93

BIOL 3614.03R: Field Ecology. (Not offered 1995-96): The class provides practical experience in techniques of quantitative field ecology, including design of field sampling programmes and manipulative experiments. Students examine specific ecological questions and hypotheses by collecting, analyzing and interpreting field data and writing scientific reports. Projects focus on intertidal and subtidal systems but involve concepts and techniques that have broad application in ecology. Lectures provide the theoretical background to projects and the rationale for methodology and statistical analysis. Topics include: spatial pattern, zonation, animal movement, disturbance and succession, and herbivore-plant interaction.

Format: 5 projects involving 7 days of field work in September; laboratory or lecture first term only
Instructor: R. Scheibling
Prerequisites: BIOL 2060.03 and MATH 1060.03, 1070.03 or equivalent

BIOL 4010.03B: Genes and Genomes. See class description for BIOC 4403.03, in the Biochemistry section of this calendar.

BIOL 4011.03A: Gene Expression. See class description for BIOC 4404.03, in the Biochemistry section of this calendar.

BIOL 4012.03A: Advanced Laboratory in Biochemical Techniques. See class description for BIOC 4603.03, in the Biochemistry section of this calendar.

BIOL 4024.03A: Microscopy. The class is concerned with biological ultrastructural analysis concentrating on transmission and scanning electron microscopy. The importance of a proper understanding of the physical and chemical principles governing technical procedures such as fixation, freeze-fracture, colloidal gold probes, stereology, autoradiography, x-ray microanalysis and photography are emphasized. During laboratory periods students have the opportunity through individual projects to participate in some of the techniques covered in the lectures. This class is designed primarily for honours and graduate students.

Format: lecture 3 hours, no formal lab
Instructors: G.T. Faulkner, L. Frotten-Maillet, D.B. Stoltz
Prerequisites: Instructor's consent

Cross-listing: MICR 4024.03/5024.03, BIOL 5024.03

***BIOL 4060.03A: Marine Mammalogy.** The class will examine the characteristics that mammals brought with them when they returned to the ocean, the evolution of the different groups of marine mammals, some of their special adaptations, the roles of marine mammals in oceanic ecosystems and general principles of the marine mammal population biology. Finally we will consider the factors that regulate marine mammal populations and how these influence attempts to manage and conserve them. Assignments will include a laboratory exercise, a review essay on some marine mammal adaptation, exploring a computer model of a marine mammal population, tests, projects, etc. and an examination.

Format: lectures 3 hours
Instructors: LA. McLaren, H. Whitehead
Prerequisites: BIOL 2060.03

BIOL 4051.03A: Experimental Design and Data Analysis in Biology. The purpose of this class is to introduce students who have previously taken formal classes in statistics to the practice and pitfalls of experimental design and data analysis in biology. Using many real examples, especially from the ecological literature, we will show how experiments should be designed and analyzed in different situations, with emphasis on potential problems and how they may be overcome. We will also introduce some of the more common techniques used in the analysis of univariate and multivariate biological data.

Format: lecture, 2 hours/tutorial
Instructors: R. Scheibling, H. Whitehead
Prerequisites: STAT 2070.03/2080.03; offered to well prepared honours students as well as graduate students

Cross-listing: BIOL 5061.03

BIOL 4068.03A: Limnology. The class is divided into three sections: (A) Physical and Chemical Limnology — geology, morphometry, thermal properties, system hydrology & budgets, optical properties, oxygen, acidity/alkalinity, physical/chemical interactions, major/minor ions and heavy metals, organic molecules, ionic budgets and mass balances; (B) Biological limnology — paleolimnology, microbiology / phytoplankton, quantitative geochemistry, zooplankton/invertebrates, vertebrates, sampling technology; (C) Applied limnology — eutrophication, acid rain, water pollution.

Format: lecture 3 hours, laboratory/tutorial 3 hours
Instructor: P. Lane
Prerequisite: Biol 2060.03

***BIOL 4070.03B: Advanced Topics in Animal Physiology.** Whereas the introductory animal physiology classes emphasize common principles, this class emphasizes the diversity of physiological solutions to common problems among animals. A different problem is chosen

each year and each student presents two seminars reviewing the literature of particular animals' solutions. The student also writes a short term paper based on one of their presentations.

Format: lecture 2 hours, open laboratory
Instructors: R.K. O'Dor, A. Pinder
Prerequisite: BIOL 3070.03 or 3071.03
Cross-listing: BIOL 5070.03

***BIOL 4073.06R: Animal Nutrition.** (May not be offered in 1995/96) General principles and techniques of animal nutrition are reviewed and used to examine current literature. Emphasis is on the assessment of nutrition requirements of aquatic and marine species.

Instructor: J. Castell

***BIOL 4101.03B: Industrial Microbiology and Biochemistry.** This class considers the industrial and environmental applications of micro-biology, particularly the industrial processes, like brewing, manufacturing, anti-biotic production, and waste water management. A fundamental and practical understanding of the biochemistry of these process is a key component.

Format: lecture and seminar 2 hours
Instructor: M. Silver
Prerequisite: BIOL 2101.03 or MICR 2100.03

BIOL 4113.03B: Biology of the Prokaryotic Cell. Although the class concentrates on the structure and function of the bacterial cell envelope, that is, the capsule, cell wall and cell membrane, other topics such as the physiology of obligate anaerobiosis, sporulation, motility etc. are also covered. As part of this class, students will write one essay.

Format: lecture 2 hours
Instructor: R. Brown
Prerequisite: MICR 2100.03 or BIOL 2101.03 and CHEM 2400.06 or BIOL 2010.03

***BIOL 4214.03B: Physiology of Marine Algae.** (May not be offered in 1995-96) A comparative study of the physiology and biochemistry of the various algae classes is conducted, including studies of carbohydrates, proteins, fats, pigments and nutrition.

Format: lecture 3 hours
Instructor: J. Craigie
Prerequisite: Permission of instructor

BIOL 4302.03B: Molecular Immunology. (Not offered in 1995/96) An advanced class which investigates the molecules involved in the generation and expression of immune responses. Topics typically include the structure and function of cytokines, the generation of antibody diversity by immunoglobulin gene rearrangement, the structure and function of cell surface receptors such as the T cell antigen receptor, MHC and adhesion molecules, and the molecular interactions which lead to immune non-responsiveness. This class is offered on alternate years to MICR/BIOL 4303.03.

122 Biology

Format: lecture, student presentations, discussion
Instructors: T. Lee, A.W. Stadnyk, B. Pohajdak
Prerequisites: MICR 3115.03 and/or instructor's consent
Cross-listing: MICR 4302.03/5302.03, BIOL 5302.03

BIOL 4303.03B: Granulocytes and the Immune Response. An advanced class dealing with the contribution of granulocytes to immunologic function. Mast cells, basophils, neutrophils, carophages, NK cells and eosinophils will be considered with respect to their unique functions and contribution to a variety of immune effector mechanisms. This class is offered on alternate years to MICR 4302.03/BIOL 4302.03.

Format: lecture, student presentations, discussion
Instructors: T. Lee, A.W. Stadnyk, B. Pohajdak
Prerequisites: MICR 3115.03 and/or instructor's consent
Cross-listing: MICR 4303.03/5303.03, BIOL 5303.03

***BIOL 4369.03B: Fisheries Oceanography.** See class description for OCEA 4160.03B, in the Oceanography section of this calendar.

BIOL 4404.03A: Introduction to Pharmacology I. This introductory class is designed to acquaint students with the actions of drugs on physiological and biochemical functions in mammals including humans. The interaction of drugs with the central and peripheral nervous systems will be covered. Factors which affect the blood levels of drugs (absorption, distribution, metabolism, and elimination) will be considered, together with the mechanisms by which drugs act and their potential uses.

Format: lecture 3 hours
Instructors: H. Robertson, J. Blay
Co/Prerequisites: Upper level physiology or instructor's consent
Cross-listing: PHAC 5406.03, BIOC 4804.03, NESC 4374.03

BIOL 4405.03B: Introduction to Pharmacology II. This class is intended to cover specific aspects of drug action in greater depth than BIOL 4404.03 and to provide students with practical expertise in pharmacology. The laboratory component consists of prescribed exercises using varied techniques. Instructor's consent and signature are required.

Format: lecture 3 hours, laboratory 3 hours
Instructors: TBA
Prerequisite: BIOL 4404.03
Cross-listing: PHAC 5407.03, BIOC 4805.03, NESC 4375.03

BIOL 4600.03B: Invertebrate Fisheries and Aquaculture. Subject matter will deal with commercially exploited invertebrates (crustaceans and molluscs) with a heavy

emphasis on bivalves. Topics to be covered include: (1) Review of the major invertebrate harvest fisheries (locations, methods, population cycles, fisheries models) (2) Biology and ecology of the Bivalvia (feeding, bioenergetics, growth, and reproduction) (3) Shellfish aquaculture (methods, species, site location, economics). These topics will be covered with respect to the Maritimes as well as non-local fisheries. Course structure will be a mixture of lecture and class discussions. Course requirements will include a research paper and oral presentations.

Format: lecture/discussion 3 hours
Instructors: G. Newkirk
Prerequisites: BIOL 2001.03, 2060.03, and 3321.06; fundamental knowledge of statistics; or instructor's consent
Cross-listing: OCEA 4600.03/5600.03, BIOL 5600.03

BIOL 4660.03A: Principles of Biological Oceanography. See class description for OCEA 4150A, in the Oceanography section of this calendar.

BIOL 4662.03B: Biology of Phytoplankton. (Not offered in 1995/96) See class description for OCEA 4230.03B, in the Oceanography section of this calendar.

BIOL 4664.03B: History of Marine Sciences. See class description for SCIE 4001.03 in the Science, Interdisciplinary section of this calendar.

BIOL 4666.03B: Benthic Ecology. See class description for OCEA 4330.03B, in the Oceanography section of this calendar.

BIOL 4900.06: Special Topics. Available as 4806.03A, 4807.03B, 4808.03R. These classes involve independent study and are intended for fourth year students who wish to study an area of biology not covered in other classes. The topic of study must be different from the student's honours thesis. Students should first consult with a faculty member to arrange the topic of study. An outline of the course content must be submitted to and approved by the chair of the curriculum committee. Only the Chairperson of the Curriculum Committee can sign the approval form.

BIOL 8700.00B Co-op Seminar I (non-credit)

BIOL 8891.12 Co-op Work Term I

BIOL 8892.12 Co-op Work Term II

BIOL 8893.12 Co-op Work Term III

BIOL 8894.12 Co-op Work Term IV

BIOL 4900.06R: Honours Research and Thesis. Compulsory class in Biology and Marine Biology honours programme.

Format: Student seminars
Instructor: A.R.O. Chapman, P. Collins, J. Wright, and staff

Marine Biology

Honours and Advanced Major in Marine Biology

The Biology Department offers a 4 year Honours and a 4 Year Advanced Major degree in Marine Biology. Since 1991, we have also been offering these two degrees as a Co-operative Education degree (Marine Biology Co-op) where students integrate work experience into their academic programme.

These programmes are designed to provide a fundamental background in biological science while permitting concentration in Marine Biology. The Advanced Major prepares students for technical positions in government fisheries laboratories, fish farms, etc. The honours programme is more rigorous and provides research experience for the preparation of a thesis and is intended for students wishing to continue with further research training at graduate school.

The resources of the departments of Biology and Oceanography are combined in the Life Sciences building which is equipped with a sophisticated flow-through sea-water system. The Life Sciences centre is located very close to the sea coast and this enables many classes to offer field work.

Co-operative Education Programme in Marine Biology, Honours and Advanced Major

Programme Co-ordinator
M.J. O'Halloran (494-2136)

The Co-operative education degree is an integrated programme of 8 academic terms and 4 work terms in industry, government laboratories, aquaculture farms, etc. The work terms, each of 4 months duration, enable students to apply their knowledge of marine biology and provide them with work experience for making intelligent career choices. Upon successful completion of the programme, the student's transcript indicates that the degree was co-operative in format. The Co-op degree normally takes 4 1/3 years to complete.

The Work-study programme

The work terms are of 4 months duration and alternate with study terms as follows:

Year	Fall	Winter	Summer
1	AT1	AT2	Free
2	AT3	AT4	WT1
3	AT5	WT2	AT6
4	WT3	AT7	WT4
5	AT8	May Graduation	

AT = Academic term

WT = Work Term

The Faculty's Co-op Placement Officers serve to co-ordinate the contacts between students and employer. Students are remunerated according to employers' policies on

permanent employees of similar training and education. At the end of each work term, each student must submit an acceptable work report.

The academic programme and required classes for Honours and Advanced Major Co-op students are essentially the same as those for the non co-op programme (listed below). Students in the third and fourth year of their co-op programme will have difficulty taking full-credit R classes during the academic year because of their work terms. The 2 required full-credit third year biology classes (Biology 3321.06 and 3071.06) are split into Part 1 (A term) and Part 2 (B term) so that students can take Part 1 in the fall term of their third year and Part 2 in the winter term of their fourth year.

Many employers require basic computer skills (word-processing, data-base management), so students are strongly advised to take non-credit (Henson College) or credit classes during their first 2 years.

During their second year Co-op students must attend a non-credit seminar class to prepare them for their work term placements.

Eligibility

Students should obtain application forms from the Marine Biology Co-op Co-ordinator at the end of their first year. They should also contact the Co-op Co-ordinator during their first year of study to have their programme checked.

Both Honours and Advanced Major Co-op students are required to demonstrate sufficient academic potential and maintain a grade average of B (GPA 3.00) in Biology 1000.06 or 1001.06, 2001.03, 2020.03, 2030.03, 2060.03. Students must also be Canadian citizens or landed immigrants.

Honours in Marine Biology

Programme Advisor
M.J. O'Halloran (494-2136)

Honours students must take a minimum of 9 and a maximum of 11 credits in their major subject (Marine Biology/Biology) above the 1000 level in addition to the general rules of the College of Arts and Science (see degree requirements in the College of Arts and Science section of this calendar).

Students are recommended to take Oceanography as their minor subject and 2 credits are required.

It is the responsibility of all students to arrange for supervisors for their research. Honours theses may be supervised by a faculty member within the Biology department, or by an external scientific investigator, subject to the approval of the honours committee. Students not in co-op should begin to search for a potential supervisor during their 3rd year of study and should have completed arrangements by May of their 3rd year. Co-op students will normally do their Honours research in the summer of their 4th year or in

their 5th year and should consult with their advisor. If students wish to be supervised by someone external to the department, they must consult with their honours advisor to determine the potential supervisor's eligibility prior to starting their research. Students with a cumulative GPA of 3.70 should consider applying for an NSERC Undergraduate Research Scholarship to start their honours research with a supervisor during the summers. The deadline for applying for these scholarships is usually in early January of each year.

For the standing required for Honours please see "Graduation Standing" section "Academic Regulations" given earlier in this calendar.

Our department requires marine biology honours students to obtain a B average (GPA 3.00) in the following second year classes:

BIOL 2001.03, 2020.03, 2030.03, and 2060.03. These classes must normally be completed by the end of year 2.

Departmental Requirements

Classes required in honours:

- 1000 level:** Biology 1000.06 or 1001.06
2000 level: Biology 2001.03, 2020.03, 2030.03, 2060.03
3000 level: Biology 3071.06 or 3074.03 & 3076.03; 3067.03; 3211.03 or 3212.03; 3321.06 or 3301.03/3302.03
4000 level: 4900.06, Honours Qualifying exam (pass/fail grade based on participation in 4900.06 class)

Other required classes:

Chemistry 1040.06; Mathematics 1000.03 and 1060.03; Oceanography 2850.06 or 2851.03/2852.03; Statistics 2080.03

Suggested biology credits and electives

The following 3rd and 4th year classes are marine related and could be used for obtaining more biology credits or serve as electives. Other biology classes can also be taken if students want to concentrate in a specific area such as ecology, molecular or developmental biology but please discuss this with your Marine Biology programme Advisor first.

All students should ensure they have the necessary pre-requisite classes for entry into higher level classes.

Aquaculture

BIOL 4600.03: Invertebrate fisheries and aquaculture

Development

BIOL 3050.03: Developmental biology

Animal Diversity

BIOL 3067.03: Fish Biology
 BIOL 3326.03: Vertebrates and evolution
 BIOL 4060.03: Marine Mammalogy

Ecology

BIOL 3061.03: Communities and ecosystems
 BIOL 3063.03: Resource ecology
 BIOL 3069.03: Population ecology
 BIOL 4061.03: Expt'l design
 BIOL 4666.03: Benthic ecology

Earth Sciences

ERTH 4280.03: Marine geophysics

Evolution

BIOL 3041.03: Evolution

Microbiology

BIOL 3100.03: Aquatic microbiology

Oceanography

BIOL 4600.03/OCEA 4600.03: Invert. Fisheries and Aquaculture
 BIOL 4369.03/OCEA 4160.03: Fisheries Oceanography
 BIOL 4660.03/OCEA 4150.03: Principles of biological oceanography
 BIOL 4662.03/OCEA 4230.03: Biology of phytoplankton
 BIOL 4664.03/OCEA 4664.03: History of Marine Science
 OCEA 4170.03: Physics and Chemistry of the Ocean
 OCEA 4260.03: Biology of zooplankton
 OCEA 4380.03: Marine modelling

Limnology

BIOL 4068.03: Limnology

Physics

PHYC 1300.06: Physics in and around you

Physiology

BIOL 4070.03: Advanced topics in animal physiology

Politics

POLI 3590.06: Politics of the Sea

Resource management/economics

BIOL 3063.03: Resource ecology
 ECON 361.1(2): Fisheries economics (offered at St.Mary's University).

Science

SCIE 3000.06: Science fundamentals

Biology field class

(1/2 credit) offered at a recognized field station (see advisor for information).

Class at St. Mary's University

Fisheries Economics 361.1(2)A or B: This class emphasizes the application of economic concepts to problems of fishery management and development. Topics to be discussed include: common property resources, the economics of fishery regulation, socioeconomics, fish markets, and the fishery as part of the national and regional economy. Particular attention will be paid to current issues in the Atlantic Canada fishery. (Check with the Finance and Management Science Dept at SMU to see if offered in 1994-95)

Format: Classes 1.5 hrs, seminars 1.5 hrs a week in B term

Instructor: T. Charles
Prerequisites: Instructor's consent. An introductory economics class would be useful.

Honours Co-op in Marine Biology

Departmental Requirements

Same as for regular Marine Biology Honours as above in addition to the following:

- BIOL 8700.00 (Co-op Seminar),
- BIOL 8891.12, 8892.12, 8893.12, 8894.12 (Co-op Workterms)

Co-op students will normally do their Honours research in the summer of their 4th year or in their 5th year and should arrange this with the Honours advisor. If students wish to be supervised by someone external to the department, they must consult with the honours advisor, prior to starting the research, to determine supervisor and project's eligibility. The Honours Seminar class will normally be taken in two parts to accommodate students' workterms; Part 1 in B term of 4th year and Part 2 in A term of 5th year.

Suggested Biology credits or electives

Same as for regular Marine Biology Honours as above plus COMP 1000.03.

Advanced Major in Marine Biology (4 year)

Advanced major students are required to take a minimum of 6 and a maximum of 9 credits above the 1000 level in their major subject (Marine biology/Biology) in addition to the general rules for Advanced majors which are listed in the degree requirements section of the College of Arts and Science regulations in this calendar.

Departmental Requirements

Classes required in Advanced Major:

- 1000 level:** BIOL 1000.06 or 1001.06
2000 level: BIOL 2001.03, 2020.03, 2030.03, 2060.03, plus one other biology credit at or above the 2000 level not including the classes listed below.
3000 level: minimum of three credits at or above the 3000 level.

Other required classes:

Chemistry 1040.06 Mathematics 1000.03, and 1060.03

Suggested Biology credits or electives

These can be selected from any of the "mandatory" or "suggested" marine related classes listed earlier in the Marine Biology Honours programme with the exception of BIOL 4900.06R.

Other biology classes may be taken if students wish to concentrate in a particular subject area of Marine Biology such as ecology,

molecular or developmental biology but this should be discussed first with the Marine Biology programme advisor.

Advanced Major Co-op in Marine Biology

Departmental Requirements

Same as for regular Advanced Major in Marine Biology as above in addition to the following:

- BIOL 8700.00 (Co-op Seminar),
- BIOL 8891.12, 8892.12, 8893.12, 8894.12 (Co-op Workterms)

Canadian Studies Programme

Location: Multidisciplinary House, 1444 Seymour Street, Halifax, N.S.
Telephone: (902) 494-3814
Fax: (902) 494-2176

Coordinator

J.A. Wainwright - (494-3814/3876)

Faculty

R. Apostle (Sociology and Social Anthropology)
 B. Bednarski (French)
 M. Bradfield (Economics)
 D. Cameron (Political Science)
 D. Clairmont (Sociology and Social Anthropology)
 M. Cross (History)
 C. Danyak (History)
 J. Elliott (Sociology and Social Anthropology)
 R. Finbow (Political Science)
 W. Kemp (Music)
 B. Lesser (Economics)
 V. Miller (Sociology and Social Anthropology)
 P. Monk (English)
 I. Oore (French)
 D. Overton (Theatre)
 H. Runte (French)
 C.T. Sinclair-Faulkner (Comparative Religion)
 J. Smith (Political Science)
 D. Sutherland (History)
 G. Taylor (History)
 A. Wainwright (English)

Aim

The purpose of the programme is to allow students to concentrate part of their work on Canadian Studies both within their major field and outside of it. For example, a student who is planning to major in a subject will take a number of classes in that subject that are designated as Canadian. The student will in addition take a number of classes that are designated as Canadian outside his or her major field.

In other words, the Canadian Studies Programme does not attempt to establish a new major field. It seeks to use any one of a number of departments in the Faculty of Arts and Social Sciences as a base around which a student may effectively cluster a number of classes in Canadian subjects. However, all students in the Canadian Studies programme must take the half-credit interdisciplinary seminar, CANA 2000.03. Students in this seminar will consider significant issues in Canadian history, politics, society, and literature and their interrelated contribution to this country's past, present, and future. Those who fulfil the Canadian-content

requirements of this programme will have the words "With An Emphasis in Canadian Studies" on their transcript upon graduation.

Classes

Before enrolling in any of the classes listed below, students should consult with the Coordinator of Canadian Studies in the Multidisciplinary House.

In addition to the disciplines and classes listed below, there are individual Canadian content classes available from the School of Education. Please consult with the appropriate Chairs.

Students who are interested in a Canadian Studies programme should attempt in their first year to take an introductory class in the following subjects: English, French, History (preferably HIST 1200.06 if available), and in either Political Science or Sociology and Social Anthropology. (Prospective Economics majors may substitute an introductory class here).

With attention to prerequisite classes, in the second, third, and possibly fourth years of study, students, either as part of, or in addition to, fulfilling their major discipline requirements, should take:

- One or more classes in English from the list below;
- One or more classes in French from the list below. Students should take French 1000.06 and 2000.06 or 1020.06 or 1040.06 (in this latter case, a second-year French class, 2021.03/2022.03, is strongly recommended, though not required);
- One or more classes in History from the list below;
- One or more classes in either Political Science or Sociology and Social Anthropology from the lists below (again, an Economics major may substitute an upper-level class here).

NOTE: Classes marked * are not offered every year. Please consult the current timetable on registration to determine if these classes are offered.

CANA 2000.03A or B: A Seminar in Canadian Studies. An interdisciplinary seminar for second, third, and fourth year students in the Faculty of Arts and Social Sciences who, in pursuit of their degree in a particular subject, are taking one or more Canadian-content classes in English, History, and French, as well as one or more Canadian-content classes in Political Science OR Sociology and Social Anthropology OR Economics.

This seminar is also open, as an elective class, to Faculty of Arts and Social Sciences students with an interest in Canadian Studies who may not complete the Canadian-content requirements.

This seminar will be taught by a number of professors in various Faculty of Arts and Social

Sciences disciplines. In individual weekly seminars students will consider essays and other short readings in English, History, French (in translation), Political Science, Sociology and Social Anthropology, and Philosophy. The class is designed to provide students with the opportunity to consider the structure and content of Canadian society from a variety of academic viewpoints - philosophical, historical, political, sociological, and literary. Students must consult with the Canadian Studies Coordinator before enrolling in the seminar.

Instructors: Apostle, Bednarski, Burns, Cameron, Cross, Danyak, Elliott, Finbow, Kemp, Miller, Monk, Oore, Overton, Smith, Runte, Taylor, Wainwright

Format: Seminar/Discussion

Co-requisite: Canadian-content classes in English, History, French, and Political Science or Sociology and Social Anthropology or Economics

English Classes Cross-listed With Canadian Studies

*ENGL 2207.06R: Canadian Literature

*ENGL 4357.06R: Honours Seminar in Canadian Literature

French Classes Cross-listed With Canadian Studies

*FREN 2021.03A/FREN 2022.03B: Études pratiques/Practice in Language Skills

FREN 2203.03A or B: Approches du texte letterer/Approaches to Literary Texts

*FREN 3025.03A or B: Less Parers accedence: Introduction linguistic/Linguistic Introduction to Acadian Dialectology

*FREN 3900.03A/FREN 3901.03B: La Literature Canadian-Frances/French Canadian Literature

*FREN 3910.03A or B: Aditios acadiennes/Acadian Studies

*FREN 4902.03A: Écrivains Québécois Contemporains/Contemporary Quebec Writers

*FREN 4904.03A or B: Écrivaines Québécoises/Quebec Women Writers

History Classes Cross-listed With Canadian Studies

HIST 1200.06R: History of Canada

*HIST 2202.03A or B: Canada's Industrial Revolution, 1850-1950

HIST 2211.03A or B: Social History of Canada Before 1870

HIST 2212.03A or B: Social History of Canada Since 1870

HIST 2221.03A or B: Rough Justice: Canadian Popular Culture to the 1890's

HIST 2222.03A or B: Rough Justice: Canadian Popular Culture, 1890's to Present

HIST 2230.06R: Canada in the 20th Century

HIST 2270.06R: The Atlantic Provinces

*HIST 2334.03A or B: The United States, Canada, and the World

*HIST 3220.03A or B: Youth Culture in Canada, 1950's to 1970's

*HIST 3222.03A or B: Topics in Canadian Social History, 19th and 20th Centuries

*HIST 3225.03A or B: Crime, Punishment and the Criminal Law in Canadian Society

*HIST 3230.03A or B: Labour and Community in 19th Century Canada

*HIST 3231.03A or B: The Canadian Working Class: The 20th Century Experience

*HIST 3245.03A or B: French Canada

*HIST 3250.03A or B: Canada Within the Empire

*HIST 3255.03A or B: The Age of MacDonald and Laurier

*HIST 3260.03A or B: West by North: History of the Canadian West and North

*HIST 3261.03A or B: The Rural Experience in Canada

*HIST 3272.03A or B: Themes in the History of Atlantic Canada

HIST 3273.03A or B: Nova Scotia: Pre-Confederation

HIST 3274.03A or B: Nova Scotia: Post-Confederation

*HIST 3286.03A or B: The Urban Experience in Canada

*HIST 3292.03A or B: Wealth and Power in North America

*HIST 3302.03A or B: Technology and History in North America

*HIST 3610.03A or B: Women in Capitalist Society: The North American Experience Cross-listed in Women's Studies as *WOST 3305.03A or B.

*HIST 3750.03A or B: History of Seafaring

Please Note: 3000-level classes have prerequisites which apply to Canadian Studies students as well as History majors.

Political Science Classes Cross-listed With Canadian Studies

POLI 2200.06R: Canadian Government and Politics

*POLI 2228.03A or B: Government and Business Relations

*POLI 3205.03A or B: Canadian Political Thought

POLI 3216.03A or B: Local and Regional Government

POLI 3220.03A or B: Intergovernmental Relationships in Canada

*POLI 3224.03A or B: Canadian Political Parties

*POLI 3228.03A or B: Interest Groups: Function and Management

*POLI 3235.03A or B: Regional Political Economy in Canada

*POLI 3245.03A or B: The Judicial System and Canadian Government

*POLI 3250.03A or B: Canadian Public Administration

POLI 4204.06R: Advanced Seminar in Canadian Government

POLI 4240.03A or B: Policy Formulation in Canada

POLI 4241.03A or B: Introduction to Policy Analysis

Social Anthropology Classes Cross-listed With Canadian Studies

*SOSA 3008.03A or B: Canadian Society and Politics

Please note that this class is not offered every year. However, there are numerous Canadian content classes in the Department. Students should consult with the Chair and then with the Coordinator of Canadian Studies.

Economics Classes Cross-listed With Canadian Studies

ECON 2232.06R: Canadian Economic History

ECON 3316.03B: Collective Bargaining and Labour Market Policy

*ECON 3317.03B: Poverty and Inequality

ECON 3324.06R: Public Finance

*ECON 3326.03A: Money and Banking

ECON 3332.03A or B: Resource Economics

*ECON 3336.03B: Regional Development

*ECON 3432.06R: Regional Economics

*ECON 4000.06R: Seminar on Economic Policy (not usually offered)

*ECON 4426.03B: Monetary Policy

*ECON 4433.03B: Intergovernmental Fiscal Relations

Other Economics classes that deal with Canadian issues are available. Students should consult with the Chair and with the Coordinator of Canadian Studies.

Theatre Classes Cross-listed with Canadian Studies

THEA 4500.03A or B: Canadian Drama

THEA 4501.03A or B: The History of Canadian Theatre

Music Classes Cross-listed with Canadian Studies

MUSC 3362.03A: Music in Canada to 1950

MUSC 3364.03B: Women in Canadian Music

Comparative Religion Classes Cross-listed with Canadian Studies

COMR 3003.06R: Religion in Canada

Chemistry

Location: Chemistry Building
 Telephone: (902) 494-3305
 Fax: (902) 494-1310

Chairperson of Department

 Compounds, Moscow)
 I. Svirshchev, PhD (Moscow)
 H. Zheng

Introduction

Chemistry is one of the fundamental sciences. It explores the interactions among different forms of matter and energy. Its main purpose is to gain a basic - but also a very useful - understanding of how compounds react and when and why they form particular products. The universe and the world in which we live are composed of chemicals. Therefore, chemical knowledge helps us to influence and protect our environment; chemical principles and

procedures are found everywhere in the groundwork of the natural and medical sciences.

The Honours BSc is the expected professional requirement for a chemist. Chemists with honours degrees are employed in widely differing areas in industry and government. This degree will provide a background for further graduate work in chemistry or in such diverse areas as medicine, law, business administration, biochemistry, oceanography and geology. A postgraduate degree is essential for independent original research in an industrial career or in university teaching.

Chemistry 1010.06 (or 1020.06 or 1040.06 or 1500.06) is an introduction to the discipline. All students intending to take classes in chemistry beyond the first-year level should include classes in mathematics (Math 1000.03/1010.03) and physics (not PHYC 1000.06) in their first year. Final grades in these classes should not be less than C; if they are, the student is bound to find advanced classes in chemistry difficult and frustrating.

At the second-year level the student is exposed to the four traditional areas of specialization in chemistry. Inorganic chemistry deals with all the chemical elements except carbon, and the compounds which these elements form. Organic chemistry is devoted to the study of the almost limitless number of compounds containing carbon. Analytical chemistry is concerned with the determination of the composition of substances, and with the detection of elements in quantities however minute. Physical chemistry is concerned with both macroscopic phenomena, including why and at what rates chemical reactions occur, and with molecular phenomena through the application of spectroscopic techniques. Beyond the second-year level, a student's studies in chemistry become increasingly concentrated in one of these four areas. The student may also be introduced to biochemistry or the chemistry of living organisms, as well as such specialties as structural chemistry, radiochemistry, environmental chemistry and theoretical chemistry.

Degree Programmes

The Honours in Chemistry, Joint Honours in Chemistry and Biochemistry and Advanced Major in Chemistry as described in this calendar, are programmes accredited by the Canadian Society for Chemistry (CSC). CSC accreditation ensures that graduates of these programmes have met certain criteria concerning the quantity and quality of their instruction and qualifies such graduates for membership in the CSC.

See "Degree Requirements" section for complete details.

Honours in Chemistry

This programme is intended to provide a broad training in chemistry while at the same time making provision for the individual interests of students. Competence in mathematics as well as chemistry is required. All honours students must consult annually with the Honours Student Advisor and obtain approval of their class selection.

All nine required chemistry credits must be passed with a grade of at least C.

Departmental Requirements

Classes required in Honours:

1000 level:	CHEM 1010.06, 1020.06, 1040.06 or 1500.06
2000 level:	CHEM 2101.03, 2201.03, 2301.03, 2302.03, 2400.06
3000 level:	CHEM 3101.03 or 3102.03, 3201.03, 3301.03, 3302.03, 3401.03 and 3890.00
4000 level:	CHEM 4880.00, honours qualifying credit (8880.00)

The remaining seven half credits in Chemistry must be chosen from the classes listed below, with at least one half credit from each of the groups A, B, C and D.

- A: CHEM 3101.03, or 3102.03, 4101.03, 4102.03
- B: CHEM 3202.03, 4201.03, 4202.03, 4203.03.
- C: CHEM 3303.03, 4301.03, 4304.03, 4305.03, 4306.03, 4307.03
- D: CHEM 3402.03, 3403.03, 4401.03, 4402.03, 4403.03
- E: CHEM 3501.03, 4501.03, 4502.03, 4503.03, 4504.03

Other required classes:

MATH 1000.03 and 1010.03, MATH 2000.06 or equivalent, PHYC 1100.06

Two credits beyond the 1000 level must be taken in a minor subject. Minor subjects allowed for this degree are biochemistry, biology, computing science, earth sciences, mathematics, or physics. The minor, the unspecified credits in chemistry, and electives should be chosen according to the future plans of the student.

Combined Honours Programme

The department has designed a number of programmes which allow a student to obtain a Combined Honours Degree in Chemistry with one of Biochemistry, Biology, Computing Science, Earth Sciences, Mathematics or Physics. To obtain an introduction to all the basic areas of chemistry, CHEM 2101.03, 2201.03, 2301.03, 2302.03 and 2400.06 must be part of any combined honours programme involving Chemistry, and must be passed with a grade of at least C.

The additional eight credits in chemistry and the other subject must be chosen in consultation with the two departments involved. Students

must consult the Honours Student Advisor of the Department of Chemistry and the Chair of the other area of study before registering in the combined programme. Students should also consult the Department's Handbook "Undergraduate Studies in Chemistry" for more information.

Advanced Major in Chemistry

Departmental Requirements

Classes required in Advanced Major:

1000 level:	CHEM 1010.06 or 1020.06 or 1040.06 or 1500.06
2000 level:	CHEM 2101.03, 2201.03, 2301.03, 2302.03 and 2400.06
3000 level:	CHEM 3101.03 or 3102.03; 3201.03, one half credit from CHEM 3301.03, 3302.03, 3401.03

The additional 2.5 credits minimum can be selected from remaining 3000 and 4000 level Chemistry classes.

All Chemistry classes must be passed with a grade of at least C-.

Other required classes:

MATH 1000.03, 1010.03, 2000.06 or equivalent and PHYC 1100.06 or equivalent

Advanced Double Major Programme

The Department has a number of programmes which allow a student to obtain an Advanced Double Major Degree in Chemistry with one of Biochemistry, Biology, Computing Science, Earth Sciences, Mathematics or Physics. To obtain an introduction to all the basic areas of chemistry, CHEM 2101.03, 2201.03, 2301.03, 2302.03 and 2400.06 must be part of any advanced double major programme involving Chemistry, and must be passed with a grade of at least C-.

Additional credits in Chemistry and the other subject must be chosen in consultation with the two departments involved. Students are encouraged to consult the Chair of the Undergraduate Studies Committee in the Department of Chemistry and the Chair of the other area of study before registering in the programme. Students should also consult the Department's Handbook "Undergraduate Studies in Chemistry" for more information.

Major in Chemistry

Departmental Requirements

Classes required in Major:

1000 level:	CHEM 1010.06 or 1020.06 or 1040.06 or 1500.06
2000 level:	CHEM 2101.03, 2201.03, 2301.03, 2302.03 and 2400.06
3000 level:	At least one credit at or above the 3000 level

All Chemistry classes must be passed with a grade of at least C-.

Other required classes:

PHYC 1300.06 or 1100.06, MATH 1000.03, 1010.03

Earth System Science

Refer to the Earth System Science section in this calendar.

Classes Offered

"A" or "B" indicates that is offered in either the A or B term or in exceptional circumstances in both terms. "R" indicates a class extending over both the fall and winter terms. The credit hour extension following the class number, eg. .06 or .03 indicates the credit hour weight of the class. An asterisk (*) indicates that the class is not necessarily offered every year. Consult the timetable for up-to-date details.

Students who have passed a first-year Chemistry class with a grade of D should consider themselves inadequately prepared for further studies in this subject. Such students may not be allowed to register directly for second-year Chemistry classes but may request that their names be put on a waiting list. Consult the Department for details. Duly registered students, who do not show up for the first two scheduled lectures in a class, may lose their place to students on the waiting list.

Chemistry Resource Centres

First-Year and Advanced Resource Centres are located in Rooms 122 and 115. The former is staffed with people who can help with Chemistry problems. Facilities include study areas, a computer laboratory with special programmes designed for Chemistry students, molecular models, audio-visual aids and a small library.

*CHEM 1000.06R: The Chemical World. This class is intended for students who want to take only a first-year credit in science, and who wish to understand some of the chemical aspects of the world around us. The class does not use a mathematical approach to science, and can be taken by students with no, or limited, previous chemistry experience. The class will cover the development of chemical knowledge from early times to the present. By means of lectures, frequent (and sometimes spectacular!) demonstrations, and laboratory or reading projects, students will be introduced to the world of chemistry and to chemicals and chemical ideas in everyday use. Students contemplating careers, e.g., in law, business, or government could profit from the material studied in this class. Students will be required to do extensive written assignments, which will be marked both on content and writing style. CHEM 1000.06 is an approved "writing class" in the College of Arts and Science. CHEM 1000.06 does not serve as a prerequisite for second-year chemistry classes.
Instructor: T.S. Cameron

132 Chemistry

Format: Writing Requirement, lectures 2 hours, lab/tutorial 2 hours
Exclusions: CHEM 1000.06R cannot be taken concurrently with or after CHEM 1010.06R, 1020.06R, 1040.06R and 1500.06R

CHEM 1010.06R: General Chemistry. A study of the fundamental principles of chemistry with particular reference to stoichiometry, atomic and molecular structure, gases, liquids and solids, solutions, thermochemistry, equilibria, chemical properties of common substances, acid-base and oxidation-reduction reactions and chemical kinetics. Students enrolling in this class should have a background in chemistry equivalent to the Nova Scotia XII level. Mature students should consult the Department. It is important that students be familiar with exponents and logarithms, and be able to solve quadratic and simultaneous equations.

Instructors: A. Chaff, T.B. Grindley, P.G. Kusalik, K.T. Leffek, L. Ramaley, R. Stephens, C.H. Warren, M.A. White

Format: lectures 3 hrs, tutorial 1 hr, lab 2 hrs

Any of CHEM 1010.06R, 1020.06R, 1040.06R or 1500.06R may serve as a prerequisite for any 2000 level class in chemistry, and as a credit in the College of Arts and Science. However, credit will only be given for one of 1010.06, 1020.06, 1040.06 or 1500.06.

CHEM 1020.06R: General Chemistry for Engineering Students. This class is similar to Chem 1010.06, but with greater emphasis on quantitative topics, including chemical equilibrium, thermodynamics, reaction kinetics and electrochemistry. The class is open only to students enrolled in the Engineering programme, but it serves also as a regular prerequisite for all second-year chemistry classes.

Instructors: J.A. Coxon, R.E. Wasylishen
Format: lectures 3 hours, tutorial 1 hour, lab 2 hours

CHEM 1040.06R: General Chemistry for the Life and Health Sciences. The basic content and rigour of this class is the same as that of CHEM 1010.06. However, more emphasis is given to organic (as opposed to inorganic) structures, and topics that are of interest to the life and health sciences are favoured over those of the inanimate variety. Thus, chemical principles are illustrated primarily by examples from living systems. Additional areas such as enzyme kinetics, isotopes in medicine, and several types of bio-analyses are introduced in short and simple form. Some chapters take note of the material covered in other prominent first-year classes, particularly in biology and psychology. Requisite high school chemistry (N.S. grade XI/XII) may be reviewed in tutorial but is not retaught in lecture. CHEM 1040.06 uses the same

textbook and laboratory experiments as CHEM 1010.06 and serves as a regular prerequisite for all second-year Chemistry classes.

Instructor: W.A. Aue
Format: lectures 3 hours, tutorial 1 hour, lab 2 hours
Prerequisite: N.S. Grade XII Chemistry (441) or equivalent

CHEM 1410.03A: Introductory Chemistry. A descriptive introduction to chemistry with emphasis on materials related to the life and health sciences. The class requires a background of high school chemistry and mathematics. Topics covered include units, matter, the Periodic Table, stoichiometry of reactions, gases, liquids, solids, solutions, simple concepts of equilibria, acids, bases, radioactivity hydrocarbons, alcohols, ethers, amines, amides, esters and simple carbohydrates and proteins. The organic chemistry deals primarily with structures and introduces molecules of medicinal interest.

Instructor: P.D. Pacey
Format: lectures 3 hours, tutorial 2 hours

Note: This class does not serve as a prerequisite for any other chemistry class.

CHEM 1430.06R: Introductory Chemistry and Biochemistry. This class combines CHEM 1410.03A and Biochemistry 1420.03B for use by Nursing students.

Note: This class does not serve as a prerequisite for any other classes in chemistry or biochemistry.

***CHEM 1500.06R: Principles of Chemistry.** Similar to CHEM 1010.06 but with more emphasis on atomic and molecular structure, thermodynamics, equilibria and kinetics. This class is intended for prospective science students and for students wishing to gain a more thorough introduction to the principles of chemistry. Students enrolling in this class must have attained high standing in high school chemistry and are advised to contact the lecturer prior to registering for this class. Concurrent enrolment in MATH 1000.03 and 1010.03, or in MATH 1500.06 is advised.

Instructors: J.C.T. Kwak, P. Wentzell
Format: lectures 3 hours, lab/tutorial 3 hours

CHEM 210L.03A or B: Introductory Inorganic Chemistry. The fundamentals of inorganic chemistry are covered. Specific topics include: ionic bonding and the nature of solids, the structure of atoms and simple bonding theory, coordination chemistry of the transition metals and selected topics in main group chemistry. The preparation, analysis and observation of inorganic compounds are the laboratory assignments.

Instructor: N. Burford, T.S. Cameron
Format: lectures 3 hours, lab 3 hours

Prerequisite: CHEM 1010.06 or 1020.06 or 1040.06 or 1500.06

CHEM 2201.03A or B: Introductory Analytical Chemistry. An introduction to those analytical techniques most often employed in modern chemical analysis. Topics include: acid-base and redox chemistry and the theory of titrations based on these types of reactions; atomic and molecular spectroscopy in the visible and ultraviolet regions of the electromagnetic spectrum; potentiometry and the use of ion selective electrodes; and gas and liquid chromatography. Laboratory experiments will be based on topics selected from the lectures and will introduce the student to a wide variety of methods.

Instructors: L. Ramaley, R. Stephens
Format: lectures 3 hours, lab 3 hours
Prerequisite: CHEM 1010.06 or 1020.06 or 1040.06 or 1500.06

CHEM 2301.03A: Chemical Thermodynamics. The physical chemist attempts to describe macroscopic systems and chemical reactivity based on an understanding of the atoms and molecules which make up the systems we study. This first class in physical chemistry will start with a discussion of the forces between molecules, and the properties of gases, liquids and solids. Energy relations in macroscopic systems are presented; further topics in thermodynamics include thermochemistry, entropy, and free energy relations, with many applications including phase equilibria, chemical equilibrium, solutions and colligative properties. In the laboratory students will perform experiments based on many of the concepts discussed in class, including an introduction to data handling by computer.

Instructor: J.C.T. Kwak
Format: lectures 3 hours, lab 3 hours
Prerequisites: CHEM 1010.06 or 1020.06 or 1040.06 or 1500.06, Mathematics 1000.03 and 1010.03
Exclusion: Students registered in/ or having received credit for CHEM 2303.03 are not permitted to register in CHEM 2301.03.

CHEM 2302.03B: Chemical Kinetics and Dynamics. This class examines the dynamics of systems by considering motion and reactivity of molecules. Topics include transport properties such as diffusion and ionic conductivity, the molecular kinetic theory of gases, and rates of chemical reactions. The latter are studied in detail, with applications in atmospheric chemistry, liquid and solid state reactivity, catalysis, enzyme kinetics and polymers. The laboratory experiments emphasize the determination of molecular motion and chemical reactivity using a variety of techniques and instrumental methods.

Instructor: P.D. Pacey
Format: lecture 3 hours, lab 3 hours

Prerequisites: CHEM 1010.06 or 1020.06 or 1040.06 or 1500.06, Mathematics 1000.03

Exclusion: Students registered in/ or having received credit for CHEM 2303.03 are not permitted to register in CHEM 2302.03.

***CHEM 2303.03A or B: Physical Chemistry for the Life Sciences.** Chemistry majors may not apply credit for CHEM 2303.03 towards the major requirements for a degree in Chemistry. Those who do not plan a career in chemistry, but who can use the principles and concepts of physical chemistry in related areas, are introduced to the basic ideas of physical chemistry with the necessary mathematical concepts in simple terms. Previous knowledge of calculus is not necessary. The principal topics: thermodynamics, rates of enzyme-catalyzed reactions, chemical equilibrium and spectroscopy are treated by application to examples of biological and environmental interest.

Instructor: D.L. Hooper
Format: lectures 3 hours, lab/tutorial 3 hours
Prerequisite: CHEM 1010.06 or 1020.06 or 1040.06 or 1500.06
Exclusions: Students registered in/ or having received credit for CHEM 2303.03 are not permitted to register in CHEM 2301.03 and/ or 2302.03.

CHEM 2400.06R: Introductory Organic Chemistry. This class gives a broad introduction to the chemistry of carbon compounds, including molecular shapes and bonding, characteristic reactions of functional groups and the way in which they take place, and the application of spectroscopy to organic chemistry. Laboratory work is designed to teach a broad range of fundamental operations and techniques used in modern organic chemistry laboratories.

Instructors: D.R. Arnold, T.P. Forrest, and J.A. Pincock
Format: lecture 3 hours, lab 3 hours
Prerequisite: CHEM 1010.06 or 1020.06 or 1040.06 or 1500.06 with a grade of at least C.

SCI 3000.06R: Science Fundamentals. See class description in Science, Interdisciplinary section of this calendar.

CHEM 3101.03A or B: Chemistry of the Main Group Elements. This class gives an overview of the chemistry of the non-metal elements (p block), with particular emphasis on the elements of the second (B - F) and third rows (Al - Cl). Preparative methods, molecular structure, characterization, and bonding are discussed, with some examples examined in detail. The laboratory introduces synthetic procedures for the preparation of inorganic compounds and

some study of their reactions. Some of these experiments involve special techniques, such as vacuum line manipulation and high temperature.

Instructor: N. Burford
Format: lecture 3 hours, lab 3 hours
Prerequisite: CHEM 2101.03

CHEM 3102.03A or B: Coordination Chemistry of the Transition Metals. Modern bonding theories are used to unify discussion of the chemical and physical properties of compounds of the transition elements. The laboratory experiments introduce procedures for the preparation and characterization of compounds of the transition elements. The compounds prepared illustrate the principles discussed in class and exhibit unusual structures, geometries, oxidation states and other interesting properties.

Instructor: T.S. Cameron
Format: lecture 2 hours, tutorial 1 hour, lab 3 hours
Prerequisite: CHEM 2101.03

CHEM 3201.03A: Analytical Spectroscopy and Separations. The most commonly employed instrumental techniques in chemical analysis use spectroscopy in some form or involve separations. Qualitative and quantitative analysis and the instrumentation involved are discussed in some detail for spectroscopic methods in the visible, ultraviolet, and X-ray regions of the spectrum. Various methods of separation including precipitation, solvent extraction, and the various types of chromatography are presented. Laboratory experiments illustrate the above techniques with practical examples.

Instructor: L. Ramaley, R. Stephens
Format: lecture 3 hours, lab 3 hours
Prerequisite: CHEM 2201.03

CHEM 3202.03B: Instrumental Methods of Analysis. This class deals with the application of various important instrumental and computer techniques to problems in chemical analysis. These techniques include electrochemistry, radiochemistry, mass spectrometry, sampling theory, electrophoresis, data analysis and automation. Basic chemical, physical and mathematical principles are explained, instrumentation is described and analytical applications are examined. Laboratory experiments are designed to illustrate the techniques covered in the lectures.

Instructor: P.D. Wentzell
Format: lecture 3 hours, lab 3 hours
Prerequisite: CHEM 3201.03 or instructor's consent

CHEM 3301.03A: Quantum Mechanics and Chemical Bonding. This class gives an introduction to quantum mechanics and its application to spectroscopy and the electronic structure of atoms and molecules. The postulates of quantum mechanics are presented and applied to some simple physical systems, followed by a discussion of the rotations and vibrations of molecules, and the electronic

structure of atoms, concluding with an introduction to the simple Hückel molecular orbital method. The relevance to chemical bonding will be stressed.

Instructor: C.H. Warren
Format: lectures 3 hours
Prerequisite: Mathematics 2000.06 or 2480.03A/2490.03B and CHEM 2101.03 or 2301.03 or 2302.03

CHEM 3302.03B: Symmetry and Spectroscopy. Many different types of electromagnetic radiation, such as ordinary visible light, microwave radiation, and X-rays, are absorbed and emitted by all atoms and molecules. The understanding and uses of such phenomena constitute the subject of spectroscopy. Spectroscopic methods are used extensively in all areas of chemistry and a wide range of applications have been developed. In recent years, the traditional approaches have been complemented by dramatic development of newer techniques, such as magnetic resonance and laser spectroscopies. This class provides an introduction to the physical basis and applications of most types of spectroscopy, including microwave, infrared, visible, ultraviolet, laser, Raman, and magnetic resonance techniques. The topics of molecular symmetry and elementary group theory are introduced at an early stage, and provide a satisfying and unifying thread extending over all areas of spectroscopy.

Instructor: J.A. Coxon
Format: lecture 3 hours, lab 3 hours
Prerequisite: CHEM 3301.03 or permission of the instructor

CHEM 3303.03A or B: Materials Science. The emphasis of this class will be on the exposition of the underlying principles involved in understanding physical properties of materials, such as thermal and mechanical stability, and electrical and optical properties. All phases of matter will be examined: gases, liquids, films, liquid crystals, perfect crystals, defective solids, glasses. The principles of important processes such as photography and Xerography will be explained.

Instructor: M. A. White
Format: lecture 3 hours
Prerequisite: CHEM 2301.03 or PFYC 3200.03A or ERTH 2100.06R or ENGI 2340.03A or permission of the instructor.

CHEM 3401.03B: Intermediate Organic Chemistry. This class is a continuation of CHEM 2400.06 and covers many of the topics included in the last third of modern organic chemistry texts. Topics presented include enolate anions, amines, aromatics, heterocycles, carbohydrates, amino acids, and concerted reactions. The synthesis of compounds of chemical and pharmaceutical interest will be used as a focus for these topics. In addition, an introduction to some of the principles of

mechanistic organic chemistry will be presented. Students work independently in the laboratory on the preparation of organic compounds. The success of student syntheses is monitored by the use of spectroscopic and other techniques. Students should have a good comprehension of the principles studied in CHEM 2400.06, as evidenced by a grade of at least C, and should possess adequate laboratory skills, such as can be obtained from CHEM 3101.03, 3102.03 or 3402.03.

Instructor: J.S. Grossert
Format: lecture 3 hours, lab 3 hours
Prerequisite: CHEM 2400.06 (or equivalent) with a grade of at least C.

CHEM 3402.03A: Identification of Organic Compounds. The class develops separation techniques, together with wet chemical and spectroscopic analysis methods, that were introduced in CHEM 2400.06. Spectral techniques studied include ultraviolet, infrared, Raman, proton and carbon nmr, and mass spectrometry. Students, using a variety of techniques, work independently in the laboratory to identify unknown substances and to separate and identify components of mixtures. Students should have a good comprehension of the principles studied in CHEM 2400.06, as evidenced by a grade of at least C.

Instructor: T.P. Forrest
Format: lecture 3 hours, lab 3 hours
Prerequisite: CHEM 2400.06 (or equivalent)

CHEM 3403.03B: Bioorganic Chemistry. The principles of organic chemistry that are used by the organic chemist to explain and predict the reactivity of compounds will be used to study the behaviour of organic compounds in nature. To cause a reaction to occur in the laboratory it might be necessary to alter functional groups and provide other conditions necessary to induce particular reactivity. In a natural system the same principles can be considered in the analysis of the reactivity of the organic compounds involved. The basic principles controlling the reactivity of organic compounds will be reviewed and applied to a study of selected naturally occurring reaction pathways.

Instructor: R.L. White
Format: lecture 3 hours
Prerequisite: CHEM 2400.06 or equivalent

CHEM 3501.03B: Numerical Methods in Chemistry. This class provides an introduction to numerical methods that can be applied to various problems in chemistry. Students will utilize these techniques on microcomputers. Topics to be covered include the treatment of experimental data by least squares methods; by curve fitting, smoothing, and interpolation techniques; and by numerical integration. Matrices, determinants, and eigenvalue equations will be studied and applied to problems in quantum chemistry and spectroscopy. Complex equilibria will be examined through the numerical solution of

simultaneous equations. Computer graphics will be introduced and applied to topics such as wave functions, gas laws, potential energy contours, coordinate transformations and molecular geometries. Computer simulation of experiments will also be examined.

Instructor: C.H. Warren
Format: lecture 3 hours
Prerequisites: CHEM 2301.03 and 2302.03 and Mathematics 2000.06 or 2490.03 and 2490.03 or instructor's consent

CHEM 3690.05R: General Topics in Chemistry. A non-credit seminar class to be given by invited speakers. Attendance at all seminars is required of all 3rd year Honours Chemistry students.

***CHEM 4101.03A or B: Topics in Non-Metal Chemistry.** Following a brief overview of the fundamental aspects of preparation, structure and bonding for familiar systems, selected topics are examined in some detail. An emphasis is placed on novel structure and bonding arrangements in comparison with carbon chemistry and other common systems.

Instructor: N. Burford
Format: lectures 3 hours
Prerequisite: CHEM 3101.03
Cross-listing: CHEM 5101.03

***CHEM 4102.03A or B: Advanced Transition Metal Chemistry.** Organotransition metal chemistry has grown over the last several decades into one of the most important areas of research and development in inorganic chemistry. In this class the most important types of organic ligands and their bonding characteristics will be surveyed, as will the most important reaction pathways such as migratory insertion, oxidative addition, nucleophilic addition, etc. The class concludes by examining homogeneous catalysis by organotransition metal complexes.

Instructor: K.R. Grundy
Format: lecture 3 hours
Prerequisite: CHEM 3102.03 or instructor's consent
Cross-listing: CHEM 5102.03

***CHEM 4201.03A or B: Advanced Topics in Separations.** Chemistry started as the science of separations and separations are still its most prominent feature in most laboratories around the world. This class will deal mainly with chromatography and associated techniques; in particular, gas chromatography in its regular, capillary and supercritical forms, high-pressure liquid (including ion) chromatographies, capillary electrophoresis, and gas and liquid chromatography combined with other instrumental techniques such as mass spectrometry. The original ideas behind the design of separation media and detection modes will be emphasized, and so will be their consequences for the analysis of living and environmental systems. This class will not present a survey of the field; rather, it will focus

primarily on past (and future) innovation. Please consult the instructor for the detailed content of this class in a given year.

Instructor: W.A. Aue
Format: lecture 2 hours, lab arranged
Prerequisite: CHEM 3201.03, or instructor's consent
Cross-listing: CHEM 5201.03

***CHEM 4202.03A or B: Topics in Advanced Analytical Spectroscopy.** The topics covered are applicable to elemental analysis: atomic absorption, emission, fluorescence; optical rotation; X-ray spectroscopy; neutron activation analysis. The class will cover the theory and application of the different spectroscopic methods, and will include discussion on instrument design and performance. The emphasis on different topics may vary from year to year; students are advised to consult with the instructor for further detail.

Instructor: R. Stephens
Format: lecture 2 hours, lab arranged
Prerequisite: CHEM 3201.03
Cross-listing: CHEM 5202.03

***CHEM 4203.03A or B: Environmental Chemistry.** The first part of this class covers the chemical equilibria suitable for the description of metal ion and organic chemical interactions in the environment. Topics to be covered in this section include polyprotic acid equilibria in sufficient depth to describe carbonate and hydrogen sulphide systems (acidity, alkalinity, conservative quantities), redox equilibria (Eh-pH diagrams), solubility of oxides, hydroxides and carbonates and complexation equilibria.

Adsorption equilibria are covered for metal ion and organic interactions with clays, humic and hydrous oxide materials. The second part of the class covers analytical methodology for the determination of metals and organics in environmental systems. Particular interest is paid to analytical methods for the speciation of compounds in waters and sediments. Students should be familiar with or interested in using microcomputers for chemical calculations.

Instructor: R.D. Guy
Format: lecture 3 hours, lab arranged
Prerequisite: CHEM 3201.03
Cross-listing: CHEM 6203.03

CHEM 4204.03A or B: Nuclear Analytical Chemistry. This class introduces basic concepts of nuclear chemistry and nuclear analytical methods. The class includes: discovery of radioactivity; nuclides and natural decay chain; types of radioactive decay; nuclear reactions; research reactors; instrumental, preconcentration and radiochemical neutron activation analysis; and two laboratory sessions on NAA.

Instructor: A. Chatt
Prerequisites: CHEM 3201.03, 3202.03 or equivalent
Cross-listing: CHEM 6204.03

CHEM 4301.03B: Theory of Chemical Bonding. This class discusses chemical bonding within the

framework of molecular quantum mechanics, the science relating molecular properties to the motions and interactions of electrons and nuclei. The emphasis is on the qualitative features and physical basis of molecular orbital theory and its application to chemistry. The symmetry properties of molecular orbitals are discussed within the context of group theory. Other topics include ladder operators and the addition of angular momenta.

Instructor: R.J. Boyd
Format: lecture 3 hours
Prerequisite: CHEM 3301.03 or instructor's consent
Cross-listing: CHEM 5301.03

***CHEM 4304.03A: Kinetics and Catalysis.** This class relates the properties of molecules in motion to the rates of chemical changes. Collision, transition state and diffusion theories are applied to significant industrial, biological and atmospheric processes. Photochemistry, and its converse, luminescence, are interpreted. Mechanisms of catalyst activity are discussed.

Instructor: P.D. Pacey
Format: lecture 2 hours
Prerequisite: CHEM 2302.03 or equivalent
Cross-listing: CHEM 5304.03

***CHEM 4305.03B: Introductory Statistical Thermodynamics.** The principles of statistical mechanics are introduced and the relationship between the laws of thermodynamics and the underlying microscopic processes is examined. Wherever possible applications to chemical systems are emphasised. An overview of modern techniques is also given.

Instructor: P.G. Kusalik
Format: lecture 3 hours
Prerequisites: CHEM 2301.03 and 3301.03, or instructor's consent
Cross-listing: CHEM 5305.03

***CHEM 4306.03A or B: Magnetic Resonance.** The basic principles of magnetic resonance will be discussed and reinforced with examples of applications to problems in chemistry and chemical physics. Topics to be discussed include: the magnetic Hamiltonian, chemical shielding, nmr in solids, quantum mechanical approach to spectral analysis of nmr spectra in liquids, epr of organic radicals, relaxation, molecular rate processes, and two dimensional nmr. Students will be assigned problems on a regular basis.

Instructor: R.E. Wasylshen
Format: lectures 3 hours
Prerequisite: CHEM 3301.03 or instructor's consent
Cross-listing: CHEM 5306.03

***CHEM 4307.03A or B: Biophysical Chemistry.** This class gives a theoretical and practical introduction necessary for the application of physical chemistry to life sciences and medicine. Topics include the structure and conformation of biological macromolecules, techniques for the

study of biological structure and function, transport processes and biochemical spectroscopy. The laboratory is on an open basis with at least four experiments to be completed during the term.

Instructor: Staff
Format: Lectures 2 hours, lab 3 hours, alternate weeks
Prerequisite: CHEM 2301.03 and 2302.03 and CHEM 3301.03 and 3302.03 or instructor's consent

CHEM 4401.03A or B: Synthesis in Organic Chemistry. The prerequisite classes provide a foundation of knowledge of many organic reactions that are useful for bringing about specific functional group transformations. This class expands this foundation and shows how these reactions can be combined in well planned, multi-step strategies to synthesize complex molecules. The thought processes involved are illustrated with examples chosen from recently reported syntheses of natural and unnatural products.

Instructor: T.B. Grindley, R.L. White
Format: lectures 3 hours
Prerequisites: CHEM 3401.03 and 3402.03 or equivalents, or instructor's consent
Cross-listing: CHEM 5401.03

CHEM 4402.03A or B or E: Organic Structure Determination. This class continues the study of molecular structure and conformation begun in CHEM 3402.03A, using methods and results from infrared and nuclear magnetic resonance, and mass spectrometry.

Instructor: D.L. Hooper
Format: lecture 3 hours, lab as needed
Prerequisite: CHEM 3402.03
Cross-listing: CHEM 5402.03

CHEM 4403.03A or B: Organic Reaction Mechanisms. The fundamental concepts of bonding, structure, and dynamic behaviour of organic compounds are discussed. The applications of molecular orbital theory and molecular mechanics calculations are introduced. Methods for determining the mechanisms of organic reactions are discussed. Topics considered include applications of kinetic data, linear free energy relationships and acid and base catalysis, concerted reactions and the importance of orbital symmetry, steric effects, solvent effects, and isotope effects.

Instructors: K.T. Lefk
Format: lecture 3 hours
Prerequisites: CHEM 3401.03 and 3402.03 or equivalents, or instructor's consent
Cross-listing: CHEM 5403.03

***CHEM 4501.03A or B: Electronic Instrumentation for Scientists.** This class starts with basic electrical concepts and describes simple ac and dc circuits. Semiconductors are introduced, followed by a discussion of power

supplies and the various types of amplifiers. Chemical instruments are used as examples whenever possible. Practical aspects of electronics such as basic measurements, the use of various electronic instruments, reading circuit diagrams and troubleshooting are emphasized. No knowledge of physics beyond the first year is required.

Instructor: L. Ramaley
Format: lecture 2 hours, lab 3 hours
Prerequisite: CHEM 2201.03
Cross-listing: CHEM 6501.03

***CHEM 4502.03A or B: Polymer Science.** This class will cover aspects of synthesis, analysis, characterization, structure and application of synthetic and naturally occurring macromolecules. Emphasis will be on the application of standard methods of organic synthesis, analytical separations, and physico-chemical characterization. There is no laboratory, but students will do an independent literature project.

Instructor: J.S. Grossert, J.C.T. Kwak
Format: lecture 3 hours
Prerequisites: CHEM 2201.03 and 2301.03 and 2302.03 and 2400.06 or instructors' consent

***CHEM 4503.03A or B: Group Theory in Chemistry.** The theory of abstract groups and their representations, crystallographic and non-crystallographic point groups, and an introduction to space groups are given. Examples from stereochemistry, crystallography and spectroscopy illustrate the theory.

Instructor: Staff
Format: lecture 3 hours
Prerequisite: CHEM 3302.03
Cross-listing: CHEM 5503.03

***CHEM 4504.03A or B: Diffraction Techniques in Solid State Chemistry.** All chemical elements and compounds can exist as crystalline solids. This class will study the arrangements of atoms and molecules in such solids and will examine the methods used to determine these structures. Particular emphasis will be placed on the techniques of X-ray crystallography.

Instructor: T. S. Cameron
Format: lecture 2 hours, lab 3 hours
Prerequisites: CHEM 2101.03 and Math 2000.06 or 2200.06 or equivalent
Cross-listing: CHEM 5504.03

CHEM 4801.03A or B or E: Advanced Major Research Project. This class is designed for those students in the Advanced Major programme who wish to participate in original research. It will consist of a literature or experimental research project on some aspect of chemistry in which the student has an interest. The results of the research will be embodied in a report which shall be graded. Students taking this class must consult with the Coordinator at the beginning or each term.

Coordinator: T.S. Cameron

CHEM 4880.00R: Advanced Topics in Chemistry. A non-credit seminar class to be given by invited speakers. Attendance at all seminars is required of all 4th year Honours Chemistry students.

CHEM 8880.00R: Honours Qualifying Examination. This is an additional class required of all Honours students in Chemistry in order to satisfy regulation 1.3.5 (see Academic Regulations section of this calendar). It should be taken in the final year of a concentrated chemistry honours programme. All honours students, whether in a concentrated or unconcentrated programme, must consult with the professor in charge of the Honours Thesis Programme.

Coordinator: T.S. Cameron

Introduction

Classics is the study of origins - how the Christian-European tradition arose out of the ancient civilizations of the Mediterranean area. The fundamental ideas and beliefs of Europeans and North Americans, by which they are distinguished from Chinese, Indians, and those of other traditions, were formed in the meeting of Greek and Oriental cultures in ancient times. To understand fully contemporary Western culture, we must study its historical origins. The Department of Classics actively encourages students of all backgrounds and traditions to participate in the study of the classical heritage.

Such an understanding of the unique aspects of Western culture is most important in the contemporary world where all cultures have come into relation with one another.

Classics is the study of the intellectual forces that have shaped our civilization, and to understand fully the assumptions and ideas of that civilization we have to go back to their original formulation. Our literary forms, the shape of our political and social institutions, such disciplines as Philosophy, History, and

many of the Natural Sciences all originated and took shape in the ancient cultures of Greece and Rome.

Classics is thus more than the study of ancient languages. Languages are not learned for themselves, but because they are necessary for the scientific study of ancient history, literature, religion, mythology and philosophy. The Classics Department at Dalhousie provides instruction both in these subjects and in ancient languages. While previous preparation in one or more ancient languages is desirable, it is nevertheless quite feasible for students who discover an interest in classics to begin their language studies at university.

Students of classics must learn Greek and Latin if they wish to take an honours degree or to go on to graduate studies in the field, but the Department offers a variety of classes in Greek and Roman Literature, Ancient and Medieval Philosophy, Ancient and Christian Religion, and general Classical Culture, which do not require a foreign language.

Classics is worth studying for its own sake by students who wish to obtain a better understanding of the common assumptions and beliefs of Western society. This knowledge has always been regarded as pertinent to a career in politics and the higher levels of the civil service. For those who are thinking of the clergy, Classics is the most relevant preparation. Classical studies also prepare students for a life of teaching and scholarship in several directions. Canada is responsible for its own culture, and we have great need of scholars and teachers who know about its origins. Classics is also the best preparation for the study of non-European cultures (Chinese, Indian, Islamic, etc.), and there is a growing need for specialists in these fields. For the older history of philosophy, and for the history of Christian belief until, and including, the Reformation, a knowledge of Classics is indispensable. The same may be said for Medieval Studies. Classics leads also to ancient Near Eastern Studies (Jewish, Babylonian, Egyptian, etc.) and to Archeology.

Degree Programmes

See "Degree Requirements" section for complete details.

Honours in Classics

The candidate may choose between three programmes: BA with Honours in Classics (Ancient Literature), BA with Honours in Classics (Ancient History), or BA with Honours in Classics (Ancient Philosophy). In each case, it is highly desirable, but not essential, that the student begin the study of at least one of the classical languages during the first year of study. For purposes of meeting grouping requirements,

some Ancient and Medieval Philosophy classes may be counted either as Classics credits, or Philosophy credits.

Departmental Requirements

Classes required in Honours:

- 2000 level:** Six to eight credits at or above the 2000 level in Classics
- 3000 level:** At least three credits at 3000 level or higher in Classics must include work in Greek or Latin at the 3000 level in one and at the 2000 level in the other

Whether the Honours degree is awarded in Ancient Literature, History or Philosophy depends on the area of the Department's offerings in which a larger part of the work is done.

Candidates for Honours and Combined Honours degrees who anticipate continuing their studies at the Graduate level in Classics should consult the calendars of the Graduate Schools of their choice concerning requirements for entry into Graduate programmes. It may be the case that additional preparation in the classical languages or in other aspects of ancient civilizations is required for entry into certain programmes.

Combined Honours

Classics may be taken as part of a combined honours programme with other disciplines. Students interested in such programmes should consult with the undergraduate advisors of the respective departments.

Advanced Major in Classics (20 credit)

Departmental Requirements

Classes required in Advanced Major:

- 2000 level:** Three to six credits at or above the 2000 level in Classics
- 3000 level:** At least three credits at or above the 3000 level in Classics

Other requirements:

Usually two language classes in Greek and/or Latin are required.

Major in Classics, BA (15 credit)

Departmental Requirements

Classes required in major:

- 2000 level:** Two to six credits at or above the 2000 level
- 3000 level:** At least two credits at or above the 3000 level

The Department is glad to assist students in working out programmes according to their interests.

Note: The following classes satisfy the first-year writing requirements for a degree: CLAS 1000.06; CLAS 1010.06; CLAS 1100.06.

The programmes of all students majoring or honouring in the Department must be approved by the Undergraduate Advisor.

Classes Offered

Note: Classes marked * are not offered every year. It is advisable to inquire at the Classics Department (494-3468) to determine if these classes are offered.

Note: The Introductory classes, and the more elementary classes in Ancient History and Religions, and Classical Philosophy listed below do not require knowledge of the ancient languages. However, students who plan to do advanced work in any of these areas are advised to begin study of the appropriate languages as early as possible.

CLAS 1000.06R: Classical Literature. An introduction to classical literature, read in English translations. Authors studied are Homer, the Greek Tragedians, Plato, Vergil and St. Augustine. This class meets the first year writing requirement.

Instructors: W. Hankey

Format: Writing Requirement, lecture 2 hours

CLAS 1010.06R: Ancient History: An Introduction to the Cultural History of the Ancient World. The first term is devoted to a study of the major pre-classical civilizations (Mesopotamian, Egyptian, Hebrew, etc.) with attention paid to the art, religion and social forms of these cultures as well as their political development. In the second term the civilizations of Greece and Rome are studied, as well as their issue in the Early Christian world. As the class is intended as an introductory one, no special preparation is expected. There is no foreign language requirement. This class fulfils the first year writing requirement.

Instructor: D. K. House

Format: Writing Requirement, lecture 2 hours

***CLAS 1021.03A: Ancient Art. Greece and the Ancient Near East:** Aided by slides and films, in addition to lectures and readings, this class will study the origin and development of ancient art in Greece, Mesopotamia and Egypt to the end of the Hellenistic period.

Instructor: G. Thomas (this is given at St. Mary's University)

Format: Lecture 3 hours

***CLAS 1022.03B: Ancient Art. Rome and Christian Europe:** Aided by slides and films, in addition to lectures and readings, this class will study the art of Ancient Rome after the Hellenistic period and of the Christian world to the end of the 14th century.

Instructor: W. J. Hankey

Format: Lecture 3 hours

CLAS 1100.06R: Classical Mythology. Why has the mythology of the world of classical Greece and Rome been so central a part of the artistic, intellectual and religious culture of the Western world? This course explains the origin, meaning and importance of classical mythology. During the first term, work begins with a survey of pre-classical mythology: this is explored through myths of the origin and creation of the natural world; here the early cultures of the Sumerians, the Egyptians and the Jews are studied. After a historical lecture on the origins of Indo-European mythology, attention turns to the world of Mycenaean and Early Classical Greece; the works of Hesiod, and the myths of Prometheus are particularly closely considered in this section.

In the New Year the understanding of the human world (community & family) through myth is the principal pre-occupation; here the *Iliad* of Homer, the *Aeneid* of Virgil (for the Romans) and the *Oedipus* plays of Sophocles are the texts through which the mythological consciousness is analysed. The course concludes with a consideration of why the Greeks broke away from the world of myth and began to understand nature and human culture through science and philosophy. This class fulfils the first year writing requirement.

Instructor: J. P. Atherton
Format: Writing Requirement, lecture 2 hours

CLAS 1700.06R: Introductory Greek. An introduction to Classical Greek. Greek is a highly inflected language and as such presents English-speaking students with a number of challenges not found in most modern languages. This class introduces the student in a systematic way to the most common and important elements of Classical Greek grammar. The aim of the class is to bring the student by the end of the year to read connected passages from Xenophon and other Greek prose writers.

Instructor: Staff
Format: Lecture 3 hours

CLAS 1800.06R: Introductory Latin. An introduction to Latin through the study of its basic grammar. The aim of the class is to enable students to read Latin texts with the assistance of nothing more than a Dictionary.

Instructor: P.J. Calkin
Format: Lecture 3 hours

CLAS 2000.06R: Classical Literature. An introduction to classical literature, read in English translations. Authors studied are Homer, the Greek Tragedians, Plato, Vergil and St. Augustine. This class is the same as CLAS 1000.06R and may therefore not be taken by anyone who has taken that class.

Instructors: W. Hankey
Format: Lecture 3 hours

CLAS 2100.06R: Classical Mythology. Why has the mythology of the world of classical Greece and Rome been so central a part of the artistic,

intellectual and religious culture of the Western world? This course explains the origin, meaning and importance of classical mythology. During the first term, work begins with a survey of pre-classical mythology: this is explored through myths of the origin and creation of the natural world; here the early cultures of the Sumerians, the Egyptians and the Jews are studied. After a historical lecture on the origins of Indo-European mythology, attention turns to the world of Mycenaean and Early Classical Greece; the works of Hesiod, and the myths of Prometheus are particularly closely considered in this section.

In the New Year the understanding of the human world (community & family) through myth is the principal pre-occupation; here the *Iliad* of Homer, the *Aeneid* of Virgil (for the Romans) and the *Oedipus* plays of Sophocles are the texts through which the mythological consciousness is analysed. The course concludes with a consideration of why the Greeks broke away from the world of myth and began to understand nature and human culture through science and philosophy. This class is the same as CLAS 1100.06R and may therefore not be taken by anyone who has taken that class.

Instructor: J. P. Atherton
Format: Lecture 2 hours

***CLAS 2200.06R: Ancient History.** The Ancient City: An introduction to Ancient History through a study of the constitutions of the Greek city states (especially Athens) and of Rome. Basic texts, such as Aristotle's *Athenian Constitution*, are read in English translation. This class is open to first-year students. There is no foreign language requirement. This class is given alternately with CLAS 2210.06.

Instructor: P. F. Kusmaul
Format: Lecture 2 hours

***CLAS 2210.06R: Roman History: The Roman Empire and the Rise of Christianity.** A continuation of the introduction to Ancient History through a study of the institutions and constitutional arrangements of the Roman Empire from the time of Augustus. The relation of the Empire to Christianity is a topic of primary interest. This class is given alternately with CLAS 2200.06R and, like it, is open to first-year students. There is no foreign language requirement.

Instructor: P. F. Kusmaul
Format: Lecture 2 hours

CLAS 2361.03A/CLAS 2362.03B: Ancient Philosophy from its Beginning to the 5th Century AD. Proper attention is paid to the great classical philosophies of Plato and Aristotle studied in their historical context. Much emphasis is laid on the Greek philosophy of the first centuries AD and its influence on developing Christian thought. The first half considers the history from the Pre-Socratics to Plato. The second half moves from Aristotle to Plotinus.

Instructors: J. P. Atherton/W. J. Hankey

Format: Lecture 2 hours
 Cross-listing: PHIL 2361.03/2362.03
 Exclusion: CLAS 3361.03/3362.03

***CLAS 2501.03A: Introduction to Classical Rhetoric.** In recent years rhetoric has attained great importance and significance for literary criticism and theory as well as for philosophy. The system of rhetoric and its terminology were developed and completed by the Greeks and Romans; therefore, Classical Rhetoric forms the basis of all modern approaches to rhetorical practice and theory. This class is intended to introduce the student to the system and to the central terms of rhetoric, as they have been developed and shaped in the relevant texts of Greek and Roman authors. All texts will be studied in English translation.

Instructor: R. Friedrich
 Format: Seminar/Lecture 3 hours

CLAS 2700.06R: Intermediate Greek. A continuation of CLAS 1700.06R and the normal second year class in Greek. The work of the class is divided equally between formal grammar sessions and the reading of Greek texts from Xenophon, Lysias and Plato. In the grammar sessions a complete and systematic review of all Greek grammar is undertaken during which the student meets the more difficult forms and constructions which are omitted in CLAS 1700.06R. The aim of the class is to prepare the student to read the philosophical and dramatic texts of the 5th century BC.

Instructor: P.J. Calkin
 Format: Seminar 3 hours
 Prerequisite: CLAS 1700.06 or 2710.06

CLAS 2710.06R: Greek Prose. A study of Greek grammar through the reading of Greek prose authors (Xenophon, Lysias).

Prerequisite: any 1000 level Classics class or equivalent.

Instructor: Staff
 Format: Seminar 3 hours
 Prerequisite: Any 1000 level Classics class or equivalent

CLAS 2800.06R A: Study of Latin Prose and Poetry. CLAS 2800.06R is a continuation of CLAS 1800.06R or CLAS 2810.06R. A study of the poetry and prose literature of Rome through a selection of texts. Particular attention is paid to improving the students' command of the grammar and syntax of the Latin language.

Instructor: P. F. Kusmaul
 Format: Seminar 2 hours
 Prerequisite: CLAS 1800.06 or 2810.06

CLAS 2810.06R: Latin Prose. A study of Latin accidence and syntax through the reading of Roman prose authors (Caesar, Cicero).

Instructor: P.J. Calkin
 Format: Seminar 3 hours
 Prerequisite: Any 1000 level Classics class or equivalent

***CLAS 2860.06R: Latin Historical Texts.**

Instructors: J. P. Atherton/P. F. Kusmaul
 Format: Seminar 2 hours
 Prerequisite: 1800.06 or 2810.06

***CLAS 3280.06R: Christian Beginnings and the Early History of the Church.**

Format: Seminar 2 hours
 Cross-listing: CLAS 5708.03

***CLAS 3300.06R: Pagan and Christian Schools from Clement of Rome to Augustine.** The class considers the mutual effect of pagan and Christian intellectual, spiritual and institutional forms on one another in the first four centuries of the Common Era. In particular it treats the way in which the pagan schools and the Christian church mirror one another: the common elements and their opposed systematic relations. Students will ordinarily have some background in Ancient History and Philosophy.

Instructor: W. J. Hankey
 Format: Lecture 2 hours

***CLAS 3370.06R: The Augustinian Tradition.** The class considers the effect of Augustine on the philosophical and theological thought of late Antiquity and the Middle Ages. The relation to the Prodean Neoplatonism transmitted through Pseudo-Dionysius is a special concern. Texts from Dionysius, Eriugena, Anselm, Bonaventure, Aquinas and Cusanus are analysed. Students will ordinarily have begun either Greek or Latin though others may be admitted by permission.

Instructor: W. J. Hankey
 Format: Lecture 2 hours
 Cross-listing: CLAS 5370.06

CLAS 3380.06R: Medieval Philosophy. A study of the development of philosophy in the formative age of European civilization related to political, institutional, literary and theological concerns. An attempt is made to show how the legacy of classical and Christian antiquity was appropriated and reformed to constitute the ideology of medieval Christendom. The lectures are devoted mainly to the study and discussion of a few fundamental texts, beginning with Boethius' *Consolation of Philosophy*. Special attention is given to Anselm's *Proslogion* and the first few questions of Thomas Aquinas' *Summa*. It is the object of lectures to present the continuity of the historical development and to emphasize broad implications of the philosophical doctrines presented in the texts. In the later part attention is given to late medieval Platonism and Mysticism, to show something of the Reformation and modern philosophical and religious thought.

Instructor: R. D. Crouse
 Format: Lecture 2 hours
 Cross-listing: PHIL 2380.06

***CLAS 3400.06R: The Dialogues of Plato.** This seminar involves the detailed study of a group of dialogues. The choice of dialogues varies from year to year.

Instructor: D. K. House

Format: Seminar 3 hours
 Cross-listing: CLAS 5603.06

***CLAS 3410.06R: St. Augustine's Confessions.** A study of the three parts of Augustine's Confessions with a view to understanding his dissatisfaction with the various positions he adopted prior to his conversion to Christianity (Part I), the practical consequences of this conversion (Part II), and the new theoretical understanding of time, space and motion which come out of his Trinitarian exegesis of the first chapters of Genesis (Part III). This class presupposes some knowledge of the history of Ancient Philosophy, and some of Latin. This class is given alternately with CLAS 3420.06.

Instructor: C. J. Starnes
 Format: Seminar 2 hours
 Cross-listing: CLAS 5705.06

***CLAS 3420.06R: St. Augustine's City of God.** A study of Augustine's account of the failure of the Roman Empire and of the new Christian 'city' that replaced it. The class sometimes concentrates on the entire twenty-two books of the City of God and sometimes begins with a study of earlier accounts of Rome (Aeneid), and of the relations of Rome and the church in, for example, the Apostolic Fathers, the Acts of the Martyrs and Tertullian, before turning to the first ten books of the City of God. This class is given alternately with CLAS 3410.06.

Instructor: C. J. Starnes
 Format: Seminar 2 hours
 Cross-listing: CLAS 5706.06

CLAS 3470.06R: Reading and Research.
 Ancient Literature

CLAS 3480.06R: Reading and Research.
 Ancient History

CLAS 3490.06R: Reading and Research.
 Ancient Philosophy

***CLAS 3500.06R: Aristotle.** This seminar involves the detailed study of either Aristotle's *Metaphysics* or *De Anima* or *Physics* or ethical and political treatises. The choice of texts varies from year to year.

Instructor: D. K. House
 Format: Lecture/Seminar 2 hours
 Recommended background: CLAS 2361.03/2362.03
 Cross-listing: CLAS 5602.06

CLAS 3510.06R: Ancient and Modern Drama I. Ancient and Modern Drama is a study of Western drama from its ritual beginnings in ancient Greece to its 20th century forms. It is presented in two parts, each forming a full credit class. However, both parts (CLAS 3510.06 and 3511.06) are designed in such a way that they can be taken independently from one another. Ancient and Modern Drama I deals with ancient drama and theatre: their beginnings in the Dionysian ritual; the Dionysian festivals; production and stage conventions. The aim of this class is a study of Greek and Roman plays,

both tragedies and comedies, by Aeschylus, Sophocles, Euripides, Aristophanes, Menander, Plautus, Terence and Seneca. This study will be accompanied by readings from Aristotle's *Poetics* and Horace's *Art of Poetry*. All texts will be studied in English translation. This class is given alternately with CLAS 3511.06.

Instructor: R. Friedrich
 Format: Seminar 2 hours
 Recommended: CLAS 2000.06

***CLAS 3511.06R: Ancient and Modern Drama.**
 Format: Seminar 2 hours

CLAS 3700.06R: Advanced Greek. This class which reads both a prose and a poetic work is the normal third class in Greek.

Instructors: D. K. House/R. Friedrich
 Format: Seminar 2 hours
 Prerequisite: CLAS 2700.06

***CLAS 3710.06R: Greek Epic.**

Instructor: R. Friedrich
 Format: Seminar 2 hours
 Prerequisite: CLAS 2700.06
 Cross-listing: CLAS 5010.06

***CLAS 3720.06R: Greek Lyric.**

Instructor: Staff
 Format: Seminar 2 hours
 Prerequisite: CLAS 2700.06
 Cross-listing: CLAS 5013.06

***CLAS 3730.06R: Greek Drama: Tragedy.**

Instructor: R. Friedrich
 Format: Seminar 2 hours
 Prerequisite: CLAS 2700.06
 Cross-listing: CLAS 5011.06

***CLAS 3750.06R: Greek Authors.**

Format: Seminar 2 hours
 Prerequisite: CLAS 2700.06
 Cross-listing: PHIL 3750.06

CLAS 3760.06R: Reading and Research of Greek Texts.

Format: Seminar 2 hours
 Prerequisite: CLAS 2700.06

***CLAS 3780.06R: Greek Historians.**

Format: Seminar 2 hours
 Prerequisite: CLAS 2700.06
 Cross-listing: CLAS 5032.06

CLAS 3791.03A or B: Reading and Research

Format: Seminar 2 hours
 Prerequisite: CLAS 2700.06

***CLAS 3800.06R: Roman Satire.**

Instructor: P. F. Kusmaul
 Format: Seminar 2 hours

CLAS 3810.06R: A Study of Vergil. A study of the development and importance of Vergil's basic themes and ideas embodied in the *Aeneid*. In the first part of the class special attention is given to his early work the *Bucolics*, where his themes begin to appear, and their development is then followed through the relevant parts of the *Georgics*. The main part of the class is devoted to the reading and discussion of the chief themes of

the *Aeneid*, especially as they illustrate Roman political, religious and social ideas which have greatly influenced our own beliefs and institutions.

Instructors: J. P. Atherton/R. Friedrich
Format: Seminar 2 hours
Prerequisite: A class in Latin at the 2000 level
Cross-listing: CLAS 5040.06

CLAS 3820.06R: Advanced Reading in Latin Literature.

Format: Seminar 2 hours
Prerequisite: CLAS 2800.06

***CLAS 3840.06R: Latin Philosophical Texts.**

The purpose is to give students experience in reading philosophical Latin. Various authors are read from Cicero to the late Middle Ages.

Instructor: R. D. Crouse
Format: Seminar 2 hours
Prerequisite: CLAS 2800.06
Cross-listing: CLAS 5890.06

CLAS 3850.06R: Reading and Research of Latin Texts.

Format: Seminar 2 hours
Prerequisite: CLAS 2800.06

***CLAS 3900.06R: Philosophy of Aristotle.** The general scope of the Aristotelian Philosophy - the understanding of nature, the City, the aesthetic experience of humanity - is considered in relation to the argument of the *Metaphysics* or 'First Philosophy'. Given alternately with CLAS 3910.06.

Instructor: J. P. Atherton
Format: Seminar 2 hours
Cross-listing: CLAS 5604.06

***CLAS 3910.06R: Neoplatonism: Plato and Neoplatonism.** The philosophy of Plotinus and later thinkers considered as the resume of Greek Philosophy; in particular the role of Plato and other older philosophers in the formation of Neoplatonism is a principal interest. Given alternately with CLAS 3900.06.

Instructor: J. P. Atherton
Format: Seminar 2 hours
Recommended: CLAS 2361.03/2362.03
Cross-listing: CLAS 5605.06

***CLAS 4200.06R: Ancient Practical Philosophy.**

Format: Seminar 2 hours
***CLAS 4320.06R: Ancient and Modern Dialectic.**

Format: Seminar 2 hours
***CLAS 4400.06R: Philosophy of the Church Fathers.**

This seminar involves the detailed study of a text, or group of texts, from one or more of the Greek or Latin Church Fathers. The choice of text varies from year to year, in relation to the needs and interests of students. Given alternately with CLAS 4450.06.

Instructor: R. D. Crouse
Format: Seminar 2 hours
Cross-listing: CLAS 5700.06

***CLAS 4450.06R: Medieval Interpreters of Aristotle.** The precise topic of this seminar is

chosen in consultation with prospective students. For example, it might concentrate upon the interpretation of a work of Aristotle by Thomas Aquinas, or Albert the Great, or Dante. Given alternately with CLAS 4400.06.

Instructor: R. D. Crouse
Format: Seminar 2 hours
Cross-listing: CLAS 5701.06

***CLAS 4500.06R: Seminar on Neoplatonism.** Major Neoplatonic systems, pagan and Christian, are considered from Plotinus to Cusanus.

Instructor: W. J. Hankey
Format: Seminar 2 hours

CLAS 4530.06R: Seminar on the Roman Empire and the Rise of Christianity. Selected topics from the transition from Classical to Christian culture are studied. Particular attention is paid to the connection between religious innovation and the effect of the new beliefs on literature, art and philosophy.

Instructor: P. F. Kusmaul
Format: Seminar 2 hours
Cross-listing: CLAS 5530.06

CLAS 4580.06R: Reading and Research

CLAS 4680.03A/4690.03B: Reading and Research

CLAS 4710.03A/4720.03B: Special Topics

CLAS 4800.06R: Reading and Research

CLAS 4810.03A/4820.03B: Special Topics

CLAS 4850.06R: Reading and Research

CLAS 4900.06R: Departmental Seminar:
Format: Seminar 2 hours

CLAS 4910.06R: Departmental Seminar.
Format: Seminar 2 hours

CLAS 0400.00R: Honours Seminar. In order to obtain their Honours degree, students must complete twenty credits plus the Honours Seminar and pass the exam at the end of it. This is a non-credit class which meets every two weeks. Details available from the department. Note: Students are not required to take all units of this class in one year but may spread them out over two or three years to suit their individual programmes.

Instructor: R. Friedrich et al
Format: Seminar
Prerequisite: CLAS 2810.06 and CLAS 2710.06

Classes in Ancient Hebrew, Coptic, Syriac and Arabic, are sometimes available as electives at the discretion of the Department, only in relation to the needs of the particular student.

Commerce

School of Business Administration

Location: 6152 Coburg Road
 Telephone: (902) 494-7080
 Fax: (902) 494-1107

The School of Business Administration offers a curriculum of undergraduate and graduate studies designed to equip students to serve the community in business, government, and the professions.

The undergraduate commerce programme includes studies in the humanities and social sciences as well as in the functional areas of business. It is offered on a co-operative education (work/study) basis.

In co-operation with the Faculty of Arts and Social Sciences, the School also offers a Bachelor of Arts, Advanced Major or Honours, with a Minor in Business.

Bachelor of Commerce

The School of Business Administration offers the undergraduate Bachelor of Commerce degree, which is a four-year programme. Starting in September 1991, the Bachelor of Commerce was changed to a mandatory co-operative education programme which allows students to combine relevant work experience with academic studies. The schedule for the Bachelor of Commerce Co-op includes seven academic terms (AT) and three work terms (WT), as follows:

Yr/Term	Fall	Winter	Summer
1	AT1	AT2	FREE
2	AT3	WT1	AT4
3	WT2	AT5	WT3
4	AT6	AT7	

Students enrolled before September 1991 will be able to continue the regular Bachelor of Commerce programme. Such students should consult the Calendar for the year they entered the commerce programme. For further information, contact the Director, Academic Programmes, School of Business Administration, 6152 Coburg Road, (902) 494-7080.

The co-op programme in Commerce requires a broad and general range of studies, including required and elective classes provided by the College of Arts and Science. The programme also allows students to choose a measure of concentration in a variety of special areas.

The three workterms each receive ½ credit, but constitute a full work load. (See the Regulations section of this calendar for "overload" limits and conditions.)

The programme of studies for the Bachelor of Commerce Co-op is the programme described in detail in this calendar. Students who are qualified may join the programme at the beginning of the second year, and will be charged a transfer fee. (See Admissions and/or Fees section of this calendar)

Degree Requirements

- 4 year programme includes 7 academic terms and 3 work terms
- Total credits required - 20
- Required GPA for graduation - 2.00
- Required core area classes - 10 credits:

COMM 1000.03, 1501.03, 2101.03, 2102.03, 2201.03, 2301.03, 2302.03, 2401.03, 2501.03, 2502.03, 2601.03, 2701.03, 3501.03, 4350.06

ECON 1101.03 and 1102.03; and 2200.03 or 2201.03

Math 1000.03 and 1010.03 or 1110.03 and 1120.03

- Core area electives - 4 credits selected from Commerce, Economics, Mathematics, Statistics and Computing Science
- Non-Commerce electives - 3 credits selected from all classes offered except Commerce
- Free electives - 1½ credits select from all classes offered above the 1000 level, except with School approval
- Workterms - 1½ credits

Note: Due to the growing awareness of the importance of ethics and language in the education of business managers, the School highly recommends that students consider taking Philosophy 2080.06 or 2081.03: Ethics in the World of Business, and at least one class in French, German, Russian, or Spanish amongst their non-Commerce or Free electives.

Courseware Development Project

The School of Business Administration prides itself on the use of computers in all aspects of the curriculum. Initiated under the auspices of the Courseware Development Project, the prime objectives are to bring the most advanced information technology into the classrooms and to make hardware and software resources available to the students. This initiative was made possible through generous contributions from several Canadian corporations, as well as continuing support of the Capital Campaign for Dalhousie and the Annual Fund Campaign. Through this support the School of Business Administration has become a recognized world leader in the use of information technology.

Currently all faculty members and staff have their own personal computers and students have access to a computer lab with 60 personal computers. All personal computers in the School are based on the Intel 486 family of processors. They are fully networked and running Windows software and applications. All personal computers are linked through ethernet connections to the School's two MicroVAXes, scientific workstations, as well as a host of other computers on campus. Through internet connections there is also access to thousands of computers throughout the world.

Programme Guide

For their first four academic terms, students normally follow a fixed programme of study, as outlined below:

Academic Term One
 COMM 1000.03
 ECON 1101.03

MATH 1000.03 or 1110.03
3 non-Commerce electives

Academic Term Two

COMM 1501.03

ECON 1102.03

MATH 1010.03 or 1120.03

3 non-Commerce electives

Academic Term Three

COMM 2101.03

COMM 2301.03

COMM 2401.03

COMM 2501.03

ECON 2200.03 or 2201.03

Academic Term Four

COMM 2102.03

COMM 2302.03

COMM 2701.03

COMM 2502.03

COMM 2201.03

During their fifth, sixth and seventh academic terms, students can either pursue a general programme of study, by choosing electives from a wide range of the functional areas of business, or they can follow a more specialized programme, taking their elective classes in particular areas of concentration. (Note that the Commerce programme does not have formal Majors or Minors).

The School currently offers the following Areas of Concentration:

- Accounting
- Finance (combined with either Accounting, Economics or International Business)
- Marketing/Distribution
- Information Systems

Interested students should refer to the Programme Planning Guides which are available from the School before beginning their fifth academic term.

In addition, well qualified students may be able to pursue an Honours programme in one of the following areas of study:

- Accounting
- Finance
- Human Resource Management
- Marketing/Distribution
- Information Systems
- International Business

Students wishing to pursue an Honours programme should meet with the Director of Academic Programmes before beginning their fifth academic term.

The professional accounting bodies allow certain exemptions in respect of classes taken in the School of Business Administration. These differ from province to province. Particulars can be obtained from the provincial offices of the Association of Certified General Accountants, the Society of Management Accountants, and the Chartered Institute of Secretaries. In Atlantic Canada, the Atlantic School of Chartered Accountancy provides the pre-qualification

education for the CA profession, and can advise which of the classes completed at Dalhousie are accredited for their purposes.

Classes Offered

Note: Check the current timetable to determine in which term(s) each class is offered. It may not be possible to offer all the electives listed below in every year. Students should bear this in mind when planning their programme.

COMM 1000.03: Introduction to Business. This class is designed to introduce the student to the various aspects of business and the areas of study within it, including economic systems, entrepreneurship, marketing, management, accounting, and finance. A wide range of teaching-learning methods are applied, including lectures, seminars, computer simulations, case discussion, and business games. The class prepares the student for the more rigorous treatment of functional topic areas in subsequent classes and establishes a business person's perspective.

Format: lecture 1½ hrs per week, tutorial/seminar 1½ hrs per week

COMM 1101.03: Introductory Accounting I: for Non-Commerce students. An introduction to the principles and practices used by accountants in processing and communicating data both within and outside the entity. Emphasis is on financial statement accounting and reporting, with the following objectives:

- (1) to introduce the theoretical framework upon which financial statement accounting is based, and examine its major underlying principles;
- (2) to examine basic financial accounting methodology, and develop the analytical and procedural skills related thereto;
- (3) to develop an understanding of the information content of conventional financial statements, and an appreciation of the inherent limitations of accounting information.

Format: Regular lecture method: two 90-minute lectures per week, plus a 90-minute weekly tutorial, as required. Selected computer exercises may be part of the class, requiring some time to be spent in the Computer Lab.

Exclusion: Credit can be given for only one of COMM 1101.03 and COMM 2101.03

COMM 1102.03: Introductory Accounting II: for Non-Commerce students. Emphasis is placed on the need for accounting information by managers, with the following objectives: (1) to develop an understanding of the kinds of accounting information managers need; (2) to introduce managerial accounting methodology and develop the analytical and procedural skills

related thereto; (3) to introduce accounting reports which are useful for management planning, control and decision-making; (4) to develop an awareness of the limitations of managerial accounting information.

Format: Two 90-minute lectures per week; written and perhaps computer-based assignments

Prerequisite: COMM 1101.03

Exclusion: Credit can be given for only one of COMM 1102.03 and COMM 2102.03

COMM 1501.03: Introduction to Computers in Business Management. The goal of this class is to enable students to be immediately productive within an information processing system.

Successful completion of this class will provide students with a clear understanding of computers and how they may be incorporated into a business environment, as well as a proficiency with an integrated Windows-based word processing, spreadsheet, database and presentation software suite. The class combines traditional lectures with a completely self-paced, computer-managed, instructional environment, including on-line tutorials, quizzes and electronic mail. It is strongly recommended that students complete this class in their first year of study.

Format: Lectures/computer labs, 3 hours

Exclusions: Credit can be given for only one of COMP 1000.03 and COMM 1501.03.

Note: COMM 1501.03 is designed specifically for students enrolled in Commerce, and COMP 1000.03, 1200.03 or 1400.03 are not eligible as substitutes for COMM 1501.03.

COMM 2101.03: Introductory Accounting I: for Commerce students. An introduction to the principles and practices used by accountants in processing and communicating data both within and outside the entity. Emphasis is on financial statement accounting and reporting, with the following objectives:

- (1) to introduce the theoretical framework upon which financial statement accounting is based, and examine its major underlying principles;
- (2) to examine basic financial accounting methodology, and develop the analytical and procedural skills related thereto;
- (3) to develop an understanding of the information content of conventional financial statements, and an appreciation of the inherent limitations of accounting information.

Format: Regular lecture method: two 90-minute lectures per week, plus tutorials, as required. Selected computer exercises are part of the class, requiring some time to be spent in the Computer Lab.

Exclusion: COMM 1101.03

COMM 2102.03: Introductory Accounting II: for Commerce students. Emphasis is placed on the need for accounting information by managers, with the following objectives: (1) to develop an understanding of the kinds of accounting information managers need; (2) to introduce managerial accounting methodology and develop the analytical and procedural skills related thereto; (3) to introduce accounting reports which are useful for management planning, control and decision-making; (4) to develop an awareness of the limitations of managerial accounting information.

Format: Two 90-minute lectures per week; written and computer-based assignments

Prerequisite: COMM 2101.03

Exclusion: COMM 1102.03

COMM 2110.03: Accounting Information Systems. This class provides a basic understanding of information systems, especially accounting information systems. It builds on material learned in COMM 1501.03, dealing with various hardware and software issues not covered in that class. The class emphasizes the topics of systems analysis, design, control and evaluation, and topics related to database systems. In addition, the class involves instruction in, and the use of, various computer programmes such as spreadsheets, databases and wordprocessors.

Format: Ranges from 3 hours of lectures per week to no classroom time, with extensive computer conferencing

Prerequisites: COMM 1101.03 or 2101.03, 1102.03 or 2102.03, 1501.03; computer- and accounting-related work experience often provides an adequate background for this class; see instructors for further information.

COMM 2201.03: Introduction to Managerial Finance. An introduction to the problems business managers face in the acquisition and effective use of the firm's financial resources, and analytical concepts for evaluating financial decisions. How the firm can achieve successful interaction with its external environment and make an appropriate contribution to the operation of the economy is considered. Topics covered: time value of money; present value; financial ratio analysis; working capital management; and long-term financial decisions.

Format: Lecture 1.5 hours; tutorial 1.5 hours

Prerequisites: COMM 1000.03, 1101.03 or 2101.03; ECON 1101.03 and 1102.03

Co-requisite: COMM 1102.03 or 2102.03

COMM 2301.03: Organizational Behaviour. Insight into human behaviour in organizations and capacity for objective analysis is developed.

Research and text material drawn from the fields of sociology, anthropology and psychology are used in the development of understanding and objectivity. Case material and substantive data from the behavioral sciences are considered. Covers such major topics as motivation, group behaviour, individual differences, personality, perception, communications, leadership, inter-group behaviour, conflict management, job design, corporate culture, learning and creativity.

Format: lecture 1.5 hours; tutorial 1.5 hours

Prerequisites: COMM 1000.03 and 1501.03, ECON 1101.03 and 1102.03

COMM 2302.03: Organizational Theory and Design (formerly 3302.03). Surveys both theory and research pertaining to complex organizations with emphasis on design, structure and administrative practices in the environmental setting and how the interaction of these variables relates to organizational performance. Concomitant with this exposure to theory and research, students have the opportunity to apply this knowledge to case studies relevant to complex organizations. Emphasis is on the analysis of case studies and the formulation of general solutions and decisions for action. Covers such topics as bureaucracy, function-product structures, matrix structure, organizational goal-setting, organizational design and ethics, organizational decision-making, communications, control, management of change and innovation, new corporate designs, computer technology and organizational design.

Format: Lecture 3 hours

Prerequisite: COMM 2301.03

Exclusion: COMM 3302.03 (formerly)

COMM 2401.03: Introduction to Marketing. The student receives a basic understanding of the character and scope of marketing and its role in business operations and in society, with focus upon the concepts and techniques an organization must employ to anticipate and satisfy consumer needs. Emphasis is placed on the tools available for the marketing manager, the problems to be confronted, and the development of understanding and analytical ability in the following: the role of the consumer; product-line development; channels of distribution; pricing systems; selling and promotional activities. Case materials and problem sets are used to give insight into the analytical tools used in problem analysis and decision-making.

Format: lecture/discussion, 3 hours

Prerequisites: COMM 1000.03 and 1501.03; ECON 1101.03 and 1102.03

Co-requisite: COMM 1101.03 or 2101.03

Exclusions: students cannot receive credit for both COMM 2401.03 and 1401.03 (as this class was formerly numbered)

COMM 2501.03: Statistics for Business I. An introduction to the principles and applications of statistics relevant to business and economics, with emphasis on making inferences based on observed data. Topics covered include descriptive statistics, probability, random variables, decision theory, estimation, hypothesis testing, statistical software.

Format: Lecture 3 hours

Prerequisite: COMM 1000.03 and 1501.03; ECON 1101.03 and 1102.03

Exclusions: Mathematics 1060.03, 2060.03; Statistics 1060.03, 2060.03; ECON 2260.03

COMM 2502.03: Statistics for Business II. A continuation of COMM 2501. Topics covered include ANOVA, chi-square, non-parametric statistics, regression and correlation, time series, index numbers, an introduction to the use of statistical packages on the computer, and management uses of statistical data.

Format: Lecture 3 hours

Prerequisites: COMM 2501.03 or MATH 1060.03 or 2060.03, or STAT 2060.03, or ECON 2260.03

Exclusions: MATH 2080.03, STAT 2080.03, ECON 2280.03

COMM 2601.03: Legal Aspects of Business - Contracts. This class provides an appreciation of some of the legal problems that might be faced by the business community. It examines the meaning and sources of law, the machinery of justice, the law of torts, the formation of contracts, capacity to contract, legality of object, mistake, undue influence, duress, misrepresentation, statute of frauds, privity of contracts, interpretation, breach and discharge of contracts, and the law of agency. Students must make extensive use of the law library in writing reports on a series of cases.

Format: Lecture 3 hours

COMM 2602.03: Commercial Transactions. This follow-up to COMM 2601.03 examines the law relating to the sale of goods, bailment, contracts of employment, negotiable instruments, real property, tenants and landlords, mortgages, partnerships, corporations, devices for securing credit and the rights of creditors. Students must make extensive use of the law library in writing reports on a series of cases.

Format: Lecture 3 hours

Prerequisite: COMM 2601.03

COMM 2701.03: Business Communication. The goal of this class is to teach students how to properly prepare both written and oral business communications. The stress will be on written communication, specifically business memos, letters and reports, although communication theories and the role of communication in business will be discussed. As well, one oral presentation per student will be required.

Format: Lecture 3 hours

COMM 2801.03: Work Term one, Bachelor of Commerce Co-op.

Prerequisites: successful completion of at least 7 credits, of which at least 4½ credits must be in the Core Area (Commerce, Economics, Mathematics/Statistics/ Computing Science).

COMM 3100.03: Financial Accounting and Statement Analysis. This class is intended for non-accounting students. The approach to the class is analytical rather than procedural, with an emphasis on a user perspective. Topics include an in-depth treatment of liquidity and profitability analysis, pensions, leases, earnings per share, cashflow, accounting for inflation, special industry analysis, and non-profit accounting.

Format: Lecture 3 hours

Prerequisites: COMM 1101.03 or 2101.03, 1102.03 or 2102.03

Exclusions: COMM 2111.03, 3111.03, 3113.03

COMM 3101.03: Managerial Accounting and Decision Making. The class applies, through a combination of case analysis and problem-solving, managerial accounting concepts to the planning and controlling activities in organizations. Coverage includes both manufacturing and non-manufacturing activities. This class is intended for students not concentrating in accounting.

Format: Lecture 3 hours

Prerequisites: COMM 1101.03 or 2101.03, 1102.03 or 2102.03, 2201.03

Exclusions: COMM 3112.03

COMM 3111.03: Intermediate Financial Accounting Procedures. This class and its follow-up, COMM 3113.03, are meant to provide an understanding of corporate financial reporting and the related conceptual framework. The class develops technical expertise in various financial accounting topics, some of which were introduced in COMM 2101.03 and 2102.03. The focus is on understanding the implicit inter-relationships in the framework and the environmental factors that work to establish GAAP (generally accepted accounting principles).

Format: Lecture 3 hours

Prerequisites: COMM 1101.03 or 2101.03 and 1102.03 or 2102.03 with a B-average

Exclusion: COMM 3100.03; COMM 2111.03 (formerly)

Cross-listing: BUSI 6108.03

COMM 3112.03: Cost Accounting. The purpose of this class is to provide the student with detailed knowledge of cost/managerial accounting concepts and practices which help organizations in their planning, decision-making and control activities. Topics to be covered include product costing systems, cost behaviour analysis and estimation, cost allocation, standard

costs and budgeting. The class is intended primarily for students who plan to concentrate their studies in the accounting area. Students who wish to take a class in cost/managerial accounting beyond the introductory level, but do not plan to pursue a career in accounting, should consider taking COMM 3101.03 instead of this class.

Format: Lectures/case discussions, 3 hours

Prerequisites: COMM 1101.03 or 2101.03 and 1102.03 or 2102.03, with at least a B-average

Exclusions: COMM 3101.03; COMM 2112.03 (formerly)

Cross-listing: BUSI 6106.03

COMM 3113.03: Intermediate Financial Accounting Theory. This class and its prerequisite, COMM 3111.03, are meant to provide an understanding of corporate financial reporting and the related conceptual framework. The class examines the assumptions underlying topics in the external reporting model, and the consequences of relaxing those assumptions in, for instance, the study of accounting measurement models. Quantitative technical skills are emphasized simultaneously with the qualitative factors governing accounting policy choice.

Format: Lecture 3 hours

Prerequisites: COMM 3111.03 (formerly 2111.03), or permission of the instructor

Exclusion: COMM 3100.03

Cross-listing: BUSI 6113.03

COMM 3114.03: External Auditing. This class covers the theory and practice of public auditing according to generally accepted auditing standards (GAAS). The first half of the class considers the forces impacting on the setting of standards and the current level of standards. This part includes pronouncements of the accounting profession, reporting standards, professional ethics, statute laws, legal liability and responsibilities, standards for examination of internal control in both manual and computerized environments, standards for the quality of evidence, statistical sampling and the sufficiency of evidence, documentation and working papers. The second part of the class considers typical audit programmes for examination of balance sheet and income statement accounts.

Format: Lecture 3 hours

Prerequisites: COMM 2110.03, 3111.03 (formerly 2111.03)

COMM 3120.03: Information for Organizational Control. The class develops and evaluates in detail management control systems in all types of organizations - profit and not-for-profit, manufacturing and service organizations. Case analysis is used to look at structures such as cost, profit and investment centres. Information requirements of specific

control and planning models, such as linear programming, decision theory and forecasting, are also examined.

Format: Lecture/case analysis/
problem-solving, 3 hours
Prerequisites: COMM 3112.03, 2301.03,
2502.03, or permission of
instructor

Cross-listing: BUSI 6107.03

COMM 3201.03: Intermediate Finance. A more intensive study of capital budgeting, cost of capital and valuation theory than that of COMM 2201.03. The class is intended to provide an overview of the theory of corporate finance and the application of that theory to the problems faced by a financial manager. Emphasis is on principles of capital budgeting, valuation, investment decisions, financial structure, dividend policy and bargaining for funds vital in financing a business enterprise. Case analysis will be used.

Format: Lecture 3 hours
Prerequisites: COMM 2201.03

Co-requisite: One of 3111.03 (formerly 2111.03), 3112.03, 3100.03 or 3101.03

COMM 3202.03: Security Analysis. Introduces the theory and philosophies of investment, and concentrates on investment analysis using computers and other tools available to the institutional investor. The focus is on common stocks, bonds, and investment trusts. Case material is primarily Canadian and covers stocks, bonds, options and mutual funds. Reading assignments and case analysis provide opportunities to handle investment analysis and portfolio management on a problem-solving basis.

Format: Lecture 3 hours
Prerequisites: COMM 2201.03, 2502.03; ECON 2201.03

COMM 3203.03: Canadian Capital Markets. Canada's capital markets and the flow of funds within them. Main sectors in the capital markets are identified and their historical development and function within the total structure is emphasized. Other areas include term structure and risk structure of interest rates, the risk-return relationship on financial assets and the efficiency of Canada's capital markets. Reading assignments, case analysis, evaluation of available research results and classroom discussion comprise the class.

Format: Lecture 3 hours
Prerequisites: ECON 2201.03; COMM 2201.03. The former may be waived with the consent of the instructor.

COMM 3210.03: Insurance and Risk Management in the Corporate Setting. Basic concepts of insurance, insurance market organizations, types of insurance and the development of programmes for corporate risk management. Problems of implementation and administration are also considered.

Prerequisites: COMM 2102.03, 2201.03, 2302.03, 2502.03; ECON 2200.03 or 2201.03

Cross-listing: BUSI 6207.03

COMM 3303.03: The Personnel Function. The role of personnel management and administration of the personnel function are analyzed, along with the major aspects of the personnel function: job analysis, human resource planning, selection, training, performance appraisal, compensation, labour relations, safety and health, and human resource information systems. Knowledge of the processes is supplemented by the development of analytical skill in coping with various personnel problems and in the integration of the processes with the many other functions required in the organization. This "system and process" analysis builds upon the skill and knowledge acquired in COMM 2301.03. Cases simulate work environments.

Format: Lecture 3 hours
Prerequisites: COMM 2301.03

Cross-listing: BUSI 5321.03

COMM 3304.03: Labour - Management Relations. Introduces students to some practical and theoretical aspects of labour-management relations in Canada. Examines historical, legal, behavioral, economic and political backgrounds of our system. Emphasis is on the key processes of industrial relations as they impinge on the activities of managers. Cases used are drawn mainly from Canadian sources.

Format: Lecture 3 hours
Prerequisites: COMM 2301.03 and 2302.03 or instructor consent

COMM 3305.03: Individual And Organizational Change. Current concepts and methods of individual and organizational change. The primary objective: to develop the student's skills as a change agent and improve performance as a manager, using lectures, exercises and case studies. Opportunity to fine-tune those analytical and decision-making skills necessary for the effective introduction of change into complex organizations, enabling the student to: (1) identify those situations where change is appropriate; (2) develop effective change strategies; (3) implement planned change; and (4) effectively monitor the change process.

Format: Lecture 3 hours
Prerequisites: COMM 2301.03 and 2302.03, or permission of instructor

COMM 3306.03: Interpersonal Dynamics. A more intensive study of the processes and possible problems associated with the dynamic interaction between individuals. Building upon COMM 2301.03 and 2302.03, such techniques as sensitivity training, structured exercises in interpersonal relations, and case studies are employed.

Format: Lecture 3 hours

Prerequisites: COMM 2301.03 and 2302.03, or permission of instructor

COMM 3307.03: New Venture Creation. This class is about entrepreneurship - the process of creating new businesses. It is designed to expose students to the issues, problems and challenges of creating new businesses and to provide students with the opportunity, within the framework of a formal class, to explore and develop business ideas they have been considering or wish to investigate. Cases are used to permit students to vicariously experience some of the issues entrepreneurs face.

Experiential exercises enable the students to better understand themselves, their entrepreneurial potential and the merits of their new venture ideas. A major field project requires the development of a detailed business plan for the new venture.

Format: Lecture 3 hours

Prerequisites: COMM 2102.03, 2201.03, and 2401.03, or permission of instructor

Exclusion: COMM 3308.03 (as this class was formerly numbered)

COMM 3401.03: Buyer Behaviour. In view of the very competitive situation in Western business, the firm that is successful designs and sells products that meet the desires of specific consumer segments. Thus, analysis and prediction of consumer behaviour are increasing in importance and sophistication. An extensive body of research evidence from marketing and the behavioral sciences is explored and evaluated to assess the marketing implications of elements of consumer behaviour. The emphasis of the class is empirical research on an outside project. The theoretical background for the projects and their progress are discussed in class. Students must do a considerable amount of background reading from the text and outside sources.

Format: Lecture/discussion, 3 hours

Prerequisite: COMM 2401.03

COMM 3402.03: Marketing Communications. The communication tools of advertising, sales promotion, and public relations are presented as part of the overall marketing mix. Positioning, segmentation, and other marketing concerns will be studied as they relate to the firm's communications situation. Problems of the promotion manager will be presented to help students appreciate those factors which affect promotional decisions. The completion of a marketing communications plan for an outside organization is required, as is group case work.

Format: Lecture/case method/applied project work, 3 hours

Prerequisite: COMM 2401.03

COMM 3404.03: Marketing Research. The scientific method in solving marketing problems. Emphasis on planning and formulating research problems, research design, application of sampling methods, statistical design of experiments, and analysis of data collected. A

real-life research project is required, its nature to be determined considering student interests and backgrounds.

Format: Lecture/discussion, 3 hours

Prerequisites: COMM 2502.03, 2401.03

COMM 3405.03: Export Marketing. The class will discuss reasons why Canadian companies get involved in exporting, and will focus on the development of marketing plans for the export of Canadian goods and services. Also discussed will be barriers faced by companies engaging in international trade, and government agencies providing support services to facilitate international transactions.

Format: Lecture/discussion, 3 hours

Prerequisites: COMM 2102.03, 2401.03; ECON 1101.03 and 1102.03

Recommended: COMM 3701.03

COMM 3406.03: Retailing. Retailing is designed to provide an understanding of the functions, problems and practices of retail management. It provides an exposure to location planning, layout, organizational structure, retail personnel management, buying, pricing, retail accounting and control mechanisms. A major component of the class is the completion of a strategic plan for a retail business concept.

Format: Lecture/case method/applied project work, 3 hours

Prerequisites: COMM 2201.03, 3401.03, 3410.03

COMM 3407.03: Logistics Management. An examination of the decision problems faced by the manager of the channels of distribution, the transportation and storage of products, and the communications and data processing system, in order to minimize the total cost of these activities and satisfy the marketing requirements of the firm and its customers. Topics include: the integrated logistics management concept, customer service, transportation, distribution centres, inventory management, materials management, packaging, purchasing, order processing and information systems, financial control, logistics organization, international logistics, reverse distribution and recycling, and the strategic logistics plan.

Prerequisites: COMM 3410.03 and 3501.03, or permission of the instructor

Cross-listing: BUSI 6407.03

COMM 3408.03: Transportation Modes and Policy. This class examines the development and operation of various transportation modes and national transportation policy in Canada. Topics include the characteristics, cost structures and pricing decisions of the various modes (air, pipeline, rail, road and water); the National Transportation Act and other relevant legislation; the structure of the industry and government agencies; regulation; subsidies, passenger transportation and tourism, urban and metropolitan transportation; traffic and carrier management; transportation and environmental

issues; current and emerging freight and passenger issues (with particular reference to the role of transportation in the Atlantic Region).

Format: Lecture/discussion/seminar, 3 hours

Corequisite: COMM 3410.03, or permission of the instructor

Cross-listing: BUSI 6406.03

COMM 3409.03: Sales Management. This class is designed to provide an understanding of the tasks and problems facing today's sales manager and to familiarize one with current sales force management practices. Specifically, this class provides an exposure to the concepts, techniques and procedures in buyer-seller relations, salesmanship, organization of the sales force, personnel management, selection, sales training, motivation, compensation, evaluation and supervision, budgets, quotas, territories and sales control. Extensive use is made of the case method, and classroom discussion is used to extend the basic text material and examine other points of view.

Format: Lecture/case method/field work, 3 hours

Prerequisite: COMM 2401.03

Co-requisites: COMM 2201.03, 2301.03, 3101.03

Exclusion: COMM 2402.03 (as this class was formerly numbered)

Cross-listing: BUSI 6405.03

COMM 3410.03: Channels of Distribution. Few companies deal with their final customers directly, most relying on a network of distribution channel intermediaries to get their products to market. This requires that producers carefully design, select and manage their distribution channel operations to achieve the desired level of performance. This class reviews theory and practice in this field of management, employing case analysis and projects to enhance student learning.

Format: Lecture/discussion, 3 hours

Prerequisites: COMM 1102.03 or 2102.03, 2401.03, 2201.03, 2301.03, or permission of the instructor

Exclusions: prior to 1988/89, this class was numbered COMM 2401.03. Credit will be given for only one of COMM 2401.03 (taken prior to 1988/89) and COMM 2403.03 (taken after 1987/88) and COMM 3410.03

COMM 3501.03: Production/Operations Management. "Production" is one of the basic functions of any organization, whether it provides goods or services. Consequently, all managers, whatever their specialist interests, should have an understanding of some of the key concerns in managing operations, particularly if they aspire towards senior/general management positions. The purpose of this class is to provide such an understanding. It begins at a basic level by examining various types of production processes

and continues by considering key aspects of scheduling, control, materials management and quality assurance. It concludes by examining production planning and strategy.

Format: Two 1.5-hour lectures (or case discussions)

Prerequisites: COMM 2201.03, 2301.03, 2401.03, 2501.03

COMM 3511.03: Management Information Systems. This class is meant to provide the student with a basic knowledge of information systems and their role in business organizations. Fundamental to this basic knowledge is an understanding of the variety of information systems in business. An understanding of the use of computers in current and future information systems is stressed. Hardware configurations, software concepts and systems, and data base management issues, as well as system analysis, design and evaluation will be introduced. Operating, tactical, and strategic management uses of MIS are covered. Applications from marketing, purchasing, production, personnel management and finance will be studied.

Format: Lecture, lab, 3 hours

Cross-listing: BUSI 5511.03

COMM 3601.03: The Law of Business Associations. Modern business, operating through various forms of associations, in particular the corporation, raises complex problems: (a) the choice of the form of business enterprise; (b) the nature of the corporate personality; (c) the dual system of incorporation; (d) the corporate constitution; (e) the contracts between the corporation and outsiders; (f) the control and management of a corporation; (g) the structure of a corporation in the raising and maintenance of capital; (h) securities legislation; and (i) organic changes in a corporation through mergers, amalgamations, sale of assets, take-overs, reorganization, receivership and winding up. Improved understanding of the complexities of the field, while providing minimal skills essential in reaching well-formulated decisions, is the objective.

Format: Lecture 3 hours

Prerequisites: COMM 2601.03, 2602.03

COMM 3602.03: The Consumer and the Regulation of Business. Complexities in the relationships between the consumer, business and government continue to increase. A rapidly expanding body of law designed to regulate these relationships in an effort to promote freedom of contract has developed. Of particular concern are problems relating to quality and safety of goods and services, warranties and guarantees, misleading advertising, unfair trade practices, the regulation of consumer credit, and legal remedies. Some of the more critical problems, the legal remedies available, and the role of administrative tribunals, their jurisdiction, and their procedures and policies are examined.

154 Commerce

Format: Lecture 3 hours
Prerequisites: COMM 2601.03, 2602.03

COMM 3701.03: The Firm in the International Environment. As an introduction to international business, this class examines the principal methods of doing business abroad and the dimensions of the international business environment that are important to each. Successful exporting calls for an understanding of, among others, international trade flows, national trade policies, international financial flows and foreign exchange movements. Accordingly, selected aspects of the theories of international trade and finance are presented, as well as the origins and current operations of major international institutions - the GATT, IMF and World Bank Group. Regional trading areas and international commodity arrangements are also covered. The class also treats the theory of the multinational enterprise, along with methods for analyzing the economic, political and social dimensions of host countries.
Prerequisites: COMM 2102.03, 2201.03; ECON 2200.03 or 2201.03

COMM 3801.03. Work term two, Bachelor of Commerce Co-op
Prerequisites: At least 9½ full credits earned, including COMM 2801.03 and at least 6½ other credits in the Core Area (Commerce, Economics, and Mathematics/Statistics/Computing Science).

COMM 3802.03. Work term three, Bachelor of Commerce Co-op
Prerequisites: At least 12 full credits earned, including COMM 3801.03 and at least 8½ other credits in the Core Area (Commerce, Economics, and Mathematics/Statistics/Computing Science).

COMM 4101.03: Advanced Topics in Accounting I. This class covers advanced concepts in accounting. Topics include non-profit accounting, current pronouncements, special industry accounting, valuation, capital market and information efficiency, estates and trusts, bankruptcy, as well as an in-depth review of certain topics treated in prerequisite classes.
Format: Lecture 3 hours
Prerequisites: COMM 3111.03, 3112.03 and 3113.03, or permission of the instructor
Cross-listing: BUSI 6110.03

COMM 4102.03: Advanced Topics in Accounting II. This class has two objectives: (1) to provide an in-depth study of the interrelated topics of intercorporate investments, business combinations, consolidated financial statements and foreign operations, and (2) to develop a

framework that may help to resolve controversial issues in advanced financial accounting.
Format: Lecture 3 hours; extensive use is made of assigned cases and problems
Prerequisites: COMM 3111.03 and 3113.03, or permission of the instructor
Cross-listing: BUSI 6109.03

COMM 4113.03: Contemporary Issues in Accounting. Current issues in accounting and recent accounting literature are examined to provide a familiarity with the direction of accounting developments, and as a basis for future study of accounting problems and practices. Difficulties with present practices are explored, along with proposed alternatives.
Format: Seminar 2 or 3 hours, depending on the instructor's emphasis and student's needs
Prerequisite: COMM 3113.03
Cross-listing: BUSI 6151.03

COMM 4114.03: Computer Systems Controls. This class examines the special considerations when auditing in a computerized environment. Three major areas covered in the class are:

- (1) Special internal control techniques/requirements and standards for examination of internal control. This includes standards for acquisition, development, implementation, conversion, testing and maintenance of systems, concentrating on the goal of ensuring that good internal control is attained. The class also covers the standards associated with computerized processing of transactions, creation and control over databases, and special planning for interruption of computer operations and re-start.
- (2) Audit procedures in a computerized environment. For each special internal control technique, there exist a number of possible audit procedures. Audit strategy is considered, including auditing around the system, reliance on and examination of computerized controls, and use of computer-assisted audit techniques.
- (3) Use of computer-assisted audit techniques, including use in the class of "Interactive Data Extraction and Analysis", a software package from the CICA, developed by the Auditor General of Canada.

Format: Lecture 2 hours; lab 1 hour
Prerequisites: COMM 2110.03

COMM 4120.03: Taxation. An introduction to the taxation system in Canada, with special reference to the provisions of the Income Tax Act and their effects on business decisions. The measurement processes used to determine the

tax base are examined, and the basic elements in the calculation of tax payable for individuals and corporations are discussed.

Format: Two 90-minute lecture sessions, with significant effort directed to the solving of short case problems

Prerequisites: COMM 1101.03 or 2101.03; ECON 1101.03 and 1102.03

Cross-listing: BUSI 6102.03

COMM 4121.03: Advanced Taxation. A more detailed examination of the corporate taxation system in Canada. Some examples of how tax awareness and planning can be a significant element in the regular business decision-making process for both individuals and corporations, and especially for private corporations.

Format: Lecture 3 hours per week for part of the term; the remainder consists of seminar presentations of researched topics by students

Prerequisites: COMM 4120.03

Cross-listing: BUSI 6103.03

COMM 4150.03: Research in Accounting. This class provides the opportunity for students to undertake both directed and independent study of selected topics in accounting, and requires a major research paper. This class is available to Honours students only.

Format: Research seminar, 3 hours

Prerequisites: COMM 4113.03

COMM 4200.06: Seminar in Finance. Special seminar restricted to Honours students in Finance. Students are exposed to aspects of financial theory not covered in other classes. Each student prepares an original Honours thesis.

Prerequisites: COMM 3201.03, either 3202.03 or 3203.03, and ECON 2200.03 or 2201.03

COMM 4201.03: International Financial Management. This class focuses on the financial management of the individual firm in the international market place. Topics include the financial goals of multinational enterprises (MNEs), foreign exchange management, international money markets, financing foreign trade, international capital budgeting, and managing the MNE system.

Prerequisites: COMM 1102.03 or 2102.03, 2201.03, 2502.03; ECON 2200.03 or 2201.03

Cross-listing: BUSI 6807.03

COMM 4250.03: Theory of Finance. This class is intended to enhance students' understanding of the theory of finance to a level which enables them to critique current research published in journals and to apply selected research to financial management issues. This class is designed with the assumption that students have a background in financial economics. In addition

to the main text, several journal articles will be reviewed in each area. Seminar style classes will feature discussion and student participation.

Format: Seminar, 2 hours

Prerequisites: Concentration in Finance and permission of Instructor

Cross-listing: BUSI 6250.03

COMM 4350.06: Strategic Management. This is the capstone class of the Commerce programme. It is about general management - the practice of business from the perspective of the general manager. As such, it integrates the concepts and techniques developed in earlier classes. The principal tool of the general manager is strategy, so the primary concern is the formulation and implementation of strategy. Other issues addressed include: business ethics and the role of personal values in strategy, business-government relations, and managing strategic change. The class exposes students to a wide variety of organizations and contexts through cases, and includes a major field project where students, in small groups, study and advise actual businesses.

Format: Lecture 3 hours

Prerequisites: At least 12½ credits earned, including COMM 3801.03 and at least 9 other credits in the Core area (Commerce, Economics and Mathematics/Statistics/Computing Science).

COMM 4401.03: Marketing Strategy. This class is intended for marketing majors who wish to deepen their understanding of how marketing strategy is formulated and implemented. This involves high-level, long time-frame decisions, since the product and market strategies are at issue. The class aims to improve decision-making skills in managing product/market portfolios and implementing marketing strategies. As a capstone class, it is designed to permit the integration of learning from other marketing classes, as well as those in finance, policy and management. Instruction is mostly through case study discussions, report writing, and group presentations.

Format: Seminar 3 hours

Prerequisites: COMM 2401.03, 3401.03, 3404.03; and one other marketing class (3410.03 - formerly 2403.03 - recommended)

COMM 4402.03: Independent Study in Marketing. The content of this class is negotiated with an individual instructor. The class offers the student the opportunity to explore in greater detail any particular area of interest in marketing.

Format: Directed readings and discussions

Prerequisites: COMM 2401.03, 3404.03, and at least two other half classes in marketing

COMM 4413.03: Advanced Topics In Marketing. This class carries students beyond the basic tools of Marketing, developing an understanding and appreciation of the value of theory in Marketing. (This is a required class for Honours students in Marketing.)

Format: Discussion/seminar, 3 hours
Prerequisites: COMM 2401.03, 3401.03, 3404.03, and at least one-half other class in Marketing

COMM 4450.03: Honour Thesis in Marketing. Students write an Honours thesis demonstrating their ability to gather, analyze, and synthesize data leading to new knowledge useful in understanding Marketing. Special seminar restricted to Honours students in Marketing.

Format: Seminar 3 hours
Prerequisites: COMM 4413.03
Co-requisites: COMM 4401.03 must be taken concurrently

COMM 4501.03: Operations Research. The goal of this class is an understanding of the major O.R. techniques and how to apply them, not their theoretical development. Topics include: linear programming formulation, simplex method, sensitivity, integer variables, transportation, network problems, and dynamic programming. Cases are used to illustrate the main topics.

Format: Two 1.5- hour lectures
Prerequisites: COMM 1501.03 and 2502.03, or permission of the instructor

COMM 4534.03: Managing Technological Entrepreneurship. High technology based industries face unique management problems imposed by the rapid rate of technological change and the often uncertain environmental impacts of technological innovations. This class examines some of the techniques that have recently been developed to improve management effectiveness in high technology organizations and their responsiveness to environmental concerns.

Prerequisites: all required core area classes, except COMM 4350.06, or consent of instructor

Cross-listing: BUSI 6553.03

COMM 4538.03: Applied Multivariate Analysis. The convenience of packaged statistical programmes (e.g., SPSS) has opened the area of data analysis to researchers with a wide variety of backgrounds. Since it is possible to operate "canned" programmes without understanding advanced mathematics, there is a need for a class that introduces the user to the concepts underlying the techniques. Students use and interpret statistical programmes with data sets from such business areas as marketing, finance and organizational behaviour.

Prerequisites: Mathematics at the 1000 level; COMM 1501.03 and 2502.03, or consent of instructor

Cross-listing: BUSI 6504.03

Co-operative Education in Science

M.J. O'Halloran, Marine Biology

P.I. Maclean, Biochemistry

Co-operative Education Programmes

In Canada, Co-operative Education means a programme alternating academic terms with paid work experience related to the area of study. An increasing number of departments in the Faculty of Science offer students this option. The academic requirements are generally the same as for an Honours or Advanced Major degree. (See the departmental listings for more information). The workterms alternate with academic semesters beginning in January or May of Year II. The workterms, each normally 13-16 weeks in duration, are spent in industrial, business, government or laboratory positions. The work experience helps students see the applicability of their training in science and helps them make intelligent career choices. Upon successful completion of at least 3 workterms and the 20-credit academic requirements, the student's transcript will have indicated the programme to be a co-operative one.

A Co-op degree normally takes 4 1/3 years. The Physics programme is 5 years. The programmes are available either as Honours or Advanced Major programmes. Earth Science and Physics are Honours only. A Combined Honours Co-op degree, combining a Co-op subject and another appropriate subject, is possible. Students interested in such a programme should consult a Co-op Advisor.

Eligibility: Students must be Canadian citizens or landed immigrants and demonstrate sufficient academic potential (typically B- average). Some students may be admitted on a probational basis pending an improvement in their grades. Students whose grades drop significantly may be withdrawn from the Co-op option.

Application: Students should apply to one of the Academic Advisors near the end of first year and indicate Co-op when they register for second year.

Academic Advice: Students must plan their programmes carefully each year with their departmental academic advisor who must approve any changes. Co-op students have limited opportunity to take R classes. Also the choice of classes for the summer academic term is limited.

Work Terms: Although the Co-op Office has an outstanding placement record, it is ultimately the responsibility of the student to arrange the work term. The Placement Officer serves to co-ordinate the contacts between student and employer. Students are remunerated according to the employer's own policies.

It is important that students realize that successful completion of the work terms is an integral part of the course of study. Indeed, the advantages of Co-op Education derive directly from the successful interplay of academic knowledge and practical implementation. Consequently the work terms are central to Co-op Education.

Work Term Reports: At the end of each work term, each student must submit an acceptable work report. These are generally 15-20 typewritten pages. Guidelines are available from the Academic Advisor. The reports must be submitted by the 15th day of the month the following academic term begins.

Work Term Sequence: Work terms alternate with study terms in a fixed pattern for each programme.

	A	B	S	A	B	S	A	B	S	A				
a)	1	2	-	3	w	4	w	5	w	6	w	7	w	8
b)	1	2	-	3	4	w	5	w	6	w	7	w	8	
c)	1	2	-	3	4	w	5	6	w	7	w	8		

Most students follow pattern a) with first work term in January of second year. Pattern b) is for Marine Biology. Pattern c) is for Earth Sciences and Biochemistry. Changes to a pattern require prior approval. Sometimes two consecutive work terms are arranged.

Co-op Seminar: This is a special seminar arranged for the benefit of Co-op students. Various topics of relevance to the work terms are discussed. The purpose of the seminar is to better prepare students for their work terms so that everyone involved in the work term — the student, the employer, and the University — may benefit as much as possible.

Co-op students enrolled in their second year at Dalhousie must attend this non-credit seminar (min. of 12 hours required).

Additional Information: For additional information contact one of the departments listed above or: Science Co-operative Education, Dalhousie University, Student Union Bldg., Room 404, 6136 University Avenue, Halifax, Nova Scotia, B3H 4J2, (902) 494-2044.

Introduction

The University study of religion aims at an intellectual understanding of this more than intellectual reality. Religion is a phenomenon virtually universal in human society and history; some have held that it is central to the human condition. Understanding involves grasping simultaneously both the meaning of faith in the lives of participants, and the critical analysis of outside observers. Both the student wishing enhanced understanding of religion as an historical, and social and human fact, and the student who wishes to wrestle with problems arising in academic reflection concerning the relation between the personal and the objective, can find material to engage them in the classes described below.

See "Degree Requirements" for complete details.

Advanced Major in Comparative Religion

Departmental Requirements:

Classes required in Advanced Major

1000 level: COMR 1000.06 or 1301.06

2000 level:

Select 2 classes from: COMR 2001.03,
2002.03, 2003.03

Select 2 classes from: COMR 2011.03,
2012.03, 2013.03; Select 1 other credit at or
above 2000 level

3000 level: At least two and one half credits
at or above 3000 level

4000 level: At least one half credit at 4000
level

Major in Comparative Religion

Departmental Requirements

Classes required in Major

1000 level: COMR 1000.06 or 1301.06

2000 level:

Select 2 classes from: COMR 2001.03,
2002.03, 2003.03

Select 2 classes from: COMR 2011.03,
2012.03, 2013.03

3000 level: At least one and one half credits
at 3000 level or above

4000 level: At least one half credit at 4000
level

This programme provides Comparative Religion majors with a broad introduction to both Eastern and Western religious life, and to the various ways in which religion may be studied. In light of their specific interests, Comparative Religion majors are encouraged to enrol in related classes offered by other Departments. Programmes should be planned in consultation with the undergraduate advisor, Dr. C.T. Sinclair-Faulkner.

Please consult the current timetable on registration to determine which classes are being offered.

Classes Offered

First-year students are not admitted to classes beyond the 1000 level without the consent of the instructor. Classes at the 2000 level do not have prerequisites; in general, they are available only to students in their second year or above. Prerequisites for classes at the 3000 and 4000 levels are listed with each individual class below; in general, they are available only to students in their third year or above in the University.

***COMR 1000.06R: Introduction to World Religion.** This class will focus on a comparative study of Christianity and other major world religions. The first half of the class will be an introduction to the basic ideas and concerns of the world religions with an emphasis on fundamental general questions in comparative studies: What materials in different traditions are comparable? What psychological and intellectual attitudes are required for such a study? The second half is devoted to a comparative study of the Gospels and a scripture from another religion.

Instructor: R. Ravindra
Format: lecture and tutorial 3 hours

COMR 1300.03A or B: Explorations in Religion. The description and understanding of religion requires diverse approaches: historical, psychological, sociological, philosophical. It also requires that knowledge of oneself go hand in hand with knowledge of the human phenomenon of religion. This class introduces the student to basic concepts in the academic study of religion and to some of the most recent scholarship in the area.

Instructor: C.T. Sinclair-Faulkner
Format: lecture 3 hours

***COMR 1301.06R: Introduction to the Study of Religion.** Religion is: a way of life? an encounter

with God? a neurosis? the essential human trait? an epiphenomenon? The possibilities are explored by using the insights of modern social scientists, humanists and theologians to study Canadian life. This class fulfils the first-year Writing Requirement. A detailed syllabus is available from the Department of Comparative Religion.

Instructor: C.T. Sinclair-Faulkner.
Format: Writing Requirement, lecture 2 hours, section meeting 1 hour

***COMR 2001.03A or B: Judaism.** About thirty-three hundred years ago a man named Moses is said to have led the people of Israel out of slavery in Egypt, bound them in a covenant with God to live in the way that God would have them live, and brought them to the land of Canaan. They became the people of the Bible (literally, "the Book") and, when their temple at Jerusalem was destroyed two thousand years ago, they developed a dispersed community centred on the Bible as interpreted by their rabbis or teachers. Although six million Jews died in the Holocaust during the Second World War, there are fourteen million Jews in the world today, of whom roughly one-fifth live in the state of Israel (established in 1948) and over 300,000 live in Canada.

Instructor: C.T. Sinclair-Faulkner
Format: lecture and seminar 3 hours

***COMR 2002.03A or B: Christianity.** Christianity was founded two thousand years ago by Yehoshuah (Jesus), a Jew living in the Roman province of Palestine who left behind no writings of his own and who was executed for treason and blasphemy. Before his death he gathered together a diverse group which included some fishermen, a tax collector, a rich woman and a rabbinical student. They and others who joined later became the "Church" (literally, "the things which belong to the Lord"), declaring that Yehoshuah had risen from the dead and that he was both the Messiah and the Son of God. This claim scandalized many Jews and puzzled many Greeks. But Christianity went on to shape much of western civilization, and ultimately the world. Today Christianity is the religion of at least one billion people around the world, and of 90% of Canadians.

Instructor: C.T. Sinclair-Faulkner
Format: lecture and seminar 3 hours

***COMR 2003.03A or B: Islam.** Islam was founded by Muhammad less than fourteen hundred years ago, and it may be argued that it was the first "world" religion. The Arabic word "Islam" means many things at once: submission, obedience, surrender, peace. Setting his face resolutely against the worship of false gods, Muhammad accepted Jews and Christians as "People of the Book" but added the Qur'an to the TANAKH and the New Testament as the scriptures which reveal the way in which Allah (literally, "the God") would have people live. Muhammad is God's messenger, delivering the

Holy Qur'an, but Muhammad himself is not divine. At present Islam is the fastest growing religion on earth. There are almost one billion Muslims in the world, of whom more than 100,000 live in Canada.

Instructor: C.T. Sinclair-Faulkner
Format: lecture and seminar 3 hours

***COMR 2011.03 A or B: Hinduism.** What has been called Hinduism in modern times is less a religion in the Western sense and more a whole way of life woven into the very fabric of the culture and society in India where nearly seven hundred million Hindus reside. This religion is said to be eternal, without any human founder, although continually vitalised by many remarkable sages and incarnations of God. The oldest religion in the world, Hinduism displays an unbroken continuity of the tradition from the pre-historic times to the present, spanning at least five thousand years. Other major and minor religions have been spawned by Hinduism, such as Buddhism and Jainism; also Sikhism and Sufism in interaction with Islam. The religious and cultural life of much of the Asian continent, on which now lives more than half of humanity, has been strongly influenced by one or another aspect of Hinduism.

Instructor: R. Ravindra
Format: lecture and seminar, 3 hours

***COMR 2012.03 A or B: Chinese and Japanese Religions.** China and Japan have had an enormous impact on the cultural history of the world in the past, and are also bound to have significant impact in the future. The religious ideas and practices which originated and developed in these countries influence nearly half of humanity today. These days, many Westerners are also drawn to the practical and holistic views of Taoism and Confucianism.

This course will provide an introduction to the major religious traditions in China and Japan, namely, Taoism, Confucianism, Buddhism and Shintoism.

Instructor: R. Ravindra
Format: lecture and seminar, 3 hours

***COMR 2013.03A or B: Buddhism.** Buddhism originated in India in the 6th century B.C.E. with Siddhartha Gautama, the Buddha - the Enlightened and the Compassionate - and from there spread throughout South East Asia and the Far East in the following millennium. It practically disappeared from the land of its origin after nearly sixteen hundred years during which time it permanently influenced Indian thought and spirituality. Buddhism was considerably modified by the great cultures of China, Korea and Japan.

Buddhism has influenced the religious world-views and practices of more than half of humanity, largely owing to its great impact in Asia. Now, many Westerners are also drawn to the philosophy and meditational practices of

different forms of Buddhism. This class will offer a basic introduction to the history, ideas and practices of Buddhism.

Instructor: R. Ravindra

Format: lecture and seminar, 3 hours

***COMR 2200.03A or B: Religion and War.** Religious attitudes toward war have ranged from pacifism, through vigorous efforts to enforce limits on war's destructiveness, to outright support for specific wars. The class will examine comparatively the views of major religious traditions on war; the use of war and the warrior as religious symbols; the crisis of religious views on war in the nuclear age. It is cross-listed with Religious Studies 342.2 at Saint Mary's University.

Instructor: C.T. Sinclair-Faulkner

Format: lecture and seminar 3 hours

***COMR 3002.06R: Religion in Story.** When religious people seek answers to ultimate questions or try to come to grips with the mystifying phenomenon of the Holy, they turn to stories. Modern novels and short stories, particularly Canadian works, are the primary reading assignments in this class. They are set in the context of related material from the broader western culture, including the Jewish scriptures. A detailed syllabus is available from the Department of Comparative Religion.

Instructor: C.T. Sinclair-Faulkner

Format: lecture and seminar 3 hours

Prerequisite: at least one of COMR 2001.03, COMR 2002.03, COMR 2003.03 or permission of the instructor

***COMR 3003.06R: Religion in Canada.** When Canadians have built cities, gone to war, founded economic empires, fallen in love, designed school systems, and elected governments, religion has often been a decisive factor. Sometimes religion has been the decisive factor. What is "religion" in Canada? In the course of this extensive historical study of life in Canada from the 16th century to the present, a variety of answers will be explored. A detailed syllabus is available from the Department of Comparative Religion.

Instructor: C.T. Sinclair-Faulkner

Format: lecture and seminar 3 hours

Cross-listing: HIST 3228.06

Prerequisite: COMR 2001.03 or COMR 2002.03 or permission of the instructor

***COMR 3006.03A or B: Western Spirituality - Mystics.** Some have argued that the mystic's experience lies at the heart of all religions, while others see it as dangerous to what has traditionally been regarded as religion. Original accounts of Jewish, Christian, Muslim and Amerindian spiritualities are studied in their historical context in this class. A detailed syllabus is available from the Department of Comparative Religion.

Instructor: C.T. Sinclair-Faulkner

Format: lecture and seminar 3 hours
Prerequisite: at least one of COMR 2001.03, COMR 2002.03, COMR 2003.03 or permission of the instructor

***COMR 3007.03A or B: Western Spirituality - Communities.** Modern persons tend to view religion as a solitary enterprise, but more often than not religious communities have taken shape around those who have had a profoundly religious experience. Original accounts of Jewish, Christian and Muslim spiritualities are studied in their historical context in this class. A detailed syllabus is available from the Department of Comparative Religion.

Instructor: C.T. Sinclair-Faulkner

Format: lecture and seminar 3 hours

Prerequisite: at least one of COMR 2001.03, COMR 2002.03, COMR 2003.03 or permission of the instructor

COMR 3008.03A or B: The Medieval Church. This class does not attempt to provide a chronological survey of the development of the Western church, but is an advanced seminar dealing with topics which have no strict chronological limits. Subjects of study include monasticism, heresy, education and the universities, town and cathedral, lay-clerical conflict, and "popular" concepts of religion. Each year one or more topics are examined in detail, with the help of original documents in translation, and using recent periodical literature and/or monographs. Students prepare and present one or two well-researched papers, and class discussions are used to explore related materials and readings in greater depth. Some prior knowledge of medieval European history is essential.

Instructor: C.J. Neville

Format: lecture/discussion, 2 hours

Prerequisites: HIST 2001.03 or HIST 2002.03 or HIST 2120.03

Recommended: HIST 1001.03

Exclusions: Former HIST 3021.03 and 3022.03 students

Cross-listing: HIST 3002.03

***COMR 3014.03A or B: Love and Death in World Religions.** What are love and death? Why do mystics in many traditions speak of love and death together? What meaning can life have in the face of the inevitability of death? Does individual identity come to a complete end or does one continue existence in some form, as most religions assert? What is the nature of judgment after death? Is there reincarnation?

Instructor: R. Ravindra

Format: lecture and seminar, 3 hours

Prerequisite: a class in Comparative Religion or the permission of the instructor; students must be in third year or above

***COMR 3015.03A or B: Myths, Symbols and Rites.** Myths, symbols and rites have been among the major vehicles of spiritual truths and

psychological insights in all religions. After a general discussion of the nature of symbolic and mythic understanding, the focus is on some of the major myths and symbols associated with the lives and teachings of Krishna, Shiva, Gautama Buddha and Jesus Christ.

Instructor: R. Ravindra
Format: lecture and seminar, 3 hours
Prerequisite: a class in Comparative Religion or the permission of the instructor; students must be in third year or above

***COMR 3532.03A or B: Mystical Consciousness and Modern Science.** Yoga, Zen, Prayer of the heart, Sufism and other spiritual disciplines have gathered an enormous amount of experiential and theoretical material about human consciousness and its many levels, from the ordinary to the mystical and cosmic. The first half is devoted to understanding many levels of human consciousness based on these disciplines. The second half is devoted to a critical examination of mystical consciousness in the light of modern scientific discoveries, and of the fundamental presuppositions of modern science in the light of the universal experience and knowledge of the many levels of consciousness.

Instructor: R. Ravindra
Format: seminar 3 hours
Prerequisite: a class in Comparative Religion or in Science (preferably both); students must be in third year or above.

Exclusion: COMR 3531.06

Cross-listing: PHYC 4020.03

***COMR 3533.03A or B: Spirituality and Ecology.** What is the scientific and technological understanding of Nature? How does this relate with the religious views about the cosmos? Are the roots of our contemporary ecological crisis to be found in the relationship between human beings and nature as mentioned in the Bible? Can the Hindu-Buddhist - Taoist traditions and the North American native spirituality offer something of practical value for the cultivation of the right attitude to the environment and our place in the universe?

Instructor: R. Ravindra
Format: Seminar 3 hours
Prerequisite: a class in Comparative Religion or in Science (preferably both); students must be in third year or above.

Exclusion: COMR 3531.06

Cross-listing: PHYC 4020.03

***COMR 4310.03A or B Topics in Comparative Religion/*COMR 4320.03A or B: Independent Study in Comparative Religion.** Structured as a seminar or for independent guided study depending on the interests and needs of the students and the faculty. The intention is to devote some concentrated time to a specific topic of interest (e.g., *Cults and New Religions, The Feminine in World Religions, Death, The Soul,*

Suffering). Please consult the Department for the topic which may be discussed in any given term. These classes will normally only be arranged at the request of a student who is majoring in Comparative Religion, though other students may then be admitted to the class upon application to the instructor. These classes permit the student majoring in Comparative Religion to integrate the work of many previous classes and lines of study while examining some chosen topic in the academic study of religion.

C.A. Field

Director of Division
A.E. Sedgwick

Faculty Advisors
C. Hartzman (Honours)
M.A. Shepherd (Graduate)
A.E. Sedgwick (Co-op and Majors)

Professors
P. Keast, PhD (St. Andrews)
K.J.M. Moriarty, MSc (Dal), PhD (London)
M.A. Shepherd, MSc, PhD (Western)

Associate Professors
A. Farrag, PhD (Alberta)
C.S. Hartzman, MS (Purdue), PhD (Colorado)

Assistant Professors
Q. Gao, PhD (Waterloo)
A.E. Sedgwick, MS (Wisconsin), PhD (Tor)
S. Srinivas, PhD (Ind. Inst. of Sc.)

Computer Systems Manager
D. Trueman, MSc (Toronto)

Adjunct Professors
P. Muir, MSc, PhD (Toronto)
L. Oliver, MSc (Acadia), PhD (McG)
C. R. Watters, MSc (Western), PhD (TUNS)

Please refer to the entry for the Department of Mathematics, Statistics and Computing Science for a full listing of the members of the Department and information on other programmes offered by the Department.

General Interest Classes

The Division offers a number of classes that should be of interest to students whose major field of study while at Dalhousie will not be Computing Science. These classes are:

COMP 1000.03A or B: A class designed for the humanities and social sciences but probably of interest to students in other disciplines as well.

COMP 3090.03A: A class that should be of interest to students in all disciplines.

Degree Programmes

Students who plan to pursue a programme leading to a degree in Computing Science should

arrange a programme in consultation with the appropriate Faculty Advisor, listed above. Students should also consult the "Degree Requirements" section of the Calendar for specific regulations.

Honours in Computing Science

Departmental Requirements

Classes required in Honours:

- 1000 level:** COMP 1400.03 and 1410.03 and 1670.03
2000 level: COMP 2350.03, 2450.03, 2610.03, 2670.03, 2700.03. Two and one-half other credits at or above the 2000 level - not including classes listed below.
3000 level: COMP 3170.03, 3250.03, 3040.03, 3700.03
4000 level: Four classes at the 4000 level chosen in consultation with the Honours Advisor, Computing Science Honours Thesis (see below)

Other required classes:

MATH 1000.03 and 1010.03, MATH/STAT 2060.03 and 2080.03, MATH 2030.03 and 2040.03.

Note that a total of 9 credits above the 1000 level are required for all Honours programmes.

Honours Co-op, in Computing Science

Departmental requirements are the same as for the Honours programmes above, with the addition of the following:

Co-op Seminar 8700.00A

4 Coop Workterms: COMP 8891.00, 8892.00, 8893.00, 8894.00

Students in the Co-op programme should see the section below on Co-operative Education.

Honours Thesis: The Honours Thesis should comprise a body of work equivalent to a half credit, and would normally be worked on for the whole of the last year of the Honours programme. The thesis must be supervised by a faculty member, and must be read by the supervisor and one other faculty member.

Attendance at the Honours seminar is required for all Honours students during the last ten credits.

Combined Honours

Students interested in taking honours in Computing Science and another subject as a combined programme should consult the honours advisor through whom a suitable course of study can be arranged.

A combined honours programme may well be an appropriate choice for many students. If a student is contemplating graduate work, it

should be borne in mind that the work in either subject of a combined honours programme may be insufficient for entry to a regular graduate programme, and that a qualifying year may be necessary.

Advanced Major in Computing Science

Departmental Requirements

Classes required in Advanced Major:

- 1000 level: COMP 1400.03 and 1410.03
 2000 level: COMP 2350.03, 2450.03, 2610.03, 2700.03 plus one other credit in Computing Science 2000 - 4000 level
 3000 level: COMP 3040.03, 3170.03, 3250.03, 3700.03 plus one other 3000 level or above credit in Computing Science

Other required classes:

MATH 1000.03 and 1010.03, MATH 2030.03

Advanced Major Co-op in Computing Science

Departmental requirements are the same as for the Advanced Major above in addition to the following:

- Co-op Seminar 8700.00A
- 4 Co-op workterms: COMP 8891.00, 8892.00, 8893.00, 8894.00

Students in the Advanced Major Co-op should see the section below on Co-operative Education.

Major in Computing Science

Majors in Computing Science must obtain at least four (and no more than eight) credits beyond the 1000 level in Computing Science.

Departmental Requirements

Classes required in major:

- 1000 level: COMP 1400.03 and 1410.03
 2000 level: COMP 2700.03, 2350.03, 2450.03, 2610.03
 3000 level: COMP 3170.03 and 3700.03 plus one other credit at or above the 3000 level

Other required classes:

MATH 1000.03 and 1010.03, MATH 2030.03

Students who wish to arrange inter-disciplinary programmes (with fields such as Mathematics, Physics, Psychology, and others) are invited to discuss their interests with the Department.

Co-operative Education Programmes

The department offers several Co-op education programmes involving Computing Science, a concentrated programme in

Computing Science, a 20-credit major programme and a combined programme with Mathematics.

In addition to the required classes, Co-op students must complete the Co-op Seminar (COMP 8700.00) and four workterms (COMP 8891.00, 8892.00, 8893.00 and 8894.00). Students with unusual backgrounds may arrange a programme with only 3 workterms in consultation with their Co-op advisor. This arrangement should be made at the time of admission to Co-op. In special circumstances it may be possible to arrange a fifth workterm (COMP 8895.00).

Further information about the Co-op programmes is included under the Calendar entry for Co-operative Education in Science. The scheduling of Co-op workterms must be taken into account in planning class selection. The first workterm is in the winter of a student's second year followed by an academic term in the summer and the second workterm in the fall of the third year. Full credit classes may be scheduled for the summer term or during fourth year.

Any student who is interested in enrolling in a Co-op programme is urged to contact the Faculty Advisor for Co-op Education as early as possible in their academic career for advice on classes and other information.

Prerequisites

If a Computing Science class is listed as a prerequisite for a Computing Science class beyond the first year level, a grade of C or better is required in the listed class for it to count as a prerequisite.

Other Information

The Department operates an extensive network of SUN workstations. The laboratory for introductory classes is in the Killam Library Building. Students in second year and above use workstations in the Chase Building. In addition, the University operates an extensive range of computer systems including an Alliance FX/2816 multi-processor system running Concentrix. There are many PC and Macintosh micro-computer labs available for student use.

Students who complete the first two years of a Dalhousie programme in Computing Science may complete their programmes at Dalhousie or may be able to transfer to the Technical University of Nova Scotia (TUNS) to complete a Bachelor of Computing Science with Engineering options. Further information about the classes required for admission to a TUNS programme may be obtained from TUNS or the Department of Mathematics, Statistics and Computing Science.

Classes Offered

Not all classes are necessarily offered every year. Please consult the current timetable on registration to determine if a class is offered.

COMP 1000.03A or B: Microcomputer Applications. The goal of this class is to learn how to make correct use of contemporary computer application software. Spreadsheets will be used to carefully design and implement models in mathematics, the sciences, and the social sciences. The proper design of database schemes to accurately represent data and their interrelationships will be introduced through the use of database management systems. Societal issues connected with computing will be woven into the fabric of the course. Students will write essays based on these issues using word processing software. Some sections of this course use PC microcomputers, the others use Macintosh computers. Students will also be introduced to the resources available on the Internet and the "World Wide Web" of hypermedia hypertext.

Format: lecture 3 hours, tutorial 1 hour

Prerequisite: None

Exclusion: Note that Computing Science students may not take this course for credit after COMP 1400.03. Students may receive credit for only one of COMP 1000.03, COMM 1501.03 or ASSC 1000.03.

COMP 1400.03A or B: Introduction to Computing Science. This course provides a general introduction to computing science, algorithmic concepts, and structured programming. The main focus is to teach the students programming skills in C and how to apply these skills in solving a variety of problems.

Format: lecture 3 hours, tutorial 1 hour

Prerequisites: Nova Scotia Math 441 or equivalent

COMP1410.03A or B: Algorithms and Data Structures. This is an introductory course on data structures and algorithms. The prerequisite is COMP 1400.03 or familiarity with the programming language C. The topics include: algorithms analysis, abstract data types, elementary data structures (arrays, stacks, queues, and lists), trees, recursion, sorting and searching.

Format: lecture 3 hours, tutorial 1 hour

Prerequisite: COMP 1400.03 and MATH 1000.03.

COMP1670.03A: Discrete Structures I. See class description for MATH 1670.03, in the Mathematics section of this calendar.

COMP2300.03B: Introduction to Mathematical Modelling Using Algebra. See class description for MATH 2300.03, in the Mathematics section of this calendar.

COMP2350.03A: File Structures and Relational Databases. The relational data model is introduced. Efficient retrieval and manipulation of data stored in relational databases motivates the study of file and index structures. The class examines logical file organizations (indexed sequential files, direct files, tree-structure files, etc.), file operations, and their physical implementations. The entity-relationship model, used for proper database design, is introduced. The class will make use of commercial, micro-computer based relational database software.

Format: lecture 3 hours

Prerequisite: COMP 1410.03

COMP2450.03B: Introduction to Computer Systems Organization. An introduction to machine architecture from the perspective of an assembly language programmer. Students gain familiarity with an assembly language and the translation process needed to produce machine code. Common addressing modes, macros and file I/O are discussed, together with the internal structure of memory, control units and processing units.

Format: lecture 3 hours

Co-requisite: COMP 1410.03

COMP 2610.03A: Data Structures and Algorithmic Analysis. Data types and the operations on them are covered in this class. After a review of the data structures covered in COMP1410.03, the class proceeds in detail to examine trees, graphs, sets and strings. Efficient representations and algorithms for these structures are discussed. Considerable emphasis is placed on the analysis of algorithms.

Format: lecture 3 hours, tutorial 1 hour

Prerequisite: COMP 1410.03

COMP 2670.03B: Discrete Structures II. This class continues Math 1670.03. This course covers some basic concepts in discrete mathematics which are of particular relevance to students of computer science, engineering, and mathematics. The topics to be covered will include: Solution of Recurrence Relations, Generating Functions, Modular Arithmetic, Chinese remainder theorem, Trees and graphs, Finite state machines, Groups and rings, Boolean algebras.

Format: Lecture 3 hours

Prerequisite: MATH 1670.03

Cross-listing: MATH 2670.03

COMP 2700.03B: Programming Languages. The emphasis is on fundamental concepts such as block structure and recursion and structured control flow. Exercises are given in several languages such as Lisp, Prolog and Smalltalk. Recursion and functional programming are discussed and the ideas of object-oriented programming are introduced.

Format: lecture 3 hours

Prerequisite: COMP 2610.03

SCIE 3090.06R: Science Fundamentals. See class description in Science, Interdisciplinary section of this calendar.

COMP 3040.03A: Computer Architecture and Design. An introduction to logic design and detailed computer architecture. Basic logic elements such as gates and flip-flops are discussed and the design of combinational networks, registers and control mechanisms analyzed. Internal representation and arithmetic, communication between components, instruction fetch and sequencing, interrupts and I/O controllers are also discussed.

Format: lecture 3 hours
Prerequisite: COMP 2450.03

COMP 3090.03A or B: Computers and Society. The impact of computers on society is discussed in this class. Topics include the history of computing and technology, the place of the computer in modern society, legal issues such as the copywriting of software, the computer scientist as a professional, the impact of databanks on individual privacy and the public perception of computers and computer scientists.

Format: lecture 3 hours
Prerequisite: None

COMP 3170.03B (formerly 2270.03): introduction to Numerical Linear Algebra. Floating point arithmetic. Numerical solution of linear systems of equations; Gauss elimination methods and iterative methods; condition numbers of problems and of algorithms; estimation of condition numbers. Numerical calculation of eigenvalues; QR and LR algorithms; singular value decomposition; Gram Schmidt orthogonalization. Use is made of program libraries such as Linpack, Eispack and Matlab.

Format: lecture 3 hours
Prerequisites: MATH 1010.03, MATH 2030.03, COMP 1410.03

Cross-listing: MATH 3170.03

COMP 3210.03A or B: Introduction to Numerical Analysis. See class description for Mathematics 3210.03, in the Mathematics section of this calendar.

COMP 3250.03A: Data Base Management Systems Design. The concepts and structures necessary to design and implement a data base management system are stressed. Hierarchical, network and relational models are discussed with emphasis on the necessary logical and data structures. Various normal forms and canonical schemes are discussed as well as the concepts of relational algebras and relational calculus.

Format: lecture 3 hours
Prerequisites: COMP 2350.03

COMP 3350.03A or B: Topics in Vector and Parallel Computing. This class is designed to provide a wide range of concepts involved in vector and parallel supercomputing. Topics covered include pipeline and vector processing,

SIMD and MIMD processing, interconnection networks, parallelization techniques, parallel algorithm design strategies. Architecture and applications of prominent supercomputing systems will be discussed.

Format: lecture 3 hours
Co-requisites: COMP 3170.03

COMP 3390.03A or B: Statistical Computing. See class description for STAT 3390.03 in the Statistics section of this calendar.

COMP 3700.03B: Operating Systems I. This class covers the principles of modern operating system design with examples from existing systems. Specific topics include: concurrent processes, interprocess communication, synchronization, scheduling policies, multi-level storage management, and associated algorithms.

Format: lecture 3 hours
Prerequisite: COMP 2610.03

COMP 3750.03A or B: Artificial Intelligence. An introduction to basic concepts and techniques of artificial intelligence systems with insights given into active research areas and applications. Representational issues and notational structures are emphasized and existing systems are surveyed. Students work on assignments and small projects using Lisp.

Format: lecture 3 hours
Prerequisite: COMP 2700.03

COMP 3810.03B: MicroComputers and the Real World. See class description for PHYC 3810.03 in the Physics section of this calendar.

COMP 4100.03A or B: Operating Systems II. A further development of the material of Operating Systems I, but with the focus on distributed operating systems. Topics include the client-server model, IPC, light weight processes, RPC, distributed file systems, distributed transactions, transparency and reliability.

Format: lecture 3 hours
Prerequisites: COMP 3700.03
Cross-listing: COMP 5100.03

COMP 4130.03A or B: Analysis of Algorithms. This class covers algorithmic solutions to a wide variety of problems and a formal analysis of their complexity. It is a continuation of the 2610.03 class. Problems are taken from combinatorics and numerical computation including algorithms for unordered and ordered sets, graphs, fast multiplication, prime testing, factoring, polynomial arithmetic and metric operations. Other topics include the analysis of algorithms used in systems programming and artificial intelligence, such as pattern matching for text processing and algorithms in natural language processing.

Format: lecture 3 hours
Prerequisite: COMP 2700.03
Cross-listing: MATH 4130.03/5130.03, COMP 5130.03

COMP 4140.03A or B: Software Design and Development. This class involves a formal

approach to state-of-the-art techniques in software design and development. Students work in teams in the organization, development and management of a large software project. Formal models of structured programming, stepwise refinement and top-down design, strength and coupling measures, milestones and estimating, chief-programmer teams, programme libraries and documentation are included.

Format: lecture 3 hours
Prerequisite: COMP 2700.03
Cross-listing: COMP 5140.03

COMP 4150.03A or B: Theory of Programming Languages. This is a class in the formal treatment of programming language translation and compiler design concepts. Topics include lexical analysis and parsing with emphasis on the theoretical aspects of parsing context-free languages, translation specification and machine-independent code optimization. Finite state grammars, lexical scanners, and context-free parsing techniques such as LL(k), precedence, LR(k), SLR(k) are included.

Format: lecture 3 hours
Prerequisite: COMP 2700.03
Cross-listing: COMP 5150.03

COMP 4200.03B: Topics in Artificial Intelligence.

Format: lecture 3 hours
Cross-listing: COMP 5200.03

COMP 4250.03A or B: Information Retrieval. An introduction to online information retrieval systems for textual databases. The major models of information retrieval will be covered as well as such basic topics as automated indexing and performance measures, and hypertexts.

Format: lecture 3 hours
Prerequisite: COMP 2350.03
Cross-listing: COMP 5250.03

COMP 4270.03A or B: Numerical Software. The design and implementation of reliable programs and libraries for numerical computation are the foci of this class. Available program libraries such as NAG and software packages available on netlib are reviewed. Particular attention is paid to the choice of subroutine parameters and the tradeoffs between convenience, simplicity and generality.

Format: Lecture, 3 hours
Prerequisite: COMP 3170.03 (with a grade of C- or better)
Cross-listing: COMP 4270.03, MATH 4270.03/5270.03

COMP 4330.03A or B: Graph Theory. See class description for MATH 4330.03, in the Mathematics section of this calendar.

COMP 4350.03A or B: Object-Oriented Programming. An introduction to object-oriented programming (OOP) and object oriented analysis, object oriented design, and C++.

Format: lecture 3 hours
Prerequisites: Three 3000 level COMP courses
Cross-listing: COMP 5350.03, MATH 4330.03/5330.03

COMP 4400.03A or B: Programming Methodology. Techniques for verification of computer programmes. Formal specification of software.

Format: lecture 3 hours
Prerequisite: B average in 3000-level Computing Science courses
Cross-listing: COMP 5400.03/5401.03

COMP 4450.03A or B: Topics in Computer Systems. The syllabus of the class may change from year to year depending upon the interests of the faculty members and students. This year the class focusses on computer network architectures. Topics covered include design and operation of computer communication networks, specifically ATM-based integrated broadband networks, switching architectures, network routing, ATM network design, fiber-optic networks. Practical aspects of software development for networks are also discussed.

Format: lecture 3 hours
Prerequisites: STATS 2070.03/2080.03
Cross-listing: COMP 5450.03

COMP 4550.03A or B: Topics in Computer Systems. This course provides an overview of microcomputer systems both at the general concept level and by examining specific systems. General architecture topics include instruction sets, memory I/O, bus systems and interrupt structures. Specific systems by several different manufacturers are examined on the basis of both hardware and software.

Format: lecture 3 hours
Corequisite: COMP 3700.03

COMP 4650.03A or B: Selected Topics in Information Systems. Assuming that the student has a broad understanding of the field of information retrieval, this course takes an in-depth look at selected topics at the forefront of the field. The topics will vary slightly from year to year, but may include: clustering and nearest neighbour matching, information theory, bibliometrics, and new models of information retrieval.

Format: lecture 3 hours
Prerequisite: COMP 4250.03
Cross-listing: COMP 5650.03

COMP 4660.03A or B: Automata and Computability. This class deals with finite state, pushdown and linear bounded automata; their correspondents in the Chomsky hierarchy for formal grammars and Turing machines. Appropriate closure properties and non-determinism are discussed as well as computable and noncomputable functions and the Halting Problem.

Format: lecture 3 hours
Prerequisite: COMP 2670.03

Cross-listing: MATH 4660.03/5660.03, COMP 5660.03

COMP 4670.03A or B: Computer Graphics. Graphics for computing science include topics on graphical kernel system (GKS), rotation, compression, segmentation, analysis, and fractals.

Format: lecture 3 hours

Cross-listing: COMP 5670.03

COMP 4700.03A or B: Advanced Topics in Data Base Design. Topics vary from year to year depending on the interests of the students and the instructors. Past topics have included concurrency control, scheduling, query optimization and object-oriented data bases.

Format: lecture 3 hours

Prerequisites: COMP 3250.03

Cross-listing: COMP 5700.03

COMP 4800.03A: Computer Systems Modelling. This course develops queuing network models suitable for modelling computer systems. Approximate and exact solutions to these models are developed and single and multiple classes of users are considered. Modelling multiprocessors, I/O, shared memory, swapping, paging, etc. are also considered. Finally, some of the modelling techniques are applied to other situations such as database performance. The models are developed intuitively and justified rigorously using queuing network theory.

Format: lecture 3 hours

Prerequisites: COMP 3700.03 and STAT 2070.03/2080.03

Cross-listing: COMP 5801.03

COMP 8700.00: (non credit) Co-op Seminar. This seminar is used to prepare Co-op students for their workterm experience.

COMP 8870.00R: Honours Seminar

COMP 8891.00: Co-op Work Term I

COMP 8892.00: Co-op Work Term II

COMP 8893.00: Co-op Work Term III

COMP 8894.00: Co-op Work Term IV

COMP 8894.00: Co-op Work Term V

Contemporary Studies Programme

Location: University of King's College,
Halifax, Nova Scotia
Telephone: (902) 422-1271
FAX: (902) 423-3357

Director
Kenneth Kierans 422-1271

Teaching Staff at the University of King's College:

Nina Butlin, BA (Columbia), BEd (Dal), MA (Dal)
Elizabeth Edwards, BA, MA (Dal)
Margaret Heller, BA (LU and Dal), MA (Dal)
Kenneth Kierans, BA (McGill), DPhil (Oxon)
Gordon McQuat, BA, MA, PhD (Tor)

Teaching Staff at Dalhousie University:

Michael Bishop, BA, MEd (Manchester), MA (Manitoba), PhD (Kent, Canterbury)
James Brown, AB (Miami), MA (Middlebury), PhD (Penn)
Steven Burns, BA (Acadia), MA (Alta), PhD (Lond)
Victor Li, BA, MA (UBC), PhD (Cantab)

The Contemporary Studies Programme

Our assumptions about the contemporary world are not only changing but becoming increasingly diverse and complex. One way in which we can reasonably try to make sense of our period as a whole is to combine into a single course of study several different disciplines and traditions of enquiry. To this end, Dalhousie University and the University of King's College jointly offer an interdisciplinary Program in Contemporary Studies (CSP). This combined-honours BA Program brings together departmental offerings in arts and the social sciences at Dalhousie and joins them with Contemporary Studies classes—including a required 'core' class for each upper year of study—at King's. The King's portion of this intercampus degree Program consists of integrated and interdisciplinary classes. These classes are taught by specialists from a number of disciplines. The intention is to provide students with a many-sided yet unified introduction to the study of the contemporary world.

The interdisciplinary offerings within the CSP at King's count as one of two honours subjects. Contemporary Studies classes are designed so that important writers and artists of the 20th century may be considered both on their own terms and in relation to some of the fundamental themes of our time. This naturally

very often involves a consideration of the difference between these writers and artists and those of the 19th century. The three 'core' classes give students a framework for understanding political, scientific, and aesthetic phenomena in the 20th century. The non-required classes focus on diverse aspects of and explanations for these often contradictory contemporary phenomena.

Aside from preparing undergraduates for future more specialized training at the graduate or professional level, the CSP is intended to provide them with a broad overview of 20th-century culture, especially the European and North American relation to it. Students are encouraged to relate the various aspects of contemporary thought to one another and to develop independent insights into the nature of the world in which they live. It is also hoped that CSP students will take an active role in organizing certain events each year, including lectures, debates, and exhibitions.

Degree Programmes

The departmental offerings within the CSP at Dalhousie include the other honours subject and a number of possible electives. The other honours subject must be selected from the following list of Dalhousie departments and Programs: Classics, English, French, German, History, International Development Studies, Music, Philosophy, Political Science, Russian, Sociology and Social Anthropology, Spanish, and Theatre. Electives may be taken in any of the above-mentioned departments and Programs as well as in the following: Comparative Religion, Music, and Women's Studies. In addition, some professors in the Dalhousie Faculty of Arts and Social Sciences are members of the Contemporary Studies teaching staff and offer classes at King's.

Combined Honours

All students must meet the distribution requirements of the Faculty of Arts and Social Sciences as detailed in the Degree Requirements section of this calendar. Students who are eligible to take an honours degree are urged to apply to the CSP. Because it is an honours programme, the quality of work required in it is higher than that required in a major or an advanced major programme.

Applications for admission must be made to the Dalhousie department concerned and to the Contemporary Studies Office at King's on forms available from the Registrar at either Dalhousie or King's. Students should apply before registering for the second year. If application is made later, it may be necessary to make up some work not previously taken. For each individual student the entire degree programme, including elective classes, is subject to supervision and approval by the Dalhousie department concerned and by a member of the Contemporary Studies teaching staff.

All CSP students are encouraged to acquire competence in languages through appropriate classes which are relevant to their degree, interests, and future plans.

The joint Dalhousie/King's Contemporary Studies programme is based on the general requirement that the 20 credits required to graduate include:

- (1) Completion of either the King's Foundation Year programme (either the three- or the four-class version) or at least two appropriate first-year full classes at Dalhousie: Classics, CLAS 1000.06, CLAS 1010.06, CLAS 1021.03 and CLAS 1022.03, CLAS 1100.06; Comparative Religion, COMR 1000.06/2000.06; English, ENGL 1000.06; History, HIST 1001.03, HIST 1002.03, HIST 1050.06, HIST 1100.06, HIST 1200.06, HIST 1300.06, HIST 1400.06; Music, MUSC 1000.06, MUSC 1350.03 and MUSC 1351.03; Philosophy, PHIL 1000.06, PHIL 1010.06; Political Science, POLI 1100.06, POLI 1103.06, POLI 1501.06; Sociology and Social Anthropology, SOSA 1000.06, SOSA 1050.06, SOSA 1100.06, SOSA 1200.06; Spanish, SPAN 1100.03; Mathematics, MATH 1001.03 and MATH 1002.03.
- (2) A normal requirement of eleven full classes beyond the 1000-level in the two honours subjects, but not more than seven full classes being in either of them. Students may, with the approval of both the Dalhousie department concerned and the Contemporary Studies teaching staff, elect a maximum of thirteen full classes in the two principal subjects, not more than nine full classes being in either of them. In this case, the requirement in (3) below is reduced to two or three full classes.
- (3) Four full elective classes in subjects other than the two offered to satisfy the general requirement that students complete fifteen full classes beyond the first year of study.
- (4) The three 'core' classes in Contemporary Studies: CSP 2000.06, CSP 3000.06, CSP 4000.06.
- (5) An honours qualifying examination. At the conclusion of an honours programme a student's record must show a grade which is additional to the grades taken to complete the required 20 full classes. This grade may be obtained through a comprehensive examination, the presentation of a research paper (which may be an extension of one of the classes), or such other method as may be determined by the Dalhousie department concerned and/or the Contemporary Studies teaching staff. CSP students may choose to acquire this additional grade in either honours

subject or in both. Completion of CSP 4200.00, as a twenty-first credit, is sufficient to satisfy the requirement for an honours qualifying examination.

Students may take an 'Independent Reading' class only when they reach their third or fourth year. There are six options for this class, but only one full class or the equivalent may be taken in a year. No more than two full classes of this type may be taken during the course of study. The permission of a member of the teaching staff is necessary in order to take these classes, and their availability is strictly limited.

Classes offered at the University of King's College

CSP 2000.06R: Social and Political Thought in the 20th Century. This class will examine some of the major figures in contemporary social and political thought. The 19th-century background to these figures will be explored, but the class will concentrate on developments in the 20th century. Particular attention will be paid to changes in music and painting during this period. Writers to be considered include Kant, Marx, Nietzsche, Heidegger, Derrida, Foucault, and Habermas. Movements to be discussed include German Idealism, Romanticism, Marxism, Existentialism, Phenomenology, Structuralism, Post-Structuralism, and Critical Theory.

Instructor: K. Kierans
Format: lectures and tutorials.

CSP 2010.06R/CSP 3010.06R/CSP 4010.06R: The Lecture Series. Each year a lecture series class is offered. Student are allowed to take up to three such classes, one for each year of upper-level study. Each class will consist of thirteen bi-weekly evening lectures given by specialists from Atlantic Canada and beyond. The lecturers will offer students reflections on a number of contemporary issues and themes. Each year a different theme will be explored. In 1995-96 the subject will be modern technology and its often contradictory implications for nature, family life, women, minorities, political structures, literature, drama, and the arts. Small-group tutorials will help students prepare for and react to the lectures.

Instructor: G. McQuat
Format: bi-weekly evening lectures (two hours) and weekly tutorials (two hours).

CSP 2020.06R: From Symbolism and Surrealism to the New Novel and Beyond. Questions of Perception, Image and Presence: Analysis of the interlocking perceptions of self and world, word and image, in the literature and art of our modernity, from Rimbaud and Mallarmé, Gauguin and VanGogh, through Surrealism and Cubism, to Camus and Sartre and beyond: the

170 Contemporary Studies

new novel and new wave film, Barthes, Bonnefoy, and contemporary French women writers.

Instructor(s): J. Brown and M. Bishop
Format: seminar/lectures and tutorials
Exclusion: the former CSP 4310.06

CSP 2110.03A: The Thought of Simone Weil. Simone Weil (1909-1943) is one of the rare people of real genius in the first half of our century. She was born in Paris, and was a fellow student with Jean-Paul Sartre and Simone de Beauvoir. Their philosophy professor, Alain, described Weil as "far superior to the rest of her generation". For some time she was a teacher of philosophy, then in order to understand industrial working conditions she worked for a year on an assembly-line. Albert Camus was responsible for having several of her essays published. She fled the Nazi occupation of France, but died in London aged 34.

This seminar class will read and discuss a selection of her essays on a variety of topics, from the critique of Descartes in her *Lectures on Philosophy* to her assessment of Pythagorean metaphysics and contemporary Marxist political theory, and from writings on the history of mathematics and physics, to ones about human nature and political legitimacy in medieval France. In writings published posthumously there is rich testimony to her profound religious understanding, which we shall also consider.

Instructor: S. Burns
Format: Seminars and tutorials

CSP 2111.03B: The Thought of Ludwig Wittgenstein. Ludwig Wittgenstein (1889-1951) is, perhaps with Heidegger, the most influential philosopher of our century. He was a founding genius of two distinct philosophical movements (sometimes called Ideal Language Philosophy and Ordinary Language Philosophy). Although born and raised in Vienna, he studied philosophy with Bertrand Russell at Cambridge, and returned there in 1929 to work. His extraordinary influence on philosophy is the result of his teaching small groups of dedicated students. Published for the most part posthumously, his writings, too, have made of him a philosopher's philosopher.

Nevertheless, his fame has been sufficient that his influence has extended well beyond the questions about the foundations of logic and language which preoccupied him. This class will explore some of the broader implications of his work, touching on music, art and architecture, on anthropology and psychology, and on ethics and religion, as well as on his central contributions to the philosophy of language and mind.

Instructor: S. Burns
Format: Seminars and tutorials

CSP 2200.06R: History of Modern Science. This class will be an introduction to the history of modern science, from its beginnings in the

Scientific Revolution up to the institutions and professions of twentieth-century "Big Science". Going beyond a straight history of scientific "ideas", we shall examine the social and cultural place of science and its claim to overarching truths in each historical period. Students will be required to research an historical paper and participate in small tutorials.

Instructor: G. McOuat
Format: Lectures and tutorials

CSP 3000.06R: Science and Culture. In the Twentieth Century, "Science" and "Culture" are often presented as a dichotomy. In this class we shall be examining that dichotomy, attempting to explode it by showing that science itself has a "culture" and that science is very much embedded in culture. We shall investigate disputes within sociology and philosophies of scientific method, debates around the public role of science, and the recent criticism of science and its place in society by the powerful critiques of feminism and post-modernism. A strong emphasis will be placed on case studies and seminar presentation.

Instructor: G. McOuat
Format: lectures and tutorials.
Prerequisite: Joint Honours students require CSP 2000.06 or permission of instructor.

CSP 3100.06R: The Critique of Culture and the Fate of Modernity in 20th-century French Thought. This class explores some of the key figures and movements in French intellectual life in this century. The class traces the evolution of French thought from the revolutionary humanism of the 1930s to the nihilism and scepticism dominant since the 1960s. The class deals in turn with the philosophy of the early French Hegelians, Sartre, Merleau-Ponty, the structuralists, Foucault, Derrida, Deleuze and Lyotard. Certain literary and artistic works are also considered. The effort throughout is to relate the philosophical history of the period to political and cultural developments which have helped to shape French intellectual life.

Instructor: K. Kierans
Format: Lectures and tutorials

CSP 33100.06R: Culture, Politics and the Post-Colonial Condition. The term "post-colonial" marks not only the historical passage of Western colonial expansion and domination, of subaltern resistance and national independence, but also describes a renewal of the cycle of domination and resistance, dependence and struggle in the new nations that have emerged since the end of World War Two and in Western metropolitan centres with their changed conditions and new populations. This class will examine the complex relations and changing configurations of dominations and struggle that continue to exist in our contemporary post-colonial world.

Instructor: V. Li
Format: seminar/tutorials

Exclusion: the former CSP 2040.06

CSP 3510.03A or B: Independent Readings in Contemporary Studies. In a reading class the student is assigned to a member of staff for regular meetings to discuss readings in a selected area. Papers and research projects are expected.

Format: individual instruction.

Prerequisite: honours registration in Contemporary Studies or permission of the instructor.

CSP 3511.03A or B: Independent Readings in Contemporary Studies. See class description above.

Format: individual instruction.

Prerequisite: honours registration in Contemporary Studies or permission of the instructor.

CSP 3515.06R: Independent Readings in Contemporary Studies. See class description above.

Format: individual instruction.

Prerequisite: honours registration in Contemporary Studies or permission of the instructor.

CSP 4000.06R: The Deconstruction of the Tradition in the 20th Century. Our century has followed Nietzsche in deepening the 19th-century critique of western culture. In the last century, many Europeans and North Americans believed that by refuting or ignoring traditional metaphysics and religion they could scientifically identify human interests and for the first time realize freedom in the world. Special attention will be paid to the literary and poetic forms in which both traditional culture and scientific critique are supposed to be dissolved.

Instructor(s): staff. The instructors for CSP 2000.06 and CSP 3000.06 will participate in this class.

Format: lectures and tutorials.

Prerequisite: CSP 2000.06 and CSP 3000.06 or permission of an instructor.

CSP 4300.06R: The Place of Women in Contemporary French Critical Theory. This course will concentrate on some of feminism's most challenging voices, those that have emerged from France in this century: Beauvoir, Kristeva, Cixous and Irigaray. The course will attempt to illuminate the intellectual background against which these women write, particularly in the areas of linguistic and anthropological structuralism, and in psychoanalytic theory. The class will be organized in part by the historical evolution of feminist thought, in part by the consideration of central feminist concerns.

Instructor: E. Edwards

Format: lectures and tutorials

Exclusion: the former CSP 2030.06

Cross-listing: WOST 4400.06

CSP 4500.06R: Honours Seminar in Contemporary Studies. This seminar is specifically intended for students in the

combined-honours degree programme in Contemporary Studies. Students must write a substantial essay on a topic to be chosen in consultation with the appropriate member of the Contemporary Studies teaching staff.

Instructor(s): Staff.

Format: seminar (two or three hours).

Prerequisite: honours registration in Contemporary Studies or permission of the instructor.

CSP 4510.03A or B: Independent Reading in Contemporary Studies. In a reading class the student is assigned to a member of staff for regular meetings to discuss readings in a selected area. Papers and research projects are expected.

Format: individual instruction.

Prerequisite: honours registration in Contemporary Studies or permission of the instructor.

First offered 1995-96.

CSP 4511.03A or B: Independent Reading Class in Contemporary Studies. See class description above.

Format: individual instruction.

Prerequisite: honours registration in Contemporary Studies or permission of the instructor.

First offered 1995-96.

CSP 4515.06R: Independent Reading Class in Contemporary Studies. See class description above.

Format: individual instruction.

Prerequisite: honours registration in Contemporary Studies or permission of the instructor.

First offered 1995-96.

Dalhousie Integrated Science Program

The Dalhousie Integrated Science Program (DISP) is an integrated 5-credit program that covers material from each of the disciplines in the Faculty of Science. DISP uses a thematic approach to teach the basic concepts in an interdisciplinary fashion. A number of pedagogical approaches to learning are used, including cooperative learning methods. Mathematical principles and techniques are developed and applied in the context of the material being covered. Stress is placed on learning scientific methodology and how different disciplines interrelate to explain various phenomena.

The emphasis of DISP is on "learning by doing". As a result, there are numerous labs and field trips. In addition, the students are expected to write a research paper over the course of the year.

DISP is an alternative way of doing a first-year course of studies. Rather than five separate classes, it is a single program. It fulfills the student's writing, mathematics, science, and social science requirements. It does not, however, fulfil the humanities requirement. Students therefore need to take a humanities class in their second year. In second year, students may do a major or honors degree in any of the science disciplines, including engineering. They may also switch to a B.A. program or apply to programs in the Health Professions.

Students wishing to enter this program normally must have a minimum Grade 12 or OAC average of 80%, with a minimum of 75% in Math and English, and at least one Grade 12 or OAC Science class.

Students are assessed continuously throughout the year through quizzes, laboratory reports, assignments, and so forth. Students receive a single letter grade for the entire 5-credit program.

 H. Williams, PhD (Exeter), Ontario Geological Survey

Introduction

Earth Science studies the Earth and deals with many questions, such as: How was the Earth formed? What is its composition? Where do we look for oil? Or nickel? Or reliable water supplies? What changes the Earth now? What moves continents? Why are the ages of all the ocean basins less than one-twentieth the age of the Earth itself? Geology is an intellectually exciting discipline, and its study is of enormous economic and environmental importance to Canada.

Classes in earth sciences are offered for different types of students. Some will want to make a career in some aspect of the study of the Earth - as geologists, geochemists, geophysicists, oceanographers, or teachers - and work for private industry or government agencies. Some may need instruction in earth sciences as an aid to other disciplines: for example, a mining engineer, an environmental scientist interested in groundwater problems, a marine engineer interested in coastal processes, or a biologist interested in protozoa. Other students may be interested in an earth sciences degree before they take a professional qualification such as law or business administration. Those whose prime interest is the humanities or social sciences will find that introductory classes in earth sciences stimulate their awareness of their surroundings, their understanding of the environment and develop their appreciation of science.

High School Preparation

Students in high school who plan a career in sciences involving the Earth, such as geology or geophysics, should have Nova Scotia Mathematics 441 (or equivalent), plus Chemistry and Physics. Note that only Mathematics is a prerequisite, but the others are strongly recommended. The student should aim to make up deficiencies in high school preparation in the first year at Dalhousie.

Undergraduate Programmes

Students should consult the "Degree Requirements" section of this calendar for specific regulations.

Programmes and classes for those whose major is not earth sciences.

These classes are specially designed for those who want to know something about the Earth, but whose major field of study at Dalhousie will lie elsewhere; an economics student, concerned with resources; a history student, interested in the role played by Canada's geological framework in the development of transportation; a biology student interested in faunal environments on the seafloor. These classes are:

- ESCI 1040.03/1050.03: The Earth and Society, a class especially designed for students not intending to major in geology
- SCIE 1200.06: An Overview of the Cosmos, Earth and Life, an interdisciplinary science class designed for non-science majors
- ESCI 2400.03: Marine Geology, an evening class open to all with good grades in 1000.06 or 1040.03/1050.03
- ESCI 2410.03: Environmental Geology, an evening class, open to all with good grades in 1000.06 or 1040.03/1050.03
- ESCI 2420.03: The Dinosaurs, open to all with good grades in 1000.06 or 1040.03/1050.03.

For engineering students and science students in other disciplines

Biology:	1000.06, 2410.03/3410.03, 2201.03/2202.03, 2420.03;
Chemistry:	1000.06, 2101.0.03/2102.03, 3010.03, 3020.03, 4380.03;
Engineering:	1000.06, 2050.03, 2102.03/2102.03, 2110.03, 3130.03;
Math:	1000.06, 2050.03, 3130.03, 4270.03, 4280.03, 4290.03;
Physics:	1000.06, 2050.03, 3130.03, 4270.03, 4280.03, and 4290.03.

Field Work

Field excursions are part of several classes and are conducted at appropriate times during the session. In addition, some optional field excursions may be held each year.

Students are charged a contribution towards the cost of all field excursions. Charges for those trips that are held during the session, as part of a class, are payable to the department. As a result of increased costs and uncertainty of external funding, fees for individual field excursions are fixed yearly. (Please consult Department.) The charges for optional field trips are notified, and payable, several months in advance.

Professional Registration

Professional Registration of Geoscientists (geologists & geophysicists), usually in a joint Association with Engineers, is spreading across Canada. Registration is necessary to practice as a professional in Alberta, British Columbia, Newfoundland, Quebec and Northwest Territories. Negotiations are well under way in four other provinces. You should be aware that a programme which meets our degree requirements does not necessarily meet criteria

for registration. Consult the Academic Advisor. Students should note that, in addition to Earth Science classes, most Registration boards require students to have taken first year Chemistry, Calculus and Physics. The appropriate Dalhousie classes are: CHEM 1010.06, MATH 1000.03 and 1010.03, and PHYC 1100.06.

Honours Degree Programmes

An honours degree is almost essential for any professional work in earth sciences, and for graduate study. Students must take the second and third year classes of the Earth Sciences core programme listed below. See "Degree Requirements" section for complete details. Dalhousie Integrated Science Programme (see separate entry in this calendar) is an appropriate preparation for entry into the second year of an Earth Sciences programme.

Departmental Requirements

Classes required in Honours:

1000 level:	ESCI 1000.06 or 1040.03 and 1001.03
2000 level:	ESCI 0010.00, 2050.03, 2101.03, 2102.03, 2110.03, 2203.03, 2204.03
3000 level:	ESCI 0020.03, 3010.03, 3020.03, 3140.03, 3302.03, 3303.03
4000 level:	ESCI 0030.03, 4200.06, 4351.03 plus other advanced Earth Science credits for a total of nine credits beyond the 1000 level.

Honours Qualifying examination

Other required classes:

MATH 1000.03 and 1010.03 or MATH 1500.06, COMP 1000.03 (PC section), two of PHYC 1100.06, CHEM 1010.06, BIOL 1000.06 or 2001.03 and 2002.03

Other departmental requirements:

Two credits in a minor subject.

Note: PHYC 1100.06 and a Mathematics class are prerequisites for ESCI 2050.03, which fits best into Year II of the programme.

In second year, students should take one class in two of Physics, Chemistry, Biology, Mathematics. Recommended classes are: BIOL 2001.03 and 2002.03, 3321.03; CHEM 2110.03, 2200.03, 2310.03, 2320.03; PHYC 2000.03, 2005.03, 2010.03, 2015.03, or 2220.03/2230.03; MATH 2000.06, 1060.03/1070.03, 2270.03.

Students in the geophysics stream will take ESCI 3130.03. This class has a field school, which is an integral part of the course. It is normally held in late April or early May.

To satisfy Regulation 11.5 concerning the Honours Qualifying Examination, a student will complete a thesis as ESCI 4200.06, followed by an oral examination, based on the general subject area of the thesis. This

oral examination combines with ESCI 0030.03 then counts as the honours qualifying examination.

Theses must be completed by the second Monday in March of fourth year. Students who complete after this date must re-register for the following academic year in ESCI 4200.06, pay the fees, and graduate at the spring convocation of the next academic year.

Each advanced class in the second, third and fourth year, except electives, must be passed with a grade of C or better.

In five of the advanced classes, a grade of B or better must be achieved, and in three additional advanced classes, a grade of B- or better is required.

A grade of B- or better must be achieved on the Honours Qualifying Examination.

For First Class Honours, students must achieve either:

- Grades of A or better in four advanced classes and of A- or better in four additional advanced classes, or
- Grades of A or better in six advanced classes and of B or better in all advanced classes.

A grade of A- or better must be achieved on the Honours Qualifying Examination.

Co-op Programme

A co-op programme is offered by the department, providing students with an opportunity to gain practical work experience concurrently with their academic training. The student is expected to fulfil the normal twenty-credit requirement of an honours degree or advanced major, over eight academic terms that are interspersed with four work terms. A minimum average of B is required for entrance to the programme. The programme commences in the spring term of the second year. Interested students should consult with the department prior to that time.

Departmental Requirements

Same as for the regular Honours programme above in addition to the work described directly above.

Hydrogeology/Environmental Geology

In addition to the above programme, the Department offers special programmes emphasizing hydrogeology/environmental geology in the third and fourth year. Students interested in specializing in these areas should consult with the Undergraduate Advisor.

Honours Marine Geology Stream Programme

Students wishing to obtain an honours BSc degree in the marine geology stream should

discuss their programme with the undergraduate advisor and classes will normally include:

Year I:	ESCI 1000.06, MATH 1000.03/1010.03, PHYC 1100.06, CHEM 1010.06, and WRITING Requirement elective
Year II:	OCEA 2850.06, ESCI 0010.00, ESCI 2101.03, ESCI 2102.03, ESCI 2203.03, ESCI 2204.03, ESCI 2110.03, Social Science Elective, COMP 1000.03
Year III:	ESCI 0020.03, ESCI 3010.03, ESCI 3301.03, ESCI 3140.03, ESCI 3400.03, ESCI 3410.03, ESCI 3303.03, ESCI 3020.03, ESCI 2050.03, Elective
Year IV:	ESCI 4200.06, ESCI 0030.03, ESCI 4501.03, ESCI 4351.03, plus 1½ credit from ESCI 4000-level classes (ESCI 4270.03/4280.03, 4290.03, 4350.03, 4501.03, 4502.03/4503.03, 4510.03) (and 1-credit from Oceanography, OCEA 4110.03, 4120.03, 4130.03, 4150.03, 4280.03)

Combined Honours Programme

Students wishing to take combined honours in earth sciences and another subject, should discuss their programme in detail with the undergraduate advisor. Students must attend the field school normally taken at the beginning of second year (ESCI 0010.00).

Combined Honours with Biology

Earth Sciences Honours Programme should be followed during Years I-III and students should take either a Biology class or ESCI 4501.03 or 4502.03 or 4503.03 in place of ESCI 3010.03/3020.03. Suggested Biology classes are 1000.06 or 2001.03 and 2002.03 in Year I; 2030.03 and 3030.03 and 2060.03 in Year II; 2001.03 and 2002.03 or 3321.03 or 3323.03 in Year III.

Combined Honours with Physics

Students should follow the Earth Sciences Honours Programme in years I to III, including ESCI 2050.03 and ESCI 3130.03, but should take a Physics class in place of ESCI 3010.03/3020.03. Suggested Physics classes are 1100.06 in Year I, 2000.03, 2005.03, 2010.03, 2015.03 in Year II, two of 3090.03, 3140.03 or 3000.03/3010.03 or 3200.03/3210.03 and 3160.03/3170.03 in Year III. MATH 2000.06 should also be taken in either Year II or III, and MATH 3110.03/3120.03 in Year III or IV.

Combined Honours with Chemistry

Students should follow the Earth Sciences Honours Programme in Years I-III, but should take 3000 level Chemistry classes in place of ESCI 3302.03/3303.03 and 2050.03/3130.03.

Suggested Chemistry classes are 1010.06 in Year I, 2201.03/2101.03 and 2301.03/2302.03 or 2400.06 in Year II; any 3000 level in Year III.

BSc (Major) with Diploma in Engineering

Year I	MATH 1000.03/1010.03; PHYC 1100.06; ESCI 1000.06; ENGI 1100.03/1120.03; Writing Class
Year II	ESCI 0010.00, 2110.03, 2203.03, 2204.03; ENGI 2240.03, 2230.03, 2121.03, 2222.03; MATH 2480.03/2490.03; Humanity/Soc. Sci. B-term elective
Year III	CHEM 1020.06; ESCI 2101.03, 2102.03 plus year 3 credit; ENGI 2340.03, 2341.03, 2331.03, 2101.03; Humanities/Soc. Sci., 1/2 credit overload

Earth System Science

Students wishing to follow an interdisciplinary study of the Earth should consult the Earth System Science section of this calendar.

Advanced Major (20-credits)

Departmental Requirements

Classes required in Advanced Major:

1000 level:	ESCI 1000.06 or 1040.03 and 1001.03
2000 level:	ESCI 0010.00, 2101.03 and 2102.03, 2110.03, 2203.03 and 2204.03
3000 level:	ESCI 0020.03, plus three (3) additional credits in Earth Sciences beyond the 2000 level.

Other required classes:

MATH 1000.03 and 1010.03/1060.03 or MATH 1500.06, two of PHYC 1100.06, CHEM 1100.06, BIOL 1000.06 or BIOL 2001.03 and 2002.03

A grade of D in an Earth Sciences class precludes admission to classes for which the class is a prerequisite. Where several classes are listed as prerequisites, and a grade of C- or better was not obtained in all, the instructor's consent may be the basis for admission. Students must satisfy the Faculty of Science Writing Requirement and Mathematics Requirement.

Advanced Major Co-op (20 credit)

Departmental Requirements

Same as for the Advanced Major above plus the work described in the Co-op programme section previously stated.

Major in Earth Sciences (15 credit)

Three-year programmes with a major in Earth Sciences are suitable for students who intend to take other professional training or to

enter fields where they are likely to need their geological training as background. A 15-credit degree is of little value as a qualification for a professional career in the earth sciences.

Departmental Requirements

Classes required in major:

- 1000 level:** ESCI 1000.06 or 1040.03 and 1001.03
- 2000 level:** ESCI 0010.00, 2101.03 and 2102.03, 2110.03, 2203.03 and 2204.03
- 3000 level:** ESCI 0020.03, plus two (2) additional Earth Sciences credits beyond the 2000 level.

ESCI 1000.06 or 1040.03/1001.03 must be passed with a grade of B- or better to continue in the programme.

A grade of D in an Earth Sciences class precludes admission to classes for which the class is a prerequisite. Students must satisfy the Faculty of Science Writing Requirement and Mathematics Requirement.

Classes Offered

ESCI 1000.06R: Introduction to Geology. An introductory class for students who plan to take a degree in earth sciences, or in another science, or in engineering. The lecture material covers the whole field of geology including the origin of the solar system, earth history, geological time, ocean basin formation, mountain formation, volcanoes, continental drift, natural resources such as metals and petroleum, and environmental pollution. The laboratory component involves work with minerals, rocks, fossils, and geological maps as well as a number of field excursions to observe local geological features. Students who wish to major in Earth Sciences but have unresolvable scheduling conflicts with ESCI 1000.06 should consult the undergraduate advisor.

- Instructors:** J. Hall
- Format:** Lectures/Field trips/Laboratories
- Exclusion:** Credit will be given for only one of ESCI 1000.06, 1040.03/1050.03, or 1040.03/1001.03.

ESCI 1001.03B: Beginning Geology. This class is intended primarily for students intending to major in earth sciences. Lectures will cover the classification of Earth materials (minerals, rocks, fossils) and the operation of Earth processes (erosion, deposition, volcanism, metamorphism, earthquakes). They will also deal with the internal structure of the Earth (core, mantle, crust), and the many expressions of plate tectonics (mountain ranges, rift valleys, fracture zones, ocean basins, mid-ocean ridges). Laboratories involve work with minerals, rocks, fossils, and geological maps.

- Instructors:** J. Hall

- Format:** Lectures/Laboratories
- Prerequisite:** ESCI 1040.03
- Exclusion:** Credit will be given for only one of ESCI 1000.06, 1040.03/1050.03, or 1040.03/1001.03.

ESCI 1040.03A or B/1050.03A or B: The Earth and Society. These classes are designed for non-Earth Sciences majors. Previous Mathematics, Physics, or Chemistry are not required. These classes do not include formal labs, but 1040.03 includes three field trips, and some assignments are done in a laboratory environment. ESCI 1040.03 provides an introduction to some basic concepts about the Earth, including the Earth as a planet, geological time, evolution and extinctions, plate tectonics, and the evolution of the Earth's crust. ESCI 1050.03 applies the concepts learned in 1040.03 to understanding how geology affects society. Topics covered include mineral and energy resources, geological catastrophes, geology and landscape of Nova Scotia, and global climate change. ESCI 1040.03 is a prerequisite for ESCI 1050.03. Students with good grades in ESCI 1040.03 may enter ESCI 1001.03.

- Instructors:** D.I. Godfrey-Smith/M. Zentilli/P.J.C. Ryall
- Format:** Lectures/Field trips
- Exclusion:** Credit will be given for only one of ESCI 1000.06, 1040.03/1050.03, or 1040.03/1001.03.

SCIE 1200.06R: An Overview of the Cosmos, Earth, and Life. See class description in the Science, Interdisciplinary section of this calendar.

ESCI 0010.00: Field School. The class provides seven days of concentrated instruction off campus in geological field methods. A wide variety of rock types are examined in the field using traverses, measured sections and outcrop maps. The class is held the week before classes begin in the fall term and should normally be taken by those enrolling in second year level Earth Sciences classes ESCI 2101.03, 2102.03, 2110.03, 2203.03 or 2204.03. Although ESCI 0010.00 by itself is non-credit, it appears on transcripts and ESCI 0010.00 plus ESCI 0020.03 is a half credit. The prerequisite for this class is ESCI 1000.06 or ESCI 1040.03/1001.03.

ESCI 2050.03B: Principles of Geophysics. Geophysical methods are increasingly important in land- and sea-based geological studies. Understanding the principles of the various techniques (seismics, gravity, magnetics) their powers, and limitations, provides a foundation for later work.

- Instructor:** P.J.C. Ryall
- Format:** Lecture 3 hours / Tutorial 2 hours
- Prerequisites:** a first year class in Mathematics and PHYC 1100.06

ESCI 2101.03A: Mineralogy and Crystallography. This class deals with the way in which the chemical components of rocks are

organized into specific crystalline compounds (minerals). The lectures cover the crystallographic principles which determine the regular internal and external structure of minerals (crystallography), the relationship between mineral composition and structure (crystal chemistry) and the interaction of polarized light with crystals (optics). The labs involve hand specimen identification of minerals based on their physical properties and associations with other minerals in rocks.

Instructor: P. Robinson
Format: Lecture 3 hours/ Laboratory 3 hours

Prerequisites: ESCI 1000.06 or ESCI 1040.03/ESCI 1001.03

ESCI 2102.03B: Introduction to Petrography and Petrology. In this class we deal with the ways in which minerals interact with melts, solutions and each other to form rocks. Such topics as phase equilibria, solution chemistry and solid-solid reactions will be covered in the lectures as will the basic principles of rock classification based on textures and mineralogical compositions. The labs will emphasize optical identification of minerals and rocks using the petrographic microscope.

Instructor: P. Robinson
Format: Lecture 3 hours/ Laboratory 3 hours

Prerequisite: ESCI 2101.03

ESCI 2110.03A: Field Methods. This is intended as an introduction to field techniques useful to the practising geologist, particularly those concepts essential for the accurate field description and identification of rocks and the use and construction of geological maps.

Geophysical field techniques and elementary structural geology are also considered.

Instructor: N. Culshaw
Format: Lecture 3 hours/ Laboratory 3 hours/ Field trips

Prerequisites: ESCI 1000.06 or ESCI 1040.03/ESCI 1001.03

ESCI 2203.03A: Sediments and Sedimentary Rocks. This class deals with physical and biological processes which generate modern siliciclastic, carbonate and evaporite sediments. Materials associated with Quaternary glacial events are discussed. The formation of sedimentary rocks is examined and their petrology illustrated using laboratory techniques. Weekend field trips to selected modern and ancient sedimentary deposits in Nova Scotia take place in the first month of classes.

Instructor: T. Martel
Format: Lecture 3 hours/Laboratory 3 hours

Prerequisites: ESCI 1000.06 or ESCI 1040.03/ESCI 1001.03

ESCI 2204.03B: Life Through Time. The core of the class will cover in systematic sequence the

macroscopic invertebrates, a few important vertebrates and plants (microfossils and dinosaurs are covered in other classes). The class will also deal with many of the important events that have affected the development of life on Earth, including the beginning of life, evolution, fossilization, mass extinction and the great biological crises of the Permian-Triassic and Cretaceous. Laboratory work will cover identification of fossils, concept of paleontological species and paleoecology.

Instructor: D. Scott
Format: Lecture 3 hours/Laboratory 3 hours

Prerequisites: ESCI 2203.03 or ESCI 1040.03/BIOL 1000.06

ESCI 2400.03A: Marine Geology. The ocean basins make up nearly three quarters of the Earth's surface and are the loci of many active geologic processes. This class deals with the morphology and tectonic history of the ocean basins, the lithology and geophysical characteristics of oceanic lithosphere and the nature and distribution of marine sediments. Important processes such as oceanic volcanism, hydrothermal circulation, sea floor spreading and marine sedimentation will be discussed, as will environmental, legal and economic aspects of the marine environment. The class is designed to provide an introduction to marine geology for non-earth sciences majors wishing to learn more about geology and for those who plan to take a degree in earth sciences. This class is not recommended for earth sciences honours students.

Instructor: P. Robinson
Format: Lecture/Laboratory 3 hours, one evening per week

Prerequisite: any first year class in earth sciences

ESCI 2410.03B: Environmental and Resource Geology. Geology lies behind many of the environmental problems facing humanity today. In this class we consider topics such as energy and mineral resources, geological hazards such as earthquakes, landslides, and volcanic eruptions, the relevance of geology in the fields of foundation engineering, pollution and waste disposal, and the role that geology has to play in planning urban areas, especially in Nova Scotia. This class is not recommended for earth sciences honours students who should take ESCI 3410.03.

Instructor: G.K. Muecke
Format: Lecture/ Laboratory 3 hours, one evening per week

Prerequisites: ESCI 1000.06 or ESCI 1040.03/1050.03 or 1001.03

ESCI 2420.03B: The Dinosaur. This class will consider the origin, evolution and extinction of the dinosaurs as a case-study of evolutionary processes. It will address such questions as: what were the dinosaurs? Cold-blooded reptiles, or warm-blooded, mammal-like parents? Why did some of them grow so large and heavy? Are

the birds their descendants? In attempting to answer these apparently simple questions we will also investigate the sophisticated methods for gathering sufficient evidence from bones to reconstruct not only the physiology of these surprisingly modern organisms but also rather intangible characteristics such as behaviour.

Instructor: Staff
 Format: Lecture 3 hours
 Prerequisites: ESCI 1040.03/1050.03 or 1040.03/1001.03 or 1000.06

ESCI 2430.03B: Rocks as Clocks. A review of a range of dating methods, including those that rely on interval counting, chemical changes, and radioactive decay. Applications across all disciplines, including geology, archaeology, paleo-anthropology, biology and the environmental sciences, will be highlighted. Methods pertaining to the last two million years will be emphasized, but those relevant to earlier periods will also be reviewed. Case studies relating to human evolution and cultural development, as well as the study of Quaternary sedimentary geology and past climate change will be highlighted.

Instructor: D.I. Godfrey-Smith
 Prerequisites: ESCI 1040.03/1050.03 or 1001.03 or 1000.06, or permission of the instructor

ESCI 0020.03: Computing Camp. This class is required for major, advanced major, and honours programmes and it is designed to provide the computing skills necessary to meet today's challenges. These skills will be learned through a field-mapping project using computers to manipulate data and prepare geologic maps. The class will be held the week before classes begin in the third year of a programme. Successful completion of this class and ESCI 0010.00 will result in a 1/2 credit award.

ESCI 3010.03A: Igneous Petrology. The study of the field relations, mineralogy, texture, and geochemistry of volcanic and plutonic rocks. Lectures discuss the classification, graphical representation, means of production, differentiation, and emplacement of igneous rocks, and their grouping into co-magmatic provinces. Labs involve using the petrographic microscope to determine the crystallization history of igneous rocks through their mineralogy and texture.

Instructor: G. Muecke
 Format: Lecture 3 hours/Laboratory 3 hours
 Prerequisite: ESCI 2101.03/2102.03 and CHEM 1010.06

ESCI 3020.03B: Metamorphic Petrology. Metamorphic petrology is the study of the way in which pre-existing igneous, sedimentary, and metamorphic rocks respond to changes in pressure, temperature, and geochemical environment. Metamorphic reactions, deformation and recrystallization, the stability

relations of minerals and mineral assemblages under various physical and chemical conditions, and the concept of metamorphic facies are discussed. In the labs, microscopic mineralogy and texture are used to decipher the metamorphic history of rocks.

Instructor: R.A. Jamieson
 Format: Lecture 3 hours/Laboratory 3 hours
 Prerequisites: ESCI 2101.03/2102.03, ESCI 3010.03

ESCI 3140.03A: Structural Geology. An introduction to the behaviour of rocks during deformation, stressing the geometrical aspects of rock structures on the scale normally encountered by the exploration geologist, and their interpretation. The laboratory exercises in the construction and interpretation of geological maps develop skill in the interpretation and graphical representation of structures in three dimensions.

Instructor: N. Culshaw
 Format: Lecture 3 hours/Laboratory 3 hours
 Prerequisites: ESCI 2101.03/2102.03, ESCI 2110.03, ESCI 2203.03/2204.03

ESCI 3302.03A: Quaternary Sedimentary Environments. The class deals with facies models for Quaternary glacial, coastal, deep sea and alluvial sediment. Emphasis is placed on sedimentation processes typical of each depositional setting and the geometry of the resulting deposits. Ancient deposits, including those resulting from glacial events, are examined, and their association with hydrocarbons, coal and sedimentary ores discussed. The labs provide practical experience of techniques used in facies analysis.

Instructor: P. Schenk
 Format: Lecture 3 hours/Laboratory 3 hours
 Prerequisites: ESCI 2203.03/ESCI 2204.03

ESCI 3303.03A: Stratigraphy. Stratigraphy is the backbone of the geological sciences; it is the integration of sedimentology, paleontology, petrology, and structural geology to reconstruct Earth history. Subtopics include litho-, bio-, and chronostratigraphy as well as event, seismic, and sequent stratigraphy. We shall survey the fields of eustasy, isostasy and the geologic framework of sediment accumulation. The class concludes with a summary of geologic history. Laboratories include exercises, some of which involve the computer, and seminars.

Instructor: T. Martel
 Format: Lecture 3 hours/Laboratory 3 hours
 Prerequisites: ESCI 3302.03

ESCI 3400.03A: Fundamentals of Hydrogeology. The availability of clean water is absolutely essential for the development and maintenance of modern societies. This class will deal with the mathematical description of groundwater movement, geophysical and

geological methods for groundwater exploration, regional occurrence and chemical quality of groundwater, and the effects of waste disposal on chemical quality. Laboratory work stresses familiarity with techniques employed in the assessment and exploration of groundwater resources, as well as the analysis and interpretation of water quality data.

Instructor: G.K. Muecke/P.J.C. Ryall
Format: Lecture 3 hours/ Laboratory 3 hours
Prerequisites: ESCI 2203.03, 2101.03, 2102.03

ESCI 3402.03B: Practical Hydrogeology. This class is designed to build on Geology 3400A to familiarize the student with the practical aspects of groundwater resources development and monitoring system installation, including drilling methods, well design, well hydraulics and aquifer analysis, slug testing, data interpretation, and introduction to groundwater modelling. Actual case history data and problem assignments with practical applications will be emphasized.

Instructor: Staff
Format: Lecture 3 hours
Prerequisites: ESCI 3400.03

ESCI 3410.03B: Enhanced Environmental Geology. The topics treated in this class are similar to ESCI 2410.03, but they will be discussed at considerably greater depth during an additional 3 hours lab / tutorial per week. Credit will be given for only one of ESCI 2410.03 or 3410.03.

Instructor: G.K. Muecke
Format: Lecture 3 hours/ Laboratory 3 hours
Prerequisites: ESCI 3400.03, 2101.03/2102.03

ESCI 0030.03A: Advanced Field School. The class is a field excursion of 7 to 14 days duration which is designed to give the student a regional perspective of Appalachian geology, including metamorphic terrains, igneous intrusions and sedimentary basins of Precambrian to Mesozoic age. Classic field localities in eastern North America will be visited. Exceptionally, a more distant location may be selected. It appears on transcripts and is compulsory for all Honours students. Attendance and completion of this class will be part of the 21st credit required for the honours degree.

ESCI 3500B: Geoscience Information Management. Advances in microcomputer technology continue to dramatically change the working environment of earth science professionals. In this class we will be investigating digital methods of data acquisition, storage, processing, evaluation, and presentation. The types of information considered will include: numerical, text-based, spatially referenced (cartographic), and image-based (aerial photos, satellite imagery) data sets. The theory and use of spreadsheets, relational databases, global positioning systems (GPS), and geographic information systems (GIS)

in the geosciences will be considered. The integration of systems (ex. GIS with GPS and databases) will also be discussed. Laboratory projects based on geological and environmental problems and data sets form an integral part of the class. Participants are expected to have a basic familiarity with the MS_DOS and WINDOWS operating systems and the fundamentals of structured programming languages.

Instructor: G. K. Muecke
Format: Lecture 3 hours/Laboratory 3 hours
Prerequisites: ESCI 1000.06 or 1040.03/1050.03, 2110.03, 2101.03, 2102.03, 2203.03

ESCI 4100.06R: Research Project. See class description for ESCI 4200.06.

Instructor: Staff
Format: Lecture 3 hours

ESCI 4151.03A or B: Mineral Deposits. This class is an introduction to the geology of metallic ore deposits (e.g. gold, copper, zinc, lead, platinum-group elements, the rare earths, uranium, etc.) and some industrial mineral concentrations (e.g. asbestos, barite). Emphasis is given to the diverse geological processes of ore formation within different geological environments, such as the ocean floors, sedimentary basins, continental rifts, island arcs and Andean type continental margins. It also acquaints the student with principles of mineral exploration, assessment, exploitation, and environmental problems related to mining. The class integrates many Earth Science disciplines, and requires extensive reading, writing, and the oral presentation or seminars.

Instructors: M. Zentilli
Format: Lecture 3 hours
Prerequisite: ESCI 3302.03/3303.03

ESCI 4152.03B: Fossil Fuels. The class provides an introduction to the principal fossil fuels: peat and coal, oil shale, oil and natural gas, and uranium. We will discuss the chemical nature of each type of fuel, as well as biological and physicochemical factors involved in its genesis and concentration within the earth. The class will also consider practical methods used in resource evaluation and geological and geopolitical factors that make extraction of raw fuel feasible. Economically important deposits in Canada and worldwide will be discussed.

Instructors: M. Gibling
Format: Lecture 3 hours
Prerequisites: ESCI 3302.03/3303.03

ESCI 4200.06R: Honours Thesis. This class deals with many aspects of written and oral communication of scientific and technical material. In particular, it covers the elements of scientific style (clarity, precision, conciseness, and objectivity), the logical organization and development of ideas and arguments, and the acceptable formats for scientific writing. Some attention will also be given to techniques of oral presentation. This is a compulsory class for

students writing an Honours thesis in Earth Sciences, but it is open to students from other disciplines. Text: H.M. Weisman, Basic Technical Writing.

Instructor: Staff
Format: Lecture 3 hours

ESCI 4270.03A: Applied Geophysics. The application of geophysical methods to petroleum and mineral exploration as introduced in 2050.03 and 3130.03 is here treated at a more advanced level with an emphasis on seismic techniques. Assignments attempt to involve the student in interpretation of realistic geophysical data and modelling on workstations. This class is not offered every year.

Instructor: P. Ryall
Format: Lecture 3 hours
Prerequisites: ESCI 2050.03, ESCI 3130.03 or instructor's consent

Cross-listing: ESCI 5270.03

ESCI 4280.03B: Marine Geophysics. The application of the various geophysical techniques to the study of the sea floor and the principal results obtained are examined. The processes involved in the creation, evolution and destruction of ocean basins and the implications of the experimental observations are also considered. This class is not offered every year.

Instructor: K. Loudon
Format: Lecture 3 hours / Laboratory
Prerequisites: ESCI 2050.03, ESCI 3130.03, ESCI 4270.03 or instructor's consent

Cross-listing: ESCI 5280.03, OCEA 4350.03/5350.03

ESCI 4290.03A: Geodynamics. Essential for earth sciences or physics students who intend to be geophysicists, the class covers the physical state and behaviour of the Earth as a whole. This class is not offered every year.

Instructor: C. Beaumont
Format: Lecture 3 hours
Prerequisites: ESCI 2050.03, ESCI 3130.03, ESCI 4270.03 or instructor's consent

Cross-listing: ESCI 5290.03, OCEA 5450.03

ESCI 4350.03A: Tectonics. This class is intended to introduce students to current research areas in large scale processes in geology. Study of these processes draws on all fields of geology and geophysics. The process studies change as research interests change internationally. Currently three processes are considered. There are, firstly, recent advances in understanding of the Alpine-Himalayan compressional belt, involving such features as lateral extrusion and secondary extension. Secondly, new models for sedimentary basin formation as described, using the North Sea and the margins of the North Atlantic as examples. Lastly, new results on the continental crust, particularly those derived from deep reflection seismics, are described. May not be offered every year.

Instructor: J.M. Hall
Format: Lecture 3 hours
Prerequisites: All third year Geology core classes

Cross-listing: ESCI 5350.03

ESCI 4351.03B: Canadian Regional Tectonics. This class is a required class for Earth Sciences Honours students. It is intended to synthesize the various aspects of geology treated in more specialized classes through an analysis of those processes which have shaped some of the major Canadian geological regions. We will examine the structure, stratigraphy and petrology of mountain belts (Cordillera, Appalachians), Precambrian shield (Grenville, Churchill, Superior), and sedimentary basins (East Coast shelf, Western Canada, Sverdrup) in order to determine what processes, including plate tectonic processes, created them.

Instructor: N. Culshaw/M. Gibling
Format: Lecture 3 hours
Cross-listing: ESCI 5351.03

ESCI 4400.03B: Advanced Metamorphic Petrology. Metamorphic rocks are considered as equilibrium systems. The role of fluids in metamorphism, metasomatism and mass transport, kinetics of metamorphic processes, microstructure, and textural development of metamorphic rocks are discussed. Laboratory projects and special topics are chosen to suit the students' interests. This class is offered in alternate years.

Instructor: R.A. Jamieson
Format: Lecture 3 hours
Prerequisites: ESCI 3010.03, ESCI 3020.03
Cross-listing: ESCI 5400.03

ESCI 4501.03A or B: Basin Analysis. The class is designed to present advanced topics of current interest concerning regional and global patterns of sediment accumulation. Topics may include: sequence stratigraphy and continental margin evolution; stratigraphic and geochemical methods used in analysis of burial history; paleo flow patterns; and basinal geology in the context of plate-tectonic theory. This class is not offered every year—consult department.

Instructor: Staff
Format: Lecture 3 hours
Prerequisites: ESCI 3302.03/3303.03

ESCI 4502.03A: Micropaleontology and Global Change. This class provides a systematic study of major groups of microfossils (principally foraminifera, ostracoda and calcareous nanoplankton). Particular emphasis is placed on the distribution and ecology of recent microfossils, and on laboratory techniques for sampling and studying them. Quaternary paleo-oceanography and faunal distribution is examined based on knowledge of the tolerances of the living organisms.

Instructor: D.B. Scott
Format: Lecture 3 hours / Laboratory 3 hours

Prerequisites: ESCI 3302.03/3303.03

ESCI 4503.03B: Carbonate and Evaporite Petrology. This class deals with carbonate and evaporite depositional and diagenetic environments. Modern environments are surveyed from the deep sea to tidal flat and playa settings. Changes to these records and especially the development of porosity are considered in the second half. This class is not offered every year; consult timetable.

Instructor: P.E. Schenk

Format: Lecture 3 hours/
Laboratories/Seminars 3 hours

Prerequisites: ESCI 3302.03

ESCI 4510.03A/4511.03B: Directed Reading.

This class is intended to permit further study of a specific topic of interest, or to correct a deficiency in a student's programme.

Instructors: Staff

Format: As required

Prerequisite: Permission of Department

ESCI 8700.00A or B (non-credit): Co-op Seminar

ESCI 8891.12R: Co-op Work Term I

ESCI 8892.12R: Co-op Work Term II

ESCI 8893.12R: Co-op Work Term III

ESCI 8894.12R: Co-op Work Term IV

Seminars

Department seminars are arranged during the term. Other specialized seminars are arranged on an ad hoc basis.

Graduate Classes

Some graduate classes may be suitable. Please consult the Graduate Calendar and seek advice from the Department.

Earth System Science

The Earth is an isolated system which supports life. It has evolved over the past five billion years dependent upon extrinsic variables (e.g. solar energy input and collisions with celestial bodies) and intrinsic variables (e.g. tectonic forces and genetic change). A change in one component of the Earth system affects the others. The major components are the lithosphere, hydrosphere, atmosphere and biosphere.

Because of the complexity of the Earth system, the major components have been studied separately: the lithosphere by geologists, the hydrosphere by oceanographers, the atmosphere by meteorologists and the biosphere by biologists. These disciplines have been underpinned by the fundamental sciences of chemistry and physics as well as mathematics. This separation has enabled the development of knowledge, but sometimes at cost to the integration of that knowledge in understanding the Earth system as a whole. It is now time to integrate these separated packages of knowledge into Earth System Science. The goal of Earth System Science, according to the NASA Advisory Council is "To obtain a scientific understanding of the entire Earth System on a global scale by describing how its component parts and their interactions have evolved, how they function, and how they may be expected to evolve on all timescales".

Recent realization of the impact of human activities on the Earth system has spawned a new science, environmental science, which requires an understanding of the Earth system and the factors affecting human behaviour. Environmental scientists must understand the functioning of the Earth system as well as the functioning of human societies in order that change brought about by human activities can be predicted, and if necessary avoided or ameliorated. This understanding will become the cornerstone of the development of an environmentally sustainable society. The challenge, again according to NASA, is "To develop the capability to predict those changes that will occur in the next decade to century, both naturally and in response to human activity."

This programme will meet a variety of career interests including those related to the environment.

Degree Programmes

The programme in Earth System Science is taken as an area of emphasis in two subjects (chosen from, chemistry, earth sciences and physics) towards an Advanced Double Major, Combined Honours or Unconcentrated Honours. Each student's programme will be devised within the following general requirements in

consultation with a faculty advisor. The Earth System Science classes will be selected from a recommended list (available from Dean's Office - Faculty of Science) of classes from Biology, Chemistry, Earth Sciences, Oceanography, and Physics. When a student completes this programme it will be noted on the transcript, e.g. Advanced Double Major in Biology and Chemistry: (Earth System Science)

Year I:

Science Foundation Year or equivalent background in Biology, Chemistry, Earth Sciences, Mathematics, and Physics.

Year II:

- a) Arts/Humanities elective;
- b) Maths/Stats or Computing Science at second year level;
- c) One credit in Earth Sciences and one each in two of Biology, Chemistry and Physics.

Year III:

- a) Two credits each in two of the three subjects chosen in IIc or four from the relevant science disciplines;
- b) An interdisciplinary Earth Systems class (consult department).

Year IV:

- a) Two credits in one of the subjects taken in IIIa plus two other credits from Biology, Chemistry, Earth Sciences and Physics (one of these would be the honours thesis), or four from the relevant science disciplines;
- b) An interdisciplinary Earth Systems class (consult department).

PhD (Concordia)

Special Lecturer

T.A. Finfold, BA, MA (Western), PhD (Minn)

Introduction

Economics is a social science - a science because it involves a rigorous intellectual effort to derive logical conclusions from basic facts and propositions; a social science because it has human beings and their welfare as its ultimate concern. The basic facts of Economics cannot be knowable and measurable with the same precision as those of the physical sciences -

human society and its motivations are far too complex to permit this - but none of the sciences surpasses economics in its relevance to our needs, problems and goals.

Economic man is rational man consuming, organizing and producing within a framework of laws and customs in an effort to use the limited resources of our world efficiently for the greatest satisfaction. It is not an easy science; indeed it is one of the most complex, difficult (and fascinating) areas of study you could choose in the university when you pursue it beyond its elementary levels, but some basic knowledge of economics is essential for any educated person. A more extensive knowledge of the subject is an invaluable complement to other fields of specialization such as law, commerce, politics and other studies in social sciences or humanities, and a specialization in the field can lead to a variety of interesting career opportunities.

Degree Programmes

The department offers both BA and BSc degree programmes which are described below. A student may graduate with either a BA or a BSc degree but not both. In all programmes the student must ensure that the courses selected satisfy the overall faculty requirements for the relevant general degree (BA or BSc). See "Degree Requirements" section of this calendar.

General Principles

The following programme arrangements are provided to the students as guidelines to facilitate the selection of classes appropriate to particular areas of interest. They should not, however, be construed as straitjackets nor as a reason for not seeking individual guidance from faculty members. In suggesting such programme frameworks, two principles have particular weight: (a) students taking economics as a major, or in an honours programme, should strike a balance between breadth of coverage among disciplines and depth of specialization in economics; (b) students taking economics as a minor or as a component of another specialization, such as commerce, should be allowed a reasonable degree of flexibility in their choice of economics classes.

BA Honours Degree Programme (Four Years)

Undergraduate Coordinator: P. Burton (Tel: 494-6745)

Departmental Requirements

Classes required in Honours, Bachelor of Arts:

1000 level: ECON 1101.03 and 1102.03
2000 level: ECON 2200.03, 2201.03, 1060.03
or 2060.03 and 2080.03 or ECON
2260.03 and 2280.03, ECON
2232.06 or 2238.03 and 2239.03

3000 level: ECON 3338.03, 3347.03, and 3348.03
4000 level: ECON 4100.03, 4420.03, and 4421.03 plus 3 other Economics credits at or above the 2000 level for a total of nine Economics credits

Other required classes:
 MATH 1000.03 and 2030.03, Honours Thesis

BSc Honours Degree Programme (Four Years)

Undergraduate Coordinator: P. Burton (Tel: 494-6745)

Departmental Requirements

Classes required in Honours, Bachelor of Science:

1000 level: ECON 1101.03 and 1102.03
2000 level: ECON 2200.03, 2201.03, ECON 1060.03 or 2260.03 and 2280.03 or MATH 2060.03 and 2080.03, and ECON 2232.06 or 2238.03 and 2239.03
3000 level: ECON 3338.03, 3347.03, and 3348.03
4000 level: ECON 4100.03, 4420.03, 4421.03 plus 3 other Economic credits at or above the 2000 level

Other required classes:
 MATH 1000.03, 1010.03, and 2030.03, Honours Thesis

Notes:

- Classes selected (outside of economics) in the third and fourth year must include at least two classes above the 1000 level.
- The student's programme is chosen in consultation with the department and must have approval of the department.
- Students must arrange their courses to ensure that they satisfy the overall requirements for the 15-credit BSc degree.
- Since mathematics is required for graduate work in most good graduate schools, the value of econometrics and of additional mathematics is stressed. In some instances, the department may permit students to take classes in other subjects in lieu of classes in Economics and may permit minor variations in the required classes.

Combined Honours

Combined honours programmes, BA or BSc, may be arranged with other departments such as Biology, Geology, History, Mathematics, Political Science, Sociology, etc. For combined honours programmes with Economics, students also should consult the other departments concerned.

BSc Advanced Major Programme (Four Years)

Departmental Requirements

Classes required in Advanced Major, Bachelor of Science:

1000 level: ECON 1101.03 and 1102.03
2000 level: ECON 2200.03, 2201.03, ECON 2260.03 and 2280.03, plus 1 other economics credit at or above the 2000 level
3000 level: ECON 3338.03 plus 2.5 other economics credits at or above the 3000 level

Other required classes:
 MATH 1000.03, 1010.03 and 2030.03

A student who wants to have the option of later converting an advanced major to an honours degree should select classes in accordance with the list of core classes given above and should consult regulations 11.4 and 22. Besides additional core classes, the honours programme requires an honours essay and a higher academic standing than the advanced major. An honours programme can be converted to an advanced major at the student's discretion. The advanced major does, however, allow a maximum of only nine credits in economics while the honours programme allows a maximum of eleven.

BA Advanced Major Programme (Four Years)

Departmental Requirements

Classes required in Advanced Major, Bachelor of Arts:

1000 level: ECON 1101.03 and 1102.03
2000 level: ECON 2200.03 and 2201.03 plus two other credits in Economics at or above the 2000 level
3000 level: Three credits in Economics at or above the 3000 level

While the total number of credits required for the advanced major is the same as for an honours degree, the honours program in economics requires an honours essay and must include a core of classes in economics as given above. In addition, the honours program requires a **higher academic standing** than does the advanced major. However, the advanced major program does offer students the opportunity to enrol in a comprehensive program not available with the three-year program. Four-year major students are strongly encouraged to consult with members of the department to ensure an integrated and coherent programme.

A student who wants to have the option of later converting an advanced major to an honours degree should select classes in accordance with the list of core classes above and

should consult regulations 11.4 and 22. An honours program can be converted to an advanced major at the student's discretion. The advanced major does, however, allow a maximum of only nine credits in economics while the honours program allows a maximum of eleven.

BA Major in Economics (Three Years)

Undergraduate Coordinator: P. Burton
(494-6745)

Departmental Requirements

Classes required in Major, Bachelor of Arts:

- 1000 level: ECON 1101.03 and 1102.03
 2000 level: Two credits at or above the 2000 level
 3000 level: Two credits at or above the 3000 level

Intermediate micro and macro theory (ECON 2200.03 and 2201.03, respectively) are not required but serve as prerequisites for most other classes and should be taken. Students who wish to keep open the option of transferring into the honours or advanced majors programmes should select classes consistent with the requirements of these programmes.

BSc Degree Programme (Three Years)

Undergraduate Coordinator: P. Burton (Tel. 494-6745)

For the general description of the programme see the description of the BA degree programme. The specific requirements are set out below.

Classes required in major, Bachelor of Science:

- 1000 level: ECON 1101.03 and 1102.03
 2000 level: ECON 2200.03, 2201.03, ECON 2260.03 and 2280.03 or MATH 1060.03 or MATH 2060.03 and 2080.03
 3000 level: ECON 3338.03 plus 1.5 other Economic credits at or above the 3000 level

Other required Classes:

MATH 1000.03, 1010.03 and 2030.03

Combined programmes may also be arranged, with economics as the major or minor subject in association with such other fields as political science, sociology, history, geology, biology, mathematics - and possibly others.

Final programme approval for all majors' students must be obtained from the appropriate coordinator.

Classes Offered

Classes marked with an * are normally offered on a two year rotational basis. Please consult the department for details regarding rotational scheme. Classes marked with a ** are

of a special nature and not necessarily offered on a regular basis. Please consult the department for details regarding such class offering.

ECON 1101.03A or B: Principles of Microeconomics. This class is taken as the first in a series of classes in economics or as a background elective. Emphasis is on developing the basic analytical tools and applying them in the context of contemporary, and generally Canadian, economics problems, emphasizing the behaviour and analysis of individual agents in the economy (consumers, producers, markets).
 Format: lecture 3 hours
 Instructor: Staff

ECON 1102.03A or B: Principles of Macroeconomics. This class is taken as the first in a series of classes in economics or as a background elective. Emphasis is on developing the basic analytical tools and applying them in the context of contemporary, and generally Canadian, economics problems, emphasizing aggregate economic behaviour at the national level. ECON 1101.03 is not required before taking ECON 1102.03
 Format: lecture 3 hours
 Instructor: Staff

ECON 1101.03 and 1102.03 (together) satisfy the principles of Economics requirement for Economics majors and for Bachelor of Commerce students.

ECON 2200.03A or B: Intermediate Microeconomics. An extension of microeconomic theory and its applications which satisfies the minimum microeconomic theory requirements for majors in economics. Also of interest to Commerce students or others not majoring in economics, it pays particular attention to applications of theory in a practical context. Serves as the microeconomic prerequisite for higher-level classes in economics.
 Format: Lecture 3 hours
 Instructor: Staff
 Prerequisite: ECON 1101.03 or equivalent

ECON 2201.03A or B: Intermediate Macroeconomics. Inflation, unemployment, exchange rate and related macro problems, with emphasis on Canadian policy experience in these areas. An extension of macroeconomic theory and its applications which satisfies the minimum macroeconomic theory requirements for majors and honours in economics. Of interest to commerce students or others not majoring in economics, it serves as the macroeconomic prerequisite for higher-level classes in economics.
 Format: Lecture 3 hours
 Instructor: Staff
 Prerequisite: ECON 1102.03 or equivalent

*ECON 2232.06R: Canadian Economic History. The development of Canada from the age of discovery to now, presented in relation to the larger system of the relationships between the

Old World and the New. As the class proceeds, the focus shifts more and more towards Canada and more formal theory is introduced in discussing Canadian problems and policies, especially in the twentieth century.

Format: Lecture 3 hours
Instructor: B. Lesser
Prerequisite: A class in economics principles and some knowledge of history is recommended.

***ECON 2238.03A: The Industrial Revolution in Europe.** Transitions from preindustrial to industrial economies in England, France, Germany and Russia form a broad background for understanding the roots of contemporary society; of particular relevance for those interested in the economic history of Canada, the United States and other countries formerly part of a colonial system. Emphasis is on the economic, social, and technical changes of these industrial "revolutions" to disclose common elements in the experience of industrialization.

Format: Lecture 2 hours
Instructor: P.B. Huber
Prerequisite: Introductory Economics or permission of Instructor

***ECON 2239.03B: The European Economy in Historical Perspective - After the Industrial Revolution.** A self-contained class (may be taken separately from ECON 2238.03) examining the contrasting development patterns of various industrialized European countries after their respective industrial revolutions and up to about 1960. Focus is on the development of hypotheses regarding the causes and effects of differences in the experience of growth of mature economies.

Format: Lecture 2 hours
Instructor: P.B. Huber
Prerequisite: Introductory Economics or permission of the Instructor

***ECON 2250.06R: An Applied Course in Economic Development and the Environment: Concepts, Policies and Projects.** This class is designed around concepts of sustainable development, with emphasis on key issues facing developing countries and less prosperous regions of some industrial nations. There are three main elements: (1) conceptual underpinnings and tensions behind sustainable development; (2) international, national and regional level policies and planning approaches for sustainable development - including lessons from the Rio Summit, the World Bank, CIDA, Canada's Green Plan and the European Regional Development Fund; and (3) projects for sustainable development - drawing on case experience and first-hand field work undertaken as a part of the class programme.

Format: lectures, case work with group presentations, tutorials, 3 hours
Instructor: R.I. McAllister
Prerequisite: Introductory Economics or permission of instructor

ECON 2260.03A: Statistics I. See class description for MATH 2060.03, in Mathematics section of this calendar.

ECON 2280.03B: Statistics II. See class description for MATH 2080.03, in Mathematics section of this calendar.

SCIE 3000.06R: Science Fundamentals. See Class description in Science, Interdisciplinary section of this calendar.

***ECON 3241.03A: Comparative Economic Systems: National Economies.** A detailed background of institutional material on the structure and performance of several economies is featured. Reading on specific countries provides the basis for several short papers. A student taking this class must understand the interrelated character of economic activity and grasp the nature of the price system.

Format: Seminar 2 hours
Instructor: P.B. Huber
Prerequisite: ECON 2200.03

***ECON 3242.03B: Comparative Economic Systems. Economic Organization and Planning.** The economic behaviour of organizations and the ways in which this can be controlled provide the basis for consideration of the theory and practice of economic planning at micro-economic and macro-economic levels in various institutional contexts.

Format: Seminar 2 hours
Instructor: P.B. Huber
Prerequisite: ECON 2200.03, plus an additional half-class in Economics

***ECON 3315.03A: Labour Economics.** The theory of labour markets is emphasized, in particular the implications of alternative viewpoints which seek to explain relative wages and unemployment.

Format: Lecture 3 hours
Instructor: L. Osberg or S.A. Phipps
Prerequisites: ECON 1100.06; ECON 2200.03 and 2201.03 (or equivalents) are recommended

***ECON 3317.03B: Poverty and Inequality.** The extent of poverty and the distribution of income and wealth in contemporary societies are discussed. Most data are drawn from Canada but international evidence is introduced for comparative purposes. The theories underlying alternative measures and explanations of economic inequality are emphasized.

Format: Lecture and seminar
Instructor: L. Osberg
Prerequisites: ECON 1100.06; ECON 3315.03 is highly recommended

***ECON 3326.03A: Money and Banking.** The class concerns the nature and operation of the financial system, with particular reference to Canadian experience. It treats financial instruments (including money) and institutions

and the social control of the supply of money and credit. This class is complemented by ECON 4426.03.

Format: Lecture 3 hours
Instructor: Staff
Prerequisite: ECON 1100.06. It is also desirable to have completed ECON 2201.03 (or equivalent).

***ECON 3328.06R: Industrial Organization.** The application of the models of price theory to economic reality. In any industry, the problems of a firm competing with its rivals in order to survive and acquire a higher market share are far more complex than those in price theory where we have to deal with more or less simplified assumptions. The three main parts are: market structure, market conduct and market performance.

Format: Lecture 2 hours
Instructor: C. Marfels
Corequisite: ECON 2200.03 (or equivalent) or instructor's consent

***ECON 3330.03A or B: International Trade.** The causes of international exchange of goods and services are considered and the effects of international integration on the incomes and growth rates of national economies are analyzed. The theory and practice of commercial policy and other restrictions on trade are considered after the pure theory of international trade and its implications have been explored. Depending upon class interest and availability of time, the subjects of economic integration and of Canadian commercial policy may be discussed in some detail.

Format: Lecture 3 hours
Instructor: R.L. Mazany
Prerequisites: Introductory Economics and ECON 2200.03 (or equivalent)

***ECON 3332.03A or B: Resource Economics.** This class focuses on intertemporal economics and the economics of market failure as they pertain to the use of natural resources. A selection of resource sectors will also be discussed. Fisheries, agriculture, forestry, and energy represent possibilities, but this will vary from year to year.

Format: Lecture 3 hours
Instructor: M. Cross
Prerequisite: Introductory Economics and ECON 2200.03 (or equivalent).

****ECON 3333.03A or B: Theories of Economic Development.** A theoretical framework for the understanding of the process of economic development in the more and the less developed countries is provided with a view to its eventual application to the solution of practical problems. The concluding seminars are devoted to the problem of the foundations of the theory of economic development, and the distinction between the concepts of unilinear and multi-linear evolution is discussed.

Format: lecture 2 hours

Instructor: B. Lesser
Prerequisite: Introductory Economics. ECON 2201.03 (or equivalent) and ECON 3347.03 and 3348.03 are desirable.

****ECON 3334.03A or B: Economic Development - Recent Debates, Controversies and Conflicts.** Whereas ECON 3333.03 deals with the more rigorously defined theories and models and their appraisal, this class focuses on the development policies and related controversies. Important examples of such controversies and conflicts, with far reaching developmental consequences, are provided. Attention is paid to the much debated environmental aspects of growth and development.

Format: Lecture 2 hours
Instructor: Staff
Prerequisite: ECON 1100.06, ECON 2201.03 (or equivalent) and ECON 3333.03 are desirable.

***ECON 3336.03B: Regional Development.** Most countries have richer and poorer regions. The energy crisis has raised additional complications. Economic development issues, policies, and theories facing more industrialized nations are analyzed with particular focus on Canada (especially the Atlantic region), the European Economic Community, U.S.A., Japan, and Australia.

Format: Seminar 2 hours and tutorials
Instructor: R.I. McAllister
Prerequisite: Introductory Economics, and at least one class in both Political Science and Canadian History are desirable.

ECON 3338.03A: Introductory Econometrics I. The theory of some quantitative methods commonly used by economists is discussed in the context of the classical linear model. Estimation problems caused by violations of the assumptions of the classical model are studied including heteroscedasticity, autocorrelation and simultaneous equations bias. Emphasis is placed on practical econometric problems by requiring students to conduct their own research projects.

Format: Lecture 3 hours
Instructor: Staff
Prerequisites: MATH 1000.03 (or equivalent) and ECON 2280.03 or Math 2080.03.

****ECON 3339.03B: Introductory Econometrics II.** Further practical problems associated with economic data and with model specification and estimation are discussed. This course is an extension of ECON 3338.03.

Format: Lecture 3 hours
Instructor: Staff
Prerequisite: ECON 3338.03

***ECON 3344.03A or B: Public Finance I.** This class studies the economics of public expenditure programmes. One major theme is that markets

do not always lead to economic efficiency. A second major theme is that equity concerns are central to public policy formation.

Format: Lectures 3 hours

Instructor: Staff

Prerequisites: Introductory Economics and ECON 2200.03 (or equivalents); ECON 2201.03 is recommended.

***ECON 3345.03A or B: Public Finance II.** This course studies the economics of taxes and transfers. Equity and efficiency effects of both are considered.

Format: Lecture 3 hours

Instructor: Staff

Prerequisite: Introductory Economics, ECON 2200.03 and 2201.03 (or equivalents) are desirable.

***ECON 3347.03A or B: Classical Political Economy.** The theories of production, value, distribution, and economic growth developed in classical political economy will be discussed in this class. Reactions to classical political economy and links between this body of thought and macroeconomics will be included as time permits.

Format: Lecture 3 hours

Instructor: Staff

Prerequisites: ECON 1100.06 and ECON 2200.03 (or equivalent), ECON 2201.03 (or equivalent) is recommended.

***ECON 3348.03A or B: Modern Economic Thought.** Theories of production, value, and distribution developed since the marginal revolution, which dates from roughly 1870, will be examined in this class. Contributions to this body of thought developed before 1870, while classical political economy was dominant, will also be considered. Theories of equilibrium, stability, and economic growth will be discussed as time permits, but coverage of all topics must be selective because of the vastness of modern economic literature.

Format: Lecture 3 hours

Instructor: Staff

Prerequisites: ECON 1100.06 and 2200.03 (or equivalent); ECON 2201.03 (or equivalent) is advised.

***ECON 3350.03A or B: Social Cost Benefit Analysis.** The methodological base of social cost benefit analysis is developed, demonstrating some practical applications. Social cost benefit analysis and capital budgeting are two approaches to investment decision making. The former is used by public sector agencies; the latter is employed by private sector firms. Similarities and differences in the two approaches are highlighted. Solving problems which illustrate basic concepts and a paper reporting on an actual application of the methods taught are important requisites.

Format: Seminar 3 hours

Instructor: Staff

Prerequisite: Introductory Economics; Intermediate Microeconomics and Introductory Statistics are desirable.

ECON 4100.03R: Honours Seminar. This is a required course for honours students, optional for others. The course is devoted to: a) preparation and presentation of honours papers; b) discussion of policy issues; and c) lectures and discussion by faculty members and occasional invited guests.

Format: Seminar 3 hours

Instructor: Staff

Prerequisites: ECON 2200.03 (or equivalent) and 2201.03 (or equivalent) and MATH 2060.03 and 2080.03

***ECON 4418.03A: Foundations of Public Policy Towards Business.** In this class the reasoning for government interference of the free and, at times, not-so-free competitive environment in the corporate economy will be examined. This will include (i) an overview of the concepts of competition and monopoly with main emphasis on workable competition, (ii) the scope and objectives of public policy towards business, and (iii) a comparison of the competitive approach, the regulatory approach, and the ownership approach.

Format: Lecture 2 hours

Instructor: C. Marfels

Prerequisite: ECON 3328.06

***ECON 4419.03B: Canadian Competition Policy.** The discussion begins with a historical account of Canada's past experience with the Combines Investigation Act and the attempts to amend it. Main emphasis is on the New Competition Act of 1986 and on the rules for mergers and for abuse of dominant positions. Various case studies will exemplify the new powers vested in the Director of Investigation and Research and the role of the Competition Tribunal.

Format: Lecture 2 hours

Instructor: C. Marfels

Prerequisites: ECON 4418.03

ECON 4420.03A or B: Microeconomic Theory. A basic but rigorous introduction to modern microeconomic theory. Deals in detail with the theory of choice as applied to consumers and firms, and discusses the working of an economy as a system of interdependent decision-makers. Emphasis is on the comparison of alternative solution concepts for competitive economies ending with an introduction to stability theory.

Format: Lecture 3 hours

Instructor: B. Klein or S. DasGupta

Prerequisite: ECON 2200.03 (or equivalent); MATH 1000.03 and 1010.03 are desirable.

ECON 4421.03A or B: Macroeconomic Theory. For those who wish to do relatively advanced work in economic theory, possibly with the thought of going on to do graduate work in

economics. The class assumes some knowledge of calculus. Topics covered include: classical models of income and employment; Keynesian models of income and employment; the theory of economic growth (including two-sector models); and trade cycle models.

Format: Lecture 3 hours
Instructor: J. Cornwall
Prerequisite: ECON 2201.03 (or equivalent) and MATH 1000.03 and 1010.03 (or equivalent)

****ECON 4422.03B: Inflation, Stagflation and Macroeconomic Policy.** A consideration of different theories of inflation that have been developed to explain the acceleration of inflation in the past decade. Alternative policy solutions are appraised. Forms of incomes policy are taken up in some detail.

Format: Lecture 3 hours
Instructor: J. Cornwall
Prerequisite: ECON 2201.03 (or equivalent)

***ECON 4426.03B: Monetary Policy.** Assuming a basic knowledge of monetary institutions and macro-economics, a critical analysis of the objectives and effectiveness of monetary policy is developed. Particular attention is given to the Canadian experience and the effectiveness of Canadian policy.

Format: Lecture 3 hours
Instructor: Staff
Prerequisite: ECON 2201.03 (or equivalent); It is advantageous for students to have completed ECON 3326.03 as well.

***ECON 4431.03A or B: International Payments.** Selected topics in recent international monetary history are examined, the causes of, and remedies for, external imbalance in national economies are considered, and the reorganization of the international monetary system is discussed. Depending upon class interest, certain issues of international development finance and problems of instability and growth in the international economy may be discussed in detail.

Format: Lecture 3 hours
Instructor: R.L. Mazany
Prerequisite: ECON 2201.03 (or equivalent)

****ECON 4446.03A or B: Classical Liberalism, and Democracy.** See class description for PHIL 4470.03, in the Philosophy section of this calendar.

****ECON 4447.03B: The Theory of Games as an Approach to the Foundations of Ethics and Politics.** See class description for PHIL 4430.03, in the Philosophy section of this calendar.

****ECON 4448.03A: Social Choice Theory.** See class description for PHIL 4480.03, in the Philosophy section of this calendar.

Graduate Studies

The Department offers a graduate programme leading to the MA, MDE and PhD degrees. Details of these programmes, including a list of graduate courses, are given in the Calendar of the Faculty of Graduate Studies. Senior undergraduates may be admitted to some graduate classes at the discretion of the instructors concerned.

School of Education

Location: Education Building, Old Arts Annex, Dalhousie University, Halifax, N.S. B3H 3J5

Telephone: (902) 494-3724

Fax: (902) 494-2847

Please note: Admission to the BEd programme has been suspended for the 1995-96 academic year.

Director, School of Education
K.C. Sullivan, BSc, BEd (Dal), MEd, PhD (Alta)

Undergraduate Assistant Coordinator
A. Young (902) 494-3300

Undergraduate Coordinator
H.J. Murphy, BSc (St. Dunstan's), BEd (PEI), MEd, EdD (Virginia)

Emeritus Professor
E.Z. Friedenberg, BA (Centenary), MA (Stanford), PhD (Chicago)

Professors
W.F. Hare, BA (London), MA (Leics), PhD (Tor)
T.A. Laidlaw, BA MEd (Calgary), PhD (Alta)
J.D. Myers, BA, MA (Tor), PhD (Edinburgh)
J.B. Roald, BEd (UBC), MA (Wash), EdD (UBC)

Associate Professors
A. Barton, BA, MA (Trinity)
R.N. Bérard, BA (Antioch), MA (McM), BEd (Dal), PhD (McM)
R. Gamberg, BA (Brandeis), MA (Illinois)
D.A. Manicom, BEd (McG), MEd (AIE), PhD (Tor)
J. Manos, BA, BEd (StFX), MEd (Calgary), PhD (Alberta)
H.J. Murphy, BSc (St. Dunstan's), BEd (PEI), MEd, EdD (Virginia)
F.A. Perron, BMus (McG), MMusEd (Holy Names College), Major appointment in Music
E.W. Ricker, BA, MEd (UBC), PhD (Tor)
S.W. Semple, BA, Dip Ed (Syd), MEd, EdD (Tor)
S.S. Sodhi, BA, BT, MA (Punjab), Dip. Guid. (Delhi), BEd, PhD (Alta)
K.C. Sullivan, BSc, BEd (Dal), MEd, PhD (Alta)
M. Welton, BA, MA, PhD (UBC)
B.A. Wood, BA (Tor), MEd, PhD (Ottawa)

Assistant Professors
M.L. Crowley, BA (Miami), MAT (Johns Hopkins), PhD (Maryland)

Part-time Faculty
A. Boyles, BA, BEd (Dal), MA, PhD (UNB), Major appointment in English
R. Buckley, BA, BEd, MEd (MSVU)
P. De Meo, BA, MA, PhD (UCLA), Major appointment in French
M. Forrest, BA (MSVU), BEd, MA (Dal)

B. Fox, BA (Sheffield), MA (Dal), PhD (AIE)
D.F. Goble, BSc, MSc (Alta), PhD (Tor), Major appointment in Physics
P. Harding, BA (Tor), BEd, MSc (Dal)
D. Leitch, BA, BEd, MA, PhD (Dal)
L. Moody, BEd, MEd (Dal)
J. Rice, BA (Mt.A), BEd, MEd (Dal)
L. Sorge, BA, MA (NYU), Major appointment in Theatre

Education As a Field of Study

The problems of education have been the subject of serious study since at least the time of Plato and Aristotle. Education is an important and interesting field of study in which historical, psychological, philosophical and sociological inquiries, among others, can be pursued. Many elect to take classes in Education because they are interested in the questions raised for their own sake. Others are interested in education as a programme of professional preparation. Such students include in their programmes classes in foundations, methodology and field experience. The study of education should alert the student teacher to the assumptions which lie behind the methods of teaching being considered, and it should ensure that these assumptions do not go unexamined.

Affirmative Action Policy

The School of Education has an affirmative action policy for indigenous Black or MicMac applicants for all of its programmes. Such applicants will be looked upon favourably as long as the normal minimum admission standards are fulfilled.

Programmes

1. A sequential secondary BEd programme of one year which may be taken by students who have already completed a BA or BSc degree. Studies in Drama, English, French, Math, Science, Social Studies, Geography, and Music are available.
2. An integrated programme at the secondary level at the end of which students are awarded simultaneously the degrees of BA or BSc or BA (Honours) or BSc (Honours) and BEd.
3. Dalhousie BA/BEd or BSc/BEd for holders of the Nova Scotia Teachers' College Associateship.
4. Dalhousie-Nova Scotia Teachers' College Associateship BEd.
5. A five-year integrated programme at the elementary or secondary level at the end of which students are awarded simultaneously the degrees of BPE and BEd. To enter this programme, students must first be enrolled in the Bachelor of Physical Education programme.

6. Classes which may be used for credit toward a BA or BSc. These classes may be chosen from the following areas: Sociology of Education, History of Education, Philosophy of Education, and Educational Psychology. Students intending to take education classes for credit toward a BA or BSc degree should consult Arts and Science regulation 1.2.1. Students may **not** take an Education course as one of their first five credits.

Class Categories

Classes in the BEd programme are grouped into these general categories:

1. Educational Foundations
2. Methods and Field Experience
3. Electives

1. Educational Foundations

These classes develop a theoretical perspective as a basis for professional performance. There are four main subdivisions in this category - sociology of education, history of education, philosophy of education, and educational psychology. These classes are found in the calendar under course numbers EDUC 4800 to EDUC 4499.

2. Methods and Field Experience

These classes deal essentially in an applied manner with teaching, learning and the evaluation of learning. They are found in the calendar under course numbers EDUC 4800 to EDUC 4999.

Successful completion of the relevant methods class is a precondition for taking the second block of field experience. Students may be considered for dismissal from the programme if they fail practice teaching.

3. Electives

These classes provide supporting experience for other classes in Education, additional academic preparation, or an introduction to areas of potential student interest. Electives may be chosen from any courses offered in the BEd programme or classes in departments of the Faculty of Arts and Social Sciences or Faculty of Science. Education electives are found in the calendar under course numbers EDUC 4500 to EDUC 4699.

Programme Requirements

BEd Secondary Sequential

The majority of our BEd students participate in the sequential programme, which is completed between September and May. Candidates for this degree of BEd (Secondary) must complete successfully a 7-credit programme. This consists of the following: a half-credit course in each of the 3 Educational Foundations areas: sociology, history, and philosophy; 1 credit in Psychological foundations (including special education); 1

credit in a methods course in a teachable subject area (English, French, Social Studies, Math, Science, Music Geography); 1 credit in Education 490 J.06 (Field Experience); ½ credit in Anti-racist Education (EDUC 4071.03); 1 credit in Education 4950.06 (Studies in Education); and 1 further credit elective approved by the faculty advisor.

BPE/BEd Integrated

The BEd part of the integrated programme consists of a minimum of five full credits:

1. ½ credit in each Foundation area: Sociology, Philosophy, and History;
2. 1½ credit in Psychological Foundations (including Special Education).
3. Secondary: 1 credit in Teachable subject methods.

Elementary: 1 credit in Language Arts/Reading methods, one-half credit in Math methods, and ½ credit in elementary social studies or elementary science methods

4. 1 credit in field experience

Co-requirements

Elementary: A student must complete a minimum of 5 full classes from English, History, Math and Science. It is recommended that courses be selected from each area.

Secondary: A student must complete a minimum of 3 full classes above the 1000 level in a teachable subject*.

* Teachable subjects - Drama, English, French, Social Studies, Math, Science, Geography, Music.

Prospective students are strongly encouraged to meet with the appropriate methods professor to plan a programme.

BEd Degree in Association with Nova Scotia Teachers College

General Description

The programme is available at Dalhousie University to graduates of the Nova Scotia Teachers College who have completed the three-year Associateship at NSTC. Suitably qualified students may graduate after taking five further classes at Dalhousie. The programme is a fifteen-credit one, comprising six credits in education and nine credits in Arts or Science. A maximum of ten credits may be transferred from NSTC to the joint Dalhousie/NSTC BEd degree, but they must meet Dalhousie's transfer credit regulations.

Programme: 15 required credits

1. Education (6 credits):
 - (a) 5 maximum may be taken at NSTC and must meet Dalhousie transfer credit regulations;
 - (b) 1 education class must be taken at Dalhousie.
2. Arts and Science (9 credits):

- (a) 5 maximum may be taken at NSTC and must meet Dalhousie transfer regulations and not be in education;
- (b) 3 must be taken at Dalhousie in Arts and Science subjects other than education and at least 2 must be above the first year level;
- (c) 1 class, taken at Dalhousie, must be in consultation with the student's advisor (In the School of Education)

Dalhousie BA or BSc and BEd Degrees for Associates of Nova Scotia Teachers College

General Description

The programme is available at Dalhousie University to graduates of the Nova Scotia Teachers College who have completed the three-year Associateship at NSTC. Suitably qualified candidates may transfer up to eleven credits from NSTC to Dalhousie. The programme is a twenty-two credit one, comprising seven credits in education and fifteen credits in Arts or Science. All credits transferred from NSTC must meet Dalhousie's transfer credit regulations.

Programme: 22 required credits

Twenty-two credits are required, seven in education and fifteen in Arts & Social Science and Science.

1. Education (7 credits):
 - (a) 5 maximum from NSTC;
 - (b) 2 further from Dalhousie
2. Arts & Social Science and Science (15 credits):
 - (a) 6 maximum from NSTC;
 - (b) 9 further from Dalhousie

Students must maintain a minimum of a B average in work completed for both degrees.

Certification of Teachers

Licences to teach are issued by the Department of Education, Province of Nova Scotia. Information may be obtained from the Registrar, Nova Scotia Department of Education. Students from other provinces should consult the appropriate provincial Department of Education for certification and licensing information.

Classes Offered

Educational Foundations (EDUC 4000 - EDUC 4399)

Enrolment is generally restricted to 30 students in Educational Foundations classes.

1. Sociology of Education (EDUC 4000 - EDUC 4099)

EDUC 4012.03A or B: Sociology of Education. Social-Class, Race and Gender: In this course we will analyze assumptions underlying common

school practices and the effects of these practices as they relate to social class, race, and gender. We will also examine aspects of learning outside the formal school structure as they bear on these areas.

EDUC 4021.03A or B: Introduction to Gender Socialization. Identification and analysis of problems deriving from gender socialization in Canada form the core of this class. Attention is concentrated on informal (out of school) socialization in creating and perpetuating the problems.

Format: Lecture, discussion, student participation

Cross-listing: EDUC 5241.03, WOST 2100.03

EDUC 4022.03A or B: Gender Issues in Education. Central concerns in education include classroom practices, politics and ideology of the curriculum, family-school relations and the transition from school to work. Recent feminist critiques have forced educators to re-examine these areas of concern. This course considers how gender analysis deconstructs and reconstructs our understanding of central economic, social and cultural issues in education.

Format: Lecture/Seminar, 2 hours

Cross-listing: WOST 3100.03

2. History of Education (EDUC 4100 - EDUC 4199)

EDUC 4141.03A: Issues in the History of Canadian Education. An overview of selected and enduring social, economic, and political issues in the history of Canadian education. Representative topics include: child-centred school or the "3 R's"; a "Canadianized" curriculum or one free from patriotic bias; community or bureaucratic control; stratification and social control or equal opportunity; teacher professionalism vs. unionism; denominational vs. secular education.

Format: Lecture 2 hours

EDUC 4142.03B: Issues in the History of Canadian Education. An overview of the experiences of minority groups in the history of Canadian education. Topics in the first part of the course include: 19th century educational arrangements for minorities, including Lord Durham's prescription, the BNA Act, and schooling for immigrants; the development of bilingualism policy and minority language schools; the development of multiculturalism policy and educational alternatives for other groups. In the second part of the course the historical experiences of some of the following groups are profiled: Acadians, Blacks, Native Peoples and selected cultural-religious minorities (Hutterites, Mennonites, Doukhobors).

Format: Lecture - 2 hours

Cross-listing: EDUC 5291.03

EDUC 4161.03B: History of Curriculum Thinking. Topics include contemporary curriculum thought, evolution of ideas

concerning development, evaluation, implementation, contributions of selected theorists.

Format: Structured seminars (2 hours)
Cross-listing: EDUC 5061.03

EDUC 4190.03A: Didactic Tales, Part I. A brief history of didactic tales and the women and men who invented them. A critical review of some of the world's best known teaching stories and the people who devised them, relating the assumptions of story-tellers to the education practices of their times. Topics include: Auel's pre-historic romance *Earth's Children*; the epic Welsh tale *The Mabinogion*; J's satirical tale of Adam and Eve and the Garden of Eden; Byasa's *Bhagavad-Gita*; Aryasura's *Jataka Stories*; and Tolkien's fairy story *The Lord of the Rings*.

Students from all disciplines are welcome. No previous knowledge of the history of education is required. Those participating in the class will be expected to write essays on two of the didactic tales studies.

Students may take Part I by itself, Part II by itself, or both Parts I and II.

EDUC 4191.03B: Didactic Tales, Part II. A brief history of didactic tales and the women and men who invented them. A critical review of some of the world's best known teaching stories and the people who devised them, relating the assumptions of story-tellers to the education practices of their times. Topics include: The Tales of the Dervishes; Rene Daumal's *Le Mont Analogue*; Hawking's *A Brief History of Time*; Okot p'Okot's Ugandan poem *Song of Lawino*; Zuzgrigg's *Rakku's Story*; and McCaffrey's *The Dragonriders of Pern*.

Students from all disciplines are welcome. No previous knowledge of the history of education is required. Those participating in the class will be expected to write essays on two of the didactic tales studies.

Students may take Part I by itself, Part II by itself, or both Parts I and II.

EDUC 4201.03A or B: Analytical Philosophy of Education. Topics include: the aims of education, the relevance of philosophy to education, children's rights, and the moral responsibilities of the teacher.

Format: Lectures and discussions (two hours per week)

EDUC 4221.03A: Introduction to the Philosophy of Education. A class dealing with a broad range of philosophical questions about education including the use of analogies, multiculturalism, teacher education, and the role of the teacher.

Format: Lecture/discussion
Cross-listing: PHIL 2175.03

EDUC 4222.03B: Issues in Philosophy of Education. An introductory level class dealing

with some fundamental issues in philosophy of education, including indoctrination, open-mindedness and bias-free teaching.

Format: Lecture/discussion
Cross-listing: PHIL 2180.03

4. Psychology of Education
 (EDUC 4300 - EDUC 4399)

EDUC 4311.03A: Psychology and Education of the Exceptional Child. Exceptional child, socio-historical foundations, psycho-diagnostic, psycho-social models, genetic and environmental causes, various categories of exceptionality, standardized tests, abuses, myths in special education, remediation.

EDUC 4312.03B: Emotionally Disturbed and Learning Disinterested Children. Emotionally disturbed child, psycho-dynamic, developmental, neurological, behavioral, ecological models, remediation, learning disabled, learning disinterested, various models, remedial hoax, special education myths, politics of special education.

EDUC 4335.03A or B: Childhood into Adulthood. Topics include: intellectual and social development during childhood, characteristics of adolescence, and theories of development during adulthood.

Format: Lectures and discussions/presentations (two hours per week)

Cross-listing: EDUC 5335.03

EDUC 4341.03A: Developmental Psychology: Language, Learning and Cognitive Development. Children and adolescents develop thinking skills and subject mastery, in part, as a result of their interactions with parents, teachers, peers, and educational technologies. According to some therapists, learning is dependent on the student's monitoring of the learning process, the structure of the task, and the nature of the feedback the student receives. Such issues of interactivity have been at the centre of implicit and explicit debates in educational psychology. For example, behaviourists believe that learning occurs as a result of sequenced and recorded behaviour. Cognitive developmentalists, on the other hand, focus on the learner's construction of material rather than on the detailed nature of its presentation. This course is a review of theories of cognitive development and learning as they address issues of interactivity. Development of language and intelligence will also be reviewed.

EDUC 4342.03B: Developmental Psychology: Social, Moral and Personality Development. This course will explore the psychosocial and moral development of children and adolescents, drawing on theory and research from psychodynamic, cognitive, developmental, and social-psychological perspectives. The focus will be on understanding the ways in which people come to construct their inner and outer worlds,

and how these interact with their negotiation of normal developmental tasks of childhood and adolescence. Topics include parental socialization practices; the influence of peers, family, school and culture; and gender issues.

EDUC 4371.03A or B: Social Psychology of Education. Topics include: classroom psychological climate, power relationships, authority, obedience, discipline, control, freedom, self-concept.
Format: Lecture and discussion

EDUC 4380.06R: Psychology of Special Education: Resource Teachers. This course critically examines resource programmes used by the schools to "accommodate" children with learning and behavioral problems. Topics include: the rationale for and types of resource programmes; roles and competencies of resource teachers; strategies necessary to implement resource programmes in schools so as to assess and instruct children with special needs; evaluation of materials and methods used by resource teachers to help "special children". This course has a limited enrolment. It is intended for the very serious student of special education.
Cross-listing: EDUC 5380.03

EDUC 4400.06R: Psychology and Special Education. This course is designed to give Bachelor of Education students an introduction to the major areas of Educational Psychology. Students will be exposed to important theorists and issues in the areas of Developmental Psychology, Learning Theory, Social Psychology, Testing and Measurement, and Special Education.

The course will consist of a consideration of the history of childhood, behaviourism, Piaget, and social learning theory; teacher-made tests, standardized tests, test scores and what they mean; social psychology in schools, gender issues, sex roles, Freud and Erickson; and exceptionalism, normalization, integration, learning disabilities, and children in distress.

Electives (EDUC 4500 - EDUC 4699)

EDUC 4560.06R: Geography in Education. While of direct value to teachers in the social studies, the course is open to all students and without prerequisites. It uses techniques of the geographer to study three basic concepts: spatial form and interaction, interrelationship between people and their environment, and regions. Weekend rural field work in the fall involves absence from Halifax over a total of two nights. Local field trips are conducted near the campus at various times during the academic year. Participation in field work is a condition of admission to the course. Evaluation is based on field work, case studies, class tests, and a major research paper.

Format: Lecture-lab 3 hours
Prerequisites: None

Cross-listing: EDUC 5660.06

EDUC 4584.03R: Introduction to the Study of Teaching and Pedagogy. The class is an introduction to contemporary research in teaching and pedagogy. Topics include teacher thought processes and behaviour, classroom organization and interaction, classroom discourse, teaching strategies, and school effectiveness.

Format: Structured seminars
Cross-listing: EDUC 5484.03

EDUC 4634.03A or B: Computers and the Classroom. An introductory class for students with little or no prior computer experience. Emphasis is on developing familiarity with commonly-used software applications, with an aim to assessing their potential in the classroom. Topics include computer-assisted instruction, computer-managed learning, authoring languages, evaluating instructional software, word processing, electronic spreadsheets, and communications via mainframe computer networks.

EDUC 4637.03A and EDUC 4638.03B: Creative Writing and the Computer. Topics include: The imaginative use of word processing to write, design, illustrate and publish student work in an educational setting. The use of simple modular programming to write and illustrate inter-active multi-dimensional fiction and animated poetry.

Students may take either course on its own, or both courses, as they wish.

Format: Lecture 1 hour, lab 3 hours

EDUC 4642.03B: Adventure-Based Experiential Education. Outdoor education in one form or another is included as an integral part of most recreational programmes. However, there are values of outdoor adventure activities which go beyond the usual rationale for recreation programmes. These include personal development, citizenship training, leadership development and community service. This class will explore some of the educational philosophies which rely on an experiential base. Included will be an opportunity for hands-on experiences in developing, planning and evaluating an adventure-based programme which has potential beyond the traditional recreation outcomes. A practicum will be included.

Cross-listing: LEIS 2382.03

EDUC 4661.03A or B: Reading, Writing, and Learning Across the Curriculum. Intentions: I have several goals for this course: (1) to help you develop a greater awareness of the factors that affect learning from text; (2) to help you discover and examine your assumptions about the nature of learning and teaching; and (3) to help you explore the potential of writing as a vehicle for learning. Rather than to prepare you to work as reading specialists, this course is intended to help you become more effective teachers regardless of your areas of interest/expertise.

EDUC 4684.03B: Physical Activity for Special Populations. For class description see entry for 2384, the Bachelor of Physical Education section of this calendar.

Format: Lecture/practical experience
Cross-listing: PHSE 2384.03/3384.03

EDUC 4791.03A or B: Foundations and Practice of Black and Mi'kmaq Education. This multi-disciplinary course is designed to reflect the histories, cultures and social realities of Blacks and Mi'kmaqs in Nova Scotia. Teaching methodologies and school curricula relevant to these two distinct communities will be examined.

Methods of Secondary School Teaching (EDUC 4800 - EDUC 4899)

EDUC 4810.06R: Teaching English in Secondary Schools. In weekly two-hour classes of small and whole group discussions, students concentrate on the theory behind the Nova Scotia Department of Education guideline for English teachers, trying to apply this theory to the classroom. By the end of the year students should have an understanding of the relationship between language and learning and be able to apply that understanding in developing practical activities which will help their own students become active learners.

EDUC 4820.03A/4821.03B: Teaching French in Secondary Schools. Open only to students who have demonstrated adequate competence in French language and culture (passing a French language proficiency exam is required). Students taking this class must consult the instructor. A consideration of foundations of second language teaching which moves to a discussion of methodology, techniques, materials (including visual aids), and testing. Emphasis is on developing teaching strategies which enable students to use French as a tool for authentic self-expression, orally and in writing. Directed observation of experienced teachers and practice in the development of teaching skills are integral parts of the class. Evaluation is based upon class participation (micro-teaching, oral reports, contributions to discussions), written projects, lesson plans, and examinations.

EDUC 4830.06R: Teaching Geography in Secondary Schools. The class is intended for future teachers in junior high social studies, senior high geography, or those wishing to acquire a second teaching method. Presenting a variety of models for teaching geography, the course gives early attention to lesson and course planning, and later to aspects of curriculum development and evaluation. Course requirements involve microteaching sessions, group production of lab materials, a publishable lesson plan, a major curriculum unit, and the maintenance of log books.

Format: Class 2 ½ hours
Prerequisites: Instructor's consent

EDUC 4840.06R: Teaching Mathematics in Secondary Schools. The study of a variety of methods relating to the teaching of mathematics at the secondary level forms the framework for this class. Students must read about each technique, participate in discussions about these techniques, and in many cases observe classroom situations where each method is used. A strong emphasis is placed on exploring the curriculum changes occurring in Education. This includes the place of statistics, the computer, the calculator, problem solving, and geometry in a school curriculum. Evaluation is based on one major project, assignments done individually and in groups, class participation, and a final examination.

EDUC 4850.06R: Teaching Science in Secondary Schools. This course makes the connections between various learning theories and their applications to the teaching of science. Through a close examination of the goals, philosophy and methodologies of the junior high Science Plus programme and of senior high science curriculum, a wide variety of teaching strategies will be discussed and practised. Recent concerns in science technology and society, as well as gender issues in science education, will be examined. In addition, other areas of interests and concerns in science education as identified by the students in the class will be addressed.

EDUC 4860.06R: Teaching Social Studies in Secondary Schools. Skills in curriculum planning and course organization are developed, and a variety of teaching strategies are introduced. Topics include selecting content and methods setting reasonable objectives for teaching, developing fundamental skills in social studies, and evaluating achievement. Assignments will include written and oral presentations.

EDUC 4871.03A, 4872.03B, 4873.03R: Further Educational Studies. Students may apply to instructors for permission to undertake either a specially designed reading course in a given area, or to undertake additional work in their first teaching method, for credit. The instructor thus assumes personal responsibility for supervising the work of a student enrolled in this half-credit elective course.

Cross-listing: EDUC 4873.03 is cross-listed with INTD 4003.03

EDUC 4890.06R: Teaching Music in Secondary Schools. An introduction to the development of a music programme at the secondary level. Emphasis is on how to teach a general music class exploring the use of song materials, music theory, movement and creativity, and listening skills.

Cross-listing: MUSC 3400.06R

EDUC 4991.03R: Teaching Music in Elementary Schools. An introduction to the development of a music programme at the elementary level. Emphasis is on how to teach song materials,

movement and creativity, reading and writing skills, and what to listen for in music. The educational philosophies of Kodaly and Orff are examined in some detail. Solmization, hand signs, rhythm names, and body co-ordination are some of the skills to be developed.

Cross-listing: MUSC 4400.03

EDUC 4992.03B, EDUC 4993.03R: Additional Curriculum Projects. Students may apply to instructors for permission to undertake additional project work in the area of curriculum design, implementation, and evaluation, for credit. This may be done with prior consent in writing from the instructor(s) to the Coordinator, BEd Programme. The instructor(s) thus assumes personal responsibility for supervising the work of a student enrolled in this half credit elective course.

Field Experience (EDUC 4900 - EDUC 4999)

EDUC 4900.06R, EDUC 4902.03A, EDUC 4903.03B: Field Experience. It is the primary objective of the field experiences to provide students with opportunities to analyze, compare, and participate in a variety of teacher-learner situations. Students who intend to apply for a Provincial Teachers' Certificate should plan to log the equivalent of 200 hours field experience. All arrangements for field experiences are made by the BEd Coordinator.

Cross-listing: EDUC 4900.06 is cross-listed with FREN 4900.06

EDUC 4901.06R: Elementary Curriculum Study and Field Experience. Conducted partially in the Dalhousie University School, and partially in weekly tutorial sessions, this class will examine the theme study approach to programme planning, will help students design and implement their own unit plans, and will emphasize throughout whole language strategies and evaluation from a developmental perspective. Evaluation will be based on class participation and term reports.

The class seminars will take place in the fall term and they will be followed by field experience in the public schools after which a final evaluation will be made. Enrolment in this class is restricted to BSChE and BPE/BEd students with permission of the instructor.

EDUC 4910.03R: Additional Field Experience. (Available only during the first Summer Session.) Permission of the School is required. This one-half credit class is made available to the BEd students as an elective which they may choose to supplement the basic requirement for field experience. These additional field experiences are acquired through a block of three weeks spent in the schools at the end of the academic year. This class can only be taken with the permission of the major methods instructor and the BEd committee.

EDUC 4950.06R: Studies in Education. A variety of topics important to the professional development of teachers will be presented and discussed.

Introduction

Professional engineers are concerned with making the properties of matter and the sources of energy in nature beneficial to mankind. The curriculum develops "an individual's ability to use the basic sciences, mathematics, engineering sciences, economics and social sciences to convert, use and/or manage resources optimally through effective analysis, interpretation, and decision making to meet objectives". University studies in engineering are concerned with the design of engineering systems, but the skills learned are widely applicable. Many engineers combine their profession with other activities, most notably management.

The professional degree in Engineering is the Bachelor of Engineering degree which is conferred by the Technical University of Nova Scotia in association with Dalhousie University. The first two years of study are taken at Dalhousie and comprise a programme of 11 credits which lead to the Diploma in Engineering. Upon successful completion of this programme, students will be admitted to the Technical University of Nova Scotia for a further three years of study leading to the degree of Bachelor of Engineering in Civil, Electrical, Mechanical, Mining, Chemical, Industrial, or Agricultural Engineering. These programmes have been accredited by the Canadian Engineering Accreditation Board.

TUNS offers a combined BEng/MEng programme in Metallurgical Engineering. The admission requirement is the Diploma of Engineering, but admission is limited on a

competitive basis. The programme is accredited by the Canadian Engineering Accreditation Board.

Most TUNS programmes are co-operative, in which industrial experience is alternated with the academic programme.

Degree Programmes

Dalhousie offers various programmes for students wishing to pursue studies jointly in Engineering and in Arts or Science. Students may arrange programmes leading to a Bachelor of Science degree, with a major in Biology, Chemistry, Computing Science, Earth Sciences, Mathematics or Physics in addition to the Diploma in Engineering. Programmes leading to a Bachelor of Arts Degree in addition to the Diploma in Engineering can be arranged with a major in a language, social science, or humanities subject. These combined programmes require three years of study at Dalhousie. Three years are still required at TUNS in order to receive the Bachelor of Engineering degree.

Students wishing to enroll jointly in the Diploma in Engineering and Bachelor of Science or Bachelor of Arts programmes should consult the Department of Engineering for advice on programme planning.

Students who graduate from TUNS fulfil the academic requirements for registration as a Professional Engineer in all provinces in Canada. In addition to the academic requirements, the Profession requires that applicants for registration have practical experience relevant to the discipline of engineering. The minimum requirement is four years of experience subsequent to completion of the BEng. It is recommended that, in addition to this, students obtain engineering experience in the summer periods prior to graduation.

Diploma in Engineering

Admission Requirements

Students wishing to enroll in the Diploma in Engineering Programme in the Department of Engineering must satisfy the requirements for admission to the Faculty of Science at Dalhousie and must also satisfy the additional requirements of the Department of Engineering. Students are normally expected to have completed Nova Scotia Grade XII senior matriculation classes, or equivalent, in Mathematics, Physics and Chemistry and should rank well in their class. Students may be admitted with advanced standing.

Admission with Advanced Standing

Students wishing admission with advanced standing in the Diploma in Engineering Programme are advised that normally a minimum of six full credit classes of those described for the programme must be taken at Dalhousie. Transfer credit will not be granted for

any class in which the final grade was less than C, or equivalent, or for any class in which a final grade was granted conditionally.

Diploma in Engineering Programme

- Total credits required - 11
- Year 1: ENGI 1100.03, 1120.03; MATH 1000.03, 1010.03; CHEM 1020.06; PPHYC 1100.06; one full credit writing class
- Year 2: ENGI 2231.03, 2331.03, 2240.03, 2340.03, 2222.03, 2101.03, 2230.03, 2341.03; MATH 2480.03, 2490.03; one full credit elective from Social Sciences or Humanities
- Required GPA for graduation - 1.70

BSc/Diploma in Engineering

Students may arrange programmes leading to a BSc with a major in one of the sciences in combination with the Diploma in Engineering. Upon completion of the joint programme, graduates receive both the Diploma in Engineering and a BSc degree.

The programme for the BSc plus Diploma in Engineering consists of fifteen classes. Eleven of the classes are the classes for the Diploma in Engineering. The remaining classes must be chosen to meet the requirements for the BSc. One of these requirements is that there must be four classes beyond the first year in the science major. If the science major is mathematics, physics, or chemistry, then the recommended first year programme is the first year of the Diploma in Engineering. The second and third years each consist of approximately half of the remaining requirements for the Diploma and half of the requirements for the BSc. If the science major is computing science, biology, or earth sciences, then students should seek the advice of the Department of Engineering, prior to registration in first year.

BA/Diploma in Engineering

Students may arrange programmes leading to a BA with a major in one of the arts (humanities, languages, social sciences) in combination with a Diploma in Engineering. Upon completion of the joint program, graduates receive both the Diploma in Engineering and the BA degree.

This joint programme consists of fifteen classes. Eleven of the classes are required for the Diploma in Engineering; two of these are electives which must be in the humanities or social sciences. The remaining four classes must be chosen to meet the requirements for the BA.

Students interested in this type of programme should contact both the Department of Engineering and the department for the BA major subject.

Classes Offered

Instructors shown are for the previous year.

ENGI 1100.03A: Graphics. In this class the basic problem of representing three-dimensional solid objects on a two-dimensional sheet of paper is solved by a variety of methods. Problems involving points, lines, planes, and objects are tackled using the techniques of multiview drawing, pictorials (oblique, isometric, and perspective), and descriptive geometry. Problems are solved using pencil and paper and also using Computer Assisted Drafting.

Instructor: D.M. Lewis

Format: Lecture 4 hours, lab 3 hours

ENGI 1120.03B: Statics. Statics is the first in a sequence of two classes in Engineering Mechanics. The work in Statics is designed to instruct the student in concepts of force and equilibrium. Topics include a review of the laws of motion, elements of vector algebra, such quantities as position and force vectors, moments of a force about an axis, couple moments, equivalent force systems, and equilibrium of two and three-dimensional structures. Structural applications such as two-dimensional trusses, frames and simple machines, as well as shear forces and bending moments in beams are discussed. Laws of Coulomb friction, centroids and centre of mass, and area moments and products of inertia are also presented. Problems are solved by hand, and by computer using MathCAD.

Format: Lecture 4 hours, lab/tutorial 2 hours

Instructor: D.M. Lewis

Prerequisite: ENGI 1100.03, MATH 1000.03

ENGI 2101.03B: Engineering Design. The work of ENGI 1100.03 (Graphics) is extended to include technical drawings and computer graphics, a design project with working drawings and a technical report, as well as the construction and testing of a physical model.

Format: Lecture 3 hours, lab/tutorial 3 hours

Instructors: J.C. MacKinnon

Prerequisite: ENGI 2231.03, 2331.03, 2240.03, 2340.03

ENGI 2231.03A: Digital Logic. This class includes the following topics: Logic functions, gate types, Boolean algebra, Karnaugh maps, encoders, decoders, number representations, latches, flip-flops, counters, shifters, and finite state machine design.

Format: Lecture 3 hours, lab/tutorial 3 hours

Instructor: S.T. Nugent

Prerequisite: ENGI 1120.03, MATH 1010.03

ENGI 2222.03B: Dynamics. This second class in Engineering Mechanics considers the kinematics and kinetics of a single particle and a single rigid body. The class builds on the concepts introduced in ENGI 1120.03 (Statics). Both vector and scalar methods are used. Topics include kinematics of a particle, kinetics of a particle, kinematics of a rigid body in plane motion, and planar kinetics of a rigid body.

Format: Lecture 3 hours, lab/tutorial 3 hours
Instructor: C.K.K. Lun
Prerequisite: ENGI 2240.03; MATH 2480.03

ENGI 2230.03B: Electric Circuits. An introduction to the fundamental laws of electric circuits and circuit parameters, the concept of time-constants, impedances, admittances, general network theorems, three-phase circuits and transformers. The laboratory periods illustrate the use of electrical measuring devices.

Format: Lecture 3 hours, lab/tutorial 3 hours

Instructor: S.T. Nugent
Prerequisite: PHYC 1100.06; MATH 1010.03

ENGI 2240.03A: Computer Methods in Engineering. This class first introduces the student to computers in general and to our machines in particular, to the uses of an editor, a word processor, and MathCAD for programming, word processing, and engineering problem solving. The class then focuses on an algorithm-design process which uses structured programming techniques and is independent of the language chosen for coding. PASCAL is used as the implementation language, and it is taught to an intermediate level. Typical assignments involve computer solutions of engineering and mathematical problems.

Format: Lecture 3 hours, lab/tutorial 3 hours

Instructor: C.K.K. Lun
Prerequisite: ENGI 1120.03B, MATH 1010.03

ENGI 2331.03A: Strength of Materials. This class is an introduction to the study of the stresses, strains, and deformation of a solid body which results when static forces are applied to the body. Topics discussed include: the definition and transformation relations of stresses and strains, axial loading applications, torsion of circular sections, stresses and deflection of beams, combined static loading and column action.

Format: Lecture 3 hours, lab/tutorial 3 hours

Instructor: M.H. Mansour
Prerequisite: ENGI 1120.03, MATH 1010.03

ENGI 2340.03A: Classical Thermodynamics. An introduction to the fundamental concepts and principles of thermodynamics as applied to engineering design problems. Topics in this class include: properties and processes of ideal gases and simple compressible substances, work and heat interactions, energy and the first law of thermodynamics — analysis of control masses and control volumes, entropy and analysis based upon the second law of thermodynamics, performance of selected components (e.g. turbines, compressors, pumps, heat exchangers) and systems (power and refrigeration cycles).

Format: Lecture 3 hours, lab/tutorial 3 hours

Instructor: D.G. Retallack

Prerequisite: MATH 1010.03, CHEM 1020.06

ENGI 2341.03B: An Introduction to Fluid Mechanics. This class extends the basic concepts of mechanics from solids to fluids. It comprises the study of fluid properties, fluids at rest and in motion. Dimensional analysis is introduced. The fundamental flow-governing equations (conservation of mass, momentum and energy) are derived and applied to a selection of engineering problems.

Format: Lecture 3 hours, lab/tutorial 3 hours

Instructor: D.G. Retallack
Prerequisite: ENGI 1120.03, 2340.03; MATH 2480.03

English

Introduction

The study of English includes both analysis of texts and awareness of contexts. The texts proposed for analysis in various English classes will range from the traditional to the contemporary; English is a discipline which can and does adjust to include writings by Tomson Highway, Toni Morrison, and Chinua Achebe alongside words by Chaucer, Shakespeare, Milton, Austen, and the rest. The wide range of human experience represented in these texts can provide the student with what Kenneth Burke has called "equipment for living." In more practical terms, the discipline of English fosters the development of various human skills: it requires the student to think, and to use language with clarity, judgement, and imagination.

But individual works of literature are also related in various ways to their social, cultural, and political contexts. For this reason, curiosity about a particular text often leads to enquiries that touch upon history, philosophy, politics, religion, biography, and the fine arts as well. The written text turns out to be a link between an individual sensibility and the rest of the world. The value of English studies therefore, though difficult to measure, can be discovered both in the large semiologies of the cultures to which we belong, and in the smallest nuances of the language we use.

In the first year, ENGL 1000.06 is required of all students who wish to take further English classes. There are about twenty different sections ranging from historical surveys to more eclectic studies. To enable students to choose the one most suited to their inclinations and needs, the English Department and the Registrar's Office have an ENGL 1000.06 supplement which specifies the aims and reading lists of each section. Classes numbered from 2000 to 4099 are especially suited for those concentrating in English, studying it as a complement to their main area, or taking an elective, and classes beyond 4250 are designed as studies of specialized areas for Honours students. Honours classes are open to General students with permission of the Chair and the professor concerned. A supplement describing Upper-year General and Honours classes in detail is available from the English Department.

Degree Programmes

Students should consult the "Degree Requirements" section of this calendar for specific regulations.

BA with Honours in English

This degree is a preparation for students going on to advanced study and for other highly-motivated students. It is designed to provide knowledge of the historical development of literature in English and to introduce students to the critical and theoretical paradigms of the discipline. It requires students to take:

- * at least nine and no more than eleven credits in English beyond the 1000 level, of which:
 - (a) classes will be selected from the 2000, 3000 and 4000 level;
 - (b) at least five credits must be selected from Groups A, B and C in the 4000 level; and
 - (c) at least one credit must be taken in each of Groups A, B, and C in the 4000 level.
- * an additional grade (the "21st grade" - currently met by 0451.00)
- * Honours students may not take 2000- and 3000-level classes that substantially repeat the material of a 4000-level class in Group A, B, or C which they have already taken.

NOTE: For purposes of the honours programme and its requirements, classes in the 4000 series are divided into the following groups:

- Group A (early period): 4251.06, 4252.06, 4253.06, 4351.06, 4352.06, 4360.03
 Group B (middle period): 4255.06, 4256.06, 4354.06, 4355.06, 4356.06, 4457.06
 Group C (later period): 4357.06, 4453.06, 4455.06
 Group D (Special topics): 4001.03, 4002.03, 4003.03, 4004.03, 4005.03, 4006.03, 4007.03, 4008.03, 4009.03, 4010.03

BA with Combined Honours

There are several Combined Honours programmes: English and French, English and German, English and History, English and Philosophy, English and Spanish, English and Theatre. Students interested in any of these combinations or any other that involves English and another subject should consult with the Departments concerned.

BA with Advanced Major in English

This degree is a wide-ranging preparation for a variety of careers, including the teaching of English at elementary and high-school level. It is organized to develop skills in reading, interpreting, and writing about a variety of literary forms. It requires students to take:

- * at least six and no more than nine credits in English beyond the 1000 level of which:
 - (a) full- and half-credit classes will be selected from the 2000- and 3000-level, and half-credit classes from the 4000-level.
 - (b) at least three credits must be taken from beyond the 2000-level;
 - (c) at least one half-credit must be taken in the 4000-level;

- (d) one credit must be taken in poetry, one credit in drama, and one credit in prose or prose fiction; and
- (e) at least one credit must be taken in literature before 1900.

BA with Major in English

This degree is a general liberal arts degree with a concentration in English. It permits a wide range of choice in class selection. It requires students to take:

- * at least four and no more than eight credits in English beyond the 1000 level, or which:
 - (a) classes will be selected from both the 2000- and 3000-level; and
 - (b) at least two credits must be beyond the 2000 level.

Classes Offered

Note: Classes marked * may not be offered every year. Please consult the current timetable on registration to determine if these classes are offered.

ENGL 1000.06R: Introduction to Literature. Since ENGL 1000.06 consists of sections taught by many different instructors, statements about its objectives and approach must be confined to generalizations. All instructors of ENGL 1000.06 have these two broad objectives in common: (a) to involve students in the serious study of literature; (b) to involve them in the discipline of words so that they will be more critical and responsive readers and more exact and imaginative writers. The subject matter varies from section to section. Detailed syllabi of all sections are available. Practice in writing is carried on throughout the year in regular essays. Each section attends three lectures per week. In addition, the tutors attached to each session conduct small discussion groups and personal interviews with students.

Format:  Writing Requirement, lecture /discussion 3 hours

Upper-year Classes

Successful completion of ENGL 1000.06 is the prerequisite for entry into Upper-Year classes. For a more complete description of classes and of texts, students should consult the Departmental Supplement for Upper-Year classes.

Classes in the 2000 Series

The 2000 series includes classes that emphasize genre or literary form, and those that offer broad surveys of literature. Classes in the 2000 series are open to students in their second or third year of studies who have completed ENGL 1000.06.

*ENGL 2200.06R: Advanced Composition. An advanced class in the theory and practice of writing English prose, designed for people who

already have some competence and interest in writing. The class is not a "remedial" class and not a "creative writing" class.

Format: Lecture/discussion 3 hours

Prerequisite: ENGL 1000.06

***ENGL 2203.06R: Masterpieces of Western Literature.** Intensive reading of selected major works from Western literature, designed to broaden students' outlook on literature and also to increase their familiarity with works that are not only stimulating in themselves but also comprise the basis for the development of English and other literatures.

Format: Lecture/discussion 3 hours

Prerequisite: ENGL 1000.06

***ENGL 2204.06R: The European Novel.** An intensive study of about ten representative European novels of the last two hundred years. A considerable amount of attention is paid to the philosophical ideas which are an important feature in many of the novels studied.

Format: Lecture/discussion 2 hours

Prerequisite: ENGL 1000.06

***ENGL 2205.06R: Landmarks of English Literature.** This class studies works by many of the most influential British authors from Chaucer to the present century. These landmarks provide some orientation in the literary landscape, and help to make students aware of the diversity available in literary studies. The class is aimed at, but not limited to, English majors.

Format: Lecture/discussion 3 hours

Prerequisite: ENGL 1000.06

***ENGL 2207.06R: Canadian Literature.** This class offers an introduction to Canadian poetry and prose written in English. The aim will be to trace the development of Canadian fiction and poetry from the nineteenth century to the present through discussion of selected texts.

Format: Lecture/discussion 2 hours

Prerequisite: ENGL 1000.06

Cross-listed: Canadian Studies

***ENGL 2208.06: The English Novel to 1900.** Based on a selection of titles by representative authors, this class is a survey of the early English novel. Attention is given to the rise of the genre as well as to the variety of forms and functions which the novel assumed or served.

Format: Lecture/discussion 2 hours

Prerequisite: ENGL 1000.06

***ENGL 2211.06R: Commonwealth Literature.** An introduction to the literature of the British Commonwealth, emphasizing writing from Africa, Australia, the Caribbean and India. The bulk of the literature studied will be modern.

Format: Lecture/discussion 2 hours

Prerequisite: ENGL 1000.06

***ENGL 2220.06R: English Drama.** An introduction to some of the major plays and playwrights in the history of English drama. The ability to interpret a dramatic text is of principal concern; some attention may be paid to changes

in staging practices from the medieval beginnings of English drama to the recent experimental theatre. The objective of the class as a whole is to sample the richness and diversity of the English dramatic tradition.

Format: Lecture/discussion 2 hours

Prerequisite: ENGL 1000.06

***ENGL 2221.06R: Fictions of Development.** A study of a variety of literary works (chiefly novels) which portray the crises and conflicts involved in growing up, finding a vocation, and finding oneself. Works from the nineteenth century to the present by Canadian, English and American authors are included, and special attention is given to the connections between art and autobiography, and between literature and psychology, as well as to the influence of gender differences in patterns of human development, and ways of writing about them.

Format: Lecture/discussion 2 hours

Prerequisite: ENGL 1000.06

Cross-listing: WOST 2200.06

***ENGL 2225.06R: Epic, Romance, and Fantasy.** This class offers a consideration of epic, romance, and fantasy. Starting with a consideration of primary epics, it will then go on to take a look at manifestations of the epic spirit in modern works.

Format: lecture 2 hours

Prerequisite: ENGL 1000.06

***ENGL 2226.06R: Tragedy.** A study of the nature and method of tragedy in literature. Examples are taken from Greek, Shakespearean, and modern drama, as well as from poetry, and from novels.

Format: Lecture/discussion 2 hours

Prerequisite: ENGL 1000.06

***ENGL 2227.06R: Comedy and Satire.** The comedian and the satirist are interested in both the laughable and the deplorable antics and eccentricities of human nature. This class concerns itself with their points of view, as expressed in such varied forms as stage comedy, graphic satire, the comic novel, and the humorous essay. It also considers theories of comedy and laughter in their application to a wide variety of literary types. Lectures and class discussions are augmented with play readings, films and other illustrative materials.

Format: Lecture/discussion 3 hours

Prerequisite: ENGL 1000.06

***ENGL 2228.06R: Short Poems in English.** Forms and themes in the short poem are studied by means of critical reading of poems written in English. Topics may include the following: the self in the short poem, other persons, public events, love, nature, the city, the machine, wit, myth, traditional forms, free verse, the hokku, lyric as song, spoken poetry, poetry in print, concrete poetry, and possibly other topics to suit the class.

Format: Lecture/discussion 2 hours

Prerequisite: ENGL 1000.06

***ENGL 2231.06R: Modern American and Canadian Novels.** Six Canadian and six American novels are treated as related "pairs", with a view to discovering what qualities are distinctive to each group, and what qualities are shared.

Format: Lecture/discussion 2 hours

Prerequisite: ENGL 1000.06

***ENGL 2233.06R: Science Fiction and Fantasy.** Selected works of speculative fiction are read for pleasure and studied for understanding. The study emphasizes analysis and evaluation of the works as literature. Non-majors are welcome.

Format: Lecture/discussion 2 hours

Prerequisite: ENGL 1000.06

***ENGL 2234.06R: The Short Story.** This class attempts to combine detailed consideration of a wide range of the best short stories of the last 150 years with discussion of general questions about the nature of the genre itself. As much as anything else it is a class in 'reading and writing' intended to improve reading ability and to develop the capacity to understand and interpret literature.

Format: Lecture/discussion 2 hours

Prerequisite: ENGL 1000.06

Classes in the 3000 Series

The 3000 series includes classes that focus on periods in national literatures, that take up the descriptive and historical study of the English language itself, and that deal with the theory and history of literary study. Classes in the 3000 series are open to any student who has completed ENGL 1000.06.

***ENGL 3018.03A or B: Arthur, The Age and Legend.** The forms and import of diverse Arthurian works will be the subject of this class, which will investigate the sixth-century origins of Arthur's legend and its transformations to the present day. Central stories concerning the kings, knights, queens and ladies of Logres and the stewards and seekers of the grail will be studied using texts from *The Mabinogion* and *Lanzelet* to the *Mists of Avalon*, authors from Geoffrey of Monmouth, Chrétien de Troyes, Wolfram von Eschenbach and Sir Thomas Malory to Tennyson, Browning, Stewart and Perry.

Format: Lecture/Discussion, 2 hours

Prerequisite: ENGL 1000.06

***ENGL 3050.03A or B: Contemporary Women Poets.** During the last few decades, an extraordinary number of powerful new women poets have appeared on the literary scene. This class focuses on selected works written by these poets, and explores the ways in which monolithic ideas of "woman" have been challenged by individual poets who are positioned differently by race, class, sexual orientation and national identity.

Format: Lecture/discussion, 2 hours

Prerequisite: ENGL 1000.06

***ENGL 3075.03A or B: Multicultural Fictions.**

A study of the fiction of postcolonial cultures by writers from such apparently different places as North, Central and South America, Africa, Asia and Australasia. These writers explore the interface of race, ethnicity, gender, and politics of personal and communal power and so re/shape our reading of the past and present. Their work is often grounded in local place and time, but inevitably transcends regional borders in a voicing of issues that eradicate the safety of distance between so-called first- and third-world concerns.

Format: Lecture/Discussion, 2 hours

Prerequisite: ENGL 1000.06

***ENGL 3095.03A or B: Narrative in the Cinema.**

This class will provide a brief introduction to the study of film narrative. Through an examination of select films from throughout the history of the medium, this class will consider various forms and conventions of cinematic fiction-making. Although social, political, psychological and other non-formal aspects of film will be discussed, the class will be primarily concerned with the aesthetics and visual styles at work in the films under consideration.

Format: Lecture/Discussion/Screening, 4 hours

Prerequisite: ENGL 1000.06

***ENGL 3201.06R: The English Language.** This class, concerning the English language of today, begins with some general questions about the nature of language, and goes on to investigate the syntax, semantics, phonology, and dialects of modern English, with an ultimate interest in the stylistic analysis and comparison of short literary texts.

Format: Lecture/discussion 2 hours

Prerequisite: ENGL 1000.06

***ENGL 3202.06R: History of the English Language.** An introduction to the historical development of the English language. The growth of our "word-hoard", the evolution of word meanings, the changing patterns of speech sounds, of word forms and of syntactic structures, the distinction of dialects and literary styles are studied through analysis of selected literary texts. ENGL 3201.06 and ENGL 3202.06 are complementary classes.

Format: Lecture/discussion 2 hours

Prerequisite: ENGL 1000.06

***ENGL 3206.06R: American Literature of the Nineteenth Century.** An introduction to American literature through representative works by major writers from 1800 to 1900.

Among those studied are Cooper, Hawthorne, Poe, Emerson, Melville, Whitman, Dickinson, and Twain. Both fiction and poetry are studied. Students are encouraged to discuss the works, and classes usually proceed by a combination of discussion and lecture.

Format: Lecture/discussion 2 hours

Prerequisite: ENGL 1000.06

***ENGL 3209.06R: Twentieth-Century Fiction.** An introduction to the main thematic and technical trends in the modern novel.

Format: Lecture/discussion 2 hours
Prerequisite: ENGL 1000.06

***ENGL 3210.06R: Modern Poetry in English.** A study of modern poetry in English focussing on the seminal poets Yeats, Stevens, Pound, Eliot, and Williams. Developments and trends in poetry from the 1930's to the present are also considered. For readers, beginning and more experienced, who wish to get their bearings in modern poetry.

Format: Lecture/discussion 2 hours
Prerequisite: ENGL 1000.06

***ENGL 3212.06R: British Literature of the Twentieth Century.** A survey introduction to the past seventy-five years of British fiction, drama, and poetry.

Format: Lecture/discussion 2 hours
Prerequisite: ENGL 1000.06

***ENGL 3213.06R: American Literature of the Twentieth Century.** An introduction to poetry, fiction and drama by American writers of the twentieth century.

Format: Lecture/discussion 2 hours
Prerequisite: ENGL 1000.06

***ENGL 3214.06R: Shakespeare.** An introduction to Shakespeare's career as a playwright, through discussion and interpretation of a dozen or more of his plays.

Format: Lecture/discussion 2 hours
Prerequisite: ENGL 1000.06

***ENGL 3215.06R: Poetry of the Romantic Period.** An introduction to the spirit of an age and its manifestations in literary art. Examples of shorter and longer lyrics and excerpts from longer narrative and dramatic poems are drawn from the works of Blake, Wordsworth, Coleridge, Byron, Shelley, and Keats.

Format: Lecture/discussion 2 hours
Prerequisite: ENGL 1000.06R

***ENGL 3216.06R: The Gothic Novel.** A survey of the origins and development of The Tale of Terror and the Supernatural during the latter half of the eighteenth century and its various manifestations and influences in succeeding fiction. Students will not only chart the chief landmarks of gothic fiction but also explore the various chambers of horror-literature.

Format: Lecture/discussion 2 hours
Prerequisite: ENGL 1000.06

***ENGL 3218.06R: Medieval Literature.** A study of selected medieval works of Northern Europe, with major emphasis upon the Arthurian legend as found in Malory. Beginning with a look at Nordic, Celtic and Frankish background materials (in translation), one goes on to focus upon late-medieval developments in saga and romance, concluding with a look at some post-medieval uses of the inherited matter in Tennyson, Morris, Lewis and Tolkien. An

enriched ENGL 3218.06 is available for Honours credit to students who have previously taken ENGL 4351.06.

Format: Lecture/discussion 2 hours
Prerequisite: ENGL 1000.06

***ENGL 3219.06R: Chaucer and his Contemporaries.** A selection from the genres of late medieval literature in English: romances, fabliaux, plays, lyrics, and legends. Some works are studied in translation; others (including Chaucer's) are read in the original Middle English.

Format: Lecture/discussion 2 hours
Prerequisite: ENGL 1000.06

***ENGL 3224.06R: Renaissance Poetry.** An introduction to English poetry from the early sixteenth to the mid-seventeenth century, concentrating on authors whose works have exercised a continuing influence: Sidney, Shakespeare, Donne, Jonson, and Milton.

Format: Lecture/discussion 2 hours
Prerequisite: ENGL 1000.06

***ENGL 3225.06R: Restoration and Eighteenth-Century Literature.** This class will survey literary works in drama, poetry and prose from 1660-1800. Topics to be considered might include the risky business of irony, the rise of the novel, the rise and fall of the heroic couplet, the professionalization of English letters and the changing functions of the poet, the obstacles faced by early women writers, and the relation of literature to politics in an age of emerging democratic capitalism.

Format: Lecture/discussion 2 hours
Prerequisites: ENGL 1000.06

***ENGL 3229.06R: The Victorian Age.** A survey of selected Victorian texts designed to deconstruct modern myths about the Victorians and to introduce students to the diversity of the Victorian Age. Works by Mill, Tennyson, Arnold, the Brownings, the Pre-Raphaelites, and Wilde demonstrate that Victorian Literature is animated by a spirit of rebellion and a zest for controversy, marked by innovation and experimentation in literary forms and subjects, and notable for both its passionate defences of individual liberty and its surprisingly modern affirmations of women's rights.

Format: Lecture/discussion 2 hours
Prerequisite: ENGL 1000.06

***ENGL 3232.06R: Modern Drama.** An introduction to the major developments in drama from Ibsen to the present. Special attention is given to changes in dramatic style and to the growth of modern theatrical movements. The playwrights represented include Strindberg, Shaw, Pirandello, Brecht, Genet, Ionesco, Pinter, Albee, and Stoppard. A few recent Canadian plays provide a focus for discussion of contemporary trends.

Format: Lecture/discussion 2 hours
Prerequisite: ENGL 1000.06

***ENGL 3244.06R: Literary Criticism.** A survey of Classical Greek and Latin theory, English critics and some pertinent European writers and trends.

Format: Lecture/discussion 2 hours
Prerequisite: ENGL 1000.06

Classes in the 4000 Series

Classes in the 4000 series focus on more specialized topics than other classes in the major programme. They are designed for more experienced students in the Honours and Advanced Major programmes. You must have permission of the Department to take classes in the 4000 series.

***ENGL 4001.03A or B: Studies in an Individual Author I**

***ENGL 4002.03A or B: Studies in an Individual Author II**

***ENGL 4003.03A or B: Studies in Genres I**

***ENGL 4004.03A or B: Studies in Genres II**

***ENGL 4005.03A or B: Studies in National Literatures in English I**

***ENGL 4006.03A or B: Studies in National Literatures in English II**

***ENGL 4007.03A or B: Studies in Literary History I**

***ENGL 4008.03A or B: Studies in Literary History II**

***ENGL 4009.03A or B: Studies in Literary Theory I**

***ENGL 4010.03A or B: Studies in Literary Theory II**

ENGL 0451.00A: Introduction to Literary Research. A departmental (i.e., non-university and non-credit) technical class for honours and graduate students. It is planned to acquaint the student with certain research tools in the library that are most frequently used by students of English (bibliographies, catalogues, indices, digests, journals, dictionaries, microfilms), many of which the student is unlikely to stumble upon in his/her own research.

There will be a brief introduction to the history of printing and papermaking. Students will be taken on a tour of the printing shop (Dawson Room) and occasionally guest speakers will lecture on relevant topics. Successful completion of exercises and attendance at lectures one hour a week for the first term will constitute fulfilment of requirements for the class.

Format: Lecture 1 hour, first term only

***ENGL 4251.06R: Sixteenth-Century Prose and Poetry.** This is a class in the prose and poetry of the English Renaissance from its beginnings to the 1590s. The major writers to be studied are More, Sidney, Spenser, and Shakespeare; brief

selections from Wyatt, Surrey, Elyot, Ascham, Hooker, Marlowe and a few others will also be read.

Format: Seminar 2 hours

***ENGL 4252.06R: Shakespeare and the Drama of His Time.** A selection of plays by Shakespeare is placed in the context of representative plays by his earlier and later contemporaries, especially Marlowe and Jonson. Students may consult the professor for a list of plays and suggested preliminary reading.

Format: Seminar 2 hours

***ENGL 4253.06R: Old English.** An introduction to the Old English language (700-1100 AD), followed by a study of some of the prose and minor poems, and, in the second term, of *Beowulf*. Students are also introduced to some aspects of Old English art and archaeology. Some knowledge of a classical or modern European language (preferably German) is desirable, though not essential, and an understanding of traditional grammatical terminology will be helpful. This class is not recommended, except in unusual circumstances, to those who are not thoroughly fluent in modern English.

Format: Seminar 2 hours

***ENGL 4254.06R: Restoration and Eighteenth-Century Literature.** The emphasis is on three great satirical authors (Dryden, Pope, and Swift), on a study of Restoration drama and on major works of Samuel Johnson. Since the literature of the period is related closely to the culture of the age, some time is spent on the contemporary climate of opinion revealed in the works of a number of writers representative of literary, political, social, and philosophical points of view: Hobbes, Halifax, Pepys, Rochester, Butler, Addison and Steele, Mandeville and Shaftesbury.

Format: Seminar 2 hours

***ENGL 4255.06R: Poetry and Prose 1660-1800.** This seminar will examine a selection of poetry and non-fictional prose from the Restoration and Eighteenth Century. Although the works of Dryden, Pope, Swift and Johnson will be emphasized, attention will also be paid to a number of works in representative genres (B.G., biography, letters, essays). Time will be spent on some lesser known poets of period, such as the women poets and the poets of sensibility.

Format: Seminar 2 hours

***ENGL 4256.06R: The Novel from Behn to Austen.** This seminar will examine the development of narrative fiction during the Restoration and the eighteenth century. Selected works will include a number of novels, well-known and not so well-known. Topics might include the constructions of gender, the rise of individualism, changing concepts of realism, and the relation between history and fiction.

Format: Seminar 2 hours

***ENGL 4351.06R: Middle English.** An introduction to the language and literature of feudal and chivalric England, with the principal emphases being upon Chaucer's poetry and upon the Arthurian story. Through readings and study, the student should gain some historical sense of the language, of the late-medieval social milieu and of the especial flourishing of literature in the late-fourteenth century.
 Format: Seminar 2 hours

***ENGL 4352.06R: Seventeenth-Century Poetry and Prose.** A study of selected poetry and prose of the later Renaissance. Of the poets, Donne and Milton are given special emphasis; Milton's poetry, especially *Paradise Lost*, occupies a major part of the second term.
 Format: Seminar 2 hours

***ENGL 4354.06R: Nineteenth Century Novel.** The novels of the period from Scott and Austen to Hardy are studied.
 Format: Seminar 2 hours

***ENGL 4355.06R: American Literature to 1900.** This class deals with major writers of the 19th century, as well as works from the colonial period which raise important cultural questions.
 Format: Seminar 2 hours

***ENGL 4356.06R: The Romantic Period.** A close reading of the major poetry of Blake, Coleridge, Wordsworth, Byron, Shelley, and Keats. Attention is also given to their critical writings in prose, and to the intellectual, cultural, and historical milieu in which they worked.
 Format: Seminar 2 hours

***ENGL 4357.06R: Modern Canadian Literature.** A study of Canadian fiction and poetry since the 1920's with emphasis on the changing form and content of Canadian writing.
 Format: Seminar 2 hours
 Cross-listed: Canadian Studies

***ENGL 4360.03R: Old Norse.** A broad survey of major Old Norse prose and poetic works in translation and an introduction to the comparative study of the very close relation of the early Norse and English languages and literature.
 Format: Lecture 1 hour
 Prerequisite: One of ENGL 3218.06, 4253.06, 4351.06 or instructor's consent

***ENGL 4453.06R: Twentieth-Century English Literature.** A series of explorations designed to interpret some of the literary texts written in our century and the (British) culture which produced them.
 Format: Seminar 2 hours

***ENGL 4455.06R: Modern American Literature.** In the first term, this class studies 20th-century American fiction. In the second term, modern American poetry is assessed. Classes are a combination of lectures and discussion.
 Format: Seminar 2 hours

***ENGL 4457.06R: Victorian Poetry.** Poems by Tennyson, Robert Browning, Elizabeth Barrett Browning, Arnold and selected Pre-Raphaelites are studied in the context of the social and political, the religious and scientific ideas current in Victorian England.
 Format: Seminar 2 hours

Environmental Science

Introduction

Environmental Science applies the findings and principles from all disciplines of science to questions and problems involving the environment of our planet, its oceans, atmosphere, and biosphere. Environmental science is therefore extremely broad and interdisciplinary. Most environmental scientists have primary expertise in a particular discipline, and work co-operatively with specialists in other disciplines to solve environmental problems. They work in a variety of institutions; many work in federal or provincial government laboratories that are engaged in basic research or applied problem-solving. Many more work in private consulting or engineering firms to minimize humankind's impact on the environment.

Degree Programmes

Dalhousie believes that the importance of environmental science in the undergraduate curriculum requires it to be taught in the relevant classes of all disciplines (i.e. "across the curriculum"). For this reason rather than offer environmental science as a separate degree programme, we offer it as an integral part of the existing basic disciplines. Those interested in environmental science as a career are strongly advised to obtain a good grounding in the basic sciences by concentrating their field of study in one subject in order to obtain a major or honours BSc in that discipline. Current programs that provide streams emphasizing environmental subjects are Earth Sciences (particularly Environmental Geology and Hydrogeology) and Marine Biology. Of particular reference is the programme specializing in Earth System Science (see Earth System Science section of this calendar).

Most major or honours programmes allow some freedom in selection of classes, especially with respect to elective classes. In order to assist students in locating classes with particular applications or relevance to environmental issues, we have listed those classes offered within the Faculty of Science, and noted those aspects of each class which relate to the environment. We emphasize that these classes are offered by individual departments, and do not of themselves form part of a general environmental degree program. Consult the individual departments for prerequisites and admission requirements. Above all, be sure that the selection of classes you choose will be sufficient to qualify for a major or honours Bachelor of Science degree in the subject you

have chosen for specialization (Note College of Arts and Science section of "Degree Requirements" in this calendar).

After the BSc degree, career options you may wish to consider include:

- Diploma in Meteorology (Consult the Physics or Oceanography departments)
- Graduate study in Oceanography
- Masters degree programme with the School for Resource and Environmental Studies

Classes Offered Within the Faculty of Science with Particular Relevance to Environmental Science

First-year classes (1000 level):

CHEM 1000.06R: The Chemical World. This class is mainly for BA students. It emphasizes descriptive chemistry, i.e. properties of chemical compounds, over quantitative aspects. Many examples and assignments are relevant to environmental science. Principles demonstrated include chemical structure - function relations; quantity/quality considerations for chemicals in the environment; toxicity. Students will be taught to recognize chemical structure and function.

Instructors: T.S. Cameron

CHEM 1010.06R/1500.06R: General Chemistry. These classes are standard 1st-year University chemistry. Both quantitative and qualitative aspects of chemistry are emphasized, and many examples used in class are taken from environmental science. All material covered in these classes is relevant to an understanding in particular of chemicals, cycles, pollution, etc.

Instructors: Staff

CHEM 1040.06R: General Chemistry for the Life and Health Sciences. This course is similar to CHEM 1010.06 in its rigour and the principles it covers; it also uses the same textbook and the same lab experiments. CHEM 1040.06 serves as a prerequisite for all second-year chemistry courses, and students should have a background equivalent to Nova Scotia grade 12 chemistry.

In contrast to CHEM 1010.06, however, chemical principles are primarily illustrated by their action in living systems. Of particular interest in the environmental context may be: descriptions of the nature and role of particular chemicals (from O_3 , NO_x , and SO_2 to select carcinogens and biodegradable surfactants); Michaelis-Menten enzyme kinetics (including non-competitive inhibition by Hg and nerve gases); consequences of the second law of thermodynamics (e.g. entropy-driven pollution); methods used in biochemical and environmental analysis (UV-Vis spectrophotometry, pH measurements, etc.) polyprotic acid equilibria (natural buffer systems); and ionizing radiation (effects on the human body, natural and anthropogenic radioactivity, fission and fusion reactors and bombs).

Prerequisites: Students should have a background equivalent to Nova Scotia grade 12 chemistry (N.S. #411)

Current instructor: W.A. Aue

CHEM 1410.03A: Introductory Chemistry. A descriptive introduction to chemistry with emphasis on materials related to life and health sciences. As 1430R, the course is required for Nursing students, who make up the bulk of the class. Consequently, there is an emphasis on the physiological effects of chemicals on the human body. The class consists of three hours of lectures and an optional two-hour tutorial each week. The class discusses the structure of chemical compounds, concentrations of solutions, inorganic and organic compounds, reactions and non-reactive interactions between chemicals. The students learn how to work with concentrations of solutions and how to deduce the structure and something of the properties of a molecule from its name.

Instructors: P.D. Pacey
Cross-listings: CHEM 1430.06

ESCI 1000.06R/1001.03B: Introduction to Geology. Covers principles of Earth Science including those directly applicable to environmental science - e.g. nature and coupling of lithosphere-hydrosphere-atmosphere-biosphere, rock cycle, geological time, stratigraphy, geological processes and surficial geology, extinctions, scientific method. Applies principles of Earth Science to problems in environmental and resource geology - e.g., mineral and petroleum resources (including environmental problems associated with their recovery and use), groundwater, waste disposal, soils, deserts and desertification, the carbon cycle, glaciation, history and causes of climate change, rivers and floods, slope failure, coastal subsidence, volcanic and earthquake hazards. Lectures cover points noted above, with special class reading and discussion of several topical environmental issues. Field trips illustrate different aspects of geology, including environmental aspects as appropriate for each locality (e.g., shoreline erosion). Labs include the analysis and identification of sediments and rocks, and coverage of the physical basis of the Earth's surface. Students are taught geological time and the time scale; how to read the history of past environmental change from the geological record; specific geological principles (e.g., groundwater flow, the carbon cycle, slope stability) relevant to environmental science, map reading. For more course content information refer to the Earth Sciences section of this calendar.

Instructors: J. Hall

ESCI 1040.03A/1050.03B: The Earth and Society. 1040.03 covers principles of Earth Science including those directly applicable to

environmental science (applications mainly covered in 1050.03) - e.g., nature and coupling of lithosphere-hydrosphere-atmosphere-biosphere, geological time, rock cycle, stratigraphy, geological processes and surficial geology, extinctions, scientific method. Lectures cover points noted above. Field trips illustrate different aspects of geology, including environmental aspects as appropriate for each locality (e.g., shoreline erosion). Students are taught understanding of geological time and the time scale; how to read the history of past environmental change from the geological record.

1050.03 applies principles of Earth Science learned in 1040.03 to problems in environmental and resource geology - e.g., mineral and petroleum resources (including environmental problems associated with their recovery and use), groundwater, waste disposal, soils, deserts and desertification, the carbon cycle, glaciation, history and causes of climate change, rivers and floods, slope failure, coastal subsidence, volcanic and earthquake hazards. A large proportion of class time is spent on environmental applications of Earth Science, with some special reading and discussion on topical environmental problems; three out of four assignments involve problems or reports on environmental/resource geology. Students are taught specific geological principles (e.g., groundwater flow, the carbon cycle, slope stability) relevant to environmental science, map reading. For more course content information refer to the Earth Sciences section of this calendar.

Instructors: D. Godfrey-Smith, J. Hall, P.J.C. Ryall, M. Zentilli

SCIE 1000.06R: Introduction to Environmental Studies. The intention of this full-credit course is to provide students with an entry-level introduction to the scope and importance of environmental issues that affect us at the local, regional, national and global levels. The course content will deal with three groups of environmental issues; (i) the human population and sociocultural patterns, (ii) sustainability of the use of renewable and non-renewable natural resources, and (iii) environmental degradation caused by pollution and disturbance. The course will be multi-disciplinary in nature, with specialists dealing with issues that reflect their particular expertise. However, this course will also build upon the connections among specific disciplines. The instructional format will involve two lectures per week, and one two-hour tutorial every two weeks. Grading will be by examination (one at the end of each term), by essay (one per term), by short written assignments, and by participation in discussion seminars.

Instructors: Staff

SCIE 1200.06R: An Overview of the Cosmos, Earth, and Life. Students are introduced to selected concepts central to the disciplines of Earth Sciences, Biology, Physics and Astronomy.

The common thread that connects these disciplines is the sequential and connected evolution of the universe itself, our planet earth and the origin and evolution of life on Earth. Emphasis is placed on developing an understanding of the scientific method, its limitations, and its application in society. The principles will be related to environmental concerns. For example, the properties of light and radiation are applied to a discussion of global warming; knowledge of molecular biology is used to study evolution of organisms and change in habitats.

Instructors: R. Harding, R. March, P. Ryall

Prerequisites: There are no prerequisites for this class

Exclusion: This class does not serve as a prerequisite for any other science class.

Second-year classes (2000 level)

BIOL 2002.03B: Terrestrial Diversity. (Area II) A survey of the terrestrial organisms. The class emphasizes the restrictions imposed on terrestrial adaptations by the aquatic origins of the colonizers, discusses the physiology of living in a terrestrial environment, looks at the domestication of plants and animals by man, and speculates on the future diversification of the earth environment and its inhabitants.

Format: lecture 2 hr, tutorial 1 hr, lab 3 hr

Instructors: A.H. Mills, D.G. Patriquin, R. Scheibling

Prerequisite: BIOL 1000.06 or 1001.06 (Grade B- or better)

BIOL 2060.03A or B: Introductory Ecology. (Area III) Ecology is the study of the interrelationships of organisms and their environments. The broad subject of ecology focuses upon the interactions of plants and animals, including humans, with each other and with their non-living world. Three levels of ecology are studied: (1) individuals, (2) Populations, (3) Communities and Ecosystems. Assignments and tutorials enlarge upon concepts presented in lecture. Students are instructed in elementary computer techniques and use the computer for most assignments. This class provides an overview of the science of ecology for the informed citizen, and also a good foundation for further work in ecology, marine biology and environmental studies.

Format: lecture 3 hours, laboratory/tutorial 3 hours

Instructor: C. Beauchamp, R. Doyle, R. Scheibling

Prerequisite: BIOL 1000.06 or 1001.06 (Grade B- or better)

Exclusions: BIOL 2066.03, BIOL 2046.06

ECON 2250.06R: An Applied Course in Economic Development and the Environment: Concepts, Policies and Projects. The class is designed around concepts of sustainable development, with emphasis on key issues

facing developing countries and less prosperous regions of some industrial nations. There are three main elements: (1) conceptual underpinnings and tensions behind sustainable development; (2) international, national and regional level policies and planning approaches for sustainable development - including lessons from the Rio Summit, the World Bank, CIDA, Canada's Green Plan and the European Regional Development Fund; (3) projects for sustainable development - drawing on case experiences and first-hand field work undertaken as a part of the class programme.

Format: Lectures, case work with group presentations, tutorials. (3 hours).

Instructor: I.McAllister

Prerequisite: Introductory economics or permission of instructor.

ESCI 2203.03A: Sediments and Sedimentary Rocks. This class deals with physical and biological processes which generate modern siliciclastic, carbonate and evaporite sediments. Materials associated with Quaternary glacial events are discussed. The formation of sedimentary rocks is examined and their petrology illustrated using laboratory techniques. Weekend field trips to selected modern and ancient sedimentary deposits in Nova Scotia take place in the first month of classes.

Instructor: M.R. Gibling

Format: Lecture 3 hours/Laboratory 3 hours

Prerequisites: ESCI 1000.06 or ESCI 1040.03/ESCI 1001.03

ESCI 2204.03B: Life Through Time. The core of the class will cover in systematic sequence the macroscopic invertebrates, a few important vertebrates and plants (microfossils and dinosaurs are covered in other classes). The class will also deal with many of the important events that have affected the development of life on Earth, including the beginning of life, evolution, fossilization, mass extinction and the great biological crises of the Permo-Triassic and Cretaceous. Laboratory work will cover identification of fossils, concept of paleontological species and paleoecology.

Instructor: F.S. Medioli

Format: Lecture 3 hours/Laboratory 3 hours

Prerequisites: ESCI 2203.03 or ESCI 1040.03/BIOL 1000.06

ESCI 2410.03B: Environmental and Resource Geology. Today, and into the foreseeable future, humanity is faced with numerous environmental problems created by natural and human-made causes. In many cases, an understanding of one or more geologic processes is essential in finding an appropriate solution. Environmental geology is geology as it relates to human activities. This course examines how geologic processes and hazards impose constraints on human activities,

the geologic aspects of pollution and waste-disposal problems, the issues associated with the utilization and management of mineral and energy resources, and several other topics. Principles and applications addressed in the course include metallic mineral resources, energy resources (coal, hydrocarbons, nuclear), environmental problems of resource extraction and processing, groundwater as a resource, geologic hazards (flooding, landslides, subsidence, earthquakes, volcanoes) and their mitigation or prevention, role of geology in land use planning, coastal processes and human intervention, geological aspects of solid and liquid waste disposal. Many environmental issues involve a variety of geologic processes. This course provides participants with a broader foundation for the discussion and evaluation of specific environmental issues that involve geologic aspects. Emphasis is placed on the multi-disciplinary nature of environmental sciences and the holistic approach necessary to provide acceptable solutions. For more course content information refer to the Earth Sciences section of this calendar.

Instructors: G.K. Muecke

Prerequisites: ESCI 1000.06 or ESCI 1040.03 and 1050.03/1001.03

STAT 2080.03A or B: Statistical Methods for Data Analysis and Inference. Statistics is the science of collecting, organizing and interpreting data. It is a particularly essential tool in the study of environmental science. This course gives a fundamental background and techniques in collection and interpretation of data. Principles demonstrated include the importance of experimental design in approaching environmental problems and basic techniques of exploratory data analysis and statistical inference. Students are taught critical analysis and assessment of data used in support of environmental issues.

Instructors: Bowen, Field, Gabor, Hamilton, Manchester

Cross-listing: MATH 2080.03, ECON 2280.03

OCEA 2850.06R: Introduction to Oceanography. This course is descriptive in nature. An understanding of the ocean's role as a dominant environmental force is emphasized. Various examples of the importance of the oceans occur throughout.

Instructor: R. Fournier

Third-year classes (3000 level)

OCEA 3000.03B: The Atmosphere. The purpose of this class is to provide understanding of the basic physical and chemical processes determining the evolution, behaviour and anthropogenic modification of the atmosphere. Topics include: (a) formation and evolution of the atmosphere, chemical composition, recent anthropogenic changes, greenhouse gases, stratospheric ozone; (b) atmospheric motions, mesoscale and large scale dynamics, general

circulation, numerical weather prediction and general circulation models; (c) solar radiation as a source of atmospheric motions, terrestrial radiation, energy balance, scattering and absorption of radiation in the atmosphere, elements of radiative transfer; (d) hydrological cycle, thermodynamics of water vapor, phase transitions, role of aerosols and clouds, precipitation; and (e) climate models, past climate, global change, anthropogenic effects.

Instructor: I. Folkins

Prerequisites: MATH 1000.03/1010.03 or equivalent and PHYC 1000.06 or 1100.06 or equivalent

BIOL 3060.03A: Environmental Ecology. This class covers the ecological effects of pollution and disturbance, plus some resource ecology and human population biology. Ecological effects of pollution and disturbance are emphasized. Skills taught include interpretation, some calculation/budget skills.

Instructors: B. Freedman

Cross-listings: ES5120.03, BIOL 5060.03

BIOL 3063.03B: Resource Ecology. This course is concerned with fisheries, wildlife and forest management. Principles demonstrated include geoeconomics, geological control strategies, and genetic conservation strategies. Students are taught familiarisation with the technical literature in several fields.

Instructors: R. Doyle, B. Freedman, S. Walde

BIOL 3066.03A: Plant Ecology. Ecology refers both to the interactions between organism and environment as well as to the formal scientific study of these interactions. In plants these interactions can involve other plants, as in competition, or animals, as in pollination, herbivory, seed predation and seed dispersal. Plants stand still after they have passed the seed stage. Standing still means that plants must survive and make offspring in an environment that is imposed upon them. This class examines the causes and consequences of being a plant from an evolutionary perspective. Ecological interactions both cause natural selection and are themselves the consequences of evolution. The overriding theme of the class, therefore, is that of the ecological theatre and the evolutionary play (in the words of G.E. Hutchinson). This class concentrates on individual interactions, adaptations and processes. Processes, such as nutrient cycling, that occur at the level of communities or ecosystems will receive little attention.

Format: lecture 3 hrs, lab/tutorial 3 hrs, one/two field trips on weekends

Instructor: M. Johnston

Prerequisite: BIOL 2060.03

Cross-listing: BIOL 5066.03

BIOL 3069.03B: Population Ecology. An examination of selected topics in population ecology. Topics include the effect of species interactions (predation, competition, mutualism) on population fluctuations, cycles and extinction.

The relevance of theory to particular case studies such as lynx-hare cycles and biological control of winter moth will be discussed. Recent literature will be emphasized. Written assignments and exams will contribute to the final grades.

Format: lecture/tutorial 3 hours
Instructor: S. Walde
Prerequisites: BIOL 2060.03, MATH 1010.03 1060.03, or equivalent

OCEA 3170.03A: Physics and Chemistry of the Ocean. This class outlines concepts in physical and chemical oceanography with special emphasis on the ocean's role in the global biogeochemical and physical/climate systems. This class is in two parts. In the first part, topics include: the oceans as a physical system, water properties, basic dynamical concepts, the forces creating oceanic motion, ocean circulation, shelf and coastal processes. In the second part topics include: the oceans as a chemical system, composition of sea water, control of pH and redox potential, nutrient chemistry, trace elements, organic materials, distributions and geochemical cycles.

Instructor: B. Ruddick, B. Boudreau
Format: Lecture 3 hours
Prerequisites: MATH 1000.03/1010.03, plus first-year chemistry, or equivalent or permission of the instructor.
Restriction: Restricted to third and fourth-year students.

BIOL 3601.03B: Nature Conservation. The course traces the development of human economy and the resultant impact on the wild environment. Particular attention is paid to human population dynamics, biotic extinctions and land-use patterns. Having identified the causes of impoverishment of biodiversity, the course examines possible cures, including: sustainable development, conservation science and environmental ethics. Special attention is paid to the establishment and management of protected areas.

Format: lecture, tutorial
Instructor: M. Willison
Prerequisites: BIOL 1000.06 or BIOL 1001.06 or SCIE 1200.06 or permission of instructor.

CHEM 3402.03A: Identification of Organic Compounds. This is a class designed to teach skills in the identification of organic compounds. The Earth has been composed of chemicals since its beginning, and as both nature and man evolve, the range of these continues to increase. The state of the environment around us directly corresponds to its chemical composition and understanding this state therefore requires a knowledge of chemistry. Many substances encountered in the environment are organic molecules and the study of their chemistry is thus important.

The approach used in this class is two-pronged, one using older, classical methods and the other using modern spectroscopic methods. The purpose of studying the older techniques is that they will give valuable experience in the very subjective ability of handling comfortably a wide variety of chemicals. Chemicals have discrete and measurable physical properties. However, the reaction of human beings to many chemicals is a subjective and variable phenomenon - one person may find a certain smell unimportant where someone else may find it repulsive, for example, a pair of well-worn socks. Most people are only comfortable in situations with which they are familiar, and the same is true of handling chemicals - familiarity is crucial in learning how to handle these with confidence (but not with contempt!). This is particularly important in this age of chemophobia since the world needs competent, qualified chemists who can handle molecules with confidence and skill. Students need to acquire the skill of being able to recognize molecules from their appearance, from their smell and from their reactivity, also the skill of knowing how to handle them safely and efficiently. In addition, students need to become comfortable with the powers and limitations of modern analytical procedures. Most substances in real life are mixtures and hence skills at analysis and understanding interactions between compounds in mixtures is fundamentally important to the practice of chemistry. Of course, this also requires modern instrumental methods, the study of which will form the culmination of the skills taught earlier in the class.

Prerequisite: A good understanding of the principles taught in CHEM 2400.06, as evidenced by a grade of at least C.

ECON 3350.03A or B: Social Cost Benefit Analysis. This class covers valuation of costs and benefits that are not priced in markets and methods for including such costs and benefits in economic decisions. These costs and benefits may be important in evaluating environmental issues. Principles demonstrated include implications of costs and benefits that do not have market values for various projects and differences between private and social perspectives in assessing projects. Students are taught methods of incorporating environmental concerns in economic analysis and implications of ignoring such concerns.

Instructors: T. Pinfold
Cross-listing: ECON 5350.03

ECON 3332.03A or B: Resource Economics. This class covers resource management decisions - fisheries, forestry, etc. and pollution control regulations - standards versus taxes, etc. Principles demonstrated include optimal sustainable yield - fisheries; and forestry rotation

periods. Students are taught applications of economic decision making to resource management and pollution regulation.

Instructor: M. Cross

ESCI 3400.03A: Fundamentals of Hydrogeology. The availability and preservation of sources of potable, fresh water is a major environmental concern. As surface waters have increasingly become polluted, exploration and exploitation of groundwater resources have gained in importance. This course deals with subsurface waters and related geologic aspects of surface waters. The student is introduced to the factors which influence the availability of groundwater, such as the presence of suitable aquifers, water quality, and rate of recharge relative to rate of water use. The geology, geophysics, and geochemistry of groundwater systems can be protected from contamination and, in the case of already polluted aquifers, how they can be restored for future use. Principles discussed in the course include: the hydrologic cycle, principles of groundwater flow, groundwater flow to wells, regional groundwater flow, methods of groundwater exploration, geology of groundwater occurrences, geochemistry of subsurface waters, chemical and physical transport mechanisms in groundwater, water quality, groundwater contamination by point and nonpoint sources, groundwater restoration. Atmospheric and aquatic transport of contaminants are the two major pathways through which harmful pollutants become dispersed. An understanding of groundwater systems and their interaction with surface waters is essential in the study and evaluation of most environmental issues. For students specializing in hydrogeology/environmental geology the course is a pre-requisite for advanced level studies. For more course content information see Earth Sciences section of this calendar.

Instructors: G.K. Muecke, P.J.C. Ryall
Prerequisites: ESCI 2201.03, 2101.03, 2102.03

ESCI 3410.03B: Enhanced Environmental Geology. The topics and principles treated in this course are similar to those of ESCI 2410.03. The course is designed specifically for students with a strong background in geology; equivalent to that of a third year Geology major. Selected topics are explored at greater depth using the accumulated geologic knowledge of the participants. The written and oral presentation of a substantial research project forms an essential part of the course. For example, participants have researched the environmental concerns associated with the various geologic options for the permanent storage of high-level nuclear wastes. For more course content information see Earth Sciences section of this calendar.

Instructors: G.K. Muecke
Prerequisites: ESCI 2101.03, 2102.03, 2203.03, 2204.03, 3400.03

SCIE 3050.06R: Waste Management and the Environment. This is an Experimental Class intended for third year students. It examines the topic of waste management from several perspectives: Resource Economics; Pollution Cycles; Public Health Issues; Technological Controls; International Waste Management Practices; Regulation; and Waste Management Planning. It will include 1½ hours per week of lecturing and 3 hours of lab work. In the lab, the students will learn the practical skills involved in conducting a waste audit and developing a waste reduction and recycling plan on the Dalhousie Campus.

Format: lecture 1½ hours/laboratory, field trips, 3 hours

Instructors: staff
Prerequisite: CHEM 1010.06 or 1500.06 or equivalent; ESCI 1000.06 or 1060.03/1050.03

Fourth-year classes (4000 level)

BIOL 4060.03A: Marine Mammalogy. The class will examine the characteristics that mammals, brought with them when they returned to the ocean, the evolution of the different groups of marine mammals, some of their special adaptations, the roles of marine mammals in oceanic ecosystems and general principles of the marine mammal population biology. Finally we will consider the factors that regulate marine mammal populations and how these influence attempts to manage and conserve them. Assignments will include dissections of a seal and/or porpoise, a review essay on some marine mammal adaptation, exploring a computer model of a marine mammal population, and an examination.

Format: lectures/discussion/tutorials 3 hours plus some labs
Instructors: I.A. McLaren (plus others)
Prerequisites: BIOL 2060.03 and 3069.03 or see instructors

CHEM 4203.03A or B: Environmental Chemistry. The basic principles of kinetics and chemical equilibria are used to describe the behaviour of metal ions and organic compounds in the aquatic and terrestrial environment. The material covered in this class can be used to better understand the fate of chemicals in the environment and their impact on living organisms. The complexity of the chemical interactions is used to evaluate possible analytical methods for the determination of chemicals in the environment. Topics covered include polyprotic acid base equilibria, distribution of active compounds between gas and solution, Eh - pH diagrams, solubility of oxides, carbonates, and sulphides, complexation equilibria, adsorption onto solids, enzyme kinetics, and the kinetics of distribution of compounds between compartments. A computer programme (Mathcad) is used to derive simple mathematical models suitable for the description of chemical interactions in the

environment. The programming environment is such that the chemistry can be illustrated quickly without writing complex programs in traditional computer languages.

Instructors: R.D. Guy

OCEA 4120.03A: Introductory Physical Oceanography. An understanding of the role of ocean physics in climate and pollution abatement is applied. Flushing of Halifax Harbour is studied by field trip and term project. Appreciation of ocean's role in global climate control and methods of measuring the exchange rate of estuaries are emphasized.

Prerequisite: MATH 1000.03/1010.03 (Basic calculus, or equivalent)

Instructors: Ruddick

OCEA 4130.03A: Introductory Chemical Oceanography. An understanding of the role of ocean chemistry in the global carbon cycle, and the links between ocean chemistry and global climate is emphasized. The use of ocean tracers in inferring ocean circulation processes is demonstrated. Students are taught an understanding of the links between ocean chemistry and global climate and the use of tracers in ocean circulation studies.

Instructors: Moore

Prerequisite: Instructor's consent

OCEA 4311.03A/4312.03B: Fluid Dynamics I and II. Several applications of the physics of fluid flow to environmental contexts: channel flows, waves, convection in the ocean and atmosphere, turbulence. Lecture examples all throughout. Laboratory demonstrations and experiments: effects of density stratification and rotation. Students are taught the mathematical modelling and physical understanding of several oceanic and atmospheric flow and mixing phenomena.

Instructors: Bowen/Kelley

Cross-listings: PHYC 4311.03/4312.03

***OCEA 4411.03A/4412.03B: Dynamic Meteorology I and II.** By understanding how and why the atmosphere flows, the student will learn the dynamical basis of weather and climate. The interaction of many time and space scales of atmospheric phenomena in determining Earth's climate is an important lesson to be applied to environmental studies. Students will obtain an understanding of how the physical laws of fluid motion determine the atmosphere environment.

Instructors: Staff

Cross-listings: PHYC 4411.03/4412.03

***OCEA 4530.03B: Introduction to Radiation and Climate.** Introduction to the basic processes responsible for climate; low radiation provides the fundamental forcing for climate; applications include climate change. Knowing how climate works is needed to tackle issues of global change.

Instructors: P. Chylek

Cross-listings: PHYC 4530.03

French

(London), MA (Dal)

Introduction

The Department of French offers students not only the opportunity to develop fluency in classes backed up by excellent laboratory and ancillary facilities, but also the possibility of studying the literature and culture of France, French Canada and the other nations of the French-speaking world, and the linguistic structure and development of French.

Classes are available for beginners and for those with a background in the language who wish to improve and maintain any or all of the following skills: speaking, listening, reading, and writing. Other classes are specially designed for students who are interested in teaching, translation, or other areas of language study. The role of French in Canada and in the Maritimes is stressed in classes in Acadian and Québécois literature and civilization. The literature of France and French-speaking nations is brought to life in classes organized around a theme, a genre, or an historical period.

The Department of French urges students to practise the language as much as possible. The Maisons Françaises are two houses on campus in which students may live with native speakers in a francophone environment. The French Club organizes activities including films, French meals, parties and plays in which all students may participate. Exchanges with Québec and individual student travel and study are encouraged. The Department offers in some years a class off campus in a francophone environment. Please consult the Department for information and see below: Aix-en-Provence.

A BA degree in French with Honours or with Honours in French and another subject combined may lead the student to a career in education, written or oral translation, or may provide the background for careers in many fields, including radio, television, law, social work, public relations, business, diplomacy, journalism and library science. Students considering French as an area of concentration in a BA degree course are invited to discuss the matter at any time (the earlier the better) with a member of the Department. The accent is on the particular needs and aspirations of the individual. An Honours degree is normally required for access to graduate studies: MA, MAT and PhD degrees may be pursued in the Department (see the Calendar for Faculty of Graduate Studies).

Major, Advanced Major or Honours students may, with the approval of the Department of French, take up to one year of work at a University in a francophone environment and receive certain credit at Dalhousie. Scholarships are available for students selected to participate in the Dalhousie/ Aix-en-Provence Year-Abroad Programme, for Honours or Advanced Major students.

The language requirement exemption test in French will be given in the April examination period. Students who would like to write this test should inform the Registrar's Office by mid January. It is to be noted that passing this language requirement exemption test does not give a credit.

Students considering a career in teaching French are encouraged to discuss their goals and programme as early as possible with Professors DeMéo or Myers.

Degree Programmes

Requirements for the three degree programmes are set out in the following sections. Electives from other departments, when chosen with care, can enrich and enhance the major classes. Please plan your programme with an Advisor from the French Department.

Students particularly interested in linguistics should consult the list of classes in the Linguistics section of this calendar.

BA with Honours in French

This programme offers systematic, comprehensive and individualized study of French language, literature, linguistics and other programme elements both within and without the classroom. It is, therefore, an option which should be considered seriously by any student who, with career or personal objectives in mind, wishes to obtain a strong background in French and by those who plan to teach or earn a graduate degree in French.

Honours students are strongly encouraged to enrich their more traditional learning experience by living in one of the Maisons Françaises and by spending at least one summer in a French-speaking area. Majors or Honours students may, with the approval of the Department, take up to one year of work at a university in a francophone environment and receive certain credit at Dalhousie. Please consult the department for information on programmes available. Please consult the Chair of the Department.

Combined Honours students should consult the Chair before proceeding to see the Honours Advisor. Following is a description of the three different kinds of Honours programmes in French and the requirement for each:

I. Concentrated Honours:

Classes required in Honours:

- 2000 level: FREN 2045.06, 2201.03 and 2202.03
- 3000 level: FREN 3020.06, 3045.06, plus one credit in literature and/or culture
- 4000 level: Two 4000 level credits

At least two other French credits 2000 to 4000 level for a total of nine French credits.

"First year" does not necessarily mean FREN 1000-level classes; it refers to any course taken in the first year of study.

An additional grade is required: either an Honours Essay or an Oral Presentation (see document entitled "French Honours Qualifying Examination" obtainable from the Honours Co-ordinator or the Departmental secretary).

II. Combined Honours:

From 11-13 credits in French and another subject; not fewer than 4 nor more than 9 may be

chosen in either subject. Minimum requirements for the Combined Honours programme are as follows: 2045.06, 2201.03, 2202.03, 3045.06 plus a minimum of one full credit in language, literature and/or culture at the 3000-level. An additional credit is required: either an Honours Essay or an Oral Presentation (see document entitled "French Honours Qualifying Examination" obtainable from the Honours Co-ordinator or the Departmental secretary).

III. Honours Certificate:

The Honours Certificate is an option for continued study open to anyone who has previously completed a BA major programme in French. Normally, it consists of five full credits of course work plus one additional credit: either an honours essay or an oral interview based on class work and /or a specific topic. Requirements for the honours certificate are similar to those for the concentrated honours programme, but will vary according to individual circumstances.

BA with Advanced Major in French

Students who may not be eligible for the Honours Programme are encouraged to enter the Advanced Major degree programme in French

Departmental requirements:

Classes required in Advanced Major:

- 2000 level: FREN 2045.06, 2201.03 and 2202.03
- 3000 level: FREN 3045.06 plus two other 3000 level French credits
- 4000 level: One 4000 level French credit

Please note: students wishing to change to an Honours Programme may do so, if the quality of their work justifies it. Those who might wish to do so should also take FREN 3020.06 (required for Honours), and consult the Chair or the Honours Advisor.

BA with Major in French

Students should consult the Chair or a Department Advisor about the choice of classes.

Students are urged to take more than the minimum number of classes required, and, indeed, to do a 4-year degree (Advanced Major or Honours) if a high level of proficiency in French is sought.

Departmental Requirements

Classes required in Major:

- 2000 level: FREN 2045.06, 2201.03 and 2202.03
- 3000 level: FREN 3045.06 plus one other 3000 level French credit

Classes other than those required may be chosen freely in consultation with the Major Advisor, according to the students' desire to obtain a general knowledge of the field, or a

greater concentration in specific areas such as Literature, Linguistics, French-Canadian Studies, etc.

Students wishing to change to an Honours Programme may do so during the second or

third year of studies, given sufficient standing. Those wishing to do so, or to continue in Graduate Studies after obtaining a BA Major in French, should consult the Chair or the Honours Advisor.

French Department - Language Class Progression Table

Level on Entry	1st year	2nd year	3rd year	4th year
1	1000.06 (3 + 2 hours, + lab)	1010.06 (3+1 hours, + lab)	2045.06* or any other 2nd year class	3045.06* or any other 3rd year class
2a	1005.06 (3 hours + lab)	1010.06 (3+1 hours, + lab)	2045.06* or any other 2nd year class	3045.06* or any other 3rd year class
2b	1006.06/1011.06 (6 hours, + lab)	2045.06* or any other 2nd year class	3045.06* or any other 3rd year class	4045.06 or any other 3rd or 4th year class
3a	1010.06 (3+1 hours, + lab)	2045.06* or any other 2nd year class	3045.06* or any other 3rd year class	4045.06 or any other 3rd or 4th year class
3b	1006.06/1011.06 (6 hours + lab)	2045.06* or any other 2nd year class	3045.06* or any other 3rd year class	4045.06 or any other 3rd or 4th year class
4	1045.06 (3 hours + lab)	2045.06* or any other 2nd year class	3045.06* or any other 3rd year class	4045.06 or any other 3rd or 4th year class
5	2045.06* or any other 2nd year class	3045.06* or any other 3rd year class	4045.06 or any other 3rd or 4th year class	

* Required for major, advanced major and honours students

Definition of Levels:

- 1) If you have NEVER studied French before, take FREN 1000.06. If you wish to continue after completing FREN 1000.06, you may take FREN 1010.06 during the summer or the following year.
- 2a) If you studied French for a few years, some time ago (for example, up to Grade 9), take FREN 1005.06. If you wish to continue after completing FREN 1005.06, you may take FREN 1010.06 during the summer or the following year.
- 2b) A fast-track option, FREN 1006.06/1011.06 offers students the opportunity of completing the work of both FREN 1005.06 and FREN 1010.06 (normally a two-year programme) in one academic year and to enrol in second-year level classes the following year.
- 3a) If you studied French during part of your high school years, you may take either FREN 1005.06 (if you feel you need a complete review), or FREN 1010.06 if you remember your high school French reasonably well. Successful completion of FREN 1010.0 allows access to second-year level classes.
- 3b) Fast track option: see 2b above.
- 4) If you studied Core French throughout high school and are familiar with the basic structures of French (even if you are not in full control of them), take FREN 1045.06.
- 5) If you took French immersion during your high school years, you may be able to take second-year level classes in your first year. You may choose freely among second-year classes, all of which assume the same ability level. If, however, you believe that you need to go back over the basics of French, take FREN 1045.06.

Classes Offered

PLACEMENT TEST: please select your class with care, since placement is subject to change according to the results of a placement test to be administered during the first week of classes.

FREN 1000.06R: Français pour débutants/Beginners' French. For students with no previous background in French or whose placement test results (see above) indicate this as the most appropriate class. Introduction to the basic structures of the language combined with practical vocabulary for oral and written communication. This class aims to develop all 4 skills (listening, speaking, reading, writing) by integrating grammar study, oral and written exercises/activities, and situational contexts. Teaching methods and texts will vary from year to year and instructor to instructor. All classes are interactive and a high degree of participation is expected. Many self-study learning materials are used to complement class instruction. This class is normally followed by FREN 1010.06.

Instructor: Staff
Format: Lecture 3 hours, tutorial 2 hours, language lab 3 hours
Exclusions: FREN 1005.06, 1006.06

FREN 1005.06R: Français fondamental niveau I/Basic French level I. This is the same class as FREN 1000.06, but designed for students having studied French up through grade 8-9, or whose placement test results (see above) indicate this as the most appropriate class. For a more complete description of this class, see FREN 1000.06 above. While texts and methods may vary from section to section, all classes are interactive and a high degree of participation is expected. Many self-study learning materials are used to complement classroom instruction. FREN 1005.06 is normally followed by FREN 1010.06.

Instructor: Staff
Format: Lecture 3 hours, language lab 3 hours
Exclusions: FREN 1000.06, 1001.06, 1006.06

FREN 1010.06R: Français fondamental niveau II/Basic French level II. For students with up to Grade 10-11 French or whose placement test results (see above) indicate this as the most appropriate class. Brief review of structures and vocabulary presented in FREN 1000.06/1005.06 followed by introduction to more advanced structures (compound tenses, moods, etc.). All 4 skills are further developed, with reading and writing assignments focusing particularly on correct expression. A tutorial supplements classroom work. Successful completion of this class leads to all second-year classes.

Instructor: Staff
Format: Lecture 3 hours, tutorial 1 hour, language lab 3 hours
Exclusion: FREN 1045.06, 2000.06

FREN 1006.06A/FREN 1011.06B: Français fondamental niveaux I & II/Basic French levels I & II. These classes complete the work of FREN 1000.06/1005.06 plus FREN 1010.06 in one academic year, thus allowing students to enrol in second-year classes the following year. For a more complete description of these classes, see listings for FREN 1000.06/1005.06 and FREN 1010.06 above. Two full university credits are awarded, though neither will be counted towards a major in French. This class is not normally suitable for true beginners.

Instructor: Staff
Format: Lecture 6 hours, language lab 6 hours
Exclusion: FREN 1045.06

FREN 1045.06R: Introduction au français à l'université/Introduction to university French. This class is designed for students having studied French through Grade 12 or whose placement test results (see above) indicate this as the most appropriate class. It reviews all basic grammar and further develops all 4 skills (listening, speaking reading, writing), with a somewhat greater emphasis on reading and writing. Readings of several types of texts and writing assignments focus on correct expression. Regular listening comprehension assignments are done in the learning laboratory outside of class time. Successful completion of this class leads to all second-year classes.

Instructor: Staff
Format: Lecture 3 hours, language lab 2-3 hours
Exclusions: FREN 1010.06, 1011.06, 1020.06, 1040.06

FREN 1060.06R: Pratique de la lecture/French for Reading. Development of the ability to read contemporary French prose with ease and accuracy. Emphasis is on the acquisition of skills that facilitate reading. Students are encouraged to become familiar with the best French-English dictionaries and to use them judiciously, to learn large blocks of vocabulary by recognizing word families, and to grasp the meaning of unknown words from context wherever possible. Classroom work involves a grammar review, study and discussion of a wide variety of readings as well as correction of prepared translations and sight translations (from French to English only). FREN 1060.06 is given in English and is not, by itself, suitable for students who plan to major in French. It may, however, be taken by those with no prior training in French or as an additional first-year option for those taking FREN 1020.06 or FREN 1040.06. This course satisfies the Bachelor of Arts Language Requirement.

Instructors: W.T. Gordon and K. Waterson
Format: Lecture 3 hours

Note: All classes above this level are given entirely in French.

FREN 2021.03A or B/FREN 2022.03A or B: Études pratiques/Practice in Language Skills. Follows FREN 1020.06 or 1040.06 or 1000.06/

2000.06. It is normally taken in the second year of study and provides the opportunity to practice and improve language skills already acquired. Each year eight sections are chosen from among the options listed below. Each section focusses upon a broad cultural topic via which language skills are developed. No prior knowledge of the topic is supposed. Various readings lead to discussions and oral presentations. Descriptions for sections offered in a specific year may be obtained in April from the Department. All classes and assignments are entirely in French. A maximum of two sections may be taken under the class designation of FREN 2021.03 and 2022.03.

Topic 01: Le Journalisme: I. Oore

Topic 02: La Société française à travers la littérature: R. Bonnel

Topic 03: La Civilisation francophone de l'Afrique occidentale et des Antilles: M. Bishop

Topic 04: Etudes acadiennes I: H. Runte

Topic 05: Monuments culturels de Paris: R. Kocourek

Topic 06: Aspects visuels de la culture française: J. Brown

Topic 07: La Guerre des ondes: W.T. Gordon

Topic 08: La France et ses photographes: K. Waterson

Topic 09: Québécois et Québécoises célèbres: B. Bednarski

Topic 10: Aspects du Canada contemporain: E. Gesner

Topic 11: Ecritures féminines I: N. Trèves

Topic 12: L'Art en France depuis la Révolution: M. Bishop

Topic 13: Voyages culturels à travers la France: R. Kocourek

Topic 14: Etudes acadiennes II: H. Runte

Topic 15: Publicités télévisées: J. Brown

Topic 16: Aspects de la France contemporaine: E. Gesner

Topic 17: Pour comprendre les média: W.T. Gordon

Topic 18: Le Québec à travers les textes: I. Oore

Topic 19: Ecritures féminines II: N. Trèves

Topic 20: Le roman policier: P. De Méo

Instructor: As above

Format: Lecture 3 hours

Cross-listed: Canadian Studies, in part

***FREN 2032.03A or B: La phonologie I/Phonology I.** Using widely varied texts and recordings, this class studies the basic sounds (phonemes) of French, and the essential non-phonemic features of the language (rhythm, stress, intonation, etc.) It helps students master French phonemes, understand the role of non-phonemic features in oral communication and use the latter to develop self-expression and audio-comprehension.

Instructor: K. Waterson

Format: Varied participatory activities, short lectures, language lab

Prerequisite: FREN 1010.06, 1045.06 or instructor's consent

Exclusion: FREN 2030.03

***FREN 2033.03A or B: La phonologie II/Phonology II.** This class continues, with an increased emphasis on self-expression and communicative ability, the work of French 2032.03.

Instructor: K. Waterson

Format: Varied participatory activities, short lectures, language lab

Prerequisite: FREN 2032.03 or 2030.03 or instructor's consent

FREN 2045.06R: Grammaire intensive/Intensive grammar. A detailed study of grammar through an analysis of the components of the sentence leading to paragraph and text analysis. Emphasis is placed on the correspondence between grammatical content and meaning. Numerous exercises will aim at developing the ability to communicate in clear, accurate written French.

Instructor: Staff

Format: Lecture 3 hours

Prerequisite: FREN 1010.06, 1045.06, or equivalent

Exclusion: FREN 1040.06

***FREN 2050.03A or B: La Structure des dictionnaires français/Structure of French Dictionaries.** This class is an introduction to the use of French and French-English dictionaries. Emphasis is on linguistic problems that are essential for dictionary users in comprehending texts and expressing ideas. Introductions to two first-rate French dictionaries will be studied. A reader of cultural or literary texts will serve as a source of questions to be raised in exercises, discussions, assignments, and tests.

Instructor: staff

Format: Lecture 3 hours

FREN 2201.03A/FREN 2202.03B: Introduction à la littérature/ Introduction to French Literature. A survey of literature in French from the Middle Ages to the 20th Century, presenting selected works of prose, poetry and theatre from France, Quebec, Acadia and other francophone areas. Introduction to general notions of literary history and to the basic concepts involved in reading literary texts. Attention is paid to the development of both oral and written expression of ideas. FREN 2201.03 and FREN 2202.03 may be taken consecutively. Classes involve, principally, group discussion, and lecture.

Instructors: M. Bishop, H. Runte, N. Trèves

Format: Lecture 3 hours

***FREN 2203.03A or B: Approches du texte littéraire/ Approaches to Literary Texts.** An introduction to the critical reading of a selection of literary texts (various genres and periods) with an emphasis on Québec literature. The close analysis of short texts will lead to discussions of the broader nature of recurring images and myths as well as central themes.

Instructor: I. Oore

Format: Lecture/discussion 3 hours

Prerequisite: FREN 1020.06, 1040.06 or 2000.06

Cross-listed: Canadian Studies

FREN 3000.03A or B: Cours supérieur de français oral/ Advanced Oral French Workshop.

Class discussions and oral presentations based on themes of contemporary concern. This class may be offered on or off campus in the summer in an intensive fashion. This class is intended to build vocabulary, perfect facility of expression (fluency) and style. Reading and research are necessary for the oral presentations.

Instructor: Staff
 Format: Lecture/discussion 3 hours
 Prerequisite: 2000-level French class

FREN 3020.06R: Linguistique/Linguistics. This class will interest future linguists, literary specialists and language teachers, as well as translators and public servants concerned with bilingualism. Its main objective is to improve and refine the students' understanding of the French language and to explain the major areas of its study. Culturally interesting literary excerpts will be used to observe and to analyse linguistic problems in texts. Each student will prepare two reports on linguistic topics.

Assignments based on practical problems of pronunciation, spelling, grammar, vocabulary and meaning will complement the syllabus.

Instructor: Staff
 Format: Lecture 3 hours
 Prerequisite: 2000-level French class

***FREN 3025.03A or B: Les Parlers acadiens:**

Introduction linguistique/Linguistic Introduction to Acadian Dialectology. An examination of the phonetic, morphosyntactic and lexical systems of various Acadian speech communities, with emphasis on the Acadian dialects of Nova Scotia. Frequent comparisons will be made between these dialects and both standard French and Québécois. Recorded and written materials are used.

Instructor: B. Gesner
 Format: Lecture 3 hours
 Prerequisite: Corequisite or permission of instructor

Corequisite: FREN 3020.06
 Cross-listed: Canadian Studies

FREN 3045.06R: Stylistique I/Written expression I. Practice in style and manner of expression based on the study of texts. Various exercises - including dictations, translations, compositions - are used to develop further vocabulary acquisition, grammatical accuracy, sentence construction and variety of expression.

Instructor: M. Sandhu and staff
 Format: Lecture 3 hours
 Prerequisite: FREN 2045.06 or equivalent
 Exclusion: FREN 2040.06

FREN 3081.03A/FREN 3082.03B: Didactique du français langue seconde à l'école secondaire/Methods of Teaching French at the Secondary Level. Open only to students who have demonstrated adequate competence in French language and culture (passing a French

language proficiency exam is required). Students taking this class are normally completing a BEd. Other students interested must consult the instructor. A consideration of foundations of second language teaching moves to a discussion of methodology, techniques, materials (including visual aids), and testing. Emphasis is on developing teaching strategies which enable students to use French as a tool for authentic self-expression, orally and in writing. Directed observation of experienced teachers and practice in the development of teaching skills are integral parts of the class. Evaluation is based upon class participation (microteaching, oral reports, contributions to discussions), written projects, lesson plans, and examinations.

Instructors: P. De Méo, M. Myers
 Format: Lecture 3 hours
 Corequisite: FREN 3081.03
 Cross-listing: EDUC 4941.03/4842.03

***FREN 3085.03B: Didactique du français langue seconde à l'école élémentaire et en immersion/ Methods of Teaching French in the Elementary School and Immersion.** This class focuses on specific methods and materials appropriate for the elementary-age child in the French core programme and/or immersion. Students taking this class are normally completing a BEd.

Instructor: M. Myers
 Format: Lecture 3 hours

FREN 3100.06R: Civilisation de la France/Civilization of France. An attempt, through talks, reading, discussion and slide presentations, to understand and to suggest fruitful ways of studying, from an English-speaking Canadian point of view, what is essential in French culture and outlook.

Instructors: Staff
 Format: Lecture/discussion 3 hours
 Prerequisite: 2000-level French class

***FREN 3200.03A or B: Appréciation de la littérature/ Literary Appreciation.** An approach to the critical reading of various periods of French literature. The class offers discussion of representative works of major writers, centering either on genre, theme, or period and involving close textual analysis. It also includes some discussion of past and current theories of literature. See department for specific details in any given year.

Instructor: M. Bishop et al
 Format: Lecture/discussion 3 hours
 Prerequisite: FREN 2201.03/2202.03

***FREN 3250.03A or B: Les femmes écrivains: du temps des cathédrales à celui des Editions des femmes/French Women Writers through the centuries.** A chronological survey based on the study of literary texts by French Women Writers, this class will attempt to analyze the society of the time, the way it portrayed women and their role, and the overall condition of women. Emphasis will be given each time to a special period/authors within the context of the survey.

Students taking the class as a Women's Studies class may write their essays and exams in English.

Instructor: N. Trèves
 Format: Lecture/discussion 3 hours
 Recommended: FREN 2201.03/2202.03
 Cross-listed: WOST 3250.03

*FREN 3300.03A or B: *La littérature médiévale/Medieval French Literature*. Textual analyses of selected works representing the major literary genres (epic, romance, theatre, poetry) from the chansons de geste to François Villon (most texts in modern French translations). The discussion of the origins and the development of a national French literature provide a convenient introduction to critical approaches to literary texts.

Instructor: H. Runte
 Format: Lecture/discussion 3 hours
 Prerequisite: FREN 2201.03/2202.03

*FREN 3400.03A or B: *La littérature du seizième siècle/16th-Century French Literature*. Reliving the awakening, bloom and decline of the Renaissance period in literature and language through the works of Marot, Rabelais, Du Bellay, Ronsard, Montaigne and the poets of the baroque. The century's concern with the French language provides a convenient introduction to the study of the development of modern French.

Instructor: N. Trèves
 Format: Lecture/discussion 3 hours
 Prerequisite: FREN 2201.03/2202.03

*FREN 3500.03A or B: *La littérature du dix-septième siècle/17th-Century French Literature*. This class examines representative works by three major seventeenth-century French dramatists: Corneille, Molière and Racine. It explores their vision of humanity and the world and assesses their contribution to French literature and the history of ideas.

Instructor: K. Waterson
 Format: Lecture/discussion 3 hours
 Prerequisite: FREN 2201.03/2202.03

*FREN 3600.03A or B: *La littérature du dix-huitième siècle/18th Century French Literature*. An introduction to the literature of the 18th century which includes works by such authors as Voltaire, Rousseau, Diderot and Marivaux. Each year the readings and class discussions will be centered on a different theme (for example: the hero, women, love, wealth and power).

Instructor: R. Bonnel
 Format: Lecture/discussion 3 hours
 Prerequisite: FREN 2201.03/2202.03

*FREN 3700.03A or B: *La littérature du dix-neuvième siècle/19th Century French Literature*. An introduction to the main literary movements of the 19th century: Romanticism, Realism, Symbolism. Focus is on representative authors and/or texts belonging to one or more of these trends.

Instructor: J. Brown

Format: Lecture/discussion 3 hours
 Prerequisite: FREN 2201.03/2202.03

*FREN 3800.03A or B: *Théâtre et poésie du vingtième siècle/ French Theatre and Poetry of the 20th Century*. Poetry and Theatre, 1900-1990. Study of modern poetry from Dada and Surrealism to the work of contemporary poets such as Yves Bonnefoy, Jacques Dupin and Michel Deguy; and of modern theatre from Jarry to Beckett, Ionesco and beyond.

Instructor: M. Bishop
 Format: Lecture/discussion 3 hours
 Prerequisite: FREN 2201.03/2202.03

*FREN 3810.03A or B: *Prose et théorie littéraire du 20e siècle/ 20th Century Prose and Literary Theory*. Analysis of a broad selection of short prose by major novelists of the 20th century from Gide, Proust and Aragon but with emphasis upon the more recent work of Beckett, Sarraute, Simon, Duras, Le Clézio and Cixous. Parallel discussion will be centred upon the literary theory of critics such as Bachelard, Poulet, Starobinski, Barthes and Derrida.

Instructor: M. Bishop
 Format: Lecture/discussion 3 hours
 Prerequisite: FREN 2201.03/2202.03

FREN 3900.03A/FREN 3901.03B: *La littérature canadienne française/French-Canadian Literature*. In-depth study of a few major works of French-Canadian literature with emphasis on the period from 1945 to the present day. Each class deals with a specific genre (e.g. FREN 3900.03: Poetry, FREN 3901.03: Novel) and choice of genre may differ from year to year.

Instructors: B. Bednarak, I. Oore
 Format: Lecture/discussion 3 hours
 Prerequisite: FREN 2201.03/2202.03
 Cross-listed: Canadian Studies

*FREN 3910.03A or B: *Études acadiennes/ Acadian Studies*. Critical investigation into the historical, socio-cultural, linguistic and literary significance of past and present Acadian writing. May follow Acadian Studies (FREN 2021.03/2022.03).

Instructor: H. Runte
 Format: Lecture/discussion 3 hours
 Prerequisite: FREN 2201.03/2202.03
 Cross-listed: Canadian Studies

*FREN 4001.03A: *Histoire du français - Moyen Age/History of French - The Middle Ages*. Advanced research into selected topics in Old and Middle French - manuscript studies; paligraphy; historical phonetics, morphology and syntax; the cultural-literary context of linguistic development; etc.

Instructor: H. Runte
 Format: Seminar 3 hours
 Prerequisite: 3000-level French class

*FREN 4002.03B: *Histoire du français - époque moderne/History of French - The Modern Period*. Advanced research into selected topics - the emergence of a national language, the

problem of orthography, usage and the development of normative grammars, the evolution of vocabulary, epochal phenomena (Rhétoriciens, the Baroque, Préciosité, the Revolution, scientific French, argot), etc.

Instructor: H. Runte
 Format: Seminar 3 hours
 Prerequisite: 3000-level French class

***FREN 4010.03A or B: Grands linguistes du vingtième siècle/Great Linguists of the 20th Century.** How did French-speaking linguists of the 20th century contribute to the understanding of the language? Interpretation of passages by six linguists (such as Saussure, Bally, Tesnière, Guillaume, Gougenheim, Martinet) will show how interesting questions were asked, and how new answers and methods enriched the field of language study. Class reports, discussions, assignments.

Instructor: staff
 Format: Seminar 3 hours
 Prerequisite: 3000-level French class

***FREN 4011.03A or B: La Lexicologie/Lexicology.** How can French vocabulary be studied and structured? What is its formation (derivation, composition, metaphor, borrowing, abbreviation, etc.), its meaning, its development? Class reports, discussions and lexical assignments are important components of this class.

Instructor: staff
 Format: Seminar 3 hours
 Prerequisite: FREN 3020.06

***FREN 4012.03A or B: Aspects de la structure du français/Aspects of French Structure.** Students will help select, from the many problems of French phonology, graphonomy, grammar, lexical formation and semantics, the ten subjects to be examined in detail. Lectures and readings will be complemented by students' reports. Culturally relevant excerpts from literary masterpieces will be used for discussion and assignments.

Instructor: staff
 Format: Seminar 3 hours
 Prerequisite: FREN 3020.06

***FREN 4015.06R: Cours supérieur de version/Advanced Translation into English.** Development of awareness of the expressive resources of French by dealing with problems and techniques of translation into English. The texts of weekly translation assignments, which account for 50% of the final grade, progress from expository and descriptive prose to poetry.

Topics introduced through lectures and oral class reports include categories of translation, style, context and choice, context and meaning, ambiguity, verb systems of French and English, textual redundancy, simultaneous interpretation, and translation of metaphors. Occasionally, alternate English translations of a French text are studied for revealing contrasts.

Instructor: W.T. Gordon
 Format: Seminar 3 hours

Prerequisite: at least on full credit in French language or literature at the 2000 level or above

FREN 4045.06R: Stylistique II/Written expression II. This class develops further the skills acquired in FREN 3045.06. The study of several types of texts develops an awareness of various forms of written expression. Exercises develop the ability to perform a number of tasks: writing summaries, reports, letters, literary analysis etc.

Instructor: M. Sandhu and staff
 Format: Lecture 3 hours
 Prerequisite: FREN 3045.06 or equivalent
 Exclusion: FREN 3040.06

***FREN 4300.03A or B: Le roman courtois/Courtly Novels.** A close literary analysis of mediaeval French Arthurian romances. Texts in bilingual (Old French/French) editions.

Instructor: H. Runte
 Format: Seminar 3 hours
 Prerequisite: 3000-level French literature class

***FREN 4301.03A or B: La Poésie courtoise/Courtly Poetry.** A stylistic and socio-cultural study of French courtly love poetry from the 9th to the 15th centuries. Early texts in modern French translations.

Instructor: H. Runte
 Format: Seminar 3 hours
 Prerequisite: 3000-level French literature class

***FREN 4400.03A or B: Poésie de la renaissance: théorie et pratique/Renaissance Poetry: Theory and Practice.** A seminar-style study of poetic theories and practices from the Rhétoriciens to the Pléiade and to Malherbe.

Instructor: N. Trèves
 Format: Seminar 3 hours
 Prerequisite: 3000-level French literature class
 Recommended: FREN 3400.03

***FREN 4401.03A or B: La pensée philosophique, politique et morale de la renaissance/Philosophical, Political and Moral Thought of the Renaissance.** An in-depth study of major currents of Renaissance thought: humanism, scientific awakening, the beginning of littérature engagée, and the emergence of the moralists and philosophes.

Instructor: N. Trèves
 Format: Seminar 3 hours
 Prerequisite: 3000-level French literature class

***FREN 4500.03A or B: L'aventure intellectuelle du grand siècle/The Intellectual Adventure of 17th-Century France.** This class examines, at an advanced level, a major writer, movement, genre or theme in 17th-century French literature. As the focus may vary frequently please consult the professor for detailed information on the topic and format.

Instructor: K. Waterson
 Format: Seminar 3 hours
 Prerequisite: 3000-level French literature class

***FREN 4600.03A or B: Le siècle des lumières: forme et philosophie/The Enlightenment: Form and Philosophy.** An in-depth study of the French Enlightenment which treats some of the longer works by major authors and introduces the student to secondary authors whose works are also of significant literary, philosophical or historical value. The study is unified by an examination of recurring philosophical ideas and literary themes important to understanding the development of new genres and styles. Please consult the professor for information on the theme treated and the works to be studied in any given semester.

Instructor: R. Bonnel
Format: Seminar 3 hours
Prerequisite: 3000-level French literature class

***FREN 4700.03A: La révolution romantique/The Romantic Revolution.** Romanticism is viewed primarily as a rebellious and creative force which greatly contributed to the reshaping of traditional society. The origins, main themes and trends of the movement are studied with an attempt to show Romanticism as a European movement, the impact of which was felt in fields beyond the boundaries of literature. Classes are conducted as seminars; students are required to do a great deal of personal research, to prepare exposés and to participate in class discussions. The choice of texts depends largely on the students' previous experience: they include works by Mme de Staël, Chateaubriand, Lamartine, Hugo, Vigny, G. Sand and others.

Instructor: J. Brown
Format: Seminar 3 hours
Prerequisite: 3000-level French literature class

***FREN 4701.03B: Le roman du dix-neuvième siècle/ The Nineteenth-Century Novel.** Intensive study of the work of a major novelist of the 19th century: e.g., Stendhal, Flaubert, Balzac, Zola; a study of his place in the development of the novel and of his contribution to the genre. The class involves a considerable amount of reading, regular reports, and exposés.

Instructor: J. Brown
Format: Seminar 3 hours
Prerequisite: 3000-level French literature class

***FREN 4710.03A or B: Du symbolisme au surréalisme/ From Symbolism to Surrealism.** Analysis of the evolution of French literature from the various symbolist manners of Verlaine, Rimbaud, Mallarmé, Lautréamont and Laforgue, through the period of Jarry and Dada, to the aspirations and paradoxes of Surrealism viewed, principally, through the work of Breton, Eluard, Aragon and Desnos.

Instructor: M. Bishop
Format: Seminar 3 hours
Prerequisite: 3000-level French literature class

***FREN 4800.03A: Le théâtre moderne de Claudel à Chérid/Modern Theatre from Claudel to Chérid.** In all, eight plays are studied, four from each author. The works offer

a contrast in philosophical content and reveal technical problems involved in their stage presentation.

Instructor: M. Bishop
Format: Seminar 3 hours
Prerequisite: 3000-level French literature class

***FREN 4901.03B: Le Nouveau Roman/Anti-novels of the 20th Century.** In this class we are mainly interested in fictional techniques: how the author creates his illusion. Each of the works selected for detailed study is important due to the author's rejection of conventional ideas regarding the form of the novel.

Instructor: M. Bishop
Format: Seminar 3 hours
Prerequisite: 3000-level French literature class

***FREN 4911.03A or B: La poésie francophone de Perse et Char à Senghor et Césaire/Francophone Poetry from Perse and Char to Senghor and Césaire.** Discussion of the works of five or six major francophone poets of the modern period, chosen from: Perse, Reverdy, Claudel, Char, Frénaud, Senghor, Tchicaya, Césaire, Glissant, Miron and others.

Instructor: M. Bishop
Format: Seminar 3 hours
Prerequisite: 3000-level French literature class

FREN 4900.06A or B: Field Experience. See class description for EDUC 4999.09, in the Education section of this calendar.

***FREN 4902.03A/FREN 4903.03B: Écrivains québécois contemporains/ Contemporary Québec Writers.** In depth study of one or more contemporary Québec writers.

Instructors: B. Bednarski/I. Oore
Format: Seminar 2 hours
Prerequisite: 3000-level French literature class
Cross-listed: Canadian Studies

***FREN 4904.03A or B: Écrivaines québécoises/ Québec Women Writers.** This class will explore the condition of women as revealed in texts by Québec women writers. In any given year different writers and time periods will be covered, and a variety of genres may be included.

Instructors: B. Bednarski/I. Oore
Format: Lectures/discussion 2 hours
Recommended: FREN 2201.03/2202.03 and at least one third-year literature class, preferably French Canadian
Cross-listed: WOST 4250.03; Canadian Studies

FREN 4994.03A/FREN 4995.03B, FREN 4996.03A/FREN 4997.03B, FREN 4998.03A/FREN 4999.03B: Recherches indépendantes/ Independent Research. May only be taken with the approval of the Chair.

Instructor: Staff
Format: Independent study/seminar
Prerequisite: 3000-level French literature class

German

Introduction

German, the most widely used language in Central Europe, is spoken by approximately 100 million people as their native tongue in Austria, Germany, Switzerland and some parts of Eastern Europe. The cultural, economic, and scientific role of the German-speaking countries makes the knowledge of German indispensable to the study of most academic disciplines.

The departmental programme "German Studies" is the investigation of German culture and its place in the formation of the modern world. The programme concentrates on significant aspects of the cultural tradition of the German-speaking countries. From Luther to Nietzsche, Freud, and Marx, German writers have moved men and nations to change the course of the world. The literary and intellectual development of Germany culminated around 1800 in the epoch of Classicism. The authors of this epoch (Lessing, Herder, Hegel, Goethe, Schiller) founded their writings on a thorough knowledge of the cultural tradition of Europe, especially Greek culture. As scientists, historians, and politicians they described in their literary works, problems and questions of a universal nature. They became the first historians of literature and created the discipline of aesthetics. The universality of the authors of German classicism explains their present day relevance and makes the study of German important and attractive.

Major or honours students may, with the approval of the Department of German, take up to one year (5 full credits) of work at a University in a German-speaking country and receive credit

at Dalhousie. The Department has exchange arrangements with the universities of Heidelberg and Munich. In addition there is a "visiting scholars" programme which brings distinguished scholars from Germany to Dalhousie. Visiting scholars for 1994/95 are Professors P. Michelsen and F. Strack from the University of Heidelberg.

Degree Programmes

The following programmes are normally followed, other possibilities do exist. Students considering a degree in German are advised to consult with the undergraduate advisor of the Department.

BA with Honours in German
1000 level: German 1000.06 or 1010.06
2000 level: Seven credits at or above the 2000 level
3000 level: Two credits at the 3000 level or higher, in addition to those listed above

Combined Honours

It is possible for a student to take an honours degree combining German with another subject. Any student intending to take such a combined honours degree should consult with the two respective departments to arrange the details of such a programme.

BA with Advanced Major in German
1000 level: German 1000.06 or 1010.06
2000 level: Three credits at or above the 2000 level
3000 level: Three credits at the 3000 level or higher, in addition to those listed above

BA with Major in German
1000 level: German 1000.06 or 1010.06
2000 level: Two credits at or above the 2000 level
3000 level: Two credits at the 3000 level or higher, in addition to those listed above

Classes Offered

Note: Classes marked * are not offered every year. Please consult the timetable on registration to determine if this class is offered.

German Language Studies

Introductory Classes Offered

Please Note:

- GER 1000.06 is to be taken by students with no previous knowledge of German.
- GER 1050.06 is to be taken by students with no previous knowledge of German.
- Student who have completed high school German will normally take GER 2000.06.

All students with previous knowledge of German should see the Undergraduate Advisor.

GER 1000.06R: German for Beginners. GER 1000.06 is a seminar class for beginners only, and no previous knowledge is required. Its equivalent is two years of German in high school with a final mark of 75% or better. The class emphasizes the spoken language, and provides the student with a thorough knowledge of basic grammar. Language laboratory work and attendance of small conversation groups are required as are writing tutorials five or six times during each term. Passing this class fulfils the first year writing requirement.

Instructors: Staff
 Format:  Writing Requirement, seminar 3 hours
 Prerequisite: None

GER 1010.06R: German for Beginners. An introductory language class, using the same methods and goals as GER 1000.06. This class does not fulfil the writing requirement for beginning students.

Instructors: Staff
 Format: Seminar 3 hours
 Prerequisite: None

GER 1050.06R: German Reading Course for Beginners. Students acquire a knowledge of basic vocabulary and grammatical structures sufficient to understand newspapers and texts in the humanities and sciences. No previous knowledge of German is required. The class is taught in English. Attendance at writing tutorials is required five or six times during each term. For purposes of admission to advanced classes in German it is equivalent to GER 1000.06. This class fulfils the writing requirement for first-year students.

Instructor: H.-G. Schwarz
 Format:  Writing Requirement, seminar 3 hours
 Prerequisite: None

GER 1060.06R: German Reading Course for Beginners. An introductory reading class using the same methods and goals as GER 1050.06. This class does not fulfil the writing requirement for beginning students.

Instructor: H.-G. Schwarz
 Format: Seminar 3 hours
 Prerequisite: None

GER 1000.06R/1050.06R or GER 1010.06R/1060.06R: Intensified German. lecture 6 hours, lab 2 hours. Either of these combinations is recommended for students who desire rapid progress in the German language.

Intermediate Classes

Intermediate classes are based on GER 1000.06, 1010.06, 1050.06, 1060.06, high school German Grade 10, 11, 12 or an equivalent basic knowledge. A combination of GER 2000.06 and GER 2020.06 serves as an accelerated

Intermediate German class and is designed for students who want to make rapid progress in the language.

GER 2000.06R: Intermediate German. The main aim is to develop a certain degree of speaking fluency as well as reading and writing skills. Language Laboratory work is required. Small conversation classes once a week as an aid to speaking fluency are compulsory.

Instructors: E. Spence, J. Curran
 Format: Seminar 3 hours
 Prerequisite: Any of GER 1000.06, 1010.06, 1050.06, 1060.06

***GER 2020.06R: Exercises in Translation and Composition.** English and German texts from various periods of different types will be translated. These translations lead to the discussion of specific difficulties of grammar and construction. Students must prepare translations or compositions for each class.

Instructor: J. Curran
 Format: Seminar 2 hours
 Prerequisite: GER 1000.06, GER 1010.06 or equivalent

GER 2050.03A or B: German Reading I. This is a seminar specifically intended for students who do not fit into our normal programme offerings. Please consult departmental advisor.

GER 2051.03A or B: German Reading II. This is a seminar specifically intended for students who do not fit into our normal programme offerings. Please consult departmental advisor.

GER 2060.03A: German for Business and Economics I. This class introduces students to the specialized vocabulary used in business and economics. It also aims to familiarize the students with all aspects of the German economy and business world.

Format: Seminar 3 hours
 Prerequisite: Any of GER 1000.06, 1010.06, 1050.06, 1060.06

GER 2061.03B: German for Business and Economics II. This class introduces students to the specialized vocabulary used in business and economics. It also aims to familiarize the students with all aspects of the German economy and business world.

Format: Seminar 3 hours
 Prerequisite: Any of GER 1000.06, 1010.06, 1050.06 or 1060.06

GER 3000.06R: Advanced German. Translations, readings, essays and discussions will promote fluency in the language on the advanced level.

Instructor: J. Curran
 Format: Seminar 2 hours
 Prerequisite: GER 2000.06 or equivalent

GER 3010.03A: Advanced Translation I: German - English. German texts of various kinds are used to deal with techniques and problems of translating from German into

English. The class includes discussion of such things as translation theories, elements of style and questions of ambiguity and textual redundancy.

Instructor: E. Spence
Format: Seminar 3 hours
Prerequisite: GER 2000.06 or equivalent

GER 3011.03B: Advanced Translation II: English - German. English texts of various kinds are used to deal with the techniques and problems of translating from English into German. The class includes discussion of such things as translation theories, elements of style and questions of ambiguity and textual redundancy.

Instructor: E. Spence
Format: Seminar 3 hours
Prerequisite: GER 2000.06 or equivalent

Study of German Literature and Culture

***GER 2150.06R: Goethe's Faust.** A close reading of Goethe's *Faust*, comparing the German original and an English translation, will give rise to questions about translation techniques, the theory of drama and the reshaping of a legend. While Goethe's masterpiece stands at the centre, Marlowe's inspired play, *Doctor Faustus*, a sixteenth-century version of the legend, will also be discussed in detail. Assignments will involve research into later echoes of the Faust legend as well. The language of instruction is English; the texts are in German and English.

Instructor: J. Curran
Format: Lecture/discussion 2 hours
Prerequisite: None

GER 2200.06R: Introduction to German Literature. A study of texts representing major periods of German Literature. Special emphasis is on the interaction between literature, society and other forms of art. The class also serves as an introduction to literary criticism. The language of instruction is English; the texts are in German.

Instructor: H.-G. Schwarz
Format: Seminar 2 hours, tutorial 1 hour
Prerequisite: GER 2000.06 or equivalent or a reading knowledge of German

***GER 2300.06R: In Pursuit of Freedom from Luther to Nietzsche.** A study of major modern writers with special emphasis on Hegel's *Philosophy of Right*. This class is taught in English and uses English translations.

Instructor: D. Steffen
Format: Seminar 2 hours
Prerequisite: A general introduction to literature, culture or philosophy

***GER 2400.06R: German Art and Literature.** This class gives an introduction to modern German Art and Literature. Special emphasis is on the interaction between art and literature, particularly the themes and styles shared by visual and literary expression during the various

epochs of modernity. The language of instruction is German and English, as needed. The texts are in German.

Instructor: H.-G. Schwarz
Format: Seminar 2 hours
Prerequisite: GER 2000.06 or equivalent

***GER 2450.06R: Kant and the History of German Idealism.** A study of Kant's relation to modern Rationalism and Empiricism, and an inquiry into the principles of Idealism. This class is taught in English and uses English translations.

Instructor: D. Steffen
Format: Seminar 2 hours
Prerequisite: GER 2000.06 or GER 2200.06 or King's Foundation Year

GER 3051.03A or B: Advanced Reading I. This is a seminar at the advanced level specifically intended for students who do not fit into our normal programme offerings. Please consult departmental advisor.

Instructor: H.-G. Schwarz
Format: Seminar 2 hours
Prerequisite: Any 2000-level course

GER 3052.03A or B: Advanced Reading II. This is a seminar at the advanced level specifically intended for students who do not fit into our normal programme offerings. Please consult departmental advisor.

Instructor: H.-G. Schwarz
Format: Seminar 2 hours
Prerequisite: Any 2000-level course

***GER 3100.06R: German Literature and Thought from Reformation to Enlightenment.** A study of German literature between the 16th and 18th centuries as a direct reflection of the important religious, social and philosophical developments after the Reformation and during Absolutism.

Instructor: F. Gaede
Format: Seminar 2 hours
Prerequisite: GER 2200.06 or GER 2400.06

***GER 3150.06R: Goethe and the Enlightenment.** A study of German literature and thought of the time which preceded and witnessed the great revolutions of the 18th century.

Instructor: D. Steffen
Format: Seminar 2 hours
Prerequisite: GER 2200.06 or GER 2400.06

***GER 3200.06R: Goethe and Romanticism.** A study of Goethe, Hölderlin, Kleist, and Novalis.

Instructor: D. Steffen
Format: Seminar 2 hours
Prerequisite: GER 2200.06 or GER 2400.06

***GER 3240.06R: Literature of the 19th Century.** A discussion of essential literary texts which throw a critical light on the growing forces of materialism and positivism.

Instructor: F. Gaede
Format: Seminar 2 hours
Prerequisite: GER 2200.06 or GER 2400.06

***GER 3250.06R: Modern German Literature.** Modern authors as witnesses of the political catastrophes and social changes of our century: a study of the plays of B. Brecht and of selected prose texts of Fr. Kafka, Th. Mann and G. Grass.
Instructor: F. Gaede
Format: Seminar 2 hours
Prerequisite: GER 2200.06 or GER 2400.06

***GER 3650.06R: History and Theory of the German Novel.** Representative works from the Baroque Age to the 20th Century are studied and the principles of the genre discussed.
Instructor: S. Gaede
Format: Seminar 2 hours
Prerequisite: GER 2200.06 or GER 2400.06 and another literature class.
Exclusion: GER 3050.06

***GER 4100.06R: Aesthetic Theory.** An historical study of the development of literary theory.
Instructor: F. Gaede
Format: Seminar 2 hours
Prerequisite: GER 2200.06 or GER 2400.06 and another literature class

***GER 4200.06R: Seminar on Hegel's Phenomenology of Spirit.** The *Phenomenology of Spirit*, published in 1807, was Hegel's first major work. He intended to write an introduction to philosophy by demonstrating the necessity of the advance from the most immediate form of knowledge to absolute knowledge. To achieve this he had to write the *Phenomenology* as an introduction to his own philosophy.
Instructor: D. Steffen
Format: Seminar 2 hours
Prerequisite: GER 2200.06 or GER 2400.06

***GER 4250.06R: Studies in German Idealism.** This seminar is specifically intended for students in the advanced major and honours degree programmes. The specific content of the seminar varies from year to year, but is always related to some aspect of Idealism.

***GER 4500.03A or B: Special Topics Class I.** This is an intensive research seminar dealing with selected topics to be announced.

***GER 4501.03A or B: Special Topics Class II.** This is an intensive research seminar dealing with selected topics to be announced.

***GER 4600.06R: Special Topics Class.** This is an intensive research seminar dealing with selected topics to be announced.

Health Professions, Interdisciplinary

The following classes are offered as electives for students in the Faculty of Health Professions. For details on elective requirements refer to the calendar entry for the appropriate school or college. These classes may not be offered every year; Consult the current timetable.

HLTH 3000.03B: An Interdisciplinary Approach to Health Promotion. This course will offer an opportunity for students to interact with their peers and practitioners in the health field who are pursuing studies in similar and different disciplines for the purpose of discussing how to enhance the health of our world. The concepts and theories that frame the current understanding of Primary Health Care and Health Promotion will be used to guide the intellectual inquiry.

The course will have a one and a half hour large group lecture each week followed by a one and a half hour small group tutorial session. The tutorial groups will be facilitated by community leaders and the lectures will be offered by representatives of different disciplines and different aspects of community practice.

Format: 3 lecture hours/week
Prerequisite: Students must have completed one full year in a health discipline.
Restriction: Restricted to Health Profession students or by permission of instructor.

HLTH 3001.03 Drug Issues: An Interdisciplinary Perspective. Drug use issues of interest to health professionals will be explored. Topics covered will assist students in considering methods of identifying and preventing or diagnosing and treating drug-related problems and will include information on promoting appropriate drug use attitudes and behaviours. Students will have the opportunity to study these topics from an interdisciplinary perspective.

Format: 2 lecture hours/week, 1 tutorial hour/week
Prerequisite: Students must have completed one full year in a health discipline.
Restriction: Restricted to Health Professions students or by permission of instructor.

HLTH 4900.03A: An Interdisciplinary Approach to Gerontology (Social Perspectives). This is a multidisciplinary class in Gerontology with a focus on the presentation of historical and current research studies in the field of social gerontology, primarily from a Canadian perspective. This class represents the wide range of study which is reflected in most of the sciences and humanities.

Format: 3 lecture hours/week
Prerequisite: SOSA 1000.06R, SOSA 1050.06R; SOSA 1100.06R; or SOSA 1200.06R
Cross-listing: SOSA 2060

HLTH 4910.03B: An Interdisciplinary Approach to Gerontology (Health Perspectives). This multidisciplinary class in Gerontology focuses on the presentation of health issues and relevant research studies in the field of aging. Various health professionals working with this age group participate to emphasize the interdisciplinary nature of gerontology, the importance of teamwork effectiveness and to help the learners develop an awareness of the need for the development of a comprehensive and appropriate health care system that meets the needs of older persons.

Format: 3 lecture hours/week
Prerequisite: Students must have completed one full year in a health discipline.
Restriction: Restricted to Health Professions students who have completed one full year in a health discipline.

Introduction

The School of Health Services Administration offers a certificate in Health Services Administration (CHSA) programme which prepares students for a career in health care at the managerial level. It also meets the needs of those currently employed in the health care sector in a managerial capacity, particularly, middle managers in medium and large institutions, administrators in small facilities, and employees in public health, long-term care, primary care, and multi-service centres.

The programme seeks to provide a conceptual background for the increasingly complex managerial tasks that need to be performed in health institutions and health-related governmental departments. An effort is made to balance political, social, cultural, medical, and psychological approaches to understanding the health care delivery system with those of the management sciences.

All students must observe the University and Academic Regulations described in the calendar.

Part-time Study

Students may complete the CHSA programme through part-time study.

Application Procedure

Applicants must meet the Dalhousie University undergraduate admission requirements to warrant consideration into this programme.

Application forms are available from the Office of the Registrar, Dalhousie University. Applications should be submitted as early as possible, and not later than June 1 in the academic year in which studies are to commence.

Further information on the Certificate in Health Services Administration programme may be obtained from: School Administrator, School of Health Services Administration, Dalhousie University, 1234 Seymour Street, Halifax, Nova Scotia, B3H 3M3, (902) 494-7097.

Curriculum

The one-year programme features both an academic and results-oriented curriculum. Students accepted into the CHSA programme take the following half-credit classes:

- HEAS 2000.03A: Canadian Health Care Delivery System
- HEAS 2200.03B: Epidemiology and Health Planning
- HEAS 2300.03B: Health Law and Quality Assurance
- HEAS 2400.03B: Health Care Economics
- HEAS 4001.03A: Management Process in Health Services
- COMM 2301.03A or B or R: Organizational Behaviour
- COMM 110L.03A or B or R: Financial Accounting
- ECON 1101.03A or B: Principles of Microeconomics
- one credit elective as approved by the School

Classes Offered

HEAS 2000.03A: Canadian Health Care Delivery System. The course is designed to provide an overview of the health care industry in Canada, and more specifically in Nova Scotia. Aimed specifically at supervisors, middle management, and administrators, the existing trends in health care from a provincial perspective will be reviewed. The goal of this course is to provide the student with a snapshot view of the existing health care system, its past development, and future direction.

Instructor: A. McGuire

Format: Lecture and Seminar 2 hours

Prerequisite: None

HEAS 4001.03A: (Section 02) Management Process in Health Services. This course is aimed at providing a general overview of the structure, process, and environment of health care organizations for supervisors and middle managers. The goal of this course is to facilitate the development of students' administrative insights, problem solving skills, and managerial judgement. Further to this objective, this course seeks to inform students about some of the roles, functions, and values of key actors in contemporary health service organizations.

Instructor: B. Oke-kennedy
Format: Lecture and Seminar 2 hours
Prerequisite: None

HEAS 2200.03B: Epidemiology and Health Planning. The first half of this course is a general, introductory course in the principles of epidemiology. In this course discussion will concentrate on occurrence of disease and injuries in human populations, examine methods of determining the causes of illness and death, and analyze conclusions which have been gained through the application of epidemiological studies. The second half of the course will use lectures, readings and case discussions to explore national, provincial, regional and institutional health planning initiatives. How these initiatives influence planning and service delivery at the program level will also be examined.

Instructor: W.S. Keizer, M. Davies
Format: Lecture and Seminar 2 hours
Prerequisite: HEAS 2000.03

HEAS 2300.03B: Health Law and Quality Assurance. The object of the first half of this course is to give students an overview of law as it relates to health care management. It is designed to make students aware of actual or potential legal problems that they may face at the managerial level. The second half of the course will provide an introduction to the concept of quality management in health care. Course content will include the traditional models of quality assurance, risk management and utilization management as they are currently practised in Canadian health care facilities. The concept of Total Quality Management will be introduced to demonstrate how it compares/contrasts with the traditional models.

Instructors: W. Cochrane, P. O'Brien
Format: Lecture and Seminar 2 hours
Prerequisite: HEAS 2000.03

HEAS 2400.03B: Health Care Economics. This course is designed to introduce students to an economics perspective of the health care system, and, to encourage them to use economic analysis when evaluating health care issues. This course builds upon the introductory microeconomics course, therefore, but its primary objective is to specifically examine resource allocation decisions in health care markets.

Instructor: E. Langille
Format: Lecture and Seminar 2 hours
Prerequisite: BCON 1101.03, HEAS 2000.03

Introduction

A sense of history is a primitive need felt by individuals and by groups. Just as people need to know who they are and how they arrived where they are, groups, races, classes, states and nations need a sense of their own past as part of their culture.

The academic study of history, therefore, is concerned to discover as much as possible of the reality of the past and to interpret human behaviour in its changes through time. It is a unique subject, scientific in the way it uses evidence, but still an art because the

reconstruction of the past requires a disciplined imagination and an effective rhetoric for the communication of meaning.

The contemporary world is one of intensive specialization, in which the varieties of human knowledge have increased well beyond the capacity of any individual to command them all. These developments have reinforced the role of history as the foundation of a person's education, because history can never draw frontiers around itself to exclude any branch of human knowledge, although individual historians will want to select that portion of it especially relevant for them. History's field of study will always be the entirety of the human experience.

The subject of history does not have a monolithic body of knowledge. Historical understanding is a matter of interpretation, of offering explanations for events and movements which are subject to constant revision by scholars. Arguments, scepticism and controversy are thus the very stuff of history. The history student does not merely acquire a particular mass of information, but learns to think independently.

Degree Programmes

A degree in history provides an appropriate background for students planning to enter professional careers in fields such as law, education and journalism, as well as those interested in pursuing graduate study in history or related social science and humanities disciplines.

Classes in the History Department are grouped numerically in several geographical, chronological, subject and other areas: for example, Canadian, American, British, African, Medieval and Early Modern European, Modern European, Women, Science and Technology, etc. Students are strongly encouraged to select a distribution of classes from different areas in order to experience the variety and richness of history.

Students who wish to build up a greater specialization in history than the minimum requirements outlined below may do so by taking classes of an historical nature given by the Departments of Classics, Economics, Music, Philosophy, Political Science, Spanish, Theatre, etc.

Students who wish to concentrate in a particular area of history should consider acquiring the appropriate language skills, especially if they intend to pursue graduate study in it.

General and Honours BA

There are no prerequisites for entry into the programme at the 1000- and 2000-levels; however, some 2000-level classes may exclude

first-year freshman students. A first year history course is recommended for prospective majors or honours students but is not mandatory.

Students who wish to major in history in the three-year (15 credits) programme are urged to choose one or two 1000- or 2000-level history classes in their first year. They must take a minimum of four and preferably five, but no more than eight additional credits above the 1000-level, of which at least two must be beyond the 2000-level.

Students who wish to pursue the Advanced Major (four years, 20 credits) programme must complete all the requirements for the three-year degree. In addition, they must take a minimum of two credits (one at the 3000-level and preferably HIST 4500.03 or HIST 4985.03, when offered), for a total of at least six but not more than nine credits in history, above the 1000-level.

Students who wish to pursue an Honours Degree in history must also complete all the requirements for the three-year degree. In addition, they must take two required classes (HIST 4990.06 and, when offered, HIST 4985.03) and a further number of classes, preferably at the 3000- and 4000-levels, for a total of at least nine but not more than eleven credits above the 1000-level in history. It is also possible to complete a combined Honours Degree in history and another subject, in which case the student should consult the Undergraduate or Honours Coordinators in both Departments.

The following outline presents the minimum departmental requirements for each programme and should be read in conjunction with the general requirements of the Faculty. Students who intend to major or honour in history might wish to consult the department's undergraduate coordinator to have their plan of study approved, preferably before entering the second year.

Honours in History (4 year)

Please note that applications for Honours in History are not considered by the Department until the winter term of the student's third year. Please enquire at the Department for the relevant deadline.

Departmental requirements:

Classes required in Honours:

2000 level:	Seven credits at or above the 2000 level
3000 level:	Two credits at 3000 level or higher
4000 level:	HIST 4990.06, HIST 4985.03 (if offered)

Advanced Major in History (4 year)

Departmental requirements:

2000 level:	Two to three credits at or above the 2000 level
--------------------	---

3000 level:	Three credits at or above the 3000 level
--------------------	--

In their fourth year of study Advanced Major students are required to take two credits in history, one of them at the 3000- or 4000- level.

Major in History (3 year)

Departmental Requirements

Classes required in Major:

2000 level:	Two to three credits at or above the 2000 level
3000 level :	Two credits at or above the 3000 level

Types of Classes

There are several different types of classes offered by the History Department. At the 1000- and 2000-level, classes are lecture format, three hours per week, with tutorials featured in some classes. 1000-level classes are intended for students taking a History class as an isolated elective. 2000-level classes begin more specialized study of an area of History as a major or minor.

3000- and 4000-level classes provide opportunities to follow up on interests developed in previous classes. There are two types of classes at the 3000- and 4000-levels: 'lecture/discussion' and 'seminar'. 'Lecture/discussion' classes combine lectures at an advanced level with class discussion. These classes are usually limited to 35 in enrolment. 'Seminar' classes are smaller in size, usually limited to 15, and involve individual presentations by students in class. These classes are particularly recommended for Honours students and prospective Honours students.

Classes Offered

NOTE: Not every class is offered every year. Please consult the current timetable on registration to determine if these classes are offered.

HIST 1001.03A: Medieval Europe. An introduction to the thousand years between the Barbarian invasions of the fourth, fifth and sixth centuries and the beginnings of modern Europe. Original sources in translation are used to illustrate the medieval world view. Students are acquainted briefly with a wide range of topics, political, cultural and social. Particular attention is paid to developing a basic appreciation of the richness of an age often characterised as "dark" and unknowable.

Instructor:	C.J. Neville
Format:	Lectures/tutorials 3 hours
Exclusion:	Former HIST 1000.06 students

HIST 1002.03A or B: Renaissance to Revolution, 1500-1789. This course is designed to serve as an introduction to the major themes and events in European history. Students will become

acquainted with the importance of regional geography, and with the basic concepts and processes in social, religious, economic, political and cultural history.

Instructor: G. Hanlon
Format: Lectures 3 hours
Exclusion: Former HIST 1000.06 students

HIST 1003.03A or B: Modern Europe: From 1789 through the 1950's. An introductory survey of the history of Europe from 1789 to approximately 1956. Emphasis will be upon the major political and intellectual developments in France, Germany and Russia, but other national areas as well as social and economic issues will also receive some attention.

Instructors: N.G.O. Pereira
Format: Lectures 3 hours
Exclusion: Former HIST 1000.06 students

HIST 1050.06R: The Modern World. Open the morning newspaper or tune in the evening news. Crises, conflicts and controversies parade before us in a seemingly random and inexplicable fashion. Where did the problems that confront us today originate? Can an understanding of the past provide guidelines for dealing with the complex issues of the present? Historians cannot foretell the future, but they can provide perspectives that relate the events of our own time to broader trends of political, economic and social development in the modern world. This class seeks to introduce students to history as an on-going process, linking the present to the past.

Instructor: G.D. Taylor
Format: Lectures 3 hours

HIST 1100.06R: The British Isles from Prehistory to 1688. The British heritage is one very important element in our history. This class is intended as an introduction to British history, with focus not simply on Britain as a nation, but on the growth of a distinctive British culture and civilization over 2000 years. England, Scotland, Wales, and Ireland will each be examined, separately and in relationship, as will connections between the British Isles and foreign or colonial territories in Europe and ultimately in North America. The first term will trace British history from the Druidic era through the successive invasions of Romans, Anglo-Saxons and Danes, the Norman Conquest and the reintegration of the island into Europe, and the formation of national languages and cultures in the late Middle Ages. In the second term the focus will be on social, economic, and cultural developments of the period from 1399 to 1688, including colonial expansion, religious reform and dissent, and the growth of representative institutions. Instruction will be by lecture, supplemented by audio-visual presentation, and class discussion where possible.

Instructors: D.R. Woolf/C.J. Neville
Format: Lectures 3 hours

HIST 1200.06R: Canada: An Introductory Survey. An overview of the Canadian experience, from initial contact between natives

and newcomers, to contemporary debate over such issues as immigration policy and evolving federalism. Emphasis is placed on the themes of change and conflict in terms of the economy, society and politics.

Instructors: D. Sutherland/S. Tillotson
Format: Lectures/Tutorials 3 hours
Cross-listed: Canadian Studies

HIST 1300.06R: History of the United States. This class surveys the broad contours of the American experience from the Jamestown settlement to the Reagan revolution. It examines the historical development in the United States of republican government, democratic society, and the constitutional conflicts decided by the Civil War. In addition to such political concerns, the class pays particular attention to the economic development of the United States, her unusual racial and ethnic patterns, and her propensity for generating and absorbing reform movements. Students attracted to third and fourth year classes in the history of the United States should consider History 1300 early in their university career.

Instructors: J.T. O'Brien/J. VanderMeulen
Format: Lectures 3 hours

HIST 1400.06R: Europe and the Third World. Passing this class fulfils the first year writing requirement; this class is therefore an introduction to university level work and provides training in study habits, analysis of problems and essay writing by examining six "units of study" in turn. Each unit is concerned with a major phenomenon in the history of European expansion overseas and its impact on non-European peoples, ranging from 16th century America to twentieth century nationalism and decolonization. For each unit there are lectures and tutorials and students write six essays, one per month in each unit.

Instructors: Staff
Format: Writing Requirement, lectures /tutorial 3 hours

HIST 2001.03A or B: Early Medieval Europe. An investigation of the period between the fourth and the twelfth centuries. Major themes of lectures and tutorials include the mingling and exchange of Roman traditions with the Barbarian cultures in the fifth and sixth centuries, the creation of the feudal states of Europe following the disintegration of the Carolingian Empire, the development of monasticism, church-state relations, the Gregorian Reform and the Investiture Contest, the rise of papal government, the twelfth-century Renaissance, peasant life and popular culture. Original sources in translation are used to familiarize students with the medieval world view.

Instructor: C.J. Neville
Format: Lectures/tutorials 3 hours
Recommended: HIST 1001.03

HIST 2002.03A or B: Later Medieval Europe. A study of the period beginning with the

pontificate of the greatest of the medieval popes, Innocent III, and ending with the emergence of the early modern European states. After a preliminary introduction to the nature of medieval society at the end of the twelfth century attention is turned to a variety of themes, political, social, cultural, economic and religious. These include the Crusades, church-state relations, heresy, peasant life and peasant rebellions, political thought, varieties of medieval law, architecture and literature, and the concept of decline, or the "autumn" of the Middle Ages. Students make use of original sources in translation.

Instructor: C.J. Neville
Format: Lectures/tutorials 3 hours
Recommended: HIST 1001.03 and/or HIST 2001.03

HIST 2006.03A or B: After Columbus: The Old World and the New, 1450-1650. The commercial and colonial expansion of Europe into the Americas. Topics of particular interest are the relations of Europeans and indigenous peoples, the ecological consequences of colonization, the use of unfree labour, the role of technology, the establishment of settler colonies, the effect of overseas communication on European culture, and the role of colonial expansion in the development of the world economy.

Instructor: J.E. Crowley
Format: Lectures/discussion 3 hours
Recommended: HIST 1002.03
Exclusions: Former HIST 2010.03 and first-year students

HIST 2007.03A or B: The Atlantic World: European Empires in the Americas, 1650-1800. The development of the European colonial societies after their initial settlement and the establishment of their staple economies in the sixteenth and seventeenth centuries. The topics of chief interest are the predominance of colonial trade in Europe's large-scale commerce, the role of the colonies in European conflicts, the renewal of exploration, the development of the colonies' internal economies, and their revolts against European rule.

Instructor: J.E. Crowley
Format: Lectures/discussion 3 hours
Recommended: HIST 1002.03, HIST 2006.03
Exclusions: Former HIST 2013.03 and first-year students

HIST 2014.06R: State and Society in Early Modern Europe, 1550-1750. This course deepens some of the topics treated in HIST 1002.03 and examines the development of the modern state in the context of the pre-industrial societies. The states to be studied are the Spanish Empire, the Dutch republic, the Ottoman Empire in Turkey and the Balkans, the French monarchy, the Austrian Empire, and a few smaller states such as Tuscany, Prussia, Sweden, and Poland.

Instructor: staff
Format: Lectures/tutorial, 3 hours

Prerequisite: None, HIST 1001.03 or HIST 1002.03 recommended

Exclusion: Former HIST 2008.03 students

HIST 2015.03A or B: War and Society in Early Modern Europe 1550-1750. The class deals with the presence of war in European societies, and how states and societies adapted and transformed under the impetus of the desire to achieve victory against an adversary. Among specific topics the class will deal with the transformation of tactics and technology on land and sea; the creation of modern tax systems; problems of supply and recruitment; ideologies of the military function; the creation of standing armies; the impact of hostilities on society.

Format: Lecture 2 hours, tutorial 1 hour
Instructor: G. Hanlon
Prerequisite: Hist 1002.03 or some equivalent Early Modern Europe

HIST 2020.06R: Imperial and Soviet Russia. A survey of Russian history from the time of Peter the Great to the present. Emphasis is on themes of continuity in the process of modernization, as well as upon elements of discontinuity such as the Great Reforms of Alexander II, the Revolutions of 1917, the collectivization of the peasantry under Stalin, etc.

Instructor: N.G.O. Pereira
Format: Lectures/tutorials 3 hours
Recommended: HIST 1001.03 or HIST 1002.03 or HIST 1050.06 or HIST 1400.06

Exclusion: First-year students (except with permission of instructor)

Cross-listing: RUSS 2021.06

HIST 2021.03A or B: Soviet Russia. Survey of Soviet Russia from 1917 to the present. Topics discussed will include the Revolution of 1917, the Civil War and War Communism, NEP, Collectivization, the Great Purges, WWII, and the Post-Stalin era.

Instructor: N.G.O. Pereira
Format: Lectures/tutorial, 3 hrs
Prerequisite: None
Exclusion: HIST 2020.06

HIST 2030.06R: Germany in the Nineteenth and Twentieth Centuries. Selected topics in the history of Germany during the past two centuries, including the growth of nationalism and liberalism, the role of Prussia, industrialization, Bismarck and the political parties, civil-military relations, the rise, rule and destruction of Nazism, and the post-war development of the Federal and German Democratic Republics up to national reunification in 1990.

Instructor: L.D. Stokes
Format: Lectures/tutorial 3 hours
Recommended: HIST 1001.03, or HIST 1002.03, or HIST 1003.03

Exclusion: First-year students

HIST 2040.06R: Modern France, 1700-1992. The class covers the last two centuries of political, social, economic and cultural history in Europe's

pre-eminent nation. More specifically we examine the transition from a traditional rural society with a precocious state, through the French Revolution and its political and social repercussions. Throughout the 19th and 20th centuries France, perhaps more than any other single nation, mirrors developments in all aspects of the contemporary Western world.

Instructor: G. Hanlon
Format: Lectures/tutorial 3 hours
Prerequisite: none
Recommended: HIST 1001.03, or HIST 1002.03, or HIST 1003.03

HIST 2060.06R: Italy after the Renaissance. Why does the Western world's most advanced economy and culture enter into prolonged decline after 1620? Here we deal with the theme of "decadence" from which Italy has emerged only in the last half of the 20th century. The class explores how advantages became handicaps, how governments tried to stem a decline of which they were acutely aware, of how society reacted to crisis, and the roles of ideology in fashioning responses. The class will also focus on those aspects in which there was no decline.

Instructor: G. Hanlon
Format: Lectures 3 hours
Prerequisite: none
Recommended: HIST 1001.03 or HIST 1002.03
Exclusion: HIST 2061.03

HIST 2061.03A or B: Civilization of Baroque Italy 1550-1700. The class will deal with Italy at the period of its greatest influence on Western Civilization, in its various aspects. The class will survey the political, social, economic, and cultural history of the peninsula and how it fits into the European context.

Instructor: G. Hanlon
Format: Lecture/Tutorial
Prerequisite: none
Co-requisite: HIST 1002.03
Exclusion: HIST 2060.06

HIST 2062.03A or B: Italy from the Risorgimento to Fascism, 1848-1945. Selected topics in the history of nineteenth and twentieth century Italy, including the role of Piedmont in the creation of the national state, regionalism and modernization, the political weaknesses of liberal Italy, and the origins, rule and fall of the Fascist regime.

Instructor: L.D. Stokes
Format: Lectures/tutorial 3 hours
Recommended: HIST 1001.03, or HIST 1002.03, or HIST 1003.03
Exclusion: First-year students

HIST 2061.06R: Twentieth Century Europe in Literature, Art and Film. A survey of contemporary European history that employs representative works of literature, art, architecture and film as well as traditional published records and monographic accounts to introduce students to major events of the twentieth century: the two world wars, the

Russian Revolution, the political systems of Italian Fascism, German Nazism and Soviet Communism, the Holocaust and others.

Instructor: L.D. Stokes
Format: Lectures/tutorial 3 hours (audio-visual facilities as needed)
Recommended: HIST 1001.03, or HIST 1002.03, or HIST 1003.03
Exclusion: First-year students

HIST 2101.03A or B: Medieval England. This class examines some of the major social, political, economic and cultural themes in English history from the reign of Alfred the Great to the Wars of the Roses. Major topics of study include the development and maturation of the English church, the impact of the Norman Conquest on Anglo-Saxon government and society, the development of the common law system, English monasticism, constitutional struggles in the later medieval period, war with France and Scotland. In an effort to understand and appreciate more fully the culture of medieval England detailed consideration is given to contemporary sources, in translation.

Instructor: C.J. Neville
Format: Lectures/tutorials 3 hours
Recommended: HIST 1001.03, or HIST 2001.03, or HIST 2002.03

HIST 2104.03A or B: England under the Tudors, 1485-1603. An introduction to the major events, personalities and developments in the political, social and economic history of sixteenth-century England. Issues to be studied include: the formation of a national state; the beginnings of inflation; the Reformation and dissolution of the monasteries; the mid-Tudor "crisis"; and the achievements of the Elizabethan age.

Instructor: D.R. Woolf
Format: Lectures/tutorials 3 hours
Recommended: HIST 1001.03, or HIST 1002.03
Exclusions: HIST 2102.03, HIST 2103.06, and first-year students

HIST 2105.03A or B: England under the Stuarts, 1603-1688. This sequel to HIST 2104.03 studies the principal events of seventeenth-century English history, with reference to developments in Scotland and Ireland. Among the topics to be discussed: the character of Stuart kingship; the crisis of the aristocracy; the fear of catholicism at home and abroad; the causes and course of the civil war 1642-49; the importance of Parliament; the Cromwellian Regime; the Restoration; and the Revolution of 1688.

Instructor: D.R. Woolf
Format: Lectures/tutorials 3 hours
Recommended: HIST 1001.03, or HIST 1002.03
Exclusions: HIST 2102.03, HIST 2103.06, and first-year students

HIST 2111.03A or B: Modern Britain to 1884. A survey of the development of British society from the reign of George III to the late Victorian era. This class will examine the emergence of

class society, movements of popular protests, political reform, the growth of empire, and cultural change.

Instructor: S. Brooke
Format: Lectures/tutorials 3 hours

HIST 2112.03A or B: Modern Britain from 1884 to the Present. This class will examine the development of British society from 1884 to the present day, touching upon the experience of Britain in two world wars, the growth of the welfare state, the decline of Britain's empire and economy, the upheavals of the 1960's and 1970's and the emergence of Thatcher.

Instructor: S. Brooke
Format: Lectures/tutorials 3 hours
Recommended: HIST 2111.03

HIST 2151.03A or B: Scotland from the Late Middle Ages to Culloden. A survey of major themes in Scottish history from the fifteenth century to the Jacobean era. After a general introduction to Scotland's geographical and cultural inheritance, students will proceed to a review of such topics as crown-magnate relations in the late Middle Ages, religious life in pre-Reformation Scotland, the coming of the Reformation, the evolution of the Reformed Kirk, Highlanders vs. Lowlanders, the problem of the Borders, the unions of 1603 and 1707, education and poor law in early modern Scotland, the Scottish Revolution, and the Jacobite rebellions. Tutorial discussions will be based on prepared readings. Throughout the class emphasis will be placed on recent re-interpretations of traditionally held views with respect to these so-called "dark ages" in Scottish history.

Instructor: C.J. Neville
Format: Lectures/tutorials 3 hours

HIST 2152.03A or B: Scotland since 1745. A survey of major themes in the history of "North Britain" from the last Jacobite rebellion of 1745 to the present. Topics to be dealt with include the Scottish Enlightenment, the Age of Improvement, radicalism and repression, the Clearances and emigration to North America, agitation for parliamentary reform, Scottish Chartism, Walter Scott and Scottish Romanticism, Scottish cities in the Victorian era, Scottish socialism, Scotland in the Depression, the Second World War, the ascendancy of Labour, Scottish nationalism, North Sea oil, and the legacy of underdevelopment.

Instructor: D.A. Sutherland
Format: Lectures/tutorials, 3 hours

HIST 2202.03A or B: Canada's Industrial Revolutions, 1850-1950. A study of Canada's transition from a pre-industrial society to a leading industrial nation. Principal themes for discussion include urbanization, the rise of the factory and mass production, the impact on home and family, the revolution in transportation and communications, weapons development, and patterns of consumption. Special attention is given to the role of technology.

Instructor: staff
Format: Lectures/tutorials 3 hours
Recommended: HIST 1200.06 or equivalent introductory class in Canadian history

Cross-listed: Canadian Studies

HIST 2211.03A or B: Social History of Canada before 1870. This class examines the social history of pre-Confederation Canada through such topics as social control, violence and protest, women and domestic life, regionalism and marginal peoples, and the transformation of the economy.

Instructor: C. Danyak
Format: Lecture/tutorial 2 hours (evening)

Exclusion: Former HIST 2210.06 students
Cross-listed: Canadian Studies

HIST 2212.03A or B: Social History of Canada Since 1870. This class examines the social history of Canada since Confederation through such topics as the impact of industrialization, social classes, conflict, the role of women, the state and social development, and relationships among the wide variety of social groups in Canada.

Instructor: C. Danyak
Format: Lecture/tutorial 2 hours (evening)

Exclusion: Former HIST 2210.06 students
Cross-listed: Canadian Studies

HIST 2221.03A or B: Rough Justice: Order, Disorder and Canadian Popular Culture to the 1890s. This class investigates the character of popular culture, the diversions, recreations and forms of community control engaged in by Canadians, and the attempts by authorities and the law to bring order to the culture. Topics range widely over the broad scope of popular culture, from sports, drinking and prostitution to religious organization. Study of the mechanisms and institutions for imposing order includes the criminal law, industrial discipline, and more respectable forms of cultural activity.

Instructors: R. Bleasdale/M. Cross
Format: Lectures/tutorials 3 hours
Exclusions: Former HIST 3241.03, HIST 3242.03, HIST 3280.03, HIST 3281.03 students

Cross-listed: Canadian Studies

HIST 2222.03B: Rough Justice: Order, Disorder and Canadian Popular Culture, 1890s to the Present. This class continues the study of Canadian popular culture described in HIST 2221.03, from the turn of the century to the present.

Instructors: R. Bleasdale/M. Cross
Format: Lectures/tutorials 3 hours
Exclusions: Former HIST 3241.03, HIST 3242.03, HIST 3280.03, HIST 3281.03

Cross-listed: Canadian Studies

HIST 2230.06R: Canada in the Twentieth Century. A survey of the roots of contemporary Canada, which studies the origins of our current issues and problems by focusing on Canadian political developments, as well as on economic and social structures, in particular, against the backdrop of socio-economic change. French-English relations, federal-provincial relations, and regional disparities are key to this presentation of the development of contemporary Canada.

Instructors: R. Bleasdale/C. Danysk
Format: Lectures/tutorials 3 hours
Recommended: HIST 1200.06 or an equivalent introductory class in Canadian history

Cross-listed: Canadian Studies

HIST 2260.03A or B: True Believers 1800-1914: The Left and Right in Canadian Politics. The class will study the ideas and practices of Canadian political movements of the Left and the Right. We will attempt to understand why such movements have risen and declined, and what significance they have had for Canadian politics and society. Topics will include: the Tory ruling groups of the early 19th century and their Reform opponents; the Rebellions of 1837-8; religious and ethnic extremism; labour and farmer movements; Imperialism.

Instructor: M. Cross
Format: lectures/tutorials 3 hours

HIST 2261.03A or B: True Believers 1914 to Present: The Left and the Right in Canadian Politics. The class will study the ideas and practices of Canadian political movements of the Left and the Right. We will attempt to understand why such movements have arisen and declined, and what significance they have had for Canadian politics and society. Topics will include: the Progressive movement; the CCF and NDP; Communism and Fascism; Social Credit; the radical right and the New Left; the Reform Party.

Instructor: M. Cross
Format: Lectures/tutorials 3 hours

HIST 2270.06R: The Atlantic Provinces. Survey of Maritime and Newfoundland history from the beginnings of European penetration to the "triumph of Canadianization." Attention is given to the interaction of environment and culture which has given rise to a durable but nevertheless vulnerable regional character. The class seeks to define internal patterns of social change and social conflict while simultaneously placing regional development within a broader national and international context.

Instructor: D. Sutherland
Recommended: HIST 1200.06 or an equivalent introductory class in Canadian history

Cross-listed: Canadian Studies

HIST 2331.03A or B: Colonial North America, 1600-1760. A comparison of French and British colonies in North America before the American

Revolution, the class studies the interaction of indigenous peoples and Europeans, the establishment of settler societies, the development of domestic and state economics, and the conflicts of imperial interests.

Instructor: J. Crowley
Format: Lectures 3 hours
Recommended: HIST 1300.06 or HIST 1200.06

HIST 2332.03A or B: Nineteenth Century America. In 1800 slightly more than 5 million persons lived in the United States, farmed for a living, and owned land, but by 1900 a majority of the country's 76 million inhabitants neither owned nor farmed their own lands. Clearly much changed in nineteenth century America: the nation's western boundary shifted from the Mississippi to the Pacific; cities and factories altered her landscape; her slave system, the world's largest, was destroyed in the first great industrial war of our time; and by 1900 she was the most powerful industrial producer on the globe. The nature and consequences of these and other major developments are the subjects considered in this class.

Instructor: J.T. O'Brien
Format: Lectures/tutorials 3 hours
Recommended: HIST 1300.06
Exclusion: Former HIST 2330.06 and first year students.

HIST 2333.03A or B: Twentieth Century America. This class traces the political and economic history of the United States from the turn of the century to the Reagan era. Particular emphasis is placed on broad trends of change in those years: the growth of large private and public bureaucracies and their impact on traditional values; the continuing influence of racial and ethnic divisions on American politics; the role of the media on political organizations and practices; and the growing interconnections of foreign policy, military commitments and economic resources in the years since the Second World War.

Instructor: J. Vander Meulen
Format: Lectures 3 hours
Recommended: HIST 1300.06 or a similar survey class in U.S. history
Exclusion: Former HIST 2330.06 students

HIST 2335.03A or B: Modern American Culture. American mass culture has become familiar to billions throughout the world in this century. One would be hard pressed to discover in Germany, Japan, Brazil or Canada, college students unfamiliar with Elvis, Hollywood, adolescence, IQ, McDonald's, the Blues, Superbowl, or the Pill. In this class the concern is with the historical development of these cultural phenomena rather than with their export to the rest of the world. Lectures and readings focus on such matters as changing moral standards for young Americans, fashion and gender roles, food and film. Recordings and movies supplement the lectures.

Instructor: J.T. O'Brien

Format: Lectures/tutorials 3 hours
Recommended: HIST1300.06
Exclusion: First-year students

HIST 2370.03A or B: Age of Imperialism 1870-1970. Deals with the last hundred years of the activities of the imperial powers, their impact on the world, their rivalries among themselves and the resistance they provoked on every continent. Different forms of conquest are discussed and illustrated, the shifting power balance among the imperial powers is traced, and the growth of national resistance movements and their ideologies investigated. The class gives particular emphasis to the United States as the most important imperial power of the period, to its role in Latin America and to the ideologies which inform resistance movements.

Instructor: staff
Format: Lectures/discussion 3 hours

HIST 2381.03A or B: Latin America: Underdevelopment and Revolution. Outlines key developments in Latin America from the independence wars to the present - the growth of nationalism, the impact of British and American capital and the development of the anti-imperialist struggle - in relation to Argentina, Brazil, Chile, Peru, Central America and Cuba.

Instructor: staff
Format: Lectures/discussion 3 hours
Exclusion: Former HIST 2380.03, and HIST 2382.03 students

HIST 2382.03A or B: Central America to 1979. See class description for SPAN 2069.03 in the Spanish section of this calendar.

HIST 2383.03A or B: Area Studies on Mexico and Central America: See class description for SPAN 2070.03 in the Spanish section of this calendar.

HIST 2410.03A or B: Tropical Africa Before 1800. A study of some of the major themes of African pre-colonial history through an examination of the interim politics and development of African states and societies in tropical Africa. It will focus on the impact of immigration, slavery and Islamic penetration on African society.

Instructor: P. Zachernuk
Format: Lecture/tutorial 3 hours
Recommended: HIST 1400.06

HIST 2421.03A or B: Colonial Africa. Examines the history of Africa from the period of European colonial rule (1884) to the emergence of independent African states in the 1960s. The class will analyze the material basis of colonial society; culture, class and social change during the colonial period; issues around changing gender roles; and the nationalist struggle and decolonization.

Instructor: J.L. Parpart
Format: Lectures/tutorials 3 hours
Recommended: HIST 1400.06

HIST 2422.03A or B: Independent Africa. A study of Africa from the early 1960s to the present. The class will examine neo-colonial myths and realities, class, party and state in Africa, economic development and underdevelopment, and the quest for national stability during the current crisis. The class will look at the impact of structural adjustment on women's and men's lives and the current struggles in Southern Africa.

Instructor: J.L. Parpart
Format: Lectures/tutorials 3 hours
Recommended: HIST 1400.06

HIST 2501.03A or B: The Middle East to the First World War. Begins with the historical geography and the linguistic and cultural divisions of the region. Examines the emergence of Islam, its basic doctrines, and the Islamic view of politics and history. With this background concentration is then on the nineteenth century, looking at the impact of European influences, the problem of "reform" in the Turkish and Iranian empires, the British occupation of Egypt, revolutions of the early twentieth century, the origins of Zionism and the impact of the First World War.

Instructor: staff
Format: Lectures/discussion 3 hours
Exclusion: First-year students

HIST 2502.03A or B: The Middle East since the First World War. Begins with the impact of British and French imperial designs after 1918, the Balfour Declaration on Palestine, the creation of new Arab states and the Republic of Turkey. This leads to an examination of secular reform versus Islamic traditionalism, Arab nationalism, rise of the oil industry and the impact of the Second World War, the emergence of the state of Israel, the revolutions in Egypt and Iraq, the rise of OPEC, the fall of the monarchy in Iran and the nature of Khomeini's Islamic Revolution.

Instructor: Staff
Format: Lectures/discussion 3 hours
Prerequisite: HIST 2501.03
Exclusion: First-year students
Cross-listing: HIST 5502.03

HIST 2614.03A: Making Gender: Male and Female from Antiquity to Mary Wollstonecraft. This class examines the diverse and fascinating ways western cultures have shaped the meanings of gender. The history of women informs us about the once little-known history of femininity. And, as a result, historical changes in definitions of masculinity become visible. The meanings of gender are exposed in this class through topics such as: the origins of myths of western civilization, the Aristotelian one-sex model of physiology, patristic theology, the cult of courtly love, eighteenth century salons, and the rights of man.

Instructor: S.M. Tillotson
Format: Lecture/tutorials 3 hours
Cross-listing: WOST 2300.03

HIST 2615.09B: Making Gender: Male and Female from the American Revolution to the present. This class examines the diverse and fascinating ways western cultures have shaped the meanings of gender. The history of women informs us about the once little-known history of femininity. And, as a result, historical changes in definitions of masculinity become visible. The meanings of gender are explored in this class through topics such as: republican motherhood, respectability, the family wage, the homosexual, imperialism, citizenship, welfare dependency, and infertility.

Instructor: S.M. Tillotson
Format: Lecture/tutorials 3 hours
Cross-listing: WOST 2301.03

HIST 2800.06R: History of India. This class will examine the period from the late 18th century and the beginnings of British rule to the present day. The principal themes include: religion and social structure over two centuries of profound political and economic change; the modernization of the Indian economy; the rise of nationalism and national political organizations; and India's place in the world affairs.

Instructor: Staff
Format: Lectures/discussion 3 hours
Exclusion: HIST 2801.03

HIST 2995.03A or B: History of Modern Medicine, 1800-1950. This class examines the state of medicine in 1800, 1850, 1900 and 1950, and the transition of American and Canadian medicine from a low status, ineffective, poorly trained group of competing sects to what it is today. For each of the four periods the emphasis is on medical training, the diagnostic and therapeutic capabilities of physicians, their views on disease etiology, their attempts to control the size and quality of the profession and to prohibit the entry of women, and the scientific background to their views.

Instructor: J. Farley
Format: Lectures/discussion 3 hours
Exclusion: Former HIST 2295.03 students
Cross-listed: BIOL 3404.03

PLEASE NOTE: Students are advised to check the format of the 3000-level classes, whether 'lecture/discussion' or 'seminar'. Consult department timetable.

HIST 3001.03A or B: Medieval Civilization. Each year one or more particular topics are chosen, broad enough to be used as central themes in the context of which medieval civilization may be closely examined; for instance, monasticism, universities, peasants and popular culture. Such topics are studied in some depth, where possible using original sources in translation, and recent periodical literature and/or monographs. Students master the basic work in certain areas, but are also encouraged to develop particular topics more thoroughly. Class discussions are used to unravel contentious or difficult aspects. Students are expected to contribute to such discussions and to write one

or two well argued and documented papers. Some prior knowledge of medieval European history is essential.

Instructor: C.J. Neville
Format: Seminar, 2 hours
Prerequisite: HIST 2001.03 or HIST 2002.03 or HIST 2101.03

Recommended: HIST 1001.03
Exclusions: Former HIST 3000.06 students
Cross-listing: HIST 5701.03

HIST 3002.03A or B: The Medieval Church. This class does not attempt to provide a chronological survey of the development of the Western church, but is an advanced seminar dealing with topics which have no strict chronological limits. Subjects of study include monasticism, heresy, education and the universities, town and cathedral, lay-clerical conflict, and "popular" concepts of religion. Each year one or more topics are examined in detail, with the help of original documents in translation, and using recent periodical literature and/or monographs. Students prepare versions of a well-researched paper, and class discussions are used to explore related materials and readings in greater depth. Some prior knowledge of medieval European history is essential.

Instructor: C.J. Neville
Format: Lectures/discussion, 3 hours
Prerequisites: HIST 2001.03 or HIST 2002.03 or HIST 2101.03

Recommended: HIST 1001.03
Exclusions: Former HIST 3021.03 and 3022.03 students
Cross-listing: COMR 3008.03

HIST 3003.03A or B: England in the Later Middle Ages. Beginning around the reign of Edward I (1272-1307), attention is given to political, institutional, religious and social aspects of English history prior to the Tudors. This period includes the deposition of two reigning monarchs, the Scottish Wars of Independence, the Hundred Years' War, the Black Death, Wycliffite heresy and the Lollards, and the so-called "Wars of the Roses". It is therefore of exceptional interest and variety. Each year one or more topics of study are chosen for detailed consideration, where possible making use of original sources (in translation), and with the help of recent periodical literature. Class discussions are used to explore particularly difficult or controversial questions, and all students write one or two well argued and documented papers. Some knowledge of English medieval history is essential.

Instructor: C.J. Neville
Format: Lectures/discussion, 3 hours
Prerequisite: HIST 2101.03
Recommended: HIST 1001.03 or HIST 2001.03 or HIST 2002.03
Exclusions: Former HIST 3009.03, HIST 3007.03 and HIST 3010.06 students

HIST 3004.03A or B: Crime and Society in Post-Conquest England. This class explores the development of the criminal law in England between 1066 and 1500. After some introductory lectures by the instructor on the legacy of Anglo-Saxon legal notions and the creation of the royal system of justice known as the "eyre", attention is given to a study of the development of a more sophisticated hierarchy of courts: the local tribunals presided over by justices of the peace and sheriffs, itinerant sessions headed by the justices of assize, and the central court of King's Bench. The origins and elaboration of particular offenses, including treason, felony (murder, rape, arson, burglary and larceny) and trespass are examined. Emphasis is placed on the social aspects of crime in medieval England, and extensive use is made of recent periodical literature dealing with crime and its effect in this period.

Instructor: C.J. Neville
Format: Seminar 2 hours
Prerequisite: HIST 2101.03 or HIST 2001.03 or HIST 2002.03

Recommended: HIST 1010.03, HIST 2104.03
Exclusions: Former HIST 3009.03, HIST 3007.03, and HIST 3010.06 students

Cross-listing: HIST 5704.03

HIST 3005.03A or B: The Early Modern Mind: European Thought and Culture, 1450-1700. The purpose of this class is to provide students who have an interest and some background in early modern European history with more advanced study of the major issues and themes in European cultural history from the advent of printing to the dawn of the Enlightenment. Students will discuss writings by seminal authors such as Bacon, Montaigne, Bayle and Descartes, in addition to secondary works. The emphasis throughout will be not only on "high culture" but also on its relationship to society as a whole and to popular customs and rituals. Topics to be discussed include the impact of print, utopian thought, the witch craze, urbanization and civic consciousness, the writing of history, aspects of the scientific revolution, and the growth of religious toleration and scepticism.

Instructor: D.R. Woolf
Format: Seminar 2 hours
Prerequisite: One 2000- or 3000-level class in medieval or early modern European history, or instructor's consent

Recommended: HIST 2005.03, HIST 2006.03, HIST 2008.03

Exclusion: Former HIST 3011.03 students
Cross-listing: HIST 5705.03

HIST 3006.03A or B: Renaissance and Reformation Europe, 1348-1559. A survey of the major themes, subjects, and personalities in western European history from the Italian Renaissance to the beginnings of the Protestant Reformation in the sixteenth century. Topics to

be covered include the rise of Italian city-states, Italian humanism, the arts, the emergence of centralized monarchies in northern Europe, religious sentiment, and the reform movement. Although most areas of western Europe will be dealt with, the focus will be on Italy, France, and Germany.

Instructor: D.R. Woolf
Format: Lectures/discussion, 2 hours
Prerequisite: Any first- or second-year European history class
Exclusion: Former HIST 2005.03 students

HIST 3040.06R: Culture and Behaviours in Early Modern France, 1550-1750. This class explores the characteristics and complexities of elite and popular culture between the wars of religion and the Enlightenment. We study the traditional universe of Early Modern civilization and the process it underwent in a variety of domains: religion, education, sociability, deviance, social organization, etc. Emphasis is placed on sources, methods and critical analysis.

Instructor: G. Hanlon
Format: Lectures/discussion, 2 hours
Prerequisite: Any European Medieval or Early Modern history or literature

HIST 3051.06R: Fascist and National Socialist Movements in Europe, 1900-1945. The origins, ideologies, social composition, leadership, rise to power and rule of the two principal fascist and national socialist movements, those of Mussolini's Italy and Hitler's Germany, as well as similar phenomena in other European countries between the world wars, are studied comparatively to distinguish them from Soviet communism and other varieties of authoritarianism and totalitarianism.

Instructor: L.D. Stokes
Format: Seminar/lecture/discussion 2 hours
Prerequisite: One 2000-level class in European or modern British history

Recommended: HIST 2030.06, HIST 2062.03, HIST 2081.06, HIST 2021.03, HIST 2040.06, HIST 2112.03

Exclusion: Former HIST 3051.06 students

HIST 3052.06R: Europe and World War Two. Selected topics on the origins, course and aftermath of the Second World War as this involved Europe, including Nazi foreign and occupation policies, strategic and political decision-making by the Allied and Axis powers, national resistance movements, and the wartime origins of the Cold War.

Instructor: L.D. Stokes
Format: Seminar/lecture/discussion 2 hours
Prerequisite: One 2000-level class in European or modern British history

Recommended: HIST 2030.06, HIST 2062.03, HIST 2081.06, HIST 2021.03, HIST 2040.06, HIST 2112.03

Exclusion: Former HIST 2052.03 or HIST 3052.06 students

HIST 3055.06R: The Holocaust: The Destruction of the Jews of Europe, 1933-1945. The destruction of most of European Jewry by Nazism and its helpers during the Second World War is studied in the context of centuries-old religious anti-Semitism, nineteenth century Jewish emancipation and the emergence of racist ideology, the political and social situation of Jews in eastern and western Europe after World War I, "legal" and bureaucratic persecution of German Jews culminating in mass killing at Auschwitz and other death camps, the response of bystander nations to the perpetration of genocide, and finally the creation of the state of Israel in relation to the Holocaust.

Instructor: L.D. Stokes
Format: Seminar 2 hours
Prerequisite: One 2000-level class in European or modern British history

Recommended: HIST 2030.06, HIST 2062.03, HIST 2081.06, HIST 2021.03, HIST 2040.06, HIST 2112.03

Exclusion: Former HIST 1990.06 (section 07) students

HIST 3090.03A or B: Russian Society. Some basic institutions of Russian society are considered in their historical context, with special attention to the role of the Party and Marxism-Leninism, official culture and literature, the workings of the economy, and social stratification.

Instructor: N.G.O. Pereira
Format: Seminar 2 hours
Prerequisite: Reading knowledge of Russian (at least two years of language study) and some Russian history

Recommended: RUSS 1000.06, RUSS 2000.06
Cross-listing: HIST 5090.03, RUSS 3090.03

HIST 3092.03A or B: Russian Topics. Topics to be studied and researched will vary from year to year. They may include the sources of Bolshevism/Leninism, the doctrine of peaceful coexistence, the position of national minorities, the role of literature (official and samizdat) and the press, the Cult of Personality, Khrushchev's "Thaw", Brezhnev, Gorbachev, and Yeltsin.

Instructor: N.G.O. Pereira
Format: Seminar 2 hours
Prerequisite: One 2000-level class in history
Recommended: HIST 2020.06, HIST 2022.03, HIST 2030.06, HIST 2040.06, HIST 2062.03

HIST 3105.03A or B: The English Civil War Society, Religion and Politics, 1603-1660. An advanced class on one of the most tumultuous and eventful periods in British history, that leading up to and including civil war and revolution 1642 to 1660. Select primary sources will be used in addition to secondary works. Topics to be studied include the social structure of early Stuart England; the Church and its

critics; foreign policy; radical politics; the military course of the war; religious sectarianism; and the impact of the war and its aftermath on the populace.

Instructor: D.R. Woolf
Format: Seminar 2 hours
Prerequisite: Any second year class in British history

Recommended: HIST 2105.03, HIST 2106.03, HIST 2005.03, HIST 2008.03

Exclusion: former HIST 3104.06 students

HIST 3106.03A or B: England in the Age of Industrial Revolution. This class examines in some depth major themes in English history from the reign of George III through the Victorian era, including the British response to revolutions in America and France, the Napoleonic wars, the movement for Parliamentary reform, and the growth of industrialization.

Instructor: Staff
Format: Seminar 2 hours
Prerequisite: One 2000-level class in English history

Recommended: HIST 2111.03, HIST 2112.03, HIST 2131.03, HIST 2132.03

HIST 3112.03A or B: England, 1867-1914. This class concentrates upon the late Victorian and Edwardian Period in British History, from 1867 to the outbreak of the first World War. It will touch upon such subjects as urbanization, class politics, and culture, the transformation of the monarchy, the problem of poverty, women's emancipation, and the Irish Question.

Instructor: S. Brooke
Format: Lectures/discussion, 2 hours
Prerequisite: One of the following: HIST 2111.03; 2112.03; 3113.03; 3114.03; 3116.03; 2030.06; 2331.03; 2332.03; or instructor's consent.

HIST 3113.03A: Britain in the Age of the First World War, 1914-39. This class examines in depth major themes in modern British history from the first World War to the outbreak of the second, including the experience and impact of war, the problem of Ireland, the rise of labour, women's struggles, the great depression and the appeasement of the dictators in the 1930s.

Instructor: S. Brooke
Format: Lectures/discussion, 2 hours
Prerequisite: One of the following: HIST 2111.03; 2112.03; 3112.03; 3314.03; 3116.03; 2030; 2081.06.

HIST 3114.03B: Britain from the Second World War to Thatcher, 1939-1990. This class examines in depth major themes in British history from the outbreak of the Second World War to the emergence of the "Thatcher Phenomenon", including the war experience, the post-war labour governments and the welfare state, the affluence of the 1950s and 1960s, Suez, the

immigrant experience, and social and economic decline in the 1970s, ending with the election of Margaret Thatcher in 1979.

Instructor: S. Brooke
Format: Lectures/discussion, 2 hours
Prerequisite: One of the following: HIST 2111.03; 2112.03; 3112.03; 3113.03; 3116.03; 2030.06; 2081.06

HIST 3115.03A: Socialism and Working-Class Politics in Britain, 1880's-1980's. The last century in Britain has witnessed two intertwined developments: the full participation of the working-class in politics and the rise to power of a socialist party, the Labour party. This class will cover three aspects of that history: the development of working-class culture and politics (in particular through the union movement); the shaping of socialist ideology in Britain; and the emergence and development of the Labour party. It will embrace social, economic, and intellectual history, covering such topics as the "New Unionism" of the 1880's, working-class culture in Britain; the General Strike; the Labour governments of 1945-51, and, throughout, the arguments over ideology.

Instructor: S.J. Brooke
Format: Seminar 2 hours
Prerequisite: As this is an advanced seminar in British history, the instructor's permission is required for registration.

HIST 3116.03A or B: Advanced Seminar in British History: Culture, Class, and Society in Twentieth-century Britain. How does culture reflect social and political change? This class sets out to explore this question in the context of modern British society. Using a variety of texts, such as films like *My Beautiful Launderette*, the photographs of Bill Brandt and Humphrey Spender, the plays of John Osborne, Howard Brenton, and Caryl Churchill, art, architecture, and popular forms of culture, this seminar will examine how issues such as class tension, social change, the decline of empire and the beginning of a multi-racial society, changes in women's status, and other political and social developments represented in twentieth-century Britain, from the First World War to the present day.

Format: Seminar, 2 hours
Instructor: S.J. Brooke
Prerequisite: As this is an advanced seminar in British history, the instructor's permission is required for registration.
Cross-listing: HIST 5116.03

HIST 3220.03A or B: Youth Culture in Canada, 1950's to 1970's. The 1950's and 1960's were decades of often startling social change throughout North America in general and Canada in particular. This class will attempt to understand these changes and their impact on our society. The primary focus of the investigation is the popular youth culture of the

time, the culture of "sex, drugs and rock n' roll." The class will look at economic and social factors underlying youth culture, at some of the major thinkers who influenced it (such as Marshall McLuhan and Herbert Marcuse), and the responses of authority to youth culture.

Format: lecture/tutorial 3 hours
Instructor: M.S. Cross
Prerequisite: One previous history class
Recommended: HIST 2222.0
Cross-listed: Canadian Studies

HIST 3222.03A or B: Topics in Canadian Social History, 19th and 20th Centuries. This seminar will explore major themes in Canadian social development. The topics discussed will vary from year to year but will emphasize such themes as: changing values in Canadian society; the nature of popular cultures; the relationship of order and disorder; the family; gender relations; and social classes.

Instructor: M. Cross
Format: Seminar 2 hours
Prerequisite: A class in Canadian History
Cross-listing: HIST 5222.03 and Canadian Studies

HIST 3223.03A or B: The Caring Society?: Welfare in Canada since 1900. This class examines changes over the twentieth century in the ways Canadians have dealt with people's needs, their own or others', whether for income, housing, personal care, or other matters of survival and wellbeing. Both private and government forms of welfare provision will be studied, with the overall purpose of understanding why Canada came to have the kind of welfare state it does. Among the topics covered are: changing views on the origins and prevention of dependency; definitions of need; religious and ethnic variations in welfare practices; connections between welfare and women's lives; charitable fundraising; promoters and opponents of government social programs; financing the welfare state; gender, race, constitutional, and class issues in welfare.

Instructor: S. Tillotson
Format: Lecture/tutorial or seminar, 2 hours
Prerequisite: HIST 1200.06 or HIST 2112.03 or HIST 2230.06
Cross-listed: Canadian Studies

HIST 3225.03A or B: Crime, Punishment and the Criminal Law in Canadian Society. This class examines crime and the criminal law as they relate to broader changes within society and the economy of New France, British North America, and Canada. Moving from the nineteenth century through to the 1980's, it analyses the shifting patterns of crime; the changing definitions of crime and punishment; the social, economic, political, and ideological significance of the criminal law; and the influence of Britain, the United States, and France on legal developments.

Instructor: R. Bleasdale

Format: Seminar or lecture/discussion 2 hours
Prerequisite: One previous history class
Recommended: HIST 2221.03, and HIST 2222.03
Cross-listed: Canadian Studies

HIST 3226.03A or B: Law and Justice in Canadian Society, to 1890. Discussion begins with an exploration of concepts of law and justice among native Peoples prior to and during the occupation of the continent by the French and British. The class pursues crime and the criminal law as they relate to broader changes within the society and economy of New France, British North America, and Canada. We analyse shifting patterns and perceptions of crime and punishment; the social, economic, political, and ideological significance of the criminal law; the influence of Britain, France and the United States on legal developments.

Instructor: R. Bleasdale
Format: Lecture/discussion
Recommended: One previous history class
Exclusion: HIST 3225.03
Cross-listed: Canadian Studies

HIST 3227.03A or B: Criminal Law, Crime and Punishment in Canadian Society, 1890 to the present. Continuing the approach and themes of HIST 3226.03, this class studies crime, punishment, and the criminal law as they reflect social, economic, political, and ideological developments. As appropriate these are placed within their international context, and in particular linked to the American system of law and justice. We pay attention to the impact of technological change on crime, detection of crime, enforcement mechanisms, and alternative means and methods of punishment.

Instructor: R. Bleasdale
Format: Lecture/discussion
Recommended: One previous history class
Exclusion: HIST 3225.03
Cross-listed: Canadian Studies

HIST 3228.06R: Religion in Canada. When Canadians have built cities, gone to war, founded economic empires, fallen in love, designed school systems, and elected governments, religion has often been a decisive factor. Sometimes religion has been the decisive factor. What is "religion" in Canada? In the course of this extensive historical study of life in Canada from the 16th century to the present, a variety of answers will be explored. A detailed syllabus is available from the Department of Comparative Religion.

Instructor: C.T. Sinclair-Faulkner
Format: lecture and seminar 3 hours
Prerequisite: COMR 2001.03 or COMR 2002.03 or permission of the instructor

Cross-listing: COMR 3003.06

HIST 3232.03A or B: Labour and Community in Nineteenth-Century Canada. The experience of Canadian workers during the transition to an

industrial capitalist society. Topics include pre-industrial work patterns, new forms of discipline and the employment relationship, varieties of collective protest and organization, and changes in the structure of the family and community.

Instructor: R. Bleasdale
Format: Seminar or lecture/discussion, 2 hours

Prerequisite: One previous history class
Cross-listed: Canadian Studies

HIST 3233.03A or B: The Canadian Working Class: The Twentieth Century Experience. The development of the Canadian working-class movement from 1896 to the present. Topics include the degradation of work, the question of international unions, labour in politics, women and trade unions, the role of the state in industrial relations, and working-class culture in mass society.

Instructor: R. Bleasdale
Format: Seminar or lecture/discussion, 2 hours

Prerequisite: One previous history class
Cross-listed: Canadian Studies

HIST 3245.03A or B: French Canada. Given in English for English-speaking students, this class traces the development of French-Canadian society through the study of political and social developments. While the emphasis is on developments in Quebec, French-Canadians in the Maritimes, Ontario and the West will also be studied.

Instructor: S. Tillotson
Format: Lectures/discussion, 2 hours
Prerequisite: One class in Canadian history, or instructor's consent

Exclusion: Former HIST 2240.03 students
Cross-listed: Canadian Studies

HIST 3255.03A or B: The Age of Macdonald and Laurier. A seminar comprehending the society and politics of Canada from Confederation to the First World War. Themes of particular importance are imperialism, nationalism, and racism; the clash of nationalisms; the opening of new frontiers; politics and ideology.

Instructor: Staff
Format: Lectures/discussion, 2 hours
Prerequisite: A survey of Canadian history
Cross-listed: Canadian Studies

HIST 3260.03A or B: History of the Canadian West. This class takes a thematic approach within a chronological framework, exploring social, economic and political topics in the development of Western Canada. Among the themes considered are Native economies, political dissent, labour radicalism, ethnic relations, and federal-provincial relations.

Instructor: C. Danyak
Format: Seminar or lecture/discussion 2 hours

Prerequisite: A class in Canadian history

Exclusion: Former HIST 2250.03 students
Cross-listed: Canadian Studies

HIST 3261.03A or B: The Rural Experience in Canada. The rural experience has dominated Canada's past and continues to exert a strong influence in the present. This class explores the contours of Canadian rural life, examining the impact of rural politics, economics, social relations and ideologies upon Canadian development. Specific themes will vary from year to year.

Instructor: C. Danyak
Format: Seminar
Prerequisites: A survey of Canadian history
Cross-listed: Canadian Studies

HIST 3272.03A or B: Themes in the History of Atlantic Canada. This class provides students an opportunity to broaden their knowledge of historical trends in the region through archival research based on specific selected themes, which vary from year to year.

Instructor: Staff
Format: Seminar, 2 hours
Prerequisite: One class in Canadian history
Cross-listed: Canadian Studies

HIST 3273.03A or B: Nova Scotia: Pre-Confederation. An exploration of character and circumstances in the history of provincial society, from the era of European "invasion" to the debate over entry into British American union.

Instructors: D. Sutherland/J. Fingard
Format: Seminar 2 hours
Prerequisite: One Canadian History class or instructor's consent

Exclusion: Former HIST 3270.06
Cross-listed: Canadian Studies

HIST 3274.03A or B: Nova Scotia: Post-Confederation. An exploration of the transformation of provincial society in response to the onset of Canadianization and industrialization.

Instructors: D. Sutherland/J. Fingard
Format: Seminar 2 hours
Prerequisite: One Canadian History class or instructor's consent

Recommended: HIST 3273.03
Exclusion: Former HIST 3270.06
Cross-listed: Canadian Studies

HIST 3286.03A or B: The Urban Experience in Canada. The rise of the city stands as one of the most crucial changes to have taken place in our collective past. This class explores the reasons for and the impact of urbanization within Canada. Emphasis is on developments from the mid nineteenth century to the present.

Instructor: D. Sutherland
Format: Seminar 2 hours
Prerequisite: One class in history
Cross-listed: Canadian Studies

HIST 3292.03A or B: Wealth and Power in North America. Business enterprises have

played a major role in shaping the social and political as well as economic development of the United States and Canada over the past two hundred years - perhaps more so than in most other modern nations. This class explores the growth and significance of business in the history of these two countries. Among the topics covered are: entrepreneurship, technical innovation and economic growth; the rise of big business and management organization; the convoluted and controversial linkages of business and government; and the emergence of multinational enterprises and their impact on Canadian-American relations.

Instructor: G.D. Taylor
Format: Lectures/discussion 2 hours
Prerequisite: One class in Canadian or U.S. history, or an appropriate class in a related discipline.

Recommended: A survey class in U.S. or Canadian history

Exclusion: Former HIST 3291.03 students
Cross-listed: Canadian Studies

HIST 3302.03A or B: Technology and History in North America. The effects of technology on our lives are ever-present, from debates over acid rain and nuclear reactors to promises of a glowing future for Canada through "high-tech" enterprises and supercomputers. The continuing impact of technical innovation has been a central feature of the history of Canada and the United States, going back even to the period before the Industrial Revolution of the nineteenth century. The harnessing of science and technology to industrial and military uses in our own time has fuelled both rapid economic growth and controversies over the benefits and costs of technological changes for the household, the workplace, the environment, politics and society in North America.

Instructor: G.D. Taylor
Format: Lectures/discussion, 2 hours
Prerequisite: One class in Canadian or U.S. history, or an appropriate class in a related discipline.

Recommended: A survey class in U.S. or Canadian history

Cross-listed: Canadian Studies

HIST 3331.03A or B: The United States, Canada and the World. During the past century both nations of North America evolved from sparsely settled agricultural societies to complex industrial nations with increasing influence on, and dependence upon, developments throughout the rest of the world. This class traces the rise of the United States in global, political, and economic affairs, and reviews the role of the United States in the transformation of Canada since the early 19th century. The class focuses on diplomatic affairs, military conflict and cooperation, the rise of multinational enterprise, and the impact of technology in shaping America's relations with Canada and the world.

Instructor: G.D. Taylor

Format: Seminar, 2 hours

HIST 3334.03A or B: U.S. Foreign Policy in the 20th Century. As neighbours, interlinked by geography, economic patterns and (to some extent) common political and cultural traditions, Canada and the United States have had a close though not always smooth relationship over the past two hundred years. But that relationship has often been shaped by broader changes in international political, military and economic affairs, and - particularly in the twentieth century - U.S. foreign policies that affect Canada are determined by events and concerns far removed from North American shores. This class traces the history of Canadian-American relations in the context of these broader trends in United States foreign policy, and global political and economic developments.

Instructor: G.D. Taylor

Format: Lectures/discussion 3 hours

Recommended: A survey class in U.S. or Canadian History

Exclusions: Former HIST 3330.06 and HIST 3331.03 students

Cross-listed: Canadian Studies

HIST 3341.03A or B: Revolutionary America, 1760-1820. Topics of particular interest are the popularization of politics, the social conflicts related to neutralism and Loyalism, the development of a national political economy and constitutional tradition, and the cultural changes associated with republican government and egalitarian ideology.

Instructor: J.E. Crowley

Format: Lectures/discussion, 2 hours

Prerequisite: One 2000-level class in U.S. history, or HIST 2131.03

HIST 3350.03A or B: Family and Community in North America, 1600-1900. The family in North American society, from when the family was a model for social relations to the time when it was idealized as a private refuge. Among the topics considered are the role of the family in rural and urban communities, the demographic transition from high fertility and mortality, the reduction of the family's economic and educational autonomy, the role of ideology in shaping sex roles and childbearing; and the relations of family and community according to ethnic group, class and economic setting.

Instructor: J.E. Crowley

Format: Lectures/discussion, 2 hours

Prerequisite: One second-year class in American or Canadian history

Recommended: A class in the sociology or social anthropology of the family

Cross-listing: WOST 3300.03

HIST 3360.03A or B: Enslavement and Emancipation: African-Americans in the U.S. South to 1900. This class examines slavery as a system of racial subordination and economic exploitation. Attention is given to the social, familial, and cultural life of the slaves, the role of

slavery in shaping southern nationalism and national racial beliefs, and to reconstruction after the Civil War.

Instructor: J.T. O'Brien

Format: Seminar 2 hours

Prerequisite: HIST 1300.06 or one second-year U.S. history class

Recommended: HIST 2332.03

HIST 3361.03A or B: The American Civil War and Reconstruction. The Civil War, occasioned by the formation of the Southern Confederacy and the Union government's refusal to recognize the existence of a separate southern nation, was a pivotal moment in the history of the United States. This class will examine the causes of the war, the forces behind slave emancipation, the military fortunes of the two combatants, and the efforts undertaken by the victorious society, to alter the polity of the defeated South.

Instructor: J.T. O'Brien

Format: Seminar 2 hours

Prerequisite: HIST 1300.06 or second-year U.S. history class

Recommended: HIST 2332.03

HIST 3366.03A or B: Industry, Unionism, and Workingpeople in the United States, 1873-1940. America's rise to industrial pre-eminence shot forward after the Civil War. By 1900 it had the most productive industrial economy in the world, as well as one of the world's bloodiest labour histories. The growth of unions, however, proceeded much more slowly. Indeed, unionization of mass production industries was not achieved until late in the 1930's with the spread of the CIO and the revitalization of the AFL. This class examines the fitful history of American unions from the beginning of the depression of the 1870's to 1990.

Instructor: J. Vander Meulen

Format: Seminar 2 hours

Prerequisite: HIST 1300.06 or one second-year U.S. history class

Recommended: HIST 2332.03, HIST 2333.03, HIST 2334.03

HIST 3368.03A or B: From Hoover to Eisenhower. This class traces United States politics, economy, foreign policy and the development of the state during the period from 1929 to 1961. The goal is to develop a fairly advanced sense of the main events of the period, including the Great Depression, the New Deal political order, America and World War II, the Cold War, relations with the Third World, the Korean War, McCarthyism, and the civil rights movement. This course is also intended to expose students to the main literature, historiography and theory on American history in the contemporary period. Students taking this course are strongly encouraged to take its complement, HIST 3369.03.

Instructor: J. Vander Meulen

Format: lecture/discussion

Prerequisite: HIST 2333.03 or instructor's permission

HIST 3369.03B: From Kennedy to Clinton. This class traces United States politics, economy, foreign policy and the development of the state during the period from 1961 to 1994. It follows through on HIST 3368.03 which is a prerequisite. The idea is to build on the historiographical and theoretical background developed in HIST 3368.03 by testing it against the main events of recent American history which include the Great Society reforms, the crisis of liberalism, the Vietnam War, Watergate, the rise of the new right, the Reagan Revolution, and the Clinton years.

Instructor: J. Vander Meulen
Format: lecture/discussion
Prerequisite: HIST 3368.03

HIST 3390.03A or B: The Caribbean: Underdevelopment and Revolution. Caribbean wealth and Caribbean revolutions have made the islands a focus of imperial rivalries for more than three centuries. This class deals with the impact of twentieth century imperialism and the emergence of nationalism and socialism. Particular attention is paid to Cuba.

Instructor: staff
Format: Seminar 2 hours
Prerequisite: One second-year Arts class

HIST 3430.03A or B: The Making of Colonial Africa, c. 1850 - 1930. European colonial rulers and business interests laid out the framework of the sub-Saharan African colonial order from about 1850 to the 1920s, seeking ways to exploit African labour and natural resources. But imperial plans were limited and sometimes frustrated by African interests, and by historical dynamics within Africa, such as the rise of new merchants and Islamic revolution. This class assesses how the realities of Africa intersected with European imperial ambitions to profoundly change African society during this early colonial period.

Instructor: P. Zachernuk
Format: lecture/discussion

HIST 3435.03A or B: The Rise and Fall of African Slavery. Many African societies, like pre-industrial societies elsewhere, used slaves as well as other forms of labour for a variety of purposes. The rise of external slave trades after 1700 — notably across the Atlantic and Sahara — transformed many African societies into specialized slave exporters. As external slave trades declined in the 19th century, many African economies used extensive internal slave labour to produce exports, a pattern colonial governments were slow to change in the 20th century. This class examines these changes in African slavery, and how they affected such issues as gender relations and class structure.

Instructor: P. Zachernuk
Format: lecture/discussion

HIST 3440.03A or B: African History from Oral Tradition. For students who have a keen interest in African history, the class concentrates upon a restricted geographic area and considers

myths of origin, allegory and symbolism in oral traditions, how political leaders become national deities through ancestor worship and how feminist movements of the past have been handled by male chroniclers.

Instructor: Staff
Format: Seminar, 2 hours
Prerequisite: Any 2000-level class on African history

Recommended: HIST 2410.03

HIST 3451.03A or B: South Africa to 1860. Examines the history of South Africa before the coming of the mineral revolution. Themes include the nature of Xhosa and San societies, the expansion of Bantu-speakers, Dutch settlement and administration of the Cape area, the rise of the Zulu, Shaka's empire and the mfecane, the British takeover from the Dutch, the impact of the humanitarian movement and the Great Trek, African states and kingdoms in the nineteenth century and the formation of the Boer Republics.

Instructor: J. Parpart
Format: Lectures/discussion, 2 hours
Prerequisite: HIST 2131.03, HIST 2132.03, HIST 2421.03, HIST 2422.03 or permission of instructor.

Exclusion: Former HIST 3450.06 students

HIST 3452.03A or B: South Africa since 1860. The class examines not only the changes in race relations and politics, but also the effects of mining and other industries on rural and urban societies after the discoveries of diamonds and gold. Themes will include British policies and the "imperial factor", the growth of Afrikaner and African nationalism, the Boer War and unification, the development of apartheid and South Africa's relations with the wider world.

Instructor: J. Parpart
Format: Lectures/discussion, 2 hours
Prerequisite: HIST 2421.03 or HIST 2422.03 or HIST 3451.03 or HIST 3461.03 or HIST 3462.03

Recommended: HIST 3451.03, HIST 2131.03, HIST 2132.03

Exclusion: Former HIST 3450.06 students

HIST 3461.03A or B: Women and Development in Africa. This class examines the economic, political and social roles of African women from precolonial to modern times. It analyzes women not as objects, but as actors who participate in the political and economic processes which affect their lives. The class will examine development and feminist theory in the light of recent debates over women and development issues.

Instructor: J.L. Parpart
Format: Seminar 2 hours
Prerequisite: A core class in either International Development Studies or Women's Studies or a class on Africa in the History Department or permission of the instructor.

Cross-listing: WOST 3310.03, HIST 5461.03

HIST 3462.03A or B: Distortion or Development: African History. An examination of economic change in tropical Africa, with particular attention to the question of economic development and underdevelopment. From the premercantilist period to the current crisis.

Instructor: J. Farpart
Format: Seminar 2 hours
Prerequisite: HIST 2422.03
Cross-listing: HIST 5462.03

HIST 3750.03A or B: History of Seafaring. An examination of our maritime heritage with the cooperation of the staff of the Maritime Museum of the Atlantic. Within the context of these overlapping periods - the age of discovery, the age of sail, and the age of steam - the focus is on the development of merchant and naval fleets; the roles of the state, capital, and labour; and the features of seafaring culture. Special emphasis is given to the shipping industries and maritime traditions of this region.

Instructor: J. Fingard
Format: Lectures/discussion, 2 hours
Prerequisite: One class in history or permission of the instructor
Cross-listed: Canadian Studies

HIST 4001.03A or B: Directed Readings.
Format: This is a class of individual instruction. Students may only register for this course with the written permission of a Faculty member and the Undergraduate Coordinator.

HIST 4320.03A: Feminism, Postmodernism and Development. In the last decade poststructural and postmodern critiques have increasingly dominated the world of scholarship. The grand theories of the past have been called into question; universals have been overtaken by particularities and difference(s). Feminist scholars have reacted to these critiques in a number of ways. Some reject it outright, which others call for a synthesis. Scholars and activists concerned with international development issues have for the most part rejected both feminism and postmodernism. This class will explore the debates between the two perspectives and the possibility that they may have important insights to offer to both the theory and practice of development, especially the development of women.

Cross-listing: HIST 5320.03

HIST 4350.03A or B: People and Things: Material Culture in History. A seminar for advanced undergraduates on Material Culture Studies in social and cultural History. The class discusses the theoretical, cross-cultural, and historical considerations involved in the interdisciplinary study of material culture - economic technology, household comforts, architecture, clothing, even the landscape itself. The chief interpretative issues deal with the relation between consumption patterns and economic, social and cultural change.

Northwestern Europe and North America, 1600-1850, provide the context for examples of empirical research.

Instructor: J. Crowley
Format: Seminar

HIST 4500.03A or B: Topics in Modern History. This seminar is specifically intended for students in the Advanced Major and Honours degree programmes in History. The specific content of the seminar varies from year to year, but generally involves examination of a subject in history in some depth, and may include an historiographical, comparative or interdisciplinary dimension.

Instructor: Staff
Format: Seminar 2 hours
Prerequisite: Enquire at Department
Cross-listing: HIST 5500.03

HIST 4985.03A or B: The Varieties of History: Historiography in the Twentieth Century. This class, intended for Honours and Advanced Major students in History, will begin with a brief survey of the writing of history from the Middle Ages to the nineteenth century, and then proceed to an examination of the major schools, approaches, and sub-disciplines within the historical profession in the twentieth century. Topics to be covered include the following: the nature of historical knowledge, historical "relativism", Marxism, the "Annales" school, oral history, psychohistory, quantitative history, Feminism and others. No background in statistics is required. Classes will meet weekly to discuss assigned readings and each student will investigate an historian or historical school of his/her choice for a term paper.

Instructor: D.R. Woolf
Format: Seminar 2 hours
Prerequisite: Concurrent enrolment in HIST 4990.06 or instructor's consent

Recommended: A class in modern intellectual history or PHIL 2540.06

Cross-listing: HIST 5985.03

HIST 4990.06R: Honours Essay in History. All history Honours students and those in combined Honours programmes in which history is their principal subject must write a substantial essay on a topic to be chosen in consultation with the undergraduate coordinator and an individual faculty supervisor.

Instructor: Staff
Format: Honours Essay
Prerequisite: Admission to History Honours Programme.

Humanistic Studies in Science

Attention is drawn to the following classes, offered in several departments. All of these classes are concerned with the humanistic aspects of scientific thought and its development. For complete class descriptions please consult the appropriate department listing in this calendar.

Classes marked * are not offered every year. Please consult the timetable on registration to determine if these classes are offered.

History of the Sciences

*BIOL 3402.03/HIST 3072.03/SCIE 4000.03: The History of Modern Science. E.L. Mills (may not be offered in 1995-96)

*HIST 2995.03: The History of Modern Medicine. J. Farley

*History 3075.03: History of Tropical Medicine. J. Farley

BIOL 4664.03/OCEA 5331.03/SCIE 4001.03: History of Marine Sciences. E.L. Mills (may not be offered in 1995-96)

PSYO 4580.06: History of Psychology. J.W. Clark

Philosophy of the Sciences

*PHIL 2410.03: Philosophy of Psychology. T. Tomkow

*PHIL 2420.03: Philosophy of Biology. R. Campbell

BIOL 3410.03: Man in Nature. K.E. von Maltzahn

*COMR 3532.03: Mystical Consciousness and Modern Science. R. Ravindra

*COMR 3533.03: Spirituality and Ecology. R. Ravindra

*COMR 3503.03: Nuclear Bombs Survival and Morality. R. Ravindra

Interdisciplinary Studies

During the last two decades, numerous areas of interdisciplinary study have developed in the Arts and Social Sciences, as well as in the Sciences. Research at the graduate and faculty level now increasingly crosses disciplinary boundaries, and is published in interdisciplinary journals. In response to this research, a variety of new interdisciplinary programmes have been established at universities across North America. Asian Studies, Black Studies, Cultural Studies, Women's Studies, Gender Studies, Canadian Studies, Environmental Studies, International Development Studies: these are some of the new interdisciplinary programmes of study that have emerged.

At Dalhousie University, students can currently choose among interdisciplinary programmes in Canadian Studies, Contemporary Studies, International Development Studies, and Women's Studies. (Interdisciplinary classes are also available in Health Studies and in Science.) Students can concentrate on a particular interdisciplinary area of study in their undergraduate programme; they can combine an interdisciplinary programme with study in a traditional discipline; or they can combine two interdisciplinary areas of study. In some cases, students can construct programmes that bring together classes in the Arts and Social Sciences with classes in the Sciences.

For more information regarding these programmes, students should consult the entries in this calendar for:

S. Zurbrig

Introduction

"The right to development must be fulfilled so as equitably to meet developmental and environmental needs of present and future generations." (extract from Agenda 21 of the UN Conference on Environment and Development in Rio de Janeiro, June 1992).

Dalhousie University and Saint Mary's University are coordinating resources to offer an undergraduate degree in international

development studies. This reflects a commitment by both universities to the concept of sustainable development, not only for those privileged to live in Canada and other wealthy nations - but also for those in the Third World.

To foster greater understanding through study, teaching, research and shared field experiences of North-South partnerships and development, distinctive BA major and honours degree programmes enable students to work within interdisciplinary frameworks on both university campuses, as well as to draw upon the international development experiences from over twenty overseas linkage programmes currently engaged in by Dalhousie and Saint Mary's Universities.

Normally students are eligible to join the IDS programme at the start of their second year of university studies, once appropriate classes in at least two of the major participating social science/humanities' disciplines have been completed at the 1000 level.

Students with a background in science are also welcomed in this programme and every effort will be made to design study frameworks to explore how science can contribute to sustainable development and to encourage their interest in science within an international context.

All IDS students are encouraged to acquire competence in basic statistics and research design, e.g. Political Science 2249.06, as well as in one relevant language in addition to English, eg. French, Spanish, Russian, through appropriate classes and supporting activities.

Students are encouraged to enter the combined honours or double advanced major programmes, which provide opportunity further to integrate their IDS studies with those of an approved arts or science field e.g. IDS and History, IDS and Biology. Students should bear these two options in mind, particularly if they plan to pursue graduate students.

For a full listing of Saint Mary's University faculty and classes in IDS, please consult the current Saint Mary's University academic calendar, which will be available in the Dalhousie IDS Office. IDS core and other classes are usually available each summer through the "Halifax Summer School in International Development". Halifax is the Maritime regional centre for official and non-governmental organizations active in international development and the IDS programme encourages links with them, especially in terms of development education, international exchanges and data resources. In addition to the Dalhousie and Saint Mary's Universities library collections (general, law, environmental, medical and science libraries) and computer facilities, resource and reading materials on international development can be found in the following units:

Dalhousie University

International Institutes for Transport and Ocean Studies

International Student Centre

Lester Pearson Institute for International Development

School of Resource and Environmental Studies (Asian Studies Collection)

Saint Mary's University

Asian Studies Programme

Gorsebrook Research Institute

International Education Centre

Centre for Latin American and Caribbean Development

Mount Saint Vincent University Library

The Halifax and Dartmouth Public Libraries

Degree Programmes

Students should consult the "Degree Requirements" section of this calendar for specific requirements.

Honours in International Development Studies

Departmental requirements:

1000 level: Completion of appropriate first-year classes in at least two of the major participating social science or humanities disciplines (that is, COMR 1000.06, 2000.06; ECON 1101.03/1102.03; HIST 1050.06, 1400.06; POLI 1100.06, 1103.06, 1501.06; SOSA 1000.06, 1050.06, 1100.06; or SPAN 1100.03, 1110.03).

Advanced Classes Required

- INTD 2001.03/2002.03
- INTD 3001.03/3002.03
- INTD 4010.06 (with honours essay requirement)
- The equivalent of six full credit classes at or above the 2000-level in two or three established IDS disciplines, with at least one full credit per discipline. See below for the listing of International Development Studies classes.

NOTE: a minimum of the equivalent of four full-credit classes must be at the 3000-level or above. These can be chosen from the IDS approved list.

Minor: Two full credits in a minor subject (that are not from the IDS established discipline list).

Advanced Major in International Development Studies

Departmental requirements:

1000 level: Completion of appropriate first-year classes in at least two of the major participating social science or humanities disciplines (that is, COMR 1000.06, 2000.06; ECON 1101.03/1102.03; HIST 1050.06, 1400.06; POLI 1100.06, 1103.06, 1501.06; SOSA 1000.06, 1050.06, 1100.06; or SPAN 1100.03, 1110.03).

Advanced Classes Required

- INTD 2001.03/2002.03
- INTD 3001.03/3002.03
- Plus the equivalent of one full-credit class at or above the 3000-level from the IDS list below.
- The equivalent of four full-credit classes at or above the 2000-level in two or three established IDS disciplines, with at least one full credit per discipline. See below for the listing of International Development Studies classes.

NOTE: a minimum of the equivalent of four full-credit classes must be at the 3000-level or above.

Major in International Development Studies

Degree Requirements

Classes required in Major:

1000 level: Completion of appropriate first-year classes in at least two of the major participating social science or humanities disciplines (that is, COMR 1000.06, 2000.06; ECON 1101.03/1102.03; HIST 1050.06, 1400.06; POLI 1100.06, 1103.06, 1501.06; SOSA 1000.06, 1050.06, 1100.06; or SPAN 1100.03, 1110.03).

Advanced Classes Required

- INTD 2001.03/2002.03
- INTD 3001.03/3002.03
- Plus the equivalent of one full-credit class at or above the 3000-level from the IDS list below.
- The equivalent of one full-credit class at or above the 2000-level in each of two established IDS disciplines. See below for the listing of International Development Studies classes.

Classes Offered at Dalhousie University

Core Required Classes

INTD 2001.03A/INTD 2002.03B: Introduction to Development I and II. This is the entry level class for IDS majors and others wishing a broad overview of the themes and issues which define the study of international development. By means of lectures and discussion groups, students will be encouraged to gain a critical understanding of, for example, economic development, participatory development, development planning and policy, sustainable development, and how these contribute to, or impede social justice at the national and international levels.

Format: lectures and seminars
Prerequisite: two first year classes as indicated above under (1)

INTD 3001.03A/3002.03B: Seminar in Development III and IV. This course is a sequel to 2001.03/2002.03 and will focus on theoretical perspectives and development strategies regarding global, regional and national policies. The course will examine development issues in greater depth, paying particular attention to the link between theory, policy and practice.

Format: Seminar
Prerequisite: INTD 2001.03/2002.03

IDS Special Classes

INTD 3100.03A: Indian Society: Change and Continuity. This half-credit multidisciplinary class will be offered by faculty from Dalhousie and Saint Mary's University. Topics for discussion include history, economics, political economy, social structure, religion and philosophy, developmental issues, status of women, cultural life and creativity, literature, science and technology, recent structural changes and foreign policy in India.

Format: lecture/discussion, 2½ hours
Prerequisite: 2nd year Arts and/or science class

Cross-listing: SOSA 3310.03

INTD 3101.03A or B: Special Topics in International Development Studies. A half-year reading class on a particular aspect of international development taught only by special arrangement between individual IDS major or honours students and individual instructors associated with the programme. Available in summers as well as regular sessions.

Format: Individual tutorial
Prerequisite: INTD 2001.03/2002.03

INTD 3201.06R: International Development Studies Through Canada World Youth. Structured tutorials before and after Canadian World Youth (CWY) assignments. This class is intended for CWY participants who wish to earn academic credit related to their work in the Third

World. It consists of pre-departure tutorials and post-return paper preparation based on an agreed research topic. IDS faculty will attend CWY orientations. CWY registrants will receive supervised readings in development studies, and directions for field observations. They will be required to keep a journal of their observations and to prepare a research proposal for which they will collect materials while in the Third World. On returning to Canada they will communicate regularly with their advisor as they prepare a brief report on their field experience and an original research paper for evaluation.

Format: Individual tutorial with selected IDS faculty

Prerequisite: None, although high school/university global studies is desirable.

INTD 3202.06R/4001.03A/4002.03B/4003.06R/4100.06R: Special Topics in International Development Studies. See class description for INTD 3101.03, above.

Prerequisite: INTD 3001.03/3002.03
Cross-listing: INTD 4003.03 is cross-listed with EDUC 4873.03

INTD 4010.06R: Honours Essay Practicum in International Development Studies. Advanced seminar in theory and methodology leading to preparation and defence of honours essay.

Format: Seminar
Prerequisites: INTD 2002.03/2002.03 and INTD 3001.03/3002.03

INTD 4210.06R: Gender and Development. The class will discuss the subject of gender and development in developing countries and in Canada. It aims to help students develop their theoretical understanding, research skills, and policy analysis in the new field of study. It will focus on issues such as education, work, health, the role of the state, and empowerment. Students taking the class at the graduate level will be expected to attain a higher level of achievement and may be required to do additional assignments.

Format: Seminar
Prerequisite: INTD 3001.03/3002.03 or equivalent (SMU-IDS 421.1 & 423.2)

Cross-listing: SMU-IDS 622.1, 623.2 & SOC 422.1, 423.2

Listing of Classes routinely accepted within International Development Studies at Dalhousie University. It is possible to take a number of other classes, but only after approval by the coordinator. Some of these other classes are taught at Dalhousie, some at Saint Mary's. Students are thus encouraged also to review the current Saint Mary's calendar offerings.

Note: Classes marked * are not offered every year so please consult the current timetable, in addition to the calendars, when registering.

Biology

The importance of an understanding of biology for informed contribution to sustainable development cannot be over-emphasized. While the class specifically identified as part of the IDS programme is Biology 4650.03: Resource Systems and Economic Development, students are also encouraged to explore additional, appropriate biology classes with officials of the Biology Department.

*BIOL 4650.03: Resource Systems and Economic Development

Comparative Religion

Understanding religion and its influences on human behaviour involves grasping both the meaning of faith in the lives of participants and the critical analysis of outside observers. It has important implications for international cultures and development questions.

*COMR 2002.03: Christianity

*COMR 2003.03: Islam

*COMR 2011.03: Hinduism

*COMR 2012.03: Chinese and Japanese Religions

*COMR 2013.03: Buddhism

*COMR 3015.03: Myths, Symbols and Rites

*COMR 3532.03: Mystical Consciousness and Modern Science

*COMR 3533.03: Spirituality and Ecology

Earth Sciences

Geology lies behind many of the environmental problems facing humanity today - while energy and mineral resources provide an underpinning of many of the development plans of Third World nations.

ESCI 2410.03: Environmental and Resource Geology

Economics

A grasp of economic frameworks whereby societies allocate resources (human resources and capital) is a prerequisite for understanding development plans and national prospects, development projects and foreign aid, the constraints and the possibilities for sustainable development.

*ECON 2238.03: Industrial Revolution in Europe

*ECON 2239.03: European Economy in Historical Perspective

*ECON 2250.06: Applied Class in Economic Development and the Environment

*ECON 3241.03: Comparative Economic Systems: National Economies

*ECON 3242.03: Comparative Economic Systems: Economic Organization and Planning

*ECON 3317.03: Poverty and Inequality

*ECON 3330.03: International Trade

*ECON 3333.03: Theories of Economic Development

*ECON 3334.03: Development - Recent Debates, Controversies and Conflicts

*ECON 3336.03: Regional Development

*ECON 3350.03: Social Cost Benefit Analysis

*ECON 3432.06: Regional Economies

*ECON 4431.03: International Payments

English and Spanish

Language skills are obviously important for effective communication for those wishing to pursue international development studies; but through the study of languages important insights about culture and development experience are also to be gleaned. The IDS programme encourages students minimally to study one additional (relevant) language to English.

English

*ENGL 2211.06: Commonwealth Literature

*ENGL 3075.03: Multicultural Fictions

Spanish

*SPAN 2069.03: Central America to 1979

*SPAN 2070.03: Area Studies on Mexico and Central America

*SPAN 2109.03: Cuba from Colonial Times to 1961

*SPAN 2110.03: The Cuban Cultural Revolution

*SPAN 2130.03: Latin American Dictators in the Novel

*SPAN 2210.03: The Novel of the Mexican Revolution

*SPAN 2230.03: Contemporary Latin American Prose, Part I

*SPAN 2240.03: Contemporary Latin American Prose, Part II

*SPAN 3050.06: Culture and Society of the Dominican Republic

*SPAN 3070.03: Contemporary Latin American History

Environmental Studies

Most environmental scientists have primary expertise in a particular discipline and work cooperatively with specialists from other disciplines to solve environmental problems. Dalhousie does not offer a BSc major in environmental science-however, current programmes that provide streams emphasizing environmental subjects include Earth Sciences

(particularly Environmental Studies) geology and hydrogeology, ECON 2250.06, marine biology and POL 3585.03.

ESCI 2410.03: Environmental and Resource Geology

POLI 3585.03: Politics of the Environment

POLI 3590.06: Politics of the Sea

Health Services Administration

Should resources be allocated to urban hospitals or rural clinics, advanced systems for surgical procedures for heart disease or basic primary health care programmes. Often, in a developing nation, the choices are difficult and resources extremely limited. Appropriate health services are an essential underpinning for sustainable development.

*HEAS 5200.03: Principles of International Health

History

Just as people need to know who they are and how they arrived there, groups, races, classes, states and nations need a sense of their own past as part of their culture and to guide their future development choices.

HIST 2006.03: After Columbus: Early European Imperialism in the Americas 1450-1650

HIST 2007.03: B The Atlantic World: The Expansion of Europe, 1650-1800

*HIST 2132.03: The Fall of the British Empire

HIST 2020.06: Imperial and Soviet Russia

*HIST 2334.03: The United States, Canada and the World

*HIST 2370.03: The Age of Imperialism 1870-1970

*HIST 2381.03: Latin America: Underdevelopment and Revolution

*HIST 2421.03: Colonial Africa

*HIST 2422.03: Independent Africa

*HIST 2501.03: The Middle East to the First World War

*HIST 2502.03: The Middle East Since the First World War

*HIST 3092.03: Russian Topics

*HIST 3390.03: The Caribbean: Underdevelopment and Revolution

*HIST 3430.03: The Making of Colonial Africa, c. 1850-1930

*HIST 3435.03: The Rise and Fall of African Slavery

*HIST 3440.03: African History from Oral Tradition

*HIST 3451.03: B South Africa to 1860

*HIST 3452.03: South Africa since 1860

*HIST 3461.03: Gender and Development in Africa

*HIST 3462.03: Distortion or Development: African Economic History

*HIST 3612.03: Women in Socialist Countries

*HIST 3910.06: Health, Hunger, and Population in History

*HIST 4320.03: Feminism, Postmodernism and Development

Political Science

Political Science is valuable for individuals who want to know more about the values, laws, institutions and policy mechanisms that govern their lives in society, and, as well, the differences between their systems of government and those in other countries.

*POLI 2300.06: Comparative Politics

POLI 2500.06: World Politics

*POLI 3302.03: Comparative Development Administration

POLI 3303.03: Human Rights and Politics

POLI 3315.03: African Politics

POLI 3340.03: Approaches to Development

*POLI 3360.03: Politics in Latin America

POLI 3531.03: The UN in World Politics

POLI 3535.03: The New International Division of Labour

POLI 3540.03: Foreign Policies of Third World States

POLI 3544.03: Political Economy of Southern Africa

*POLI 3585.03: Politics of the Environment

*POLI 3590.06: The Politics of the Sea

Sociology and Social Anthropology

Sociology provides a context within which students learn to think critically about their social environment. Social Anthropology aims at generalizations by comparing structures and processes in major institutions within societies (kinship, political, economic and religious) as well as between societies.

SOSA 2001.06: Ethnography in a Global Context

*SOSA 2100.06: Environment and Culture

*SOSA 2190.06: Comparative Perspectives on Gender

*SOSA 2400.06: Health and Illness Across Cultures

SOSA 3060.03: Social Change and Development

*SOSA 3206.03: Ethnicity, Nationalism, and Race

*SOSA 3211.03: Continuity and Change in Rural Societies

*SOSA 3232.03: Psychological Anthropology

Women's Studies

It is important to recognize the implications of gender issues and to be sensitive to how these are viewed in different cultural circumstances.

Hence, students are strongly advised to participate in at least one of the following WOST classes:

- INTD 4210.06: Gender and Development
- WOST 2800.06: Comparative Perspectives on Gender
- WOST 3310.03: Gender and Development in Africa
- WOST 3330.03: Women in Socialist Societies
- WOST 4320.03: Feminism, Postmodernism, and Development

The IDS -Earth Summit- Prize on Sustainable Development:

A special prize is being awarded to the best essay paper submitted by an IDS student on a theme of direct relevance to the Rio Earth Summit. The prize is only open to Dalhousie and Saint Mary's IDS students at the undergraduate level. Essays should be submitted to the Dalhousie University Coordinator (typed) by 15 March 95. An interdisciplinary panel will adjudicate. The essay may be written as part of a regular class or specifically for the competition. Additional details can be obtained from the Coordinator's Office at Dalhousie University.

Seminars and Conferences

All IDS students are encouraged to attend the Killam Lecture Series for 1994-95, as well as the seminar series that are regularly sponsored through the Pearson Institute, the Gorsebrook Institute, SMU International Development Studies Programme and SRES. Students are encouraged to incorporate, in their programmes, classes which enable them to take advantage of Dalhousie's commitment to ocean studies, health and sustainable development.

Linguistics

Various departments offer classes in linguistics or in some aspect of linguistic study in the broad sense:

- Classics (several classes in Greek and Latin)
- English (*ENGL 3201.06: The English Language, *ENGL 3202.06: History of the English Language, ENGL *4253.06: Old English, *ENGL 4351.06: Middle English)
- French (*FREN 2050.03: Structure of French Dictionaries, *FREN 3020.06: Linguistics, *FREN 3025.03: Linguistics, FREN 4001.03: History of French - The Middle Ages, FREN 4002.03: History of French - The Modern Period, *FREN 4010.03: Great Linguists of the 20th Century, *FREN 4011.03: Lexicology, *FREN 4012.03: Aspects of French Structure, *FREN 4015.06: Advanced Translation into English)
- German (various classes)
- Philosophy (PHIL 3300.03: Philosophy of Language, *PHIL 4510.03: Topics in the Philosophy of Language, and other relevant classes in logic and on the work of Frege, Russell or Wittgenstein, for example.)
- Psychology (PSYO 2190.03: Language and the Brain, PSYO 3150.03: Introduction to Hearing and Speech Mechanisms, PSYO 3197.03: Human Communication)
- Russian (RUSS 4000.06: The Structure of Contemporary Standard Russian, RUSS 4950.03/RUSS 4960.03/RUSS 4990.06: Russian Special Topics)
- Sociology and Social Anthropology (SOSA 3081.03: Sociolinguistics)

Note: Classes marked * may not be offered every year. Please consult the current timetable on registration to determine if these classes are offered.

Further information about these classes will be found under the departmental listings. It should be noted that some of the classes listed may not be offered in the current year.

 W.R.S. Sutherland (Graduate)
 A. Sedgwick (Co-op)

General Interest Classes

The Division offers several classes for non-majors who would like to know something about Mathematics.

- **MATH 1000.03/1010.03:** This core calculus class is the starting point for any degree programme in the sciences.
- **MATH 1001.03/1002.03:** A class designed especially for B.A. students and others who wish to know something about the historical and cultural aspects of mathematics.
- **MATH 1060.03:** An introduction, through examples drawn from a wide variety of disciplines, to the basic ideas of statistics.
- **MATH 1110.03/1120.03:** Linear algebra and calculus arranged to meet the needs of commerce students, but of interest to anyone wishing a brief introduction to either of these topics.

Degree Programmes

One full credit in Mathematics other than MATH 1001.03/1002.03 and 1110.03/1120.03 is required for a BSc degree.

Students should consult the "Degree Requirements" section of this calendar for specific regulations.

Honours in Mathematics

Departmental Requirements

Classes required in Honours:

- 2000 level:** MATH 2001.03/2002.03 (or 2490.03/2490.03); 2030.03/2135.03 and 2505.03. Two and one-half other credits at or above the 2000 level - not including classes listed below.
- 3000 level:** MATH 3030.06 and 3500.06
- 4000 level:** Two credits at or above the 4000 level. Honours Qualifying Result.

Students may choose programmes with a concentration in Applied Mathematics, Computing Science, Pure Mathematics or

Statistics. Students wishing to concentrate in Computing Science should consider Combined Honours in Mathematics and Computing Science, and examine the separate Calendar entry for Computing Science. Students wishing to concentrate in Statistics should consider Honours in Statistics or Combined Honours in Mathematics and Statistics, and examine the separate Calendar entry for Statistics. All honours programmes must be approved by the Chairperson. Students wishing to take an Honours degree concentrating in Applied Mathematics are advised to consider a programme similar to the following:

Year 2: MATH 2001.03; 2002.03; 2030.03; 2135.03; 2505.03; 2060.03; 2080.03; 2300.03; Co-op Seminar and one elective class

Year 3: MATH 3500.06; 3030.06; 3110.03; two of 3210.03, 3300.03, 3260.03, an appropriate statistics class; 1 1/2 elective classes

Year 4: MATH 4400.03; the remaining two of 3210.03, 3300.03, 3260.03, an appropriate statistics class; 1 1/2 other classes at the 4000 level; 2 elective classes.

Students wishing to take an Honours degree concentrating in Pure Mathematics are advised to consider a programme similar to the following:

Year 2: MATH 2001.03; 2002.03; 2030.03; 2135.03; 2505.03; another half mathematics class; 2 elective classes

Year 3: MATH 3500.06; 3030.06; another full mathematics class; 2 elective classes

Year 4: MATH 4010.03; 4140.03; three other full mathematics classes, at least one of which is at the 4000 level; 1 elective class.

It is recommended that the additional mathematics classes include a statistics class, an applied class and a class in algebra, topology or complex variables.

Honours Comprehensive Examination: The Honours Comprehensive Examination in mathematics consists of a written paper of about 20-30 pages researched and prepared by the student during the spring term. The topic is decided on in conjunction with the supervisor of the Honours seminar. The paper is also presented to the seminar. The Honours Comprehensive Examination in statistics requires successful completion of STAT 8680.00.

Combined Honours

Students interested in taking honours in mathematics or statistics and another subject as a combined programme should consult the chairman of the department through whom a suitable course of study can be arranged.

A combined honours programme may be appropriate for many. Students contemplating a combined honours course in mathematics or statistics and another subject should, however, bear in mind that the work in either subject

would probably be insufficient for admission to a regular graduate programme. A qualifying year would usually be necessary.

Advanced Major and Major in Mathematics

Departmental Requirements

Classes required in Advanced Major:

2000 level: MATH 2001.03/2002.03 (or 2480.03/2490.03), MATH 2030.03 and 2040.03 (or 2135.03).

One other credit at or above 2000 level - not including classes listed below.

3000 level: Three credits at or above the 3000 level

Classes required in Major:

2000 level: MATH 2001.03/2002.03 (or 2480.03/2490.03), MATH 2030.03 and 2040.03 (or 2135.03)

3000 level: Two credits at or above the 3000 level

Majors in Mathematics are strongly urged to include COMP 1400.03, 1410.03 as part of their programme.

Students wishing to concentrate in Applied Mathematics, Pure Mathematics or Statistics are advised to consider modelling their programmes on the first three years of the Mathematics or Statistics Honours programmes.

Those students who wish to arrange inter-disciplinary programmes (with such fields as Physics, Chemistry, Biology, Engineering, Psychology and Economics) are invited to discuss their interests with the department.

Co-operative Education Programmes

The Co-operative Education Programme is an integrated programme of 8 academic terms and 4 work terms of relevant industrial/laboratory employment. The work terms, each of 4 months duration, are spent in industrial and laboratory positions. The work experience helps students see the applicability of their training in mathematics, statistics and computing science and helps them make intelligent career choices. Upon successful completion of the programme the student's transcript indicates that the programme was a co-operative one.

A Co-op degree normally takes 4 1/3 years. The co-op programmes are available either as an Advanced Major (20-credit) degree programme or as an Honours degree programme.

There are three Advanced Major Co-op programmes; one in each division of the Department.

There are four Honours Co-op programmes available within this Department, in the areas of:

- Mathematics
- Mathematics and Computing Science combined

- Computing Science
- Statistics

A Combined Honours Co-op degree, combining Mathematics or Computing Science or Statistics and another appropriate subject, is possible. Students interested in such a programme should consult the Director of Co-op Education.

Students who are interested in Co-operative Education Programmes in the Department should consult the Co-operative Education in Science entry in this calendar for further information.

Departmental Requirements

Classes required for Honours Co-op:

Same as for regular Honours in Mathematics as above with the addition of the following:

- 4 Co-op Workterms: MATH 8891.00, 8892.00, 8893.00, 8894.00

Classes required in Advanced Major Co-op:

Same as for regular Advanced Major in Mathematics as above with the addition of the following:

- 4 Co-op Workterms: MATH 8891.00, 8892.00, 8893.00, 8894.00

Prerequisites and Performance Test

The prerequisites listed in the class descriptions indicate the mathematical background expected of students entering that class, but may be waived with the consent of the instructor. In addition to the listed prerequisites students may write a short preliminary performance test before enrolling in the following classes: MATH 0010.00, 1000.03, 1060.03, 1110.03, and 1120.03.

These preliminary tests are held regularly during the summer and during fall registration. Students are urged to make arrangements for taking these tests as soon as possible. Further information is obtainable by contacting the department or the Math Learning Centre (902-494-2484).

Classes Offered

Class descriptions for Computing Science can be found in the calendar under Computing Science. Class descriptions for Statistics can be found in the calendar under Statistics.

Credit may not be obtained twice for the same class even if the numbers have been changed.

Classes with the designation (MLC) are supported by the tutorial services of the Math Learning Centre.

Classes marked with an asterisk (*) may not be offered every year.

MATH 0010.00R: Pre-University Mathematics, "Classroom Version". This class does not count as part of the regular student class load. This

class is designed for students who do not have the usual prerequisite for first-year math classes (i.e. N.S. Math 441), or for others who wish to strengthen their background in mathematics. The class begins with a review of algebra, use of variables, exponents, absolute value, factoring methods and solution of equations and inequalities. This leads to graphing and the functional approach which is the focus of the class. Functions studied include linear, quadratic, inverse, exponential, logarithmic and trigonometric. Throughout the year, there is strong emphasis on the use of mathematical models to solve application problems. Students completing this class should not only be adept at the mechanics of mathematics, but also have an understanding of the uses of these skills. After successful completion of this class, the student will have the necessary prerequisite for any first-year university mathematics, statistics or computing science class. Students register and pay for this class at Henson College, Centre for Continuing Studies, 6100 University Avenue.
Format: Lecture 3 hours, (non-credit class), MLC

Prerequisite: Performance test

Note: Mathematics 1000.03 and Mathematics 1010.03 introduce the basic ideas of the calculus, and together constitute a solid foundation for study in the Sciences (Physics, Chemistry, Biology, etc.), as well as for further study in Mathematics. Students who require one or both of these classes, but are uncertain of their ability to handle them, are invited to make use of the diagnostic and remedial services offered in the Mathematics Learning Centre, located in the basement of the Chase Building.

MATH 1000.03A or B or R: Differential and Integral Calculus. A self-contained introduction to differential and integral calculus. The topics include: functions, limits, differentiation of polynomial, trigonometric, exponential and logarithmic functions, product, quotient and chain rules, applications of differentiation, antiderivatives and definite integrals, integration by substitution. A sequel to this class is Mathematics 1010.03.

Format: Lecture 3 hours, tutorial 1 hour, MLC

Prerequisite: Nova Scotia Mathematics 441 or equivalent

Exclusion: Credit will be given for only one of MATH 1000.03, 1120.03

MATH 1001.03A: Mathematics for Liberal Arts Students I. For students who wish to become acquainted with mathematics as an art rather than as a tool for the sciences. A selection of elementary topics will be discussed with a view to illuminating historical and cultural aspects of the subject. Required work will include a series of written reports on assigned readings and a major essay. This class cannot be used to satisfy the B.Sc. mathematics requirement.

Format: Lecture 3 hours, MLC

Prerequisite: None

***MATH 1002.03B: Mathematics for Liberal Arts Students II.** Same as 1001A above, but with a different set of topics. Either one or both of 1001.03 and 1002.03 may be taken for credit. This class cannot be used to satisfy the BSc Mathematics requirement.

Format: Lecture 3 hours, MLC

Prerequisite: None

MATH 1010.03A or B: Differential and Integral Calculus. A continuation of the study of calculus with topics including: techniques of integration, elementary differential equations and applications, Riemann sums, parametric equations and polar coordinates, sequences and series, Taylor series.

Format: Lecture 3 hours, tutorial 1 hour, MLC

Prerequisite: MATH 1000.03

MATH 1060.03A or B: Introductory Statistics for Science and Health Sciences. See class description for STAT 1060.03 in the Statistics section of this calendar.

MATH 1110.03A or B: Finite Mathematics for Commerce. This class provides an introduction to the methods of finite mathematics with special emphasis on applications to business. Topics include linear equations, systems of linear equations, matrices, determinants, matrix inverses, linear programming including the simplex method, an introduction to nonlinear functions and the elements of the mathematics of finance. This class replaces half of the previous class Math 1100.06. This class may not be used to partially satisfy the requirement that BSc students must have at least one full university class in mathematics.

Format: Lecture 3 hours, MLC

Prerequisite: Nova Scotia Mathematics 442 or equivalent

MATH 1120.03A or B: Calculus for Commerce. This is an elementary calculus class with special emphasis on applications to business. Topics include functions, limits, rate of change, derivatives, one variable optimization and curve sketching, exponential functions, logarithmic functions, functions of several variables, Lagrange multipliers, elementary integration. This class replaces half of the previous class Math 1100.06. This class may not be used to partially satisfy the requirement that BSc students must have at least one full university class in mathematics.

Format: Lecture 3 hours, MLC

Prerequisite: Nova Scotia Mathematics 442 or equivalent

Exclusion: Credit can be given for only one of MATH 1120.03, and MATH 1000.03

MATH 1670.03A: Discrete Structures I. This class together with MATH 2670.03 offers a survey of those areas in Mathematics which may

be classified as dealing with discrete structures. Areas covered include set theory, mathematical induction, number theory, relations, functions, algebraic structures and introductory graph theory. The topics to be discussed are fundamental to most areas of Mathematics and have wide applicability to Computing Science.

Format: Lecture 3 hours
Prerequisite: Nova Scotia Mathematics 441 or equivalent
Cross-listing: COMP 1670.03

MATH 2001.03 A or B/2002.03 A or B: Intermediate Calculus I and II. The topics of these two classes include functions of several variables, partial derivatives, multiple integrals, indeterminate forms, improper integrals, infinite series, power series, Taylor and MacLaurin series, matrices, determinants, systems of linear equations, complex numbers, elementary ordinary differential equations.

Format: Lecture 3 hours, MLC
Prerequisite: MATH 1010.03
Exclusion: Credit will be given for only one of the following combinations: MATH 2001.03 and 2002.03 or MATH 2490.03 and 2490.03.

MATH 2030.03A: Matrix Theory and Linear Algebra I. This class, together with MATH 2040.03, is a self-contained introduction to Matrix Theory and Linear Algebra. Topics include: vector spaces, linear transformations, determinants, systems of linear equations. Students should note that this is a second-year class and, although it has no formal first-year prerequisites, mathematical maturity and an ability to handle formal proofs at the level of a student who has completed Mathematics 1000.03 is expected.

Format: Lecture 3 hours, MLC
Prerequisite: Nova Scotia Mathematics 441 or equivalent

MATH 2040.03B: Matrix Theory and Linear Algebra II. This class is a continuation of Mathematics 2030.03. Topics include: similarity, diagonalization, inner product spaces.

Format: Lecture 3 hours, MLC
Prerequisites: MATH 2030.03 and 1000.03
Exclusion: Credit can be given for only one of MATH 2040.03 and 2135.03

***MATH 2050.06R: Problems in Geometry.** This class is organized around a sequence of stimulating geometrical problems. A set of approximately 20 challenging problems is given to the students at the beginning of the year. The students are expected to attempt these problems throughout the year. Good students should be able to do some of these problems and are encouraged to present their solutions to the class for extra credit on the final grade. These problems are chosen so that their solutions use a wide variety of geometrical ideas (from Combinatorial, Projective, Inversive, Transformational, Topological, Differential and Non-Euclidean Geometry).

Format: Lecture 3 hours
Prerequisite: MATH 1010.03
Exclusion: Credit can be given for only one of MATH 2050.06 and MATH 2051.03.

***MATH 2051.03A or B: Problems in Geometry.** A half class on such material from MATH 2050.06 as time permits.

Format: Lecture 3 hours
Prerequisite: MATH 1010.03
Exclusion: Credit can be given for only one of MATH 2050.06 and MATH 2051.03.

MATH 2060.03A or B: Introduction to Probability and Statistics I. See class description for STAT 2060.03 in the Statistics section of this calendar.

MATH 2080.03B: Statistical Methods For Data Analysis & Inference. See class description for STAT 2080.03 in the Statistics section of this calendar.

MATH 2135.03B: Linear Algebra. This class is a continuation of MATH 2030.03. Topics include: similarity, diagonalization, inner product spaces. It is intended for honours students only.

Format: Lecture 3 hours
Prerequisite: MATH 2030.03
Exclusions: Credit can be given for only one of MATH 2040.03 and 2135.03

MATH 2300.03A or B: Mathematical Modelling I. This class is designed to provide a bridge between introductory calculus and the applications of mathematics to various fields. By using fundamental calculus concepts in a modelling framework, the student investigates meaningful and practical problems chosen from common experiences encompassing many academic disciplines, including the mathematical sciences, operations research, engineering and the management and life sciences. Some simple user-friendly computer packages will be introduced.

Format: Lecture 3 hours, MLC
Corequisite: MATH 2030.03 and MATH 1000.03
Cross-listing: COMP 2300.03, STAT 2300.03

MATH 2490.03A/2490.03B: Intermediate Calculus for the Engineering Programme. The topics for these two half classes include functions of several variables, partial derivatives, multiple integrals, indeterminate forms, improper integrals, infinite series, power series, Taylor and MacLaurin series, matrices, determinants, systems of linear equations, complex numbers, elementary ordinary differential equations.

Format: Lecture 3 hours, MLC
Prerequisite: MATH 1010.03
Exclusion: Students who take MATH 2490.03/2490.03 may not also receive credit for 2000.06 or 2001.03/2002.06

MATH 2505.03B: Introductory Analysis. For honours students and other serious students of mathematics. Topics include: the axioms for the real number system, geometry and topology of Euclidean space, limits, continuity, differentiability, the inverse and implicit function theorems.

Format: Lecture 3 hours
Prerequisite: Good standing in MATH 2001.03

***MATH 2540.03A: Basic Set Theory.** An introduction to the basic topics of set theory, including equivalence relations, order, recursion, the axiom of choice, ordinals and cardinals.

Format: Lecture 3 hours
Prerequisite: MATH 1000.03

***MATH 2600.03 A or B: Theory of Interest.** A detailed examination of the theory of simple and compound interest. The syllabus includes the material on which the theory of interest portion of Examination 4 in the Society of Actuaries examination series is based. Some of the topics are: nominal and effective rates of interest and discount, force of interest, annuities, perpetuities, price of bonds, callable bonds, special topics.

This class should appeal to students in mathematics, economics and commerce. Students interested in an actuarial career should take this class and are urged to consult the department for guidance in class selection and additional information.

Format: Lecture 3 hours, MLC
Prerequisite: MATH 1010.03 or 1110.03
Cross-listing: STAT 2600.03

MATH 2670.03B: Discrete Structures II. See class description for COMP 2670.03 in the Computing Science section of this calendar.

***MATH 2800.03A or B: Applied Mathematics for the Life Sciences.** This class is intended as a preparation for the mathematical aspects of advanced classes in ecology, genetics and physiology and is designed primarily for honours students in the biological sciences. The topics to be covered include complex numbers, linear algebra, difference equations and differential equations. Students are introduced to each topic through examples drawn from appropriate areas of biology and physiology. Computer software packages such as MINITAB, MATLAB and MAPLE are used to solve specific problems. This class is not given every year and students interested should consult the department. Students interested in the applications of mathematics should also consider MATH 2300.03 and/or MATH 3260.03.

Format: Lecture 3 hours, MLC
Prerequisites: MATH 1000.03 and BIOL 1000.06

SCIE 3000.06R: Science Fundamentals. An interdisciplinary class that stresses the motivations, methodologies, and responsibilities of scientists, and provides extensive formal instruction in written and oral communication of scientific material. For details, see main calendar entry "Science, Interdisciplinary." The status of

this class (elective, minor, or major credit) varies from department to department; check with your undergraduate advisor.

MATH 3030.06R: Abstract Algebra. In this first class in abstract algebra the following topics are treated: groups, sub-groups, factor groups, homomorphisms, rings, ideals, Euclidean domains, polynomial rings, fields, unique factorization, irreducible polynomials, Sylow theorems, solvability of polynomial equations, Galois theory, and the Jordan canonical form.

Format: Lecture 3 hours
Prerequisite: MATH 2040.03 or 2135.03

***MATH 3040.03A or B: Metric Spaces and Elementary Topology.** Topics include: metric spaces: bounded-, totally bounded-, compact- and complete sets in metric spaces; Lipschitz and contraction mappings; topological spaces; open and closed sets, bases; continuity, compactness, connectedness.

Format: Lecture 3 hours
Prerequisites: MATH 2000.06 and 2135.03 (or 2040.03)

***MATH 3050.06R: Differential Geometry and Tensor Analysis.** The material consists of two parts. The first part discusses the theory of curves and surfaces in three-dimensional Euclidean space. Topics include: theory of curves, surfaces, first and second fundamental forms, Gaussian and mean curvature, formulae of Weingarten and Gauss, geodesic curvature and geodesics. The second part consists of an introduction to Riemannian geometry, and, if time permits, an introduction to general relativity as an application of Riemannian geometry. Topics include: foundations of tensor calculus, differentiable manifolds, foundations of Riemannian geometry, absolute differentiation and connections.

Format: Lecture 3 hours
Prerequisites: MATH 2000.06 and 2135.03 (or 2040.03)

***MATH 3070.03A or B: Theory of Numbers.** The following topics are discussed: congruences and residues; elementary properties of congruences; linear congruences; theorems of Fermat, Euler and Wilson; Chinese remainder theorem; quadratic residues; law of quadratic reciprocity; Legendre, Jacobi and Kronecker symbols, arithmetic functions; algebraic fields; algebraic numbers and integers; uniqueness of factorization, definition and elementary properties of ideals; ideal classes and class number.

Format: Lecture 3 hours
Prerequisite: MATH 2040.03 (or 2135.03)

***MATH 3080.03A or B: Introduction to Complex Variables.** An introduction to the basic elements of complex analysis. Topics include: complex numbers, functions, differentiation and integration in the complex

plane, some special mappings, series in general, Taylor and Laurent Series, residues, some principles of conformal mapping theory.

Format: Lecture 3 hours

Prerequisite: MATH 2000.06

MATH 3090.03A: Advanced Calculus I. An introduction to Fourier Series. Topics covered include half range expansions, expansions on other intervals, convergence theorems, differentiation and integration of Fourier Series and the Complex form of Fourier Series. Also an introduction to special functions, including Gamma and Beta functions and orthogonal polynomials and some of their properties is given. Additional topics covered include some implicit function theorems and an introduction to transformations.

Format: Lecture 3 hours

Prerequisites: MATH 2000.06 and MATH 2030.03

Exclusion: Credit cannot be given for both MATH 3090.03 and MATH 3500.06

MATH 3100.03B: Advanced Calculus II. Topics covered include properties of functions defined by integrals: differentiation under the integral sign, tests for the convergence of improper integrals, improper multiple integrals and functions defined by improper integrals. Also considered is the Fourier integral and various other integral transforms, a review of multiple integrals and vector field theory. Green's, Stokes' and the divergence theorems and related matters are also considered.

Format: Lecture 3 hours

Prerequisite: MATH 3090.03

Exclusions: Credit cannot be given for both MATH 3500.06 and 3100.03.

MATH 3110.03A: Differential Equations. One of the aims of this class is to give students the ability to analyze and solve a number of different types of differential equations. Wherever possible, applications are drawn from the fields of physics, chemistry, biology, and other areas. The class is intended mainly for mathematics students interested in applications and for science students who wish to be able to solve problems arising in their major areas of interest.

Format: Lecture 3 hours, MLC

Prerequisite: MATH 2000.06

MATH 3120.03B: Differential Equations. The topics discussed are of great importance to any student interested in applied mathematics. Areas include Fourier series, orthogonal polynomials, Sturm-Liouville problems, the classical partial differential equations, and some applications to physics, chemistry and engineering.

Format: Lecture 3 hours

Prerequisite: MATH 3110.03

***MATH 3170.03A: Introduction to Numerical Linear Algebra.** See class description for COMP 3170.03, in the Computing Science section of this calendar.

Format: Lecture 3 hours

Prerequisites: MATH 1010.03, 2030.03 and COMP 1410.03

Cross-listing: COMP 3170.03

***MATH 3210.03B: Introduction to Numerical Analysis.** Some more advanced aspects of numerical linear algebra, including the Power Method and the QR Algorithm are examined. Various acceleration procedures for iterative processes are examined. Several forms of interpolating polynomials including Newton, Lagrange and Hermite are considered. Finite differences are also introduced. Numerical differentiation and integration is examined. In particular, interpolatory, Gaussian, Romberg and adaptive quadrature are discussed, and error estimates considered. Polynomial splines and some of their properties are introduced. Methods for solving nonlinear equations including the Newton-Raphson method are considered. Special attention is paid to finding the roots of a polynomial. Throughout, the difficulties of implementing the various methods are discussed, and illustrated via assignments. Finally, some indication of the difficulties involved in multidimensional numerical analysis is given.

Format: Lecture 3 hours

Prerequisites: Instructor's permission

Cross-listing: COMP 3210.03

MATH 3260.03A or B: Mathematical Modelling II. This class is an introduction to mathematical modelling and analysis using intermediate level calculus and elementary differential equations. It includes such topics as "can we prove mathematically that relativistic effects explain the procession in the perihelion of Mercury?", "is there truth to the legend of Samson and the Euler column?", "how do we quantify and analyze traffic flow?", "how does mathematics prove that a guitar is more musical than a drum?", and "what is an economically optimal forest harvesting strategy?"

Format: lecture 3 hours

Prerequisite: MATH 3110.03 (may be taken concurrently)

MATH 3300.03A: Optimization I. This class is an introduction to the concepts and applications of linear and nonlinear programming. Topics include the simplex method for linear programming, duality and sensitivity analysis, convex programming, Kuhn-Tucker and Lagrange multiplier conditions, numerical algorithms for unconstrained and constrained problems. Some of these topics are illustrated by means of interactive computer packages.

Format: Lecture 3 hours

Prerequisites: MATH 2000.06 and 2040.03

MATH 3310.03B: Optimization II. This class continues the study of the topics in MATH 3300.03. Additional topics to be covered include network flow theory, graph theoretic matching problems, shortest route problems, discrete

dynamic programming models, and combinatorial optimization with emphasis on integer programming problems.

Format: Lecture 3 hours
Prerequisites: MATH 3300.03

***MATH 3320.03A or B: Applied Group Theory.** This interdisciplinary half-class is intended for third and fourth-year undergraduate and first-year graduate students in Chemistry, Mathematics and Physics. With some additional reading in Physics, it is equivalent to PHYC 4480.03. Topics include: review of matrices, fundamentals of groups, normal subgroups, homomorphisms, representations, character, orthogonality, symmetry groups in crystallography, role of symmetry groups in quantum physics and chemistry, normal modes and molecular vibrations.

Format: Lecture 3 hours
Prerequisites: MATH 2000.06 and 2030.03
Cross-listing: PHYC 4480.03/5480.03

***MATH 3330.03A or B: Graph Theory and Combinatorics.** The following topics are discussed: elements of graph theory, paths and cycles, Eulerian graphs, trees, planar graphs and the Euler polyhedral formula, Hamiltonian graphs, chromatic numbers, the five-colour theorems; items to be selected from the following topics to suit class: graphs and matrices, graphs and groups, extremal problems, and enumeration problems.

Format: Lecture 3 hours
Prerequisites: MATH 2000.06 and 2040.03

***MATH 3340.03A or B: Regression and Analysis of Variance.** See class description for STAT 3340.03, in the Statistics section of this calendar.

***MATH 3360.03A or B: Probability.** See class description for STAT 3360.03, in the Statistics section of this calendar.

***MATH 3380.03A or B: Sample Survey Methods.** See class description for STAT 3380.03, in the Statistics section of this calendar.

***MATH 3460.03 A or B: Intermediate Statistical Theory.** See class description for STAT 3460.03 in the Statistics section of this calendar.

MATH 3500.06R: Intermediate Analysis. MATH 3500.06 continues the analysis sequence begun in MATH 2505.03. Topics include: number systems, metric spaces, compactness, continuous functions on metric spaces, Stone-Weierstrass theorem, Arzela-Ascoli theorem, sequences and series of functions and their properties, inverse and implicit function theorems, extrema, co-ordinate transformations.

Format: Lecture 3 hours
Prerequisites: MATH 2135.03, 2505.03
Exclusions: Credit cannot be given for both MATH 3500.06 and 3090.03, or for both MATH 3500.06 and 3100.03

MATH 4010.03A or B: Introduction to Measure Theory and Integration. A discussion of Lebesgue's theory of measure and integration on the real line. The topics include: the extended real number system and its basic properties; the definition of measurable sets, Lebesgue measure and the existence of non-measurable sets; the Lebesgue integral; differentiation of monotonic functions (e.g. the Cantor function), absolute continuity, the classical Lebesgue spaces, Fourier series.

Format: Lecture 3 hours
Prerequisite: MATH 3500.06
Cross-listing: MATH 5010.03

***MATH 4020.03A or B: Analytic Function Theory.** A second half-class in complex function theory. Topics include: review of analytic complex functions including topological properties of the plane, Mobius mappings, exponential, logarithmic, trigonometric and related functions, integration and the Cauchy theorem. Cauchy's integral formula, residues, harmonic functions, analytic continuation, entire and meromorphic functions, some results of conformal mapping, including the Riemann mapping theorem.

Format: Lecture 3 hours
Prerequisites: MATH 3080.03 and either 3100.03 or 3500.06
Cross-listing: MATH 5020.03

***MATH 4025.03A or B: Commutative Algebra I.** This introduction to commutative algebra includes a selection of the following topics: prime and maximal ideals, primary decomposition, Noetherian rings, Hilbert's Basis Theorem and the Nullstellensatz.

Format: lecture, 3 hours
Prerequisite: Math 3030.06 or equivalent
Cross-listing: MATH 5025.03

***MATH 4035.03A or B: Commutative Algebra II.** This class will examine some geometric applications of the material developed in Commutative Algebra I. Topics will include plane curves and Bezout's theorem, cubic curves, higher dimensional varieties, and an introduction to the Riemann-Roch Theorem.

Format: lecture, 3 hours
Prerequisite: Math 4025.03
Cross-listing: MATH 5035.03

***MATH 4045.03A or B: Advanced Algebra I.** Topics may include: structure of groups, rings, fields, and modules; Galois theory. Other topics of special interest may be covered.

Format: Lecture 3 hours
Prerequisites: MATH 3030.06
Cross-listing: MATH 5045.03

***MATH 4055.03A or B: Advanced Algebra II.** Topics may include: Algebras over a field, classical representation theory of groups and algebras, lattices, Boolean algebra. Additional topics may be covered at the discretion of the instructor.

Format: Lecture 3 hours

Prerequisites: MATH 3030.06
Cross-listing: MATH 5055.03

***MATH 4060.06R: Advanced Statistical Theory.** See class description for STAT 4060.06, in the Statistics section of this calendar.

***MATH 4065.03A or B: Algebraic Geometry.** an introduction to the basic concepts of algebraic geometry.

Format: Lecture 3 hours
Prerequisites: MATH 3030.06
Cross-listing: MATH 5065.03

***MATH 4070.03A or B: Topics in Number Theory.** The course is intended to give an introduction to both analytic and algebraic number theory. Following a short review of basic notions from elementary number theory, there will be a detailed discussion of quadratic reciprocity and some of its applications and extensions. The main topics from analytic number theory will be arithmetic functions a Dirichlet L-series, resulting in a proof of Dirichlet's theorem on primes in arithmetic progressions. Finally, some fundamental properties of algebraic number fields will be discussed, with some emphasis on quadratic and cyclotomic fields.

Format: Lecture 3 hours
Prerequisites: Math 3070.03
Cross-listing: MATH 5070.03

***MATH 4080.03A or B: Time Series Analysis II.** See class description for STAT 4400.03 in the Statistics section of this calendar.

***MATH 4090.03A or B: Probability.** A mathematically rigorous treatment of probability theory in Euclidean space. Topics include the definitions and properties of random variables and their distribution functions, various convergence concepts, the Borel-Cantelli lemma, weak and strong laws of large numbers, characteristic functions, central limit theorems. Although the necessary measure theory is introduced, a previous analysis class is an asset.

Format: Lecture 3 hours
Prerequisites: Mathematics 3360.03 and a third year analysis class
Cross-listing: MATH 5090.03, STAT 4090.03/5090.03

***MATH 4130.03A or B: Analysis of Algorithms.** See class description for COMP 4130.03 in the Computing Science section of this calendar.

***MATH 4135.03A or B: Introduction to Category Theory.** Categories, functors, natural transformations and adjointness are introduced with emphasis on examples drawn from undergraduate Mathematics and theoretical Computer Science. The calculus of diagram chasing, limits, colimits and Kan Extensions is explored in detail to provide a thorough foundation for subsequent specialized classes.

Format: Lecture 3 hours
Prerequisites: MATH 3030.06 or permission of the instructor.

Cross-listing: MATH 5135.03

***MATH 4140.03A or B: Introduction to Functional Analysis.** An introduction to the basic principles of functional analysis including the following topics: infinite dimensional vector spaces, normed spaces, inner-product spaces, Banach and Hilbert spaces, linear and continuous linear functionals, the Hahn-Banach Theorem, the principle of uniform boundedness, dual spaces, weak* topology, and the Alaoglu theorem, the open mapping and closed graph theorems, and consequences and applications.

Format: Lecture 3 hours
Prerequisites: MATH 2135.03 and 3040.03 or 3500.06

Cross-listing: MATH 5140.03

***MATH 4150.03A or B: Functional Analysis.** Topics include: topological vector spaces, locally convex spaces, normability, function spaces, strict convexity, uniform convexity, reflexive spaces, support functionals, geometry of convex sets and other topics.

Format: Lecture 3 hours
Prerequisite: MATH 4140.03
Cross-listing: MATH 5150.03

***MATH 4160.03A or B: Operator Theory.** An introduction to the theory and applications of continuous linear operators on Hilbert spaces, culminating with the spectral theorem, and including such topics as spectrum; adjoint; symmetric, self-adjoint, unitary, and normal operators; polar decomposition; differential and integral operators; C^* algebras; Gelfand's Theorem; and the spectral theorem.

Format: Lecture 3 hours
Prerequisites: MATH 4010.03 and 4140.03
Cross-listing: MATH 5160.03

***MATH 4170.03A or B: General Topology.** An introduction to topological spaces, and includes the following topics: classification in terms of cardinality of bases, separation, etc., product spaces, Tychonoff theorem, compactness, compactifications, Tychonoff spaces, metrization.

Format: Lecture 3 hours
Prerequisite: MATH 3040.03 or 3500.06
Cross-listing: MATH 5170.03

***MATH 4180.03A or B: Introduction to Algebraic Topology.** An introduction to algebraic topology and including the following topics: homotopy type and the fundamental group, geometry of simplicial complexes, homology theory of complexes, chain complexes, homology groups for complexes, subdivision, induced homomorphisms, axioms for algebraic topology, singular homology, the singular complex, properties of cell complexes.

Format: Lecture 3 hours
Prerequisite: MATH 4170.03
Cross-listing: MATH 5180.03

***MATH 4190.03A or B: Differential Equations.** Mathematics 3120.03 is recommended. Topics covered include existence and uniqueness

theorems, continuity of solutions, Floquet theory, autonomous differential equations and their relation to dynamical systems and flows, periodic solutions and the Poincaré-Bendixon theorem.

Format: Lecture 3 hours
Prerequisites: MATH 3500.06 (3090.03 and 3100.03) and 2030.03/2040.03 or 2135.03
Cross-listing: MATH 5190.03

***MATH 4200.03A or B: Differential Equations - Qualitative Theory.** Qualitative theory is concerned with what can be determined about the phase-portrait and the general behaviour of solutions of differential equations even though those solutions are not explicitly exhibited. Topics are selected from Liapunov stability theory, stable and unstable manifolds of singular points and periodic solutions, classification of plane singular points, structural stability, differential equations on manifolds and Hamiltonian systems. Various equations occurring in applications are qualitatively analyzed. The precise topics and equations covered depend on the specific interests of the instructor and the students.

Format: Lecture 3 hours
Prerequisite: MATH 4190.03
Cross-listing: MATH 5200.03

***MATH 4220.03A or B: Introduction to Partial Differential Equations.** This class is the first half of a two term sequence designed to introduce the student to the theoretical and numerical aspects of partial differential equations. Topics to be covered include: review of the theory of ordinary differential equations, classification of partial differential equations, solution of first order equations, the diffusion equation and random walk, Fourier Series and transforms, generalized functions, eigenfunction expansions.

Format: Lecture 3 hours
Prerequisite: MATH 3110.03
Cross-listing: MATH 5220.03

***MATH 4230.03A or B: Partial Differential Equations.** This class continues the study of partial differential equations begun in MATH 4220.03. Topics to be covered include: The Rayleigh-Ritz method, Green's Functions, finite difference methods of solution, an introduction to the finite element method.

Format: Lecture 3 hours
Prerequisite: MATH 4220.03
Cross-listing: MATH 5230.03

***MATH 4270.03A or B: Numerical Software.** See class description for COMP 4270.03 in the Computing Science section of this calendar.

***MATH 4300.03A or B: Optimal Control Theory and Applications.** Initially the classical calculus of variations is studied and the sufficiency conditions emphasized. A constructive solution of the Euler equations is presented. Then the modern theory of optimal control is developed

using techniques of mathematical programming. This approach is applied to a variety of problems such as economic growth theory, inventory control and regulator problems. Numerical methods are also presented.

Format: Lecture 3 hours
Prerequisite: Consent of instructor
Cross-listing: MATH 5300.03

***MATH 4310.03A or B: Nonlinear Programming.** A thorough introduction to the mathematical problem of optimizing a real-valued function of n variables subject to a system of constraints. Theoretical topics include the theory of convex sets and functions, directional derivatives, the Karush-Kuhn-Tucker optimality conditions, and dual problems. Several algorithms will be developed for the numerical solution of problems, including quasi-Newton and barrier methods. Software packages will be used to solve several practical applications.

Format: Lecture 3 hours
Prerequisite: Math 3500.06 (or 3090.03 and 3100.03) and 2135.03 (or 2040.03)
Cross-listing: MATH 5310.03

MATH 4330.03A or B: Topics in Graph Theory. This class is intended for math and computing science students. Items to be selected from the following topics: graphs and matrices, graphs and groups, network analysis, extremal graph theory, enumeration problems, algebraic methods in graph theory.

Format: Lecture 3 hours
Prerequisites: MATH 2000.06 and 2040.03
Cross-listing: MATH 5330.03, COMP 4330.03/5330.03

***MATH 4400.03A or B: Mathematical Modelling III.** This class is concerned with the construction, analysis and interpretation of mathematical models in the natural sciences with an emphasis on industrial applications. Specific applications of potential theory, diffusion phenomena and wave propagation will be examined in detail. A brief introduction to the calculus of variations approach to the optimal control of dynamical systems will be given and some recent applications discussed.

Format: Lecture 3 hours
Prerequisites: required Mathematics 3110.03, recommended Mathematics 3120.03
Cross-listing: MATH 5400.03

MATH 4650.03A or B: Relativity and Cosmology. A review of differential geometry will be given followed by an introduction to the general theory of relativity. Various topics will be discussed, including: linearized theory and gravitational radiation, spherically symmetric metrics and the Schwarzschild Solution, gravitational collapse, black holes, and cosmology.

Format: Lecture 3 hours

264 Mathematics

Prerequisites: Math 3050.06 or permission of the instructor.

Cross-listing: MATH 5650.03, PHYC 4650.03/5650.03

***MATH 4660.03A or B: Automata and Computability.** See class description for COMP 4660.03, in the Computing Science section of this calendar.

MATH 8700.00: (non-credit) Co-op Seminar I

MATH 8891.00: Co-op Work Term I

MATH 8892.00: Co-op Work Term II

MATH 8893.00: Co-op Work Term III

MATH 8894.00: Co-op Work Term IV

Microbiology and Immunology

Location: Sir Charles Tupper Medical Building, 7th & 10th Floors, Halifax, NS B3H 4H7
Telephone: (902) 494-3587
FAX: (902) 494-5125

Head of Department

D.E. Mahony (Acting)

Undergraduate Advisors

D.B. Stoltz (494-2590)
C. Stuttard (494-6566)
D.W. Hoskin (494-6509)

Professors

R. Anderson, PhD (Cologne), Graduate Studies Coordinator, (Viral Pathogenesis)
G.C. Johnston, PhD (York), (Molecular Genetics: Regulation of Proliferation)
S.H.S. Lee, PhD (Dal), (Diagnostic Virology; Interferon)
D.E. Mahony, PhD (McG), (Bacteriology; Bacteriocins, Toxins and Plasmids of Clostridia)
K.R. Rozee, PhD (Dal), (Microbial Pathogenesis; Epidemiology)
D.B. Stoltz, PhD (McM), Undergraduate Studies Coordinator, (Biology of Parasitic Insects; Insect Virology)
C. Stuttard, PhD (Dublin), (Microbial Genetics)

Associate Professors

R.I. Carr, MD (Tor), PhD (Rockefeller), Prof., Medicine (Rheumatology) (Immunoregulation; CNS Immune System Interactions and Auto Immune Diseases)
P.S. Hoffman, PhD (Virginia Polytech.), (Microbial Pathogenesis)
D.W. Hoskin, PhD (McG) (Tumour Immunology; MHC-Unrestricted Killer Cells)
A.C. Issekutz, MD (Dal), FRCP(C), Prof., Pediatrics (Inflammation)
S.F. Lee, PhD (Guelph) (Oral Microbiology; Microbial Pathogenesis)
T. Lee, PhD (Glasgow) (Molecular Immunology; Transplantation Immunology)
R. Rajaraman, PhD (Dal), Asst. Prof., Medicine (Integrins, Neutrophil Activation, Programmed Cell Death in Neoplasia)

Assistant Professors

C. Barnes, BA, PhD (Dal), Molecular Genetics
M.A. Drebot, PhD (Dal) (Viral Diagnostics and Pathogenesis)
R. Duncan, PhD (Guelph) (Molecular Basis of Viral Host-Range Restriction)
G. Faulkner, PhD (Dal) (Ultrastructural Analysis of Infection and Cancer Cells)
D.J.M. Haldane, MBChB (Dundee), FRCP(C) (Medical Microbiology)

W.A. Kennedy, MDCM (McG), FRCP(C), Pediatrics (Parainfluenza and Coronavirus Respiratory Tract Infection Pathogenesis)

A.W. Stadnyk, PhD (McM) (Intestinal Inflammation; Cytokines)

G.J. Tyrrell, PhD (Tor) (Antimicrobial Resistance; Verotoxins)

Instructor

L.E. Murray, PhD (Dal) (Molecular Genetics)

Introduction

The Department of Microbiology and Immunology is involved in teaching and research in several vital areas of biomedical endeavour including molecular and medical microbiology, virology, immunology and microbial genetics.

The Microbiology programme is designed to familiarize the student with the biology and pathogenesis of viruses, bacteria, yeast and multicellular parasitic organisms. Advanced classes deal specifically with selected aspects of virology, molecular mechanisms of pathogenesis, microbial genetics, cell and molecular biology.

A set of classes in molecular genetics has been identified to meet the needs of honours Microbiology or Biochemistry students who hope to pursue further study in molecular and genetic approaches to fundamental problems. These classes provide solid grounding in bacterial and eukaryotic gene structure and function, regulation and evolution, and both practical and theoretical presentations of recombinant DNA methods (genetic engineering).

They can be taken along with classes in metabolism, enzymology, bacteriology, virology and immunology and provide a good practical grounding for fields as diverse as genetic diagnosis and gene therapy, forensics, industrial microbiology and molecular evolution (see below and the Biochemistry listings and consult departmental advisors).

The Department also has a significant teaching programme in Cellular and Molecular Immunology. The Immunology programme is designed for students interested in fundamental questions in molecular immunology, tumour immunology, autoimmunity or inflammation, and defences against microbial infection.

These programmes provide the education needed for professional activities after graduation or for graduate studies in microbiology or immunology.

Degree Programmes

There is a 4-year "advanced major" programme in Microbiology but no 3-year programme leading to a Microbiology major. MICR 2100.06 is a prerequisite for most other microbiology classes offered at Dalhousie.

266 Microbiology and Immunology

Students interested in an honours programme (see below) should consult with the departmental advisors, preferably prior to registration for 2nd year classes. Biology majors are advised that classes in Microbiology and Immunology DO count toward a BSc in Biology even though they are not cross-listed with the Biology Department.

Students should consult the "Degree Requirements" section of this calendar for specific regulations.

BSc with Honours in Microbiology

This programme is designed to give students the best possible preparation for future graduate work or a professional career in microbiology or immunology. Students applying for admission to this programme must have obtained a grade of B- or better in BIOL 1000.06 or BIOL 1001.06 and must, in their 2nd year, obtain a grade of B- or better in MICR 2100.03. Students should consult an undergraduate advisor (D. Stoltz; C. Stuttard; D.W. Hoskin) at their earliest convenience.

Departmental Requirements

Classes required in Honours:

1000 level:	BIOL 1000.06, CHEM 1010.06 or 1500.06 or 1040.06, and 2 of the following: MATH 1000.03, 1010.03 or 1060.03
2000 level:	MICR 2100.03, BIOL 2020.03, 2030.03, BIOC 2200.03, CHEM 2400.06
3000 level:	BIOC 3400.03
4000 level:	MICR 4900.06

In addition to the above 4.5 classes, at least one half class at the 3000 -4000 level in the 4 following core subjects: MICR 3033.03, 3114.03, 3115.03, 3118.03 (or BIOL 3100.03, 3113.03, 4101.03, 4113.03 substituting for MICR 3118.03).

The remaining 2.5 credits (to make a total of 9) are to be taken from the list provided below (the classes listed are all considered to belong to the discipline of microbiology and/or immunology): MICR 3033.03, 3114.03, 3115.03, 3118.03, 4022.03, 4024.03, 4026.03, 4027.03, 4037.03, 4038.03, 4114.03, 4115.03, 4118.03, 4301.03, 4302.03, 4303.03, 4601.03.

BIOC 4403.03, 4404.03, 4603.03, 4802.06

BIOL 2101.03, 3100.03, 3113.03, 4101.03, 4113.03

For students wishing to specialize in molecular genetics, the following classes are strongly recommended: BIOC 3400.03, MICR 3033.03, MICR 4037.03/MICR 4038.03, MICR 4118.03, MICR 4403.03, MICR 4404.03 and MICR 4601.03. Students should also consult an undergraduate advisor.

For students wishing to specialize in the area of immunology the following classes are recommended: MICR 3033.03, 3115.03, 4115.03;

BIOC 3200.03, MICR 4026.03, 4027.03, 4301.03, 4302.03, 4303.03, 4601.03. Immunology students should consult the Immunology undergraduate advisor, Dr. D.W. Hoskin.

For students wishing to specialize in virology, the following classes (in addition to the core) are recommended: BIOC 3200.03, BIOL 3020.03 or MICR 4026.03, MICR 4114.03, MICR 4115.03, MICR 4118.03, MICR 4403.03, MICR 4404.03 and MICR 4601.03.

Notes:

1. In the 4 half-classes taken at the 3000 level to fulfil the core subjects requirement described above, students must maintain a B average with no grade less than B-.
2. The minor can be in any subject (excluding Microbiology); this includes Biology and Biochemistry.
3. The honours research thesis (MICR 4900.06) can be done in either the Microbiology, Biochemistry or Biology Departments (or in other departments in the Faculty of Science or Medicine if appropriate). The thesis work, however, must be relevant to the interests of the Department. Similarly, it should be noted that Biology majors may conduct their honours theses project (i.e., BIOL 4900.06) in this Department.
4. Students should be aware of Academic Regulation 19. Students should also note that certain advanced classes require a particular grade be achieved in the prerequisite class and/or permission of the instructor be obtained for registration in the class, or both.

Bsc with Combined Honours in Microbiology and Biochemistry

Students in this programme must complete 11 credits above the 1000 level in Microbiology and Biochemistry. The required classes in Biochemistry are BIOC 2200.03, 3200.03, 3300.03, 3400.03 and 4603.03. Students must also take 2 credits in the 4 defined core subject areas in Microbiology and Immunology. In addition, students must take MICR 2100.03, BIOL 2020.03, BIOL 2030.03 and either MICR 4900.06 or BIOC 4602.06. The remaining 4.5 credits must include at least 1 full credit from each Department at the 4000 level (excluding MICR 4900.06 and BIOL 4602.06).

BSc with Combined Honours in Microbiology and Biology

Students in this programme must complete the core requirements of each department. Students are required to maintain an average grade of B in core classes with no grade lower than B-. BIOL 1000.06 should be taken in year 1, and MICR 2100.03 in year 2. Research thesis work can be carried out in either Department. Advisors: D.B. Stoltz (Microbiology); J. Wright (Biology).

Advanced Major in Microbiology

Departmental Requirements

Classes required in Advanced Major

1000 level:	Biology 1000.06 or 1001.06; Chemistry 1010.06
2000 level:	three credits at or above the 2000 level
3000 level:	three additional credits at or above the 3000 level

Classes Offered

Note: Owing to the combined pressures of student numbers and a dearth of available space, the names of students not appearing on the first day of class may be deleted from class lists; students are therefore advised that being signed into the class is no guarantee of late admission.

MICR 1100.03A: See class description in Nursing section of this calendar. **NOTE:** Students registering in this class must also register for either a morning or afternoon laboratory session.

MICR 2020.03B: General Microbiology. This class is geared to students in pharmacy and in other health-oriented programmes. It provides a brief introduction of microbial structure, physiology and genetics in relation to microbial pathogenesis. General concepts and practices of sterilization and disinfection, antibiotics and immunity will be examined with emphasis on mechanism of action. Bacterial, fungal, parasitic and viral pathogens of medical importance will be discussed according to the mode of entry, transmission, clinical features, prevention and chemotherapy. Laboratory sessions using demonstration and/or experimentation are designed to complement the lectures and to provide a practical appreciation of the isolation, identification, cultivation and control of microorganisms. **Note:** MICR 2020.03 cannot be taken for credit in a B.Sc. programme.

Instructor: S.H.S. Lee
Format: lecture 3 hours, lab 3 hours
Prerequisite: BIOL 1000.06 or instructor's consent

Cross-listing: PHYT 2070.03

MICR 2100.03A: Introductory Microbiology and Immunology. An introduction to the basic concepts of microbiology and immunology through lectures, laboratory sessions and demonstrations. Topics include the structure, growth, genetics and physiology of selected groups of microorganisms and viruses, as well as basic immunology. This is normally a required class for Microbiology honours students; as such, it is directed primarily to second year students. **Note:** that students who have taken (or are taking) any of MICR 3033.03, 3114.03 or 3115.03 are not permitted to register in MICR 2100.03. **Lab** section assignments are made during the first lecture period. Consequently, because of

limits to lab space, students not attending that lecture may be denied admission to the class **EVEN IF THEY ARE ALREADY REGISTERED.** In particular, students must be registered prior to admission to laboratory periods. Students wishing to repeat the class must have approval to do so from the class coordinator. MICR 2100.03 is the preferred route into other microbiology offerings. **Note:** Students should make every attempt to register concurrently in BIOL 2030.03.

Instructor: D.B. Stoltz
Format: lecture 2 hours, lab 3 hours
Prerequisite: a grade of B- or better in BIOL 1000.06 or BIOL 1001.06.

Note: Biology students taking BIOL 2101.03 are advised that this class may be used as a prerequisite into 3000-level Microbiology classes provided that a grade of B or better has been obtained.

MICR 3033.03B: Microbial Genetics. Heredity in bacteria and their viruses, with principal emphasis on mutation, gene transfer, and genetic mapping; DNA repair, recombination, and restriction; molecular approaches to genetic analysis and gene expression on microorganisms (e.g., gene cloning, DNA sequencing).

Instructors: C. Stuitard, C. Barnes
Format: lecture 2 hours, lab/tutorial 3 hours
Prerequisites: MICR 2100.03 (or BIOL 2101.03 with a grade of B or better), BIOL 2030.03, BIOC 3400.03 or instructor's consent

MICR 3114.03A: Virology. Viruses are extremely efficient nucleoprotein complexes that have played, and continue to play, significant roles in the analysis of gene organization and expression, cancer biology, molecular pathogenesis, cell biology, biotechnology, gene therapy and molecular evolution. This introductory class is designed to give the student an appreciation for the diversity of viruses and their biological interactions with the host at both a cellular and organismal level. Topics discussed include virus structure, assay, characterization, gene organization and expression, host-cell interactions, cell transformation and pathogenesis. The lecture material relies on concepts introduced in BIOC 2200.03 and BIOL 2020.03 and complements material presented in other classes such as immunology, cell biology, biochemistry, molecular biology and gene expression.

Instructor: R. Duncan, D.B. Stoltz, M. Drebot, R. Anderson
Format: lecture 3 hours
Prerequisite: normally includes all of MICR 2100.03 (or BIOL 2101.03 with a grade of B or better), BIOC 2200.03, BIOL 2020.03

MICR 3115.03A: Immunology. This class is designed to provide the student with an understanding of the fundamental principles of

268 Microbiology and Immunology

cellular and molecular immunology. Lectures will focus on mechanisms governing the generation and regulation of cell-mediated and humoral immune responses. Topics to be discussed include cells and tissues of the immune system, the structure and synthesis of antibodies, complement pathways, T cell subsets and their functions, hypersensitivity reactions and the genetics of the immune response.

Instructor: D.W. Hoaklin
Format: lecture 3 hours
Prerequisite: MICR 2100.03 (or BIOL 2101.03 with a grade of B or better), a 2000-level class in cell biology, or instructor's consent

MICR 3118.03A: Medical Bacteriology. A survey of several bacterial groups with particular attention devoted to bacteria of medical interest. Attention is given to those criteria which are regarded as important in the classification of bacteria, and to the techniques used to identify particular species.

Instructor: D.E. Mahony
Format: lecture 2 hours, lab 3 hours
Prerequisite: grade of B- or better in MICR 2100.03 or grade of B or better in BIOL 2101.03

MICR 4022.03A or B: Microbial Ultrastructure Project. A research project using one or more of the skills acquired in MICR 4024.03, selected by the student in consultation with an instructor.

Instructors: G.T. Faulkner, D.B. Stoltz
Prerequisite: MICR 4024.03 or instructor's consent

Cross-listing: MICR 5022.03

MICR 4024.03A: Microscopy. The class is concerned with biological ultrastructural analysis concentrating on transmission and scanning electron microscopy. The importance of a proper understanding of the physical and chemical principles governing technical procedures such as fixation, freeze-fracture, colloidal gold probes, stereology, autoradiography, x-ray microanalysis and photography is emphasized. During laboratory periods students have the opportunity through individual projects to participate in some of the techniques covered in the lectures. This class is designed primarily for honours and graduate students.

Instructors: G.T. Faulkner, D.B. Stoltz
Format: lecture 3 hours, no formal lab
Prerequisite: instructor's consent
Cross-listing: BIO1 4024.03/5024.03, MICR 5024.03

MICR 4026.03A: The Mammalian Cell as a Microorganism. The class considers recent advances and current concepts in cellular and molecular biology with reference to the mammalian cell cultured in vitro. The following general areas are discussed: cell cycle; differentiation; somatic cell aging; extracellular, cytoplasmic and nuclear matrices;

transmembrane interactions; gene expression; growth factors and their receptors; hybridoma technology; metagenesis and somatic cell and molecular genetics.

Instructor: R. Rajaraman
Format: lecture 3 hours
Prerequisite: BIOL 2030.03 or BIOL 2020.03 or instructor's consent
Cross-listing: MICR 5026.03

MICR 4027.03B: Molecular Mechanisms of Cancer. The class considers recent cellular and molecular biology of cancer cells viewed as microorganisms in vivo. Students participate by giving seminars on recent articles and by writing term papers on selected topics. The following general areas are discussed: types of tumours; the transformed phenotype; extracellular matrix and neoplasia; hormones and neoplasia; anchorage and growth control; analysis of malignancy by cell fusion; transformation by DNA and RNA viruses, and by radiation; chemical carcinogenesis; oncogenes; interferon and cancer; reverse transformation and chemoprevention of cancer; immunoresponse and cancer; anti-oncogenes, transgenic mice in cancer research and cellular basis of metastasis.

Instructor: R. Rajaraman
Format: lecture/seminar 3 hours
Prerequisite: MICR 4026.03 or instructor's consent

Cross-listing: MICR 5027.03

MICR 4037.03A: Genetics of Industrial Bacteria. We review specific aspects of genetic structure, regulation, transmission and recombination in bacteria used to make commercial products such as antibiotics or having other commercial exploitable activities including insecticidal toxin production and metabolism of toxic chemicals. Seminars consider recent research papers. This class is offered on alternate year to MICR 4038.03.

Note: Not offered in 1995/96

Instructor: C. Stuttard
Format: lecture/seminar 3 hours
Prerequisite: MICR 3033.03
Cross-listing: MICR 5037.03

MICR 4038.03A: Molecular Biology of Yeast. The class will focus on the use of genetics and molecular genetics in the investigation of a wide variety of cellular activities in the yeast *Saccharomyces cerevisiae*, including: genome organization, regulation of gene expression at both transcriptional and translational levels, signal transduction, role of oncogenes, secretion, and control of proliferation. Wherever possible, the role of particular yeast gene products will be compared to homologues found in other eukaryotic cells including mammalian cells. This class will consist of lectures and student seminars and will rely heavily on the recent primary literature. Participants in the class will be encouraged to discuss and evaluate recent advances in the areas of genetics and molecular biology. This class is offered on alternate year to MICR 4037.03.

Instructor: C. Barnes, G. Johnston
Format: lecture/seminar 4 hours
Prerequisite: MICR 3033.03
Cross-listing: MICR 5038.03

MICR 4114.03B: Topics in Basic and Medical Virology. A class for advanced students designed to look in detail at selected aspects of virology. The class consists of lectures and student seminars revolving around current advances in virological research. Laboratory sessions expose students to basic methods associated with virology including tissue culture, phage assays, viral macromolecular synthesis and analysis of host cell interactions.

Instructors: R. Duncan, D.B. Stoltz, M. Drebot, R. Anderson
Format: lecture 3 hours, lab 3 hours
Prerequisite: grade of B- or better in MICR 3114.03
Cross-listing: MICR 5114.03

MICR 4115.03B: Immunology of Host Resistance. An advanced class in which students read and discuss research papers taken from the current literature in immunology. While all major areas of immunology are discussed, particular emphasis is placed on mechanisms involved in the host immune response to pathogens and tumour cells.

Instructor: D.W. Hoskin
Format: lecture/discussion 3 hours
Prerequisite: a minimum grade of B in MICR 3115.03
Cross-listing: MICR 5115.03

MICR 4115.03A: Molecular Pathogenesis. An advanced class on the molecular basis of bacterial pathogenesis. The class will use selected bacterial pathogens to develop basic principles regarding genes, regulatory mechanisms and the molecular function of gene products in surface colonization, invasion, intracellular growth and toxin production. The class will be taught from reviews and original research papers and will emphasize the use of modern molecular biological tools in problem solving.

Instructor: P.S. Hoffman
Prerequisite: MICR 3033.03 plus an advanced class in Bacteriology (MICR 3118.03 preferred)
Cross-listing: MICR 5118.03

MICR 4301.03A: Immunobiology. An advanced class designed to examine the experimental approaches which have led to our current knowledge of the biological characteristics of the immune system, including its cells and the interactions between them; the idiotype network; antigen processing and presentation; the mucosal immune system; CNS-immune system interactions; and both normal and pathological autoimmunity. Cytokines and inflammation; the host response to infection; lymphocyte migration; and immunodeficiency will also be discussed.

Instructors: R. Carr, A. Issekutz
Format: lecture and discussion 3 hours
Prerequisite: MICR 3115.03 and/or instructor's consent
Cross-listing: MICR 5301.03

MICR 4302.03B: Molecular Immunology. An advanced class which investigates the molecules involved in the generation and expression of immune responses. Topics typically include the structure and function of cytokines, the generation of antibody diversity by immunoglobulin gene rearrangement, the structure and function of cell surface receptors such as the T cell antigen receptor, MHC and adhesion molecules, and the molecular interactions which lead to immune non-responsiveness. This class is offered on alternate year to MICR 4303.03.

NOTE: This class is not offered in 1995/96.
Instructors: T. Lee, A.W. Stadnyk, B. Pohajdak
Format: lecture, student presentations, discussion
Prerequisite: MICR 3115.03 and/or instructor's consent
Cross-listing: BIOL 4302.03/5302.03

MICR 4303.03B: Granulocytes and the Immune Response. An advanced class dealing with the contribution of granulocytes to immunologic function. Mast cells, basophils, neutrophils, macrophages, NK cells and eosinophils will be considered with respect to their unique functions and contribution to a variety of immune effector mechanisms. This class is offered on alternate year to MICR 4302.03.

Instructors: T. Lee, A.W. Stadnyk, B. Pohajdak
Format: lecture, student presentations, discussion
Prerequisite: MICR 3115.03 and instructor's consent
Cross-listing: BIOL 4303.03/5303.03

MICR 4403.03B: Genes and Genomes. See class description for BIOC 4403.03 in the Biochemistry section of this calendar.

MICR 4404.03A: Gene Expression. See class description for BIOC 4404.03 in the Biochemistry section of this calendar.

MICR 4601.03A: Laboratory Techniques in Molecular Biology. This class consists of a series of laboratory modules covering techniques used in molecular biology and immunology (each of 4 weeks duration, 6 hours per week). The class is intended primarily for honours and graduate students. Students should consult with the class coordinator regarding eligibility and availability of space.
Instructor: G.C. Johnston
Format: lab 6 hours
Cross-listing: BIOL 4012.03/5012.03, BIOC 4603.03/5603.03, MICR 5601.03

270 Microbiology and Immunology

MICR 4700.06R: Special Topics. This class is in most respects equivalent to MICR 4900.06.

Instructor: D.B. Stoltz

MICR 4701.03A/4702.03B: Special Topics. This class is intended to permit further study of a specific topic of interest, or to correct a deficiency in a student's programme.

Instructor: D.B. Stoltz

MICR 4900.06R: Honours Research and Thesis.

Coordinator: D.B. Stoltz

Music

Location: Dalhousie Arts Centre, 5th floor,
University Ave., Halifax, N.S.
Telephone: (902) 494-2418
Fax: (902) 494-2801

Chair
W.H. Kemp (494-1142)

Student Advisors
W.H. Kemp (494-1142) - BMus, BA
P. Perron (494-1926) - MusEd

Professors
D.M. Farrell, BA (St. Norbert Col), MMus, PhD
(Wisc), (Theory and Composition)
W.H. Kemp, MusBac, MusM (Tor), AM (Harv),
DFinl (Oxon), (Theory, History and Choral)
C. van Peggelen, (Guitar and Lute)
D.P. Schroeder, AMus, BA, MA (Western) PhD
(Cantab), (Theory and History)

Associate Professors
F. Djokic, BMus, MMus (Juilliard), (Violin)
E. Gonnella-Welch, Dipl of Art (Dundee Col of
Art), LRAM (Royal Academy Lond), (Voice)
P.A. Perron, BMus (McG), MMusEd (Holy
Names College), (Music Education)
L. Stodola, BMus (Chic), MMus (Juilliard),
(Piano)
T. Zonneveld, Dipl (Teach), Dipl (School Mus),
Dipl (Performance), (Royal Conservatory, The
Hague), (Piano, Foundational Studies,
Keyboard Skills Coordination)

Assistant Professors
A. Ferenc, BMus, MA (McGill), PhD (Michigan),
(Theory, Form and Analysis)
G. Servant, BMus (Dal), MMus, DMA (Hartt)

Part-Time Faculty
N. Babineau (mus.ed. string studies)
E. Fralick (keyboard skills, orchestration)
T. Hill, MA (Calif, Davis), (mus.ed. band studies)
L. Hoffman, BA, MA (Radford), DMA (Memphis
State), (keyboard skills)
D. MacDonald, BMusEd (Dal), Dipl Mus (Paris)
MMA (McGill) (organ and church music)
R. MacKay (Band Director)
S. Naylor, BA (Waterloo Lutheran), BIS
(Waterloo)
D. Palmer (jazz studies)

Applied Skills Instructors
Flute: P. Creighton BMus (Tor);
**E. DuBois, BMus (Rochester), MMus (Emporia
State)**
Oboe: Suzanne Lemieux
Clarinet: J. Rapson
Bassoon: I. Rothwell
Recorder: P. Evans
Saxophone: D. Palmer
Horn: R. McCosh

Trumpet: J. Stern, BMus, MMus (New England
Conservatory)
Trombone and Tube: H. Schoales
Cello: S. Walt
String Bass: L. Turofsky, BMus (Tor);
M. Kasper
Percussion: J. Faraday
Harpichord: D. MacDonald

Staff Piano
Accompanist: H. Murray, BAHonMus, LRCT
(Tor) ARCCO
Technician: F. Haines

Introduction

The resources of the Music Department provide a thorough discipline to those whose demonstrated talent and specific pre-university training qualify them for specialization in music studies. Certain classes and ensembles are available to the non-specialist student who wishes to increase both musical awareness as a listener and involvement as a performer.

In the Bachelor of Music Programme, the Department offers training to the prospective professional musician: performer, composer, theorist, historian or critic. Future teachers instructing in the elementary and secondary school classroom are provided with methods, skills and field experience in the Bachelor of Music Education Programme. In our society today there are many vocations in which a working knowledge of various aspects of music is a desirable part: librarianship, media programming and production, arts management, recreational and therapeutic work, to name only a few. A carefully chosen BA (General) or combined Honours BA or BSc programme could furnish a basic equipment for further studies in preparation for such professions. The truly contemporary listener, too, must acquire style-specific tools, if there is to be an informed response to the musical experience.

Thus the University's Music Department is ready to serve many needs within a general standard of excellence. Crafts and skills, history, practice and appreciation are presented in studies flexible enough to be useful to each student's identity as a musical person.

Classes for Non-Majors

Classes offered as arts electives for non-majors are as follows:
MUS 1000.06: Listening to Music
MUS 1001.03: Materials of Music
MUS 1002.03: Introductory Music Theory
MUS 1010.06: Music and Culture
MUS 2007.06: Guitar and Lute
MUS 2008.06: Modern Guitar
MUS 2087.06: Electronic and Experimental Music
*MUS 2011.06: History of Opera
*MUS 2012.06: Music and Psychology
*MUS 2013.06: The Evolution of Jazz
*MUS 2015.06: Music and Cinema

*MUS 3064.03: Women in Canadian Music

Other classes in Music may be taken by special permission of the department.

Note: Classes marked * are not offered every year. Please consult the current timetable on registration to determine if this class is offered.

Degree Programmes

Foundational Classes

These classes are for those prospective music majors who, in the opinion of the auditioning faculty, indicate University-level talent and aptitude in performance but who are in need of a more prolonged exposure to pre-major levels of music literature, theory and related skills.

Students admitted to this level enrol in the BA Non-major Music Foundational Classes Programme, and may take a maximum of five full-credit classes.

Curriculum

- MUS 1100.06: Foundational Applied Skills
- MUS 1000.06: Listening to Music
- MUS 1001.03: Materials of Music
- MUS 1002.03: Introduction to College Music Theory
- Required Writing Class (from another department - see Degree Requirements 1.2 for a list of writing classes)
- Second non-music elective full-credit

Special Notes:

1. Music classes MUS 1000.06, MUS 1001.03, and MUS 1002.03, although credit classes, may not be counted toward the BMus, BMusEd, or BA degree with a major in Music; however, they may be counted as electives in other BA or BSc Degree Programmes.
2. All students registered in the Foundational Classes shall not enrol in the First Year Classes of the Bachelor of Music Core Curriculum until all prerequisites for those classes are completed.
3. The foundational music classes and the required writing class must be taken in the same academic year.

Standard for Foundational Classes

Minimum grades:

- MUS 1100.06 - B
- MUS 1000.06 - C
- MUS 1001.03 - C
- MUS 1002.03 - C
- Writing Class - C
- Each Elective - C

Bachelor of Music (BMus)

The BMus is a four-year programme with sixteen out of twenty classes in music. Upon successful completion of the second year, students may choose to concentrate in

performance, music history and literature, or composition, or elect the unconcentrated programme.

Common Curriculum

First Year: MUS 1000-level Applied Skills; MUS 1350.03: History of Music I (Med./Ren.); MUS 1351.03: History of Music II (Baroque); MUS 1201.03: Theory I; MUS 1202.03: Theory II; MUS 1270.03: Aural Perception I; MUS 1271.03: Keyboard Skills I; and an Arts and Social Sciences or Science Elective, one full credit (Writing Class Elective).

Second Year: MUS 2000-level Applied Skills; MUS 2350.03: History of Music III (Classical); MUS 2351.03: History of Music IV (Romantic); MUS 2201.03: Theory III; MUS 2202.03: Theory IV; MUS 2270.03: Aural Perception II; MUS 2271.03: Keyboard Skills II; and an Arts and Social Sciences or Science Elective, one full credit.

Concentration in Performance

Third Year: MUS-3000 level Applied Skills; MUS 3281.03: Form and Analysis I; MUS 3351.03: Music Since 1950; MUS 3280.03: Counterpoint; MUS 3282.03: Orchestration; MUS 3199.03: Recital; Music Elective, one half credit; and an Arts and Social Sciences or Science Elective, one full credit.

Fourth Year: MUS 4000-level Applied Skills; MUS 4199.03: Area Graduation Requirement (Recital); MUS 4281.03: Form and Analysis II; Music Elective, 2 credits; and an Arts and Social Sciences or Science Elective, one full credit.

Note: Church Music Option - Organ majors may complete a curriculum in church music by successful achievement in the following classes taken in the Third and Fourth Years: MUS 4271.03, MUS 4370.03, MUS 4198.03, and the half-credit class in church music offered at the Atlantic School of Theology and taken through letter of permission.

Concentration in Composition

Third Year: MUS 3000-level Applied Skills; MUS 3281.03: Form and Analysis I; MUS 3351.03: Music Since 1950; MUS 3280.03: Counterpoint; MUS 3282.03: Orchestration; MUS 3210.06: Composition; and an Arts and Social Sciences or Science Elective, one full credit.

Fourth Year: MUS-4000 level Applied Skills; MUS 4280.03: Advanced Harmony and Counterpoint; MUS 4281.03: Form and Analysis II; MUS 4210.06: Composition; MUS 4299.03: Area Graduation Requirement (Composition); Music Elective, one half credit; and an Arts and Social Sciences or Science Elective, one full credit.

Concentration in History and Literature

Third Year: MUS 3000-level Applied Skills; MUS 3281.03: Form and Analysis I; MUS 3351.03: Music Since 1950; MUS 3280.03: Counterpoint; MUS 3282.03: Orchestration; MUS 3362.03: Music in Canada to 1950; Music elective; one half credit;

and an Arts and Social Sciences or Science Elective, one full credit.

Fourth Year: MUS 4000-level Applied Skills; MUS 4281.03: Form and Analysis; MUS 4368.03: & MUS 4369.03: Special Studies; MUS 4399.03: Area Graduation Requirement (Thesis); Music Elective, one credit; and an Arts and Social Sciences or Science Elective, one full credit.

Unconcentrated Programme

Third Year: MUS 3000-level Applied skills; MUS 3281.03: Form and Analysis I; MUS 3351.03: Music Since 1950; MUS 3280.03: Counterpoint; MUS 3282.03: Orchestration; Music elective, one full credit; and an Arts and Social Science or Science elective, one full credit.

Fourth Year: MUS 4000-level Applied Skills; MUS 4282.03: Form and Analysis; MUS 4599.03: Graduation Requirement, Unconcentrated; Music Elective, two credits; and an Arts and Social Science or Science elective, one full credit.

Standards

All students wishing to enter third year required Music classes other than MUS 3351.03 in the BMus programme must successfully complete their MUS 2000-level Applied Skills and MUS 2202.03, MUS 2270.03 and MUS 2271.03 and achieve an overall average of B- in the music classes of the first and second years, including a minimum standing of C in each of MUS 1201.03, MUS 1202.03, MUS 2201.03 and MUS 2202.03, and a minimum of B- in each of their MUS 2000-level Applied Skills, MUS 1270.03 and MUS 2270.03. Students failing to demonstrate the required standards in MUS 2270.03 must repeat the class, but, with the permission of the Department, those with an otherwise satisfactory academic achievement may do so concurrently with their third year curriculum, within the five full classes or as an approved overload.

Students wishing to enter the concentration in performance must achieve an average of B+ in their MUS 1000- and MUS 2000-level Applied Skills; in history and literature, an average of B+ in MUS 1350.03, MUS 1351.03, MUS 2350.03 and MUS 2351.03 and demonstrate acceptable writing ability; in composition, submit one or more original pieces for assessment by the composition faculty.

Students in the BMus programme must maintain a minimum standing of B- in each of the music classes of the third and fourth years.

Students who at the end of the third year have not obtained at least five credits of B or better in their music classes above the 1000 level will not be admitted to the fourth year without the explicit recommendation of the Department and the prior approval of the Committee on Studies.

Students must achieve a minimum standing of C in each of their Arts and Social Sciences or Science electives.

Bachelor of Music Education (BMusEd)

The four-year B.Mus.Ed. programmes in elementary and secondary music education offer training in an instrument or in voice; theoretical and historical knowledge; aural and keyboard skills; the methods and repertoires needed by the music teacher in the classroom; and the foundational principles of education. Observation and field experience in classroom settings constitute an important part of the programmes. These programmes lead to certification by the Nova Scotia Department of Education.

In the First and Second Years students will enrol in the Bachelor of Music programme common curriculum (q.v.); Second Year students are advised to take two Education Foundation half credit classes. After successful application to the Department students will proceed to the B.Mus.Ed. programmes, Third and Fourth Years, choosing between curricula in Classroom Music or Instrumental Music. Normally these programmes are as follows:

Classroom Music

Third Year: MUS 3000-level Applied Skills; MUS 3400.06: Elementary Methods; MUS 3470.03: Field Experience; MUS 3160.03: Conducting; MUS 3161.03: Choral Technique; MUS 3351.03: History of Music VI - Music Since 1950; Music 3471.03: Solfa; and a half credit elective in Music or Music Education.

Fourth Year: MUS 4000-level Applied Skills; MUS 4400.03: Secondary Methods; MUS 4470.03: Field Experience; MUS 4482.03: Choral Arranging; EDUC 4450.06:R and one-half Education Foundation credit; and one full credit elective in Music, Music Education, or Arts and Social Sciences or Science.

Instrumental Music

Third Year: MUS 3000-level Applied Skills; MUS 3351.03: History of Music VI - Music Since 1950; Either MUS 3480.03: Band Instruments or MUS 3481.03: String Instruments; MUS 3400.06: Elementary Methods; and MUS 3470.03: Elementary Field Experience; MUS 3160.03: Conducting; MUS 3471.03: Solfa; and a half credit in Music or Music Education.

Fourth Year: MUS 4000-level Applied Skills; MUS 4400.03: Secondary Classroom Teaching Methods; MUS 4470.03: Secondary Classroom Field Experience; MUS 3282.03: Orchestration; either MUS 4481.03: Band Methods and Field Experience or MUS 4483.03: String Methods and Field Experience; and EDUC 4450.06: and one-half Education Foundation credit.

Bachelor of Music Education/Bachelor of Education (BMusEd/BEd)

The five year BMusEd/BEd integrated programmes in elementary and secondary music education combine the curricula of the B.Mus. Ed. programmes with additional training in either elementary classroom teaching or a second teachable subject appropriate for secondary school. The B.Mus.Ed./B.Ed. leads to certification by the Nova Scotia Department of Education.

In the First and Second Years students will enrol in the Bachelor of Music programme common curriculum (q.v.); Second Year students are advised to take a class in a co-required second "teachable subject" as their elective. After successful application to the Department and to the School of Education (the application to be supported by the Chair of the Department), students will proceed to the three senior years of the programmes, choosing between Classroom Music and Instrumental Music, and the elementary or secondary school teaching option. The fifteen and one-half credits, Years III-V, are as follows:

Classroom Music

Third Year:

- MUS 31__06: Applied Skills
- MUS 3351.03: History of Music VI
- MUS 3400.06: Elementary Methods
- MUS 3470.03: Elementary Field Experience
- MUS 3160.03: Conducting
- MUS 3471.03: Solfa Pedagogy in the Classroom
- MUS 3161.03: Choral Techniques
- Music or Music Education Elective: one-half credit

Fourth Year:

- MUS 41__06: Applied Skills
- MUS 4400.03: Secondary Methods
- MUS 4470.03: Secondary Field Experience
- MUS 4482.03: Choral Arranging
- EDUC 4450.06: Psychology and Special Education
- EDUC ½Anti-Racism class
- Elementary
- FASS .06: Co-required class in English, History, Math or Science
- Secondary
- FASS .06: Co-required class in 2nd teachable subject

Fifth Year:

- EDUC 4999.09: Field Experience

- EDUC ½Foundation Classes
- EDUC ½ Foundation Classes
- EDUC ½ Foundation Classes
- Elective ½ class elective in Music, MusEd or FASS

Elementary

- EDUC .06: Language Arts/Reading Methods
- EDUC ½ Math Elective
- EDUC ½ Methods Elective

Secondary

- FASS .06: Co-required class in 2nd teachable subject
- EDUC .06: Methods Class in 2nd teachable subject

Instrumental Music

Third Year:

- MUS 31__06: Applied Skills
- MUS 3351.03: History of Music VI
- MUS 3400.06: Elementary Methods
- MUS 3470.03: Elementary Field Experience
- MUS 3160.03: Conducting
- MUS 3471.03: Solfa Pedagogy in the Classroom
- MUS 3282.03: Orchestration
- Music or Music Education: one-half credit

Fourth Year:

- MUS 41__06: Applied Skills
- MUS 4400.03: Secondary Methods
- MUS 4470.03R Secondary Field Experience
- MUS 3480.03: Band Instruments
- or
- MUS 3481.03: String Instruments
- EDUC 4450.06: Psychology and Special Education
- EDUC ½Anti-Racism class
- Elementary
- FASS .06: Co-required class in English, History, Math or Science
- Secondary
- FASS .06: Co-required class in 2nd teachable subject

Fifth Year:

- EDUC 4999.09R Field Experience
- EDUC ½ Foundation Class
- EDUC ½ Foundation Class
- EDUC ½ Foundation Class
- MUS 4481.03: Band Methods and Field Experience
- or

MUS 4483.03: String Methods and Field Experience

Elective ½ class elective in Music, MusEd or FASS

Elementary

EDUC .06: Language Arts/Reading Methods

EDUC ½ Math Elective

EDUC ½ Methods Elective

Secondary

FASS .06: Co-required class in 2nd teachable subject

EDUC .06: Methods class in 2nd teachable subject

Co-requirements

Elementary: A student must complete a minimum of 3 full classes from English, History, Math, and Science. It is recommended that courses be selected from each area.

Secondary: A student must complete a minimum of 3 full classes above the 1000 level in a teachable subject. Teachable subjects are English, French, History, Math, Biology, Chemistry, Physics, Economics, and Geography.

To assure all requirements are fulfilled, and to select electives where available in the programmes, students must consult with the Music Education Advisor and the School of Education BEd Programmer.

Standards

All students wishing to enter third year required Music classes other than MUS 3351.03 in either the BMusEd or BMusEd/BEEd programme, must successfully complete their MUS 2000-level Applied Skill, MUS 2202.03, MUS 2270.03 and MUS 2271.03 and achieve an overall average of B- in the music classes of the first and second years, including a minimum standing of C in each of MUS 1201.03, MUS 1202.03, MUS 2201.03 and MUS 2202.03, and a minimum of B- in each of their MUS 2000-level Applied Skills, MUS 1270.03 and MUS 2270.03. Students failing to demonstrate the required standard in MUS 2270.03 must repeat the class. In order to qualify for the award of a BMusEd or BMusEd/BEEd degree, candidates must have obtained a minimum overall average of B in their music and music education classes above the 2000 level and maintain a minimum average of B in both their education and teachable subject Arts and Social Sciences or Science classes. With special permission, a student in the BMusEd or BMusEd/BEEd programme may give a graduation recital instead of a final jury exam.

Bachelor of Education in Music (BEEd)

A student possessing an appropriate four-year undergraduate degree in Music from a recognized university may apply for a 6.5 credit BEd programme in elementary and secondary

music education, which leads to certification by the Nova Scotia Department of Education.

Applications must be received by the School of Education by April 1. Subsequently potential B.Ed. students in music education must complete their audition-interview with the Department of Music by June 30. The applicant must pass a written exam in theory, a keyboard proficiency test and an ear training exam (sight singing and dictation), the equivalent to the final examination standards of Second Year (MUS 2202.03, 2270.03, 2271.03). Failure to demonstrate satisfactory standards in any of these areas will require the student to enrol in the appropriate Second Year classes in addition to the six classes listed below. The applicant also must demonstrate proficiency in his or her chosen performance idiom.

Successful applicants proceed to a curriculum which normally is as follows, noting that they may apply for transfer of credits in approved equivalent classes.

Music

MUS 3400.06: Elementary Music Methods

MUS 3470.03: Elementary Music Field Experience

MUS 3471.03: Solfa Pedagogy

MUS 4400.03: Secondary Music Methods

MUS 4470.03: Secondary Music Field Experience

Education

EDUC 4450.06: (1 credit);

½ anti-racism class

Education Foundations (1.5 credits including a .5 class in each of Sociology, Philosophy, and History of Education)

Elective ½ in Educ, Mus, or MusEd

Since the normal maximum number of classes that may be taken in any academic year is 5, students are advised to take the remaining credits in summer school prior to or following the actual year of study. Students are cautioned to consult the School of Education for the prospective availability of required education classes in summer school and to note the regular summer school tuition costs apply to those classes.

Standards

To complete successfully the programme of study, the candidate must obtain a minimum overall average of B in his/her music and music education classes above the 2000 level, and a minimum average of B in the Education classes.

Bachelor of Arts (Major in Music)

Departmental Requirements

Classes required in Major:

- 1000 level: MUS 1350.03, 1351.03, 1201.03 and 1202.03, 1270.03, 1271.03, Music 1000 level applied skills
- 2000 level: At least two credits
- 3000 level: At least two credits

Classes in subjects other than Music, to a maximum total of 8 full credit classes including the writing class (in compliance with Degree Requirements 1.2), may be selected in consultation with the Department to suit a student's individual needs and interests. Music Education classes are not considered applicable to this degree. Students in the BA (General) programme enrolled in Applied Skills classes are required to pass jury examinations.

Students wishing to transfer from another institution into this programme may be required to enrol in an Applied Skills Class at the First-Year level, depending upon the standard of their performance proficiency demonstrated in the audition-interview.

Bachelor of Arts and Bachelor of Science (Combined Honours Programmes)

Students may enrol in a combined honours programme with the joint approval of the Music Department and the department of the allied subject (in compliance with the Combined Honours degree requirements detailed in the Degree Requirements section of this calendar).

Academic Dismissal/Voluntary Withdrawal

Students required to apply for readmission to a university degree programme in Music must also submit to the department a supplementary readmission form. When a student in a Music degree programme has been dismissed on academic grounds and one of the classes failed is Applied Skills, that student must take a new audition upon application for readmission. When a student formerly registered in a music degree programme has been absent from the university for more than two years for reasons other than academic dismissal, it shall be within the discretion of the Music Department to require a new audition and/or validation tests before continuing in that programme.

Classes Offered

Classes Designed for Non-Majors

MUS 1000.06R: Listening to Music. Designed for the interested listener who desires to acquire an informed response to musical experiences. A knowledge of musical notation and terminology is not a prerequisite except for Foundational Music students assigned to this class.

The class includes a survey of the evolution of music from primitive cultures to the modern age; music in contemporary society; music in non-Western civilizations; music and image; music and the related arts; the art and psychology of listening.

Instructor: W.H. Kemp
Format: Lecture 3 hours

MUS 1010.06R: Music and Culture. This is an interdisciplinary class, presented as a series of topics, with music discussed in relation to literature, cinema, painting, gender, social change, religion, ecology, as well as issues of perception, semiotics, proportion and audience reception. Various types of music will be discussed, including European and Canadian music, world music, popular music, music of men and women, and music of living composers or musicians. Evaluation is based on assignments and listening exams. This class fulfils the first-year writing class requirement.

Instructor: D. Schroeder
Format: Writing Requirement, lecture /discussion 3 hours

MUS 2007.06R: Guitar and Lute. For students with a serious interest in classical guitar and lute playing and for whom it is not possible to provide individual instruction. Basic playing technique and the history of fretted instruments.

SIGNATURE REQUIRED

Instructor: C. van Peggelen
Format: Lab 2 hours
Prerequisite: Personal interview with Instructor

MUS 2008.06R: Modern Guitar. A class for students with a serious interest in preparing for studio guitar playing and including jazz, folk, rock and accompanying idioms. Class instruction and ensemble playing in improvisation, score reading, chording and arranging.

SIGNATURE REQUIRED

Instructor: C. van Peggelen
Format: Lab 2 hours
Prerequisite: Interview with Instructor

MUS 2015.06R: Music and Cinema. A survey of music used in Cinema in Europe, the United States and Canada from the earliest sound films to the present, covering the four following categories: opera on film, notable film scores, music as film subject, and music used in a special way in films. The types of films used will include feature-length works, documentaries, animations and experimental works.

Instructor: D. Schroeder
Format: Lab (Screening) and Lecture 4 hours

Exclusion: Music Majors

The following classes, subsequently described, are also directed to non-majors:

- MUS 1001.03: Materials of Music
- MUS 1002.03: Introductory Music Theory
- MUS 2087.06; MUS 2287.06: Electronic and Experimental Music
- *MUS 2011.06; *MUS 3311.06: History of Opera
- *MUS 2012.06; *MUS 3312.06: Music and Psychology
- *MUS 2013.06; *MUS 3313.06: The Evolution of Jazz
- *MUS 3064.03; *MUS 3364.03: Women in Canadian Music

Classes Designed for Music Majors

N.B.: The following classes designed for music majors are available to non-majors with the permission of the instructor.

Studies in Music History and Literature

MUS 1350.03A: History of Music I. A study of music in Western Civilization to 1600, including style, cultural contexts, and non-Western influences.

SIGNATURE REQUIRED

Instructor: W.H. Kemp
Format: Lecture 3 hours
Prerequisite: Permission of the instructor
Co-requisite: Normally, for Music majors, MUS 1201.03, MUS 1270.03, MUS 1271.03

MUS 1351.03B: History of Music II. A study of the history and literature of music in the Baroque period (c. 1600-1750) with an emphasis on the development of style and performance practices.

SIGNATURE REQUIRED

Instructor: W.H. Kemp
Format: Lecture 3 hours
Prerequisite: MUS 1350.03
Co-requisites: Normally, for Music majors, MUS 1202.03, MUS 1270.03, MUS 1271.03

MUS 2350.03A: History of Music III. A detailed study of the history, literature and cultural contexts of music from C. 1750 to 1830.

SIGNATURE REQUIRED

Instructor: D. Schroeder
Format: Lecture 3 hours
Prerequisites: MUS 1202.03, MUS 1350.03, MUS 1351.03
Co-requisite: Normally, for Music majors, MUS 2201.03

MUS 2351.03B: History of Music IV. A detailed study of the history, literature and cultural contexts of music from C. 1830 to 1950.

Instructor: D. Schroeder
Format: Lecture 3 hours
Prerequisites: MUS 2201.03, MUS 2350.03
Co-requisite: Normally, for Music majors, MUS 2202.03

***MUS 3311.06R: History of Opera.** An historical and analytical survey of operatic compositions from 1600 to the present day; opera as drama; changing tastes in operatic productions; operetta and musical comedy.

Instructor: Staff
Format: Lecture 3 hours
Prerequisite: Permission of the Department

***MUS 3312.06R: Music and Psychology.** The interrelationship of music and psychology, as it relates to and informs the listener, student, educator and professional musician. Topics include a) the perception of tones as a foundation for the appreciation of musical

experiences, music as passing time and as information; b) musical taste and aesthetics from a psychological point of view; c) the social psychology of music; d) theories of learning and of behaviour as appropriate to musical training and performance; e) the diagnostic and evaluative testing of musical aptitude and ability; f) the function of music in therapy and in special education. A rudimentary knowledge of musical notation is a prerequisite to this study; no previous classes in Psychology are necessary.

Instructor: W.H. Kemp
Format: Lecture 3 hours
Prerequisite: Permission of the Department

***MUS 3313.06R: The Evolution of Jazz.** A survey of the historical and social background of jazz and its musicians. The evolution of jazz styles is illustrated in live performances as well as on recordings. A knowledge of musical notation is not a prerequisite to this class.

Instructor: D. Palmer
Format: Lecture 3 hours

***MUS 3350.03A or B: Music in the Middle Ages and Renaissance.** A detailed study of the development of Western music in the Medieval and Renaissance periods with an emphasis on style, cultural contexts and performance practices.

Instructor: staff
Format: Lecture 3 hours
Prerequisites: MUS 1202.03, MUS 1350.03, or permission of the instructor

MUS 3351.03B: Music Since 1950. A detailed study of the history, literature, cultural contexts and practices of music from C. 1950 to the present; the roots of the "new" music in earlier twentieth century composition.

SIGNATURE REQUIRED

Instructor: W. Kemp
Format: Lecture 3 hours
Prerequisite: Normally, for Music majors, MUS 2202.03, MUS 2351.03

***MUS 3353.03A or B: Chamber Music Literature.** A study in depth of chamber music from the Eighteenth century to contemporary schools.

Instructor: Staff
Format: Lecture 3 Hours
Prerequisite: MUS 2202.03, 2351.03

***MUS 3355.03A or B: The Piano and its Literature.** A study in depth of the evolution of the piano and its repertoire from the Eighteenth century to the contemporary.

Instructor: L. Stodola
Format: Lecture 3 Hours
Prerequisites: MUS 2351.03 and permission of the Department

MUS 3361.03A: History of Dance. The class will explore the development of dance from the Basse dances of the Middle Ages, through the birth of ballet to the dances of today; it will include an introduction to dance notation as well as the

practical and theoretical aspects of historical dance.

SIGNATURE REQUIRED

Instructor: P. Richards
 Format: Lecture 2 hours
 Cross-listing: LEIS 3157.03

MUS 3362.03A: Music in Canada to 1950. An historical survey of music in Canada to 1950: the socio-economic factors essential to the successful transplantation and growth of European musical culture in Canada; indigenous Canadian music and nationalism in Canadian composition; Canadian composers from the Colonial era to 1950; experience in Research skills through the preparation of a study paper on an historical or contemporary topic.

Instructor: W.H. Kemp
 Format: Lecture 2 Hours; individual tutorial

Prerequisite: Permission of the Department

***MUS 3363.03B: Music in Canada since 1950.** The development of musical life in Canada from the end of World War II until the present day; special emphasis on contemporary Canadian composers and an analytical study of their work.

SIGNATURE REQUIRED
 Instructor: W.H. Kemp
 Format: Lecture 2 hrs; individual tutorial
 Prerequisite: Permission of the Department

***MUS 3364.03B: Women in Canadian Music.** An historical review of the contribution to the growth of music in Canada by women composers, performers, and educators; the life and works of major 20th Century Canadian women composers Violet Archer, Norma Beecroft, Jean Coulthard and Barbara Pentland; a survey of the younger generation of contemporary Canadian women composers.

Instructor: W.H. Kemp
 Format: Lecture 2 Hours
 Prerequisite: Permission of the Department

***MUS 3370.03R: Performance Practice.** The principles of performance practice in 18th and 19th-century music will be discussed in the context of treatises, contemporary accounts, manuscripts and early editions. Areas to be covered include instruments, ornamentation, dance-related music, and problems of interpreting expression markings.

SIGNATURE REQUIRED
 Instructor: D. Schroeder
 Format: Seminar 2 hours
 Prerequisites: MUS 1350.03, MUS 1351.03, MUS 2350.03, MUS 2351.03

MUS 4364.03A or R/MUS 4366.03B or R: Topics in Music. These are intensive studies of selected topics announced annually.

SIGNATURE REQUIRED
 Instructor: Staff
 Format: Seminar 2-3 hours
 Prerequisites: MUS 1350.03, MUS 1351.03, MUS 2350.03, MUS 2351.03

MUS 4365.03 A or R/MUS 4367.03B or R: Topics in Music History. These are intensive studies of selected topics announced annually.

SIGNATURE REQUIRED
 Instructor: Staff
 Format: Seminar 2-3 hours
 Prerequisites: MUS 1350.03, MUS 1351.03, MUS 2350.03, MUS 2351.03

MUS 4368.03A/4369.03B: Special Studies. Individually directed research and writing under the supervision of an appropriate member of the Department.

SIGNATURE REQUIRED
 Instructor: Staff
 Prerequisites: MUS 2350.03, MUS 2351.03, MUS 3350.03 and MUS 3351.03

***MUS 4370.03R: The Organ and its Literature.** The historical development of the organ, and the interrelationship between organ construction and repertoire from the Renaissance to the present day.

SIGNATURE REQUIRED
 Instructor: D. MacDonald
 Format: Lecture 3 Hours
 Prerequisite: Permission of the Department

MUS 4399.03R: Area Graduation Requirement (Thesis)

Theory and Related Skills

MUS 1001.03A: Materials of Music. An introduction to University music studies for prospective music majors recommended by audition to foundational level classes in music: also open to non-majors. A knowledge of music reading and rudiments is presumed. Extensive work in rudiments applied to all aspects of music learning; the phenomenon of the tonic-melodic, harmonic and formal; modes, pentatonic scale formation, dissonances, 2-part writing to encompass these; non-tonal formations; acoustics. Note: 1. auditioned students will be advised to take a year of private studies if their preparedness falls below the introductory level; 2. non-majors taking MUS 1001.03 as an elective are not required to enrol in the aural/keyboards labs.

Instructor: T. Zonneveld
 Format: Lecture 2 hours, lab: aural skills 1 hr, keyboard skills 1 hr

MUS 1002.03B: Introductory Music Theory. Also open to non-majors. Rhythm and phrase structures, "musica ficta" and elementary modulation in two- and three-part writing. Comparison of tonality, atonality, modality, and chromatic tonality, exploration of chord building triadic and otherwise, simple (bar) chording; elementary diatonic harmony previewing the start of MUS 1201.03; four-part writing as an immediate transition to MUS 1202.03. Note: non-majors taking MUS 1002.03 as an elective are not required to enrol in the aural/keyboards labs.

Instructor: T. Zonneveld

Format: Lecture 2 hours, lab: aural skills 1 hr, keyboard skills, 1 hr
Prerequisite: MUS 1001.03

MUS 1201.03A: Music Theory I. A survey of musical phenomena in general, subsequently of tonal music in particular. The material in this survey is immediately applied to two- and three-part writing, stressing both the harmonic and the contrapuntal dimensions.

SIGNATURE REQUIRED

Instructor: A. Ferenc
Format: Lecture 3 hours
Prerequisites: Permission of the Department, plus Royal Conservatory of Toronto Grade II Theory equivalent or MUS 1001.03/MUS 1002.03
Co-requisites: MUS 1270.03, MUS 1271.03

MUS 1202.03B: Music Theory II. A concentration upon a complete grounding in the traditional four-part writing skills, culminating in the study of the dominant seventh and elementary modulation.

SIGNATURE REQUIRED

Instructor: A. Ferenc
Format: Lecture 3 hours
Prerequisites: MUS 1201.03 or permission of the Department
Co-requisites: MUS 1270.03, MUS 1271.03

MUS 1270.03R: Aural Perception I. A class designed to correlate with MUS 1201.03A and MUS 1202.03B. Melodic, harmonic, rhythmic, textural and stylistic factors are visualized, performed and dictated systematically. Lab work in ear-training and sight-singing is done three times per week. Each student is a member of a small working section.

SIGNATURE REQUIRED

Instructor: A. Ferenc
Format: Lab 3 hours
Prerequisite: Permission of the Department; MUS 1001.03/1002.03 or equivalent
Co-requisites: MUS 1201.03 & MUS 1202.03, MUS 1271.03

MUS 1271.03R: Keyboard Skills I. The development of basic skills in sight reading, score reading and harmonized accompaniment at the keyboard.

SIGNATURE REQUIRED

Instructor: E. Pralick
Format: Lab 2 hours
Prerequisite: Permission of Department; MUS 0071.00 or equivalent

MUS 2201.03A: Music Theory III. A continuation of Theory II, covering the study of altered chords, modulation to all closely related keys, and the relationship of harmony to melody, phrasing, rhythm, meter and performance issues. Emphasis is placed on concepts of functional tonality by means of written exercises in four-part harmony and analysis of 18th and 19th century music.

SIGNATURE REQUIRED

Instructor: D. Farrell
Format: Lecture 3 hours
Prerequisites: MUS 1202.03, MUS 1270.03, MUS 1271.03
Co-requisites: MUS 2270.03, MUS 2271.03

MUS 2202.03B: Music Theory IV. The study of chromatic harmony and complex modulation. Exercises may include some texture other than four-part choral style, and analysis includes forms such as binary, ternary, sonata, rondo and variation.

SIGNATURE REQUIRED

Instructor: D. Farrell
Format: Lecture 3 hours
Prerequisites: MUS 2201.03
Co-requisites: MUS 2270.03, MUS 2271.03

MUS 2270.03R: Aural Perception II. This class provides further practice in melodic and harmonic dictation and sight-singing; it correlates with MUS 2201.03 and 2202.03. A special component deals with solmization skills in sight reading.

SIGNATURE REQUIRED

Instructor: staff
Format: Lab 2 hours
Prerequisites: MUS 1201.03 & MUS 1202.03, MUS 1270.03, MUS 1271.03
Co-requisites: MUS 2201.03, MUS 2202.03, MUS 2271.03

MUS 2271.03R: Keyboard Skills II. A continuation of MUS 1271.03.

SIGNATURE REQUIRED

Instructor: L. Hoffman; D. MacDonald
Format: Lab 2 hours
Prerequisites: MUS 1201.03 & MUS 1202.03, MUS 1270.03, MUS 1271.03
Co-requisites: MUS 2201.03, MUS 2202.03, MUS 2270.03

***MUS 3270.03R: Aural Perception III.** Advanced sight-singing and dictation. Singing music of all periods on solfa syllables and letter names with emphasis on contemporary music. Dictation of modulating excerpts in four-part chorales. Chromaticism, modality, whole-tones and contemporary music are studied along with musical examples of more rhythmic complexity. Also included: singing and dictation of atonal compositions, advanced chords, sing and play exercises.

Instructor: P. Ferron
Format: Lab 2 hours
Prerequisites: MUS 2202.03, MUS 2270.03, MUS 2271.03

MUS 3280.03R: Counterpoint. The development of skills in polyphonic architecture in two- and three-voice 16th century contrapuntal style using canonic techniques. An introduction to 18th century counterpoint: inventions, canons, and fugue expositions, etc.

SIGNATURE REQUIRED

Instructor: D. Farrell
Format: Lecture 2 hours

Prerequisite: MUS 2202.03

MUS 3281.03R: Form and Analysis I. Analytic study of the form and context of selected late eighteenth and nineteenth century compositions in various styles and idiom.

SIGNATURE REQUIRED

Instructor: A. Ferenc

Format: Lecture 2 hours

Prerequisites: MUS 2202.06, 2350.06, 2351.06

MUS 3282.03R: Orchestration. A survey of the development of the orchestra and the orchestral instruments with an introduction to acoustics. Technique in the deployment of instrumental combinations is emphasized through practical exercises in scoring for a medium-sized orchestra common in the 20th century.

SIGNATURE REQUIRED

Instructor: E. Fralick

Format: Lecture 2 hours

Prerequisite: MUS 2202.03

MUS 4280.03R: Advanced Harmony and Counterpoint. The application of acquired harmonic and contrapuntal technique to various instrumental and vocal textures and forms; chorale prelude and fugue.

SIGNATURE REQUIRED

Instructor: L. Hoffman

Format: Lecture 2 hours

Prerequisites: MUS 2202.03, MUS 3280.03 and 3281.03

MUS 4281.03R: Form and Analysis II. Analytic study of the form and content of selected twentieth century compositions in various styles and idioms.

SIGNATURE REQUIRED

Instructor: A. Ferenc

Format: Lecture 2 hours

Prerequisites: MUS 2202.03, MUS 2350.03, MUS 2351.03, MUS 3280.03 and 3281.03

Composition

MUS 2287.06R: Electronic and Experimental Music. Introduction to the experimental Sound Studio. Recording, mixing, and tape manipulation techniques; analysis and composition of tape music; voltage control concepts, synthesizer theory and practice. Composition and live performance with electronics; group improvisation with both studio and personal resources. Design and execution of live performance situations which may include verbal, visual and other theatrical elements.

SIGNATURE REQUIRED

Instructor: S. Naylor

Format: Lab 3 hours

Prerequisite: Interview with Instructor

MUS 3210.06R/MUS 4210.06R: Composition I and II. Particular works are analyzed to serve as a springboard for original composition by the student. Students' works are evaluated in small

group discussions and in individual tutorial sessions.

SIGNATURE REQUIRED

Instructor: D. Farrell

Prerequisites: Permission of the Department, an interview with the instructor, and the submission of a folio of original compositions for assessment by the composition faculty.

***MUS 4271.03R: Basso Continuo, Service Playing and Accompaniment.** This class is designed to teach elementary principles of basso continuo and realization of figured bass as well as the practical study of the role of the organ in worship. Students will gain experience in continuo playing through ensemble participation. Topics for study in service playing include solo and anthem accompaniment, hymn playing, and examination of various forms of service music.

SIGNATURE REQUIRED

Instructor: D. MacDonald

Format: Lab 2 hours

Prerequisite: Departmental consent and an interview with the instructor

MUS 4282.03A: Choral Arranging. See MUS 4482.03, in Music Education later in this section.

Instructor: D. Farrell

Format: Lecture 2 hours

MUS 4299.03R: Area Graduation Requirement (Composition)

Performance

Note: The various levels of applied study indicate the year of study in the Department and are not intended solely as an indication of relative standard. Term gradings are based upon progress as well as upon the actual performing standard displayed in the jury examination.

Classes offered in all band and orchestral instruments, guitar and lute, piano, organ, harpichord, recorder, voice. Normally all students receive a one hour weekly individual lesson in their major performance idiom. In addition to the one-hour lesson, and appropriate to the idiom, group instruction in technique and repertoire may be a required part of all sequences of Applied Skills classes.

Applied Skills classes are designated as follows:

- MUS 1101.06, MUS 2101.06, MUS 3101.06, MUS 4101.06: Voice I, II, III, IV
- MUS 1102.06, MUS 2102.06, MUS 3102.06, MUS 4102.06: Guitar I, II, III, IV
- MUS 1103.06, MUS 2103.06, MUS 3103.06, MUS 4103.06: Piano I, II, III, IV
- MUS 1104.06, MUS 2104.06, MUS 3104.06, MUS 4104.06: Organ I, II, III, IV
- MUS 1105.06, MUS 2105.06, MUS 3105.06, MUS 4105.06: Violin I, II, III, IV
- MUS 1106.06, MUS 2106.06, MUS 3106.06, MUS 4106.06: Viola I, II, III, IV

MUS 1107.06, MUS 2107.06, MUS 3107.06, MUS 4107.06: Cello I, II, III, IV
MUS 1108.06, MUS 2108.06, MUS 3108.06, MUS 4108.06: Double Bass I, II, III, IV
MUS 1109.06, MUS 2109.06, MUS 3109.06, MUS 4109.06: Flute I, II, III, IV
MUS 1110.06, MUS 2110.06, MUS 3110.06, MUS 4110.06: Oboe I, II, III, IV
MUS 1111.06, MUS 2111.06, MUS 3111.06, MUS 4111.06: Clarinet I, II, III, IV
MUS 1112.06, MUS 2112.06, MUS 3112.06, MUS 4112.06: Bassoon I, II, III, IV
MUS 1113.06, MUS 2113.06, MUS 3113.06, MUS 4113.06: Saxophone I, II, III, IV
MUS 1114.06, MUS 2114.06, MUS 3114.06, MUS 4114.06: French Horn I, II, III, IV
MUS 1115.06, MUS 2115.06, MUS 3115.06, MUS 4115.06: Trumpet I, II, III, IV
MUS 1116.06, MUS 2116.06, MUS 3116.06, MUS 4116.06: Trombone I, II, III, IV
MUS 1117.06, MUS 2117.06, MUS 3117.06, MUS 4117.06: Tuba I, II, III, IV
MUS 1118.06, MUS 2118.06, MUS 3118.06, MUS 4118.06: Percussion I, II, III, IV
MUS 1119.06, MUS 2119.06, MUS 3119.06, MUS 4119.06: Lute I, II, III, IV
MUS 1120.06, MUS 2120.06, MUS 3120.06, MUS 4120.06: Harpsichord I, II, III, IV
MUS 1121.06, MUS 2121.06, MUS 3121.06, MUS 4121.06: Recorder I, II, III, IV

MUS 4150.06R: Advanced Applied Skill. By special permission of the Department a student may enrol in a fifth year of an applied skill, subject to enrolment quotas and budget.

MUS 1100.06R: Foundational Applied Skills. By special recommendation some music majors may be advised by the Auditioning Committee to begin individual lessons at a level prerequisite to 1000-level Applied Skills classes.

MUS 3160.03A: Conducting. SIGNATURE REQUIRED

Instructor: P. Djokic
Format: Lab 2 hours
Prerequisites: MUS 2202.03, MUS 2270.03, MUS 2271.03

MUS 3161.03B: Choral Techniques. Study of the distinctive features of conducting choral ensembles with emphasis on rehearsal technique, score preparation, interpretation and group methods of building vocal tone. Practical experience in conducting.

SIGNATURE REQUIRED

Instructor: W.H. Kemp
Format: Lab 2 hours
Prerequisites: MUS 2202.03, MUS 2270.03, MUS 2271.03, MUS 3160.03

MUS 4198.03R: Church Music Internship. This class is restricted to students in the Fourth Year of the BMus Organ and Church Music Programme. Under the guidance of the liturgical and musical staff of the Atlantic School of Theology, students will prepare and perform Services pertaining to the principal church

denominations. In the second term, students will be assigned to a minimum of three representative city churches, for observation and practice of the Service, supervised by the Department in collaboration with the city church musicians and clergy participating in the programme.

Instructor: D. MacDonald, Staff Coordinator
Prerequisite: Permission of the Department
Restriction: Restricted to 4th year BMus Organ and Church Music students.

MUS 3199.03A or R: Recital. Required of all third year Bachelor of Music students whose concentration is in Performance.

MUS 4199.03A or R: Area Graduation Requirement (Recital).

Unconcentrated BMUS

MUS 4599.03R: Graduation Requirement, Unconcentrated. Students in the Unconcentrated B.Mus. Program must receive Departmental approval to fulfil their graduation requirements with one of the following: (1) a single-topic thesis (2) two essays (on different topics) (3) a half recital and an essay (4) a lecture-recital (with supporting documentation).
Instructor: Staff

Music Education

Prerequisites for all classes: permission of the Department, and an interview with the designated member of the Music Education faculty.

Core Classes

MUS 3400.06R: Elementary Classroom Teaching Methods. An introduction to the development of a music programme at the elementary level. Emphasis is on how to teach song materials, movement and creativity, reading and writing skills and what to listen for in music. The educational philosophies of Kodaly and Orff are examined in some detail. Solmization, hand signs, rhythm names and body co-ordination are some of the skills to be developed.

SIGNATURE REQUIRED

Instructor: P. Perron
Format: Lecture 3 hours
Cross-listing: EDUC 4890.06

MUS 3470.03R: Elementary Classroom Field Experience. Students must spend a minimum of 100 hours in various elementary schools during the school year practice teaching (75%) and observing master teachers (25%). This consists of one morning per week during the university year and a three week period in April-May.

SIGNATURE REQUIRED

Instructor: P. Perron

MUS 3471.03R: Solfa Pedagogy in the Classroom. An in-depth study of the theoretical and practical aspects of solfa and related ear

training skills pertaining to students taking music education. the melodic, rhythmic and harmonic features of aural perception will be studied through sight-singing and dictation emphasizing the pedagogical aspects of the moveable do system, hand-sign singing, singing on absolute letter names, and the use of rhythm names and stick notation.

SIGNATURE REQUIRED

Instructor: P. Perron
 Format: Lab 2 hours
 Prerequisites: MUS 2270.03
 Co-requisite: MUS 3400.06 and/or MUS 4400.03

MUS 3480.03R: Band Instruments. A practical introduction to the principal band instruments. Group instruction is offered in flute, oboe or bassoon, saxophone, trumpet or French horn, trombone and tuba, and percussion. This class normally is restricted to students majoring in wind, brass or percussion instruments.

SIGNATURE REQUIRED

Instructor: J. Stern, Staff Coordinator
 Format: Lab 2 hours

MUS 3481.03R: String Instruments. A practical introduction in group lessons to the instruments of the string orchestra. This class normally is restricted to students majoring in a string instrument.

SIGNATURE REQUIRED

Instructor: N. Babineau, Staff Coordinator
 Format: Lab 2 hours

MUS 4400.03R: Secondary Classroom Teaching Methods. An introduction to the development of a music programme at the secondary level. Emphasis is on how to teach a general music class exploring the use of song materials, music theory, movement and creativity and listening skills.

SIGNATURE REQUIRED

Instructor: P. Perron
 Format: Lecture 1½ hours
 Cross-listing: EDUC 4891.03

MUS 4470.03R: Secondary Classroom Field Experience. Students must spend a minimum of 100 hours in various secondary school classrooms during the school year practice teaching (75%) and observing master teachers (25%). This consists of one morning per week during the university year and a three week period in April-May.

SIGNATURE REQUIRED

Instructor: P. Perron

***MUS 4480.03R: Band Instruments II.** A continuation of MUS 3480.03.

Instructor: J. Stern, Staff Coordinator
 Format: Lab 2 hours

MUS 4481.03R: Band Methods and Field Experience. A survey of the literature for band, band methods for schools and purchase and maintenance of band instruments; supervised band leadership practice in the school setting.

SIGNATURE REQUIRED

Instructor: T. Hill
 Format: Lab 2 hours
 Prerequisite: MUS 3460.03

MUS 4483.03R: String Methods and Field Experience. A survey of literature and string methods for schools and purchase and maintenance of string instruments; supervised string teaching practice in the school setting.

SIGNATURE REQUIRED

Instructor: N. Babineau
 Format: Lab 2 hours
 Prerequisites: MUS 3481.03 or permission

Electives

MUS 4462.03A: Guitar in the Classroom.

Introductory guitar instruction including vocal/choral accompanying methods and techniques for the school classroom setting, tablature reading and finger-style playing, development of skills in a variety of accompaniment and rhythmic figurations. Practical applications will be available in MUS 3470.03R/4470.03R.

SIGNATURE REQUIRED

Instructor: C. van Feggelen
 Format: Lab 2 hours

MUS 4471.03A, B, or R: Field Projects. Under supervision, students design a project that results in an in-depth study of the theoretical and practical aspects of a particular area of music education. The project entails library research as well as working with specialists in the field.

MUS 4482.03A: Choral Arranging. Arranging for school choral ensembles.

Instructor: D. Farrell
 Format: Lecture 2 hours
 Prerequisite: MUS 3282.03

***MUS 4490.03A or B: Orff Method and Practice, Level One, Basic.** An introduction to Carl Orff's Music for Children designed for the elementary school classroom teacher and music specialists; the material is also suitable for those using music in the pre-school, recreational or studio setting. Emphasis is on how to apply the four principal elements of the Orff approach - speech, movement, rhythm and melody - to the teaching of basic musical concepts (beat, rhythm, simple metre, pentatonic scale, fundamental Bourdon, phrasing, form and notation). Creative procedures and teaching methods are explored using song, Orff instruments and the recorder.

SIGNATURE REQUIRED

Instructor: Staff
 Format: Lecture and Practicum
 Prerequisite: Permission of the Department

***MUS 4491.03A or B: Orff Method and Practice Level Two, Intermediate.** A continuation of MUS 4490.03 at the intermediate level. Emphasis is on the acquisition and practice of procedures and methods of the Orff approach using increasingly developed musical materials and constructs (complete scale repertoire, melodic

formulation, harmonic relationships and chordal formations, cross-rhythms and irregular metres, rondo and antiphony). Advanced training is given in instrumental technique (recorder, hand drum, mallets, etc.). The Orff approach is applied to ways of musically interpreting and improvising children's speech, recitation, poetry, and drama.

SIGNATURE REQUIRED

Instructor: Staff
Format: Lecture and Practicum
Prerequisite: MUS 4490.03 or a similar class in Basic Orff; an interview with the Department.

Ensembles

Participation in both large and small ensembles is required of all students whose major field of study is music in each of the years of the degree programmes. Details of specific participation requirements are available in the Department of Music.

Membership in the various ensembles is open to the University and the community by audition.

Following is a list of the ensembles sponsored by the Department of Music:

- MUS Dalhousie Chorale (W.H. Kemp):**I. 0151.00, II. 0251.00, III. 0351.00, IV. 0451.00, V. 0551.00, Found. 0051.00
- MUS Dalhousie Chamber Choir (W.H. Kemp):**I. 0152.00, II. 0252.00, III. 0352.00, IV. 0452.00, V. 0552.00, Found. 0052.00
- MUS Dalhousie Symphonic Wind Ensemble (R. MacKay):**I. 0153.00, II. 0253.00, III. 0353.00, IV. 0453.00, V. 0553.00, Found. 0053.00
- MUS Dalhousie Chamber Orchestra (P. Djoidic):**I. 0154.00, II. 0254.00, III. 0354.00, IV. 0454.00, V. 0554.00, Found. 0054.00
- MUS Dalhousie Jazz Ensemble (D. Palmer):**I. 0155.00, II. 0255.00, III. 0355.00, IV. 0455.00, V. 0555.00, Found. 0055.00
- MUS Dalhousie Brass Ensemble (R. MacKay):**I. 0156.00, II. 0256.00, III. 0356.00, IV. 0456.00, V. 0556.00, Found. 0056.00
- MUS Dalhousie Musica Antiqua (Staff):**I. 0157.00, II. 0257.00, III. 0357.00, IV. 0457.00, V. 0557.00, Found. 0057.00
- MUS Dalhousie Percussion Ensemble (J. Faraday):**I. 0158.00, II. 0258.00, III. 0358.00, IV. 0458.00, V. 0558.00, Found. 0058.00
- MUS Dalhousie Opera Workshop (G. Servant):**I. 0159.00, II. 0259.00, III. 0359.00, IV. 0459.00, V. 0559.00, Found. 0059.00
- MUS Guitar Ensemble (C. van Feggelen):**I. 0160.00, II. 0260.00, III. 0360.00, IV. 0460.00, V. 0560.00, Found. 0060.00

MUS Small Ensembles (staff coaches):I. 0161.00, II. 0261.00, III. 0361.00, IV. 0461.00, V. 0561.00, Found. 0061.00

MUS Accompanying:I. 0162.00, II. 0262.00, III. 0362.00, IV. 0462.00, V. 0562.00, Found. 0062.00

MUS Dalhousie Orchestra (by invitation):I. 0163.00, II. 0263.00, III. 0363.00, IV. 0463.00, V. 0563.00, Found. 0063.00

MUS Nova Scotia Youth Orchestra (by invitation, and Department permission):I. 0164.00, II. 0264.00, III. 0364.00, IV. 0464.00, V. 0564.00, Found. 0064.00

MUS New Music Ensemble (staff):I. 0166.00, II. 0266.00, III. 0366.00, IV. 0466.00, V. 0566.00, Found. 0066.00

Programme Advisors

B. Rusak (494-2159)
 S.R. Shaw (494-2047)

Introduction

The last two decades have witnessed the remarkable emergence of a new, interdisciplinary field called Neuroscience which has as its primary goal the understanding of the brain. Neuroscience is a rapidly developing research area which includes all aspects of the structure and function of nervous systems. Neuroscience involves a variety of experimental strategies to understand nervous systems. These include molecular, biochemical, behavioural, anatomical, physiological, and developmental approaches. Although firmly grounded in the natural sciences, the scope of Neuroscience also encompasses fundamentally important philosophical issues, such as the nature of human thought and its mechanism. The programme outlined below represents all of these approaches, with an emphasis on behaviour as the adaptive product of neural activity. Knowledge obtained from research in Neuroscience is applied to a variety of human health problems, including neurological conditions such as those occurring in Alzheimer's disease, Parkinsonism, and a variety of drug- or injury-induced behavioural disorders. Research in Neuroscience is also contributing new information related to the major psychiatric disorders, including affective disorders and the schizophrenias.

The BSc (Honours) Programme

This programme is intended to serve as a preparation for graduate work in neuroscience, biological psychology, medicine, human communication disorders and related fields. Its interdisciplinary nature is reflected in the participation of faculty from several departments in the programme, which is offered through the Department of Psychology. Students interested in the Neuroscience degree programme should consult with B. Rusak in the Department of Psychology early in their undergraduate careers, preferably by the end of their first year of study. Admission is often deferred until the end of the second year, however.

Structure

In the first year of study, students are required to take classes which provide a firm grounding in the physical and biological

sciences. In subsequent years, the programme includes 9 credits in classes drawn from Neuroscience, Psychology and Biology. These include a number of required core classes which emphasize the acquisition and application of laboratory skills. Note that students intending to obtain an Honours degree in Neuroscience may not use Psychology as their minor subject, nor may Psychology Honours students use Neuroscience as a minor subject. It is anticipated, but not required, that Neuroscience Honours students will have Biology as their minor subject. In that case, classes cross-listed with classes in Biology cannot count for credit towards both the Neuroscience programme and the Biology minor.

Students wishing to take Combined Honours in Neuroscience and a second discipline, e.g. Biology, Biochemistry, should consult with a programme advisor. In general, the required classes of the honours programme in Neuroscience will be required of all such students, except PSYO 2000.03. Thus, the minimum programme after year I is NESC 2071.03, NESC 2072.03, one full credit in Biology (BIOL 2020.03 and an extra half credit), NESC 3370.03, 3371.03, 3440.03, one of the listed Neuroscience seminar classes (half credit), and (for those students who take Neuroscience as a major subject of a combined honours programme) NESC 4500.06 (honours thesis).

Departmental Requirements

Classes required in major:

- 2000 level:** NESC 2071.03, 2072.03, PSYO 2000.03, BIOL 2020.03, BIOC 2200.03 or BIOL 2030.03 or BIOL 2001.03 or BIOL 2002.03 or BIOL 2100.03 plus two half credits selected from NESC 2140.03, 2150.03, 2160.03, 2170.03, 2190.03, 2270.03 or 2370.03, PSYO 2160.03, or BIOL 2012.03
- 3000 level:** NESC 3370.03, 3371.03 and 3440.03 plus one and one half credits selected from NESC 3000.06, 3050.06, 3070.06, 3071.06, 3150.03, 3160.06, 3260.03, 3270.03, 3590.03, 3760.03, PSYO 3040.06, 3500.06
- 4000 level:** NESC 4500.06 plus two half classes selected from NESC 4000.03, 4050.03, 4070.03, 4160.03, 4374.03 or 4375.03 plus two half classes at 3000 or 4000 level from the lists above

Other required classes:

BIOL 1000.06, CHEM 1010.06 or 1090.06, MATH 1000.03 and 1010.03 or 1500.03, PSYO 1000.06 or 1010.06 or 1500.06, PHYC 1100.06 or 1300.06.

Recommended: It is recommended that students take Psychology 3500.06 (Statistical Methods) in either their third or fourth year of study.

Notes:

1. In designing the first year of study, students should consider the requirements for a BSc degree as outlined in Section 1 of the Degree Requirements.
2. BIOL 2020.03: Cell Biology and BIOL 3440.03: Neuroanatomy; same as NESC 3440.03) cannot be counted as credits toward completing a minor in Biology.
3. Students are encouraged to consider the following classes as electives. Courses marked with an asterisk are recommended electives in the first or second year of study: BIOC 4301.03: Biochemical Communication; BIOL 3012.03 or BIOC 3200.03: Introduction to Biological Chemistry; BIOL 3013.03/BIOC 3301.03: Intermediary Metabolism; BIOL 3014.03/BIOC 3400.03: Nucleic Acid Biochemistry and Molecular Biology; *CHEM 2400.06: Organic Chemistry; PHIL 3460.03: Mind and Brain; *PHYC 1100.06/1300.06: Introductory Physics.

Classes Offered

NESC 2071.03A: Introduction to Neuroscience.

This class introduces a number of aspects of this field emphasizing analyses which are precise at the neuronal level. A general introduction is provided by the vertebrate visual system, concentrating upon the analysis of visual information in the mammalian visual cortex. This is followed by consideration of muscle spindles and other receptors of the motor nervous system; a brief treatment of the anatomy of the mammalian brain and a more detailed analysis of the cerebellum; the other major components of the motor pathways to the spinal cord; spinal reflexes and the integrative action of neurons.

Format: lecture 3 hrs
Instructor: L.A. Meinerzhagen
Prerequisites: PSYO 1000.06 or 1010.06 or 1500.06 or BIOL 1000.06 and 2020.03 or consent of instructor.

Cross-listing: PSYO 2071.03

NESC 2072.03B: Cellular Neurobiology.

Building on the knowledge of holistic aspects of brain function gained in NESC 2071.03, this class explores the neuronal basis of activity in all nervous systems. Starting with an analysis of the structure of neurons, the function of nerve cells will be explored with respect to the ionic and molecular basis of resting potentials and of electrical activity in nerve cells; synaptic transmission; the release and postsynaptic action of synaptic transmitters; aspects of the neurochemistry of synaptic transmitters and of drug action; and glial cells. Cellular phenomena relevant to neurological dysfunction will be discussed.

Format: lecture 3 hrs
Instructor: S.R. Shaw
Prerequisites: PSYO/NESC 2071.03 or consent of instructor

Cross-listing: PSYO 2072.03

NESC 2140.03A or B: Learning. Traces the experimental study of learning from the turn-of-the-century research of Pavlov and Thorndike to the present. Development of the field of animal learning is described in terms of the ways in which particular conceptions of the learning process have guided experimentation, and have in turn been revised on the basis of the outcomes of that experimentation. Some important concepts discussed are: association, attention, biological constraints on learning, classical conditions, discrimination, expectancies, law of effect, learning-performance distinction, operant conditioning, S-S and S-R bonds, and stimulus control. The value of various approaches is discussed with respect to several goals: (1) providing general principles of learning; (2) understanding the behaviour of particular species; (3) direct application to human problems. Emphasis is on understanding why researchers in animal learning do what they are currently doing (given the goals and the historical context), rather than on learning a number of facts about animal learning.

Format: lecture 3 hours
Instructor: V. LoLordo
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06

Cross-listing: PSYO 2140.03

NESC 2150.03A or B: Perceptual Processes.

Perception deals with the way in which our senses provide us with information about our environment. This class focuses on the process by which sensory experiences are coded, how they are interpreted by the nervous system, and how experience modifies perception.

Format: lecture 3 hours
Instructor: J. McNulty
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06 or BIOL 1000.06

Cross-listing: PSYO 2150.03

NESC 2170.03A or B: Hormones and Behaviour.

An introduction to the endocrinological bases of mammalian social behaviour. Emphasis is on the mechanisms by which the hormones of the hypothalamus, pituitary gland, gonads and adrenal gland control sexual, aggressive and maternal behaviour. Other topics covered are: hormone receptors in the brain; the menstrual cycle and human reproduction; puberty, sex differences in the brain; the pineal gland; neuro-transmitters; pheromones; crowding and social stress.

Format: lecture 3 hours
Instructor: R.E. Brown
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06 or BIOL 1000.06

Cross-listing: PSYO 2170.03

NESC 2190.03A or B: Language and the Brain.

This class is an introduction to the study of languages that are considered as symbolic functions of the human brain. The main topics are the common properties and organizing

principles of languages; the acquisition of languages by children; the brain structures involved in language and the effects of brain damage on language disorders.

Format: lecture 3 hours
Instructor: M. Yoon
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06
Cross-listing: PSYO 2190.03

NESC 2270.03A or B: Human Neuropsychology.

This class explores not only normal but also abnormal brain function, as revealed by the consequences of trauma, disease, and surgical intervention. Aphasia, epilepsy, the role of certain brain chemicals in behaviour, cerebral asymmetry, localization of brain function are examples of topics covered.

Format: lecture 3 hours
Instructor: M. Ozler
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06
Cross-listing: PSYO 2270.03

NESC 2370.03A or B: Drugs and Behaviour. An introduction to behavioural psychopharmacology. The lectures involve basic anatomy, physiology and chemistry of the nervous system. Behavioural effects and underlying mechanisms of various psychoactive drugs will be discussed. Specific topics will cover alcohol, tobacco, amphetamines, cocaine, opiates, hallucinogens, tranquillizers and antipsychotic drugs.

Format: lecture 3 hours
Instructor: S. Nakajima
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06
Cross-listing: PSYO 2370.03

SCIE 3000.06R: Science Fundamentals. See class description in Science, Interdisciplinary section of this calendar.

NESC 3000.06R: Independent Research in Modern Neuroscience. Primarily for students wishing further experience and understanding of neuroscience research. A student in the class chooses a member of staff who serves as an adviser throughout the academic year, and under whose supervision independent research is conducted.

Format: lab 4 hours
Instructor: D.E. Mitchell
Prerequisites: PSYO 2000.03 or NESC 2071.03 and previous or concurrent enrolment in two other 3000-level classes; and the prior consent of the instructor
Cross-listing: PSYO 3000.06

NESC 3050.06R: Perception. This class considers the way in which information about the world is provided by the senses and how we use this information in our behaviour. The material falls into four sections. (1) The methodological and theoretical problems peculiar to the study of sensation and

perception; (2) The transformation of physical stimulus energy into neural energy; (3) The physiological and psychophysical analysis of the sensory systems with particular emphasis on vision; and (4) The development of perception and its relation to the anatomical and physiological development of the sensory pathways. The experimental work has been selected for its importance in the theoretical understanding of perceptual processes and consists of a general introduction to the apparatus and methods used in perceptual research.

Format: lecture 3 hours, lab 2 hours
Instructor: D.E. Mitchell
Prerequisites: PSYO 2000.03 and 2150.03
Cross-listing: PSYO 3050.06

NESC 3070.06R: Behavioural Neuroscience. Behavioural neuroscience concerns itself with the neural mechanisms underlying a variety of behavioural phenomena. Its subject matter includes the neural mechanisms involved in the regulation of motivational systems (feeding, drinking, temperature regulations, sexual behaviour and other reproductive behaviours), the regulation of sleep and waking, motor and sensory system function, learning and other forms of behavioural plasticity, memory and the physiological mechanisms underlying behavioural disorders. Students should be familiar with experimental research methods, and have some background in biological or neural aspects of psychology. This laboratory class requires considerable time commitment by students who want to explore direct involvement in research in this area.

SIGNATURE REQUIRED

Format: lecture 3 hours, lab 2+ hours
Instructor: B. Rusak
Prerequisite: PSYO 2000.03; at least one of: PSYO/NESC 2071.03, 2150.03, 2170.03, 2270.03, 2370.03, and permission of instructor
Cross-listing: PSYO 3070.06

NESC 3071.06R: Behavioural Neuroscience. Students in this class attend the same lectures and write the same examinations as in PSYO/NESC 3070.06, but do not participate in the associated laboratory work, and do not receive credit for a laboratory course toward meeting the departmental laboratory requirement. For a class description, see the entry for PSYO/NESC 3070.06. Students cannot receive credit for both PSYO/NESC 3070.06 and PSYO/NESC 3071.06.

Format: Lecture 3 hours
Instructor: B. Rusak
Prerequisite: PSYO 2000.03; at least one of: PSYO/NESC 2071.03, 2150.03, 2170.03, 2270.03, 2370.03, or permission of instructor
Cross-listing: PSYO 3071.06

NESC 3075.03A or B: Physiological Psychology. In Physiological Psychology we study current

theory and research about the relation between brain function and behaviour. More specifically, the focus is upon the psychological consequences of physiological events in the nervous system. Among the topics included might be selections concerning brain processes underlying: hunger and thirst, sexuality and reproduction, arousal and attention, memory systems, movement and motor control, tactile senses and pain perception, states of consciousness, emotion and stress, speech and language.

Format: lecture 3 hours

Instructor: M. Ozler

Prerequisite: PSYO 2000.03 and one of PSYO 2071.03, 2270.03, 2370.03

Cross-listing: PSYO 3075.03

NESC 3150.03A or B: Introduction to Hearing and Speech Mechanisms. Hearing and speech are two behavioural capacities of fundamental importance to normal human communication.

This lecture class is designed to provide a basic understanding of the peripheral and central neural mechanisms of hearing, and of some psychological and physiological processes involved in speech production and speech perception. The class is intended for those students anticipating more advanced training in neural mechanisms of hearing, speech science, human communication disorders and/or audiology. The class emphasizes normal hearing and speech mechanisms, but will address pathology where evidence from pathological subjects is pertinent to understanding normal function. Class content: introductory acoustics; structure and function of the outer and middle ears; structure and function of the cochlea; hair cell physiology and sensory transduction; coding of simple and complex sounds in the auditory nerve; sound localization mechanisms as an example of the correspondence between the physical properties of the stimulus, neural sensitivity and behavioural performance; theories of speech production; theories of speech perception; acoustic and linguistic contributions to speech perception.

Format: lecture 3 hours

Instructor: D.P. Phillips

Prerequisites: PSYO 2150.03 or 3050.03; NESC 2071.03, 2072.03 strongly recommended

Cross-listing: PSYO 3150.03

NESC 3160.06R: Ethology. Ethology is the biological study of behaviour. It uses psychology, genetics, physiology, ecology and evolutionary theory to solve problems in the development, function and causation of behaviour across all animal species. These diverse approaches to the study of animal behaviour are presented in naturalistic and experimental situations. In laboratory exercises qualitative and quantitative records of behaviour are made in the field and in the laboratory. There are several group research projects (first term) and an individual research project (second term).

Format: lecture 2 hours, lab 2 hours

Instructor: J. Fentress

Prerequisites: PSYO 2160.03 or BIOL 1000.06

Cross-listing: PSYO 3160.06

***NESC 3260.03A or B: Biological Rhythms.** The temporal structure of animal and human physiology is governed by both homeostatic mechanisms and by a system of biological clocks. These internal clocks generate rhythms with various periods in virtually every physiological and behavioural system. Daily (circadian) clocks are the most prominent; they generate rhythms in sleep, reproduction, intellectual performance and many other functions. This class examines the nature of these biological clocks and their physiological substrates, with an emphasis on the neural mechanisms involved in rhythm generation and synchronization in a variety of species. It also explores the hypothesized role of circadian mechanisms in sleep disorders, jet lag and depression.

Format: lecture 3 hours

Instructor: B. Rusak

Prerequisites: PSYO 1000.06 or 1010.06 or 1500.06 or BIOL 1000.06

Cross-listing: PSYO 3260.03

NESC 3270.03A or B: Developmental Neuroscience. This class introduces students who are already familiar with the structural organization and functional properties of the mature nervous system to aspects of neural development, especially at the cellular level. The first part of the class will link the early events of neural development to general embryonic development. Cell determination, pattern regulation, cell production, cell-lineage analysis, and neuronal differentiation, movement and migration will be discussed. Special attention will then be given to later developmental events such as neuronal growth cones, cell death, growth factors, neuron-neuron interactions and synapse formation using invertebrate and vertebrate examples.

Format: lecture 3 hours

Instructor: M. Yoon

Prerequisites: NESC 2071.03 and 2072.03

Cross-listing: PSYO 3270.03

NESC 3370.03A or B: Neuroscience Laboratory I. The two classes NESC 3370.03 and 3371.03 (see next entry) are coordinated and provide introduction to several techniques used in contemporary neuroscience. The following information applies to these classes as a pair, between which the exact distribution of experimental approaches may vary from year to year according to availability of equipment and material, and numbers enrolled. Usually, electrical recording methods from several types of preparation are emphasized in 3370.03, while detailed neuroanatomically-based approaches are favoured in 3371.03. Regularly scheduled labs with students working in groups of 2 or 3 under supervision are supplemented by occasional lectures, in both classes. Students become familiar with electrical recording and

stimulation methods and related techniques, currently using both sensory and motor system preparations. Neuroanatomical analysis is introduced by way of techniques usually selected from the following: Golgi impregnation of neurones, immunocytochemistry, dye-tracing of connections, and electronmicroscopy of the visual system or central nervous system. Lab II (3371.03) usually runs in the second term for selected, advanced students, building upon foundations laid in 3370.03 but using different practical approaches.

Format: lab 3 hours
Instructor: S.R. Shaw
Prerequisites: NESC 2071.03 and 2072.03, or 3270.03, and consent of instructor
Cross-listing: PSYO 3370.03

NESC 3371.03A or B: Neuroscience Laboratory II. For a description of this neuroscience lab class, see the entry under 3370.03 above; usually, 3371.03 is coordinated closely with 3370.03.

Format: lab 3 hours
Instructor: L.A. Meinerzhagen
Prerequisites: NESC 3370.03 and instructor's consent
Cross-listing: PSYO 3371.03

NESC 3440.03B: Neuroanatomy. A survey of the histology, development and organization of the central nervous systems, with emphasis on the developmental and structural relationships between spinal cord and brainstem. The organization of cranial nerves and microanatomy of the brain stem is discussed. The organization of sensory and motor systems is presented in detail. The cerebral cortex, cerebellum, basal ganglia, and limbic system are also covered.

Format: lecture and lab 3 hours
Instructor: D.A. Hopkins (Anatomy and Neurobiology Dept.)
Prerequisites: BIOL 2020.03
Cross-listing: ANAT 2100.03, BIOL 3440.03

NESC 3590.03A or B: Perceptual Development. This class examines the development of visual and auditory capacities in human infants and in a variety of animal species with sensory systems like our own. The neural events that underlie these developmental changes in the various sensory pathways will be discussed. The class will also grapple with the old question of how early sensory experience influences our perceptual abilities.

Format: lecture 3 hours
Instructor: D. Mitchell
Prerequisite: PSYO 2000.03
Cross-listing: PSYO 3590.03

***NESC 3760.03A or B: Neuroethology.** Neuroethology is the study of the neural bases of animal behaviour. The class will emphasize cellular approaches toward understanding the integrative mechanisms of the nervous systems which underlie complex behaviours. Feature detectors, command systems and motor programme generators will be examined in

depth using examples from vertebrate preparations. Cellular bases of higher order functions such as motivation, learning and choice will be explored if time permits.

Format: lecture 2 hours
Instructor: Staff
Prerequisites: PSYO 2000.03 or 2160.03 or NESC 2071.03 or 2072.03 or BIOL 2020.03 or instructor's consent
Cross-listing: PSYO 3760.03

NESC 4000.03A or B: Senior Seminar.

Format: lecture 2 hours
Instructor: Staff
Cross-listing: PSYO 4000.03

***NESC 4050.03A or B: Topics in Perception.** This class explores the neural basis of perception, emphasizing the visual, tactile and auditory senses.

Format: lecture 2 hours
Instructor: Staff
Cross-listing: PSYO 4050.03

NESC 4070.03B: Neuroscience Seminar.

Format: lecture 2 hours
Instructor: Staff
Prerequisites: PSYO 2071.03 and 2072.03 and 3270.03 or consent of the instructor.
Cross-listing: PSYO 4070.03, ANAT 5070.03

NESC 4160.03A or B: Topics in Behavioural Biology.

Format: 2 hours
Instructor: Staff
Cross-listing: PSYO 4160.03

NESC 4374.03A: Introduction to Pharmacology I. This introductory class is designed to acquaint students with the actions of drugs on physiological and biochemical functions in mammals including man. The interaction of drugs with the central and peripheral nervous systems will be covered. Factors which affect the blood levels of drugs (absorption, distribution, metabolism and elimination) will be considered, together with the mechanisms by which drugs act and their potential uses.

Format: lecture 3 hours
Instructors: H.A. Robertson, J. Blay (Co-ordinator)
Prerequisite: permission of the co-ordinator
Cross-listing: BIOL 4404.03, BIOC 4804.03, PHAR 5406.03

NESC 4375.03B: Introduction to Pharmacology II. This class is intended to cover specific aspects of drug action in greater depth than 4371.03 and to provide students with practical expertise in pharmacology. The laboratory component consists of prescribed exercises using varied techniques.

Format: lecture 1 hours, lab 3 hours
Instructors: H. Robertson, J. Blay (Co-ordinator)
Prerequisite: Permission of Co-ordinator

Cross-listing: BIOL 4405.03, BIOC 4405.03,
PHAR 5407.03

NESC 4500.06R: Honours Thesis. The purpose is to acquaint the student with a current problem and the related research procedures in experimental neuroscience. Each student works with a staff member who advises the student about research in the major area of interest and closely supervises an original research project carried out by the student. The students meet together occasionally throughout the year to describe their proposed research and their progress. Each student must submit a formal written report of the completed research. The final grade is based upon the originality and skill displayed in executing the project, with emphasis upon the submitted report and an oral presentation.

Instructor: J.W. Clark and Staff

Restriction: Restricted to honours students
in their graduating year

Cross-listing: PSYO 4500.06

School of Nursing

Location: Forrest Building, 5869

Academic Staff 1995-96

Director

J. Black, BN (Dal), MEd (Media) (Boston), DipPH (Dal), EdD (UBC), RN

Professors

B. Keddy, BScN (MSVU), MA, PhD (Dal), RN
J.A. Ritchie, BN (UNB), MN, PhD (UPitts), RN
M. Stewart, BScN (McM), MN (Dal), RN, PhD (Dal)

Associate Professors

M. Arklie, BN (Dal), MS (Boston), PhD (Texas-Austin), RN
J. Black, BN (Dal), MEd(Media) (Boston), DipPH (Dal), Ed D (UBC), RN
B.L. Downe-Wamboldt, BN, MEd, Dip.PH (Dal), PhD (U Texas-Austin) RN
M.L. Ellerton, BScN (Ott), MN (McG), RN
H.D. Fraser-Davey, BScN (MSVU), DipTSN (Dal) MSc (A)(McG), PhD (Dal), RN
F. Gregor, BN, MN, PhD (Dal), RN
G. Hart, BN (McG), MSN (UBC), RN
M.J. Horrocks, BSN (UBC), MS (PsychN), MS (CHN), DCMH (UCSF), AED (Tor)
J.M. Hughes, BN (Dal), MS (Boston), RN
E. Lambie, BSc (Home Ec) (Acad), MPH (Nutrition) (Mich), PDT, FCDA
L.L. Mensah, BN (Dal), MA, DPHN (Dal), SCM (England), RN
C.L. Scullie, BScN (UBC), MSc (Ed) (Dal), RN
D. Sommerfeld, BScN (MSVU), MSN (UBC), RN
D.L. Tamlyn, BN (McG), MEd (Ott), PhD (Dal), RN
J. Wong, BScN (MSVU), MScN (Western), RN
S. Wong, BScN (MSVU), MScN (Western), RN

Assistant Professors

C. Barrett, BN (Memorial), MScN (Western), RN
D.M. Meagher-Stewart, BScN (MSVU), MS (McM), RN
P. Melanson, BScN (Ott), MN (Dal), RN
N.J. Murphy, BN (Dal), MScN (UBC), RN
F. Myrick, BN (Mem), MScN (Western), RN
G. Tomblin Murphy, BN, MN (Dal), RN

Lecturers

K. Cockersell, DipOP&CHN (Dal), BPharm (UBradford), RN
R. Martin-Misener, DipOP&CHN, BScN (Dal), RN
R.A. Pogoda, CertCHN (Man), RN
S. Schuster, DipOP & CHN, BScN (Windsor), RN
K. Stares, DipOP & CHN, BN (Dal), RN
A.R. Vuick, BN (Dal), RN

C.F. Wight Moffatt, BN (MUN), MS (Boston), RN

Senior Instructors - Skills Laboratory

E. Bethune, BScN (MSVU), RN
B. Bleasdale, BN (Dal), RN

Honorary Appointments

K. Allen, BN (Dal), MSc(N) (Tor), RN
M. Amirault, BA (Acadia), MN (Dal), RN
M. Bacon, BA (York), MEd (Tor), RN
M. Jean Bayer, BN (Dal), MEd (Acadia), PhD (Dal)
R. Blois, BScN (MSVU), CHE, RN
D. Bowes-Coward, BN (Dal), RN
J. Braunstein, BScN (Cornell), MPH (Minn)
M. Brennan, BScN (St.FX), MN (Dal), RN
L. Butler, BScN (MSVU), MN (Dal), RN
S. Christie, BN, MN (Dal), RN
S. Cobbett, BN (Dal), DipGerontology (MSVU), RN
S. Daniels, BScN (MSVU), MN (Dal), RN
D. Dorney, BScN (MSVU), RN
R. Enghardt, BN, MN (Dal), RN
S. Foster, BN (Mem), MN (Dal), RN
J. Francis, BN (Dal), RN
J. Hamilton, BN (Dal), MSN (McGill), RN
L. Hamilton, BScN (Philippines), MN (Dal), RN
J. Hartigan-Rogers, BN (Dal), RN

D. Sheppard-LeMoine, BN (Dal), RN
T. Pillatre, MHSA (Dal), RN
C. Thibeault, BScN (MSVU), MN (Mem), RN
J. Thompson, BN (UNB), MN (Dal), RN
P. Thorpe, BN, MA (Dal), RN
C. Turner, BN (Dal), MN (Dal), RN
D. Vandewater, BN, MN (Dal), RN
A. Ward, BScN (Ott), RN
D. Whitehorn, BSc (Mich), MScN (Yale), PhD (Wash)
L. Wittstock, BScN (St.FX), RN
E. Wright, SNNEB (Scotland)
H. Young, BN (Mem), MScN (Western)
D. Younker, BN (UNB), MN (Western), RN
J. Zevenhuizen, BN, MN (Dal), RN

Cross Appointments

K. Mann, BScN (Dal), MSc (Dal), PhD (Dal), Associate Dean, Faculty of Medicine
J. Singleton, BA (Waterloo), MS (Penn State), PhD (Maryland), Associate Professor, School of Recreation, Physical & Health Education

Preceptors

Many nurses, health-care professionals and persons in other disciplines give of their time and expertise to assist in the education of the nursing students in all years of all programmes. These valuable preceptors are too numerous to list, but are a vital part of the programme. Names can be obtained by contacting the School of Nursing.

Introduction

The School of Nursing was organized in 1949. In 1961 the School of Nursing became a constituent part of the newly established Faculty of Health Professions. Currently the School offers an undergraduate programme for basic and Post RN students, a Masters of Nursing programme and a 15-month programme leading to a diploma in Outpost and Community Health Nursing.

School of Nursing Regulations

1. All students are required to observe the University Regulations and Academic Regulations as described in this calendar.
2. As an academic requirement, students are assessed in each year on their aptitude and fitness for the profession of Nursing. A student who, in the judgement of the faculty, fails to attain a satisfactory standard in this assessment may be required to withdraw from the School.
3. Students in the Baccalaureate Degree Programmes are responsible for (a) the purchase of uniforms including shoes and a watch with a sweep hand or a digital watch with seconds display, (b) cost of accommodation and travel while on a clinical experience. Additional expenses are incurred by the student in the Basic Baccalaureate Degree Programmes for field experience, books, first aid course, CPR course, graduation pin, equipment, and nurse registration examinations and Recommended and/or Required Immunizations and/or testing. Each student must also purchase name tags and crests from the University.
4. Also because of enrollment limits on class size, all part-time students who wish to change their status to full-time must present this request in writing to the Associate Director of Undergraduate Student Affairs by March 1.
5. Adviser-Advisee System. Each student is assigned to a faculty member from the academic advising committee to help them plan their academic programme and to discuss academic progress or difficulties.

6. Students wishing to appeal a decision based on faculty regulations or decisions should follow the School Appeal Procedure.

School of Nursing Appeal Procedure

It is recognized that both students and faculty have rights and responsibilities and further, that as the University is a complex system, a student may experience difficulty in determining how to express dissatisfaction. This document is provided as a guideline for students and faculty in solving dissatisfactions.

Definitions

Appeal: A request for alteration of a decision which is based on School or Faculty regulations (academic matters).

The University has established a system which allows the student the opportunity to appeal an academic decision made by faculty. This appeal can be heard at three different levels within the University: (1) School, (2) Faculty, and (3) Senate. Appeals are heard in the School by the Committee on Studies, at the Faculty level by the Faculty Committee on Studies, and at the Senate level by the Senate Academic Appeals Committee.

Procedure for Undergraduate Appeals

Undergraduate appeals in the School will be heard by the Committee on Studies. Appeals may be made to the Committee on Studies on academic matters. The procedures for Undergraduate Appeals will be revised commencing in 1995-96. Please contact the School of Nursing for further information.

Bachelor of Science (Nursing) for Basic Students

1. Degree Requirements

A student must obtain a minimum cumulative GPA of 2.00 throughout the entire undergraduate programme. A student must accumulate a minimum of 126 credit hours and have successfully completed all compulsory classes, as well as the necessary number of elective classes. The degree must be completed within 6 years of commencing nursing classes, although credit will be given for classes that are up to ten years old by the date the degree is completed.

2. Grade Point Average Standards (GPA)

The grade point average system is described in the Academic Regulations. School regulations relating to GPA apply to students whose initial

registration in the School was in the Fall of 1990 or earlier. Consult calendar of the appropriate year.

3. Grades

A letter grade system is used to evaluate performance. The following grades are considered passing: A+, A, A-, B+, B, B-, C+, C, C-, D, and F except in nursing classes where a student must attain a C in both theory and clinical/laboratory components. FM, F, and INC are failing grades. ILL and W are considered neutral.

4. Requirements for Promotion

Besides meeting the GPA requirements students must meet the following requirements for promotion:

Year I to Year II: A student must pass all first year level classes in order to advance to second year nursing classes.

Year II to Year III: A student must pass all second year nursing classes, Microbiology 1100.03 and Statistics 1060.03.

Year III to Year IV: A student must pass all third year nursing classes with the exception of NURS 3210.04.

5. Normal Workload

The programme consists of 126 credit hours (21 credits); these are divided to give the following yearly normal workload:

Year I: a normal workload is considered 30 credit hours (5 credits)

Year II: a normal workload is considered 36 credit hours (6 credits)

Year III: a normal workload is considered 30 credit hours (5 credits)

Year I: a normal workload is considered 30 credit hours (5 credits).

Bachelor of Science (Nursing) for Registered Nurses

1. Degree Requirements

A student must obtain a minimum cumulative grade point average of 2.00 throughout the entire undergraduate programme. A student must accumulate a minimum of 78 credit hours and have successfully completed all compulsory classes, as well as the necessary number of elective classes. The degree must be completed within six years of commencing the nursing classes, although credit will be given for classes that are up to ten years old by the date the degree is completed.

2. Other Regulations

Students must submit proof Nurse Registration as an active practicing member in Nova Scotia or their province/country of residence each year they are enrolled in the School of Nursing classes. All other regulations are as outlined in the BScN Basic stream in the University Calendar, including Immunization, and Grades.

3. Normal Workload

The 78 credit hours of study may be completed over three academic years of full-time study with a normal yearly workload as follows: Year 1: 25 credit hours; Year 2: 26 credit hours; Year 3: 27 credit hours.

Bachelor of Science (Nursing) Degree Programmes

The challenges of the health care system have reached a technological and social level such that nurses have recognized the need for university level education in order to practice within that system. The purpose of baccalaureate nursing education is to prepare professional nurses to provide research-based care to clients in a variety of settings. Baccalaureate nursing encompasses promotion of health, prevention of disease and intervention in health and illness problems. Nursing is an art and a science centering on nursing courses. It is complimented by required and support courses in biological sciences, social sciences and humanities. The four year basic degree programme is for students with no previous nursing knowledge and experience. Students who have a diploma in nursing (Post-RN students) are also admitted to the Bachelor of Science (Nursing) programme but have a shorter programme as described later.

Programme Objectives

The graduate of this baccalaureate programme will be prepared to:

1. Use scientific knowledge in the application of the nursing process when caring for clients in different stages of health and illness.
2. Use therapeutic communication in the development of a professional helping relationship with clients.
3. Use critical thinking in nursing.
4. Serve as an advocate to protect the rights, diversity and worth of clients.
5. Use the process and products of research to enhance clinical practice.
6. Collaborate with others in the delivery of health care.
7. Demonstrate leadership in nursing and within the health care delivery system.
8. Use knowledge of the process of change within the political, social and health care systems in the practice of nursing.
9. Assume responsibility and accountability for learning and competency in her/his nursing practice.

Bachelor of Science (Nursing) for Basic Students

The Bachelor of Science (Nursing) degree is a four year programme. Graduates are eligible to write examinations for membership in the Registered Nurses' Association of Nova Scotia.

Immunization

Before commencing studies in first year, students must show proof of current immunization against: tetanus, diphtheria, polio, measles and rubella.

Immunization against Hepatitis B is recommended for all students and is available through Dalhousie Health Services at a cost of \$77 (based on 1994-95 cost).

Evidence of tuberculin testing (mantoux) must also be shown each September. TB testing can be done by the Public Health Nurse or is offered yearly by Dalhousie Health Services. This information must be sent to the Admissions Coordinator, School of Nursing. Students failing to provide this evidence will be withdrawn from clinical areas.

CPR, (BCLS) & Basic First Aid Certification

All students must show proof of CPR and Basic First Aid certification before entering clinical in second year. This proof is to be sent to the Admissions Coordinator, School of Nursing. Taking a cardio-pulmonary resuscitation course and basic first-aid course are the student's responsibilities both in time and cost.

Course of Study

The following is an outline of classes that are normally taken each year.

The curriculum of the School of Nursing is undergoing a revision commencing in 1995/96. Thus, the incoming first year class will receive instruction under the revised curriculum, while the three senior classes will continue under the previous curriculum.

First Year: A proposal for a revised programme is before Senate. Information on classes for 1995-96 will be made available in time for registration.

Second Year: MICR 1100.03; STAT 1060.03; NURS 2010.03, 2020.02, 2200.03, 2030.02, 2040.02, 2210.04, 2220.06 and 9 credit hours of electives chosen from any Faculty. These electives are to be at the 2000 level or above except in the case of a language (French, German, Russian, Spanish) which can be taken at the 1000 level. NURS 2220.06 is a six week clinical nursing class usually starting toward the end of April.

Third Year: NURS 3010.03, 3020.03, 3200.03, 3210.04, 3220.04, 3030.03, 3230.05, 3240.03, 3250.03, Human Sexuality Workshop Part I (non-credit). NURS 3240.03 and 3250.03 are clinical nursing classes of 3 weeks each that normally start towards the end of April.

Fourth Year: NURS 4010.03, N4020.01, 4030.03, 4200.04, 4210.03, 4220.03, 4230.04, one elective in nursing (3), and NURS 4240.06, Human Sexuality Workshop Part II (non-credit). NURS 4240.06 is a 5 week clinical class normally starting toward the latter part of the winter term.

Bachelor of Science (Nursing) for Registered Nurses

The Bachelor of Science (Nursing) for registered nurses consists of 78 credit hours of University study distributed as follows: required non-nursing classes, 33 credit hours; required nursing classes, 36 credit hours; electives, 9 credit hours. Students may complete the programme through either part-time or full-time study. The programme can be completed in two calendar years of full-time study provided resources allow required nursing classes to be offered during the summer session. Otherwise, students without transfer credits can complete the programme in two full-time and one part-time academic years (Sept. - April) of study. Part-time students who wish to change their status to full-time must write their request to the Associate Director of Undergraduate Student Affairs by March 1.

Course of Study

With the help of an academic advisor, each student is able to map out an individual course of study. An individual course of study may be affected by the actual classes given in an academic year as well as in which semester (Fall, Winter, Spring, Summer) they are given. Certain classes may have pre-requisites as noted in the class descriptions. Part-time students are encouraged to complete most of the required non-nursing classes before starting nursing classes. NURS 2230.04 and NURS 2010.02 are pre-requisites for all nursing classes. Non-clinical nursing required or elective classes may be taken concurrently with NURS 2230.04 by special permission of the class professor. Anatomy and Physiology are normally pre-, or co-requisites for NURS 2230.04. The course of study varies considerably when the student applies accepted transfer credits toward the degree programme. Transfer credit regulations are as outlined under the Academic Regulations section of the University Calendar.

The required non-nursing classes are (credit hours in brackets): ANAT 1010.03, PHYL 1010.06, CHEM 1430.06, PSYO 1000.06, SOSA 1000.06, MICR 1100.03, STAT 1060.03. The nine credit hours of electives may be chosen from any

Faculty and are to be at the 2000 level or above except in the case of a language (French, German, Russian, Spanish) which can be taken at the 1000 level.

Required Nursing Classes

- NURS 2010.02: Helping Relationships and Nursing
- NURS 2230.04: Advanced Concepts and Skills of Nursing Practice
- NURS 3020.03: Teaching and Learning and Nursing
- NURS 3030.03: Nursing Research
- NURS 3220.04: or B Family Nursing
- NURS 4010.03: Trends and Issues in Nursing
- NURS 4020.01: Advanced Skills in Helping Relationships and Interviewing
- NURS 4030.03: Leadership in Nursing Practice
- NURS 4200.04: Community Health Nursing: Theory and Practice I
- NURS 4230.04: Community Health Nursing: Theory and Practice II
- Human Sexuality Workshop
- Nursing Electives (5)

The 5 credit hours of nursing electives are chosen from:

- NURS 2020.02: Growth and Development and Nursing
- NURS 2040.02: Nutrition and Nursing or
- NURS 4800.03: Interdisciplinary Course in Human Nutrition
- NURS 3010.02: Pathophysiology and Nursing

OR

Nursing and Interdisciplinary electives as offered each year.

Please consult the class instructor prior to enrolling in the following clinical nursing electives:

- NURS 3200.03: Nursing the Adult/Elderly I
- NURS 3210.04: Nursing Parents and Newborn
- NURS 3230.05: Nursing the Adult/Elderly II
- NURS 3250.03: Clinical Nursing I
- NURS 4210.03: Nursing the Child/Adolescent
- NURS 4220.03: Mental Health and Psychiatric Nursing

Please refer to specific class descriptions.

Post RN students are not required to take NURS 1010.03, 2030.02, 2200.03, 2210.04, 2220.06, 3240.03, and 4240.06.

Class Descriptions

Required Non-nursing classes

Class descriptions for CHEM 1430.06, ANAT 1010.03, PHYL 1010.06, PSYO 1000.06, SOSA 1000.06, MICR 1100.03, STAT 1060.03 and potential electives can be found in the calendar under specific departments/faculties.

Required Nursing Classes

NURS 2010.02A: Helping Relationships and Nursing. Introduces helping relationship theory involving the nurse and individual clients. The

dynamics of therapeutic communication are addressed with an opportunity in a laboratory setting for the development of skills necessary to facilitate client exploration and understanding.

Format: 1 lecture and 2 laboratory hours/week

Prerequisite: NURS 1010.03, ANAT 1010.03, PHYL 1010.06, CHEM 1430.06, PSYO 1000.06, SOSA 1000.06 for Basic students; NURS 2230.04 co- or pre-requisite for Post RN students. THIS COURSE, PLUS NURS 2230.04, IS PRE-REQUISITE TO ALL OTHER REQUIRED NURSING COURSES FOR POST RNS.

NURS 2020.02A: Growth and Development and Nursing. Examines concepts and theories of normal growth and development of the individual from conception to old age. Roles and developmental stages are analyzed in regards to clients' attaining/maintaining an optimal level of health.

Format: 2 lecture hours/week

Prerequisite: NURS 1010.03, ANAT 1010.03, PHYL 1010.06, CHEM 1430.06, PSYO 1000.06, SOSA 1000.06, or with permission of the professor for Basic students; none for Post RN students.

NURS 2030.02B: Pharmacology and Nursing. Application of general principles of pharmacology to nursing practice. Content areas will include drug actions on body systems and drug actions in specific conditions, as well as potential side effects. Principles guiding the nurse in the administration of drugs are studied.

Format: 2 lecture hours/week or 1 lecture and 2 laboratory hours/week

Prerequisite: NURS 1010.03, ANAT 1010.03, PHYL 1010.06, CHEM 1430.06, PSYO 1000.06, SOSA 1000.06, NURS 2010.02, 2020.02, 2200.03 for Basic students.

NURS 2040.02B: Nutrition and Nursing.

Introduces the science of nutrition as it applies to nursing. Content is organized around nutritional needs during developmental stages and in situations of health and illness. Environmental factors which influence clients' nutritional status are examined with emphasis on nursing interventions which promote an optimal level of health. Credit is not awarded for both NURS 2040.02 and NURS 4800.03.

Format: 2 lecture hours/week

Prerequisite: NURS 1010.03, ANAT 1010.03, PHYL 1010.06, CHEM 1430.06, PSYO 1000.06, SOSA 1000.06, or with permission of the professor for Basic students; none for Post RN students.

NURS 2200.03A: Concepts and Skills of Nursing Practice I. Focuses on the role of the nurse in helping the individual meet basic needs and attain/maintain an optimal level of health. Nursing process is introduced and the assessment phase is covered in depth.

Format: 2 lecture and 2 laboratory hours/week

Prerequisite: NURS 1010.03, ANAT 1010.03, PHYL 1010.06, CHEM 1430.06, PSYO 1000.06, SOSA 1000.06 for Basic students.

NURS 2210.04B: Concepts and Skills of Nursing Practice II. Focuses on the role of the nurse in helping the individual who is experiencing an altered ability to meet basic needs and attain/maintain an optimal level of health. Builds and extends directly on the content and theories discussed in NURS 2200.03. Assessment of diminished ability to meet basic needs caused by illness and/or hospitalization is also covered.

Format: 2 lecture and 4 laboratory hours/week or 2 lecture and 6 clinical hours/week

Prerequisites: NURS 1010.03, ANAT 1010.03, PHYL 1010.06, CHEM 1430.06, PSYO 1000.06, SOSA 1000.06, NURS 2010.02, 2020.02, 2200.03 for Basic students.

NURS 2220.06B: Clinical Nursing I (Summer Session). A clinical nursing experience focusing on the care of the individual with a health problem, who has an altered ability to meet basic needs and attain/maintain an optimal level of health. Gives the students an opportunity to practice and consolidate concepts, theories and skills learned in previous classes.

Format: 40 clinical hours/week x 6 weeks

Prerequisites: NURS 2010.02, 2020.02, 2030.02, 2040.02, 2200.03, 2210.04, MICR 1100.03 for Basic students.

NURS 2230.04A: Advanced Concepts and Skills of Nursing Practice. Focuses on the development and the role of nursing as a profession through an examination of nursing and other theories relevant to nursing practice. Laboratory and clinical experience provides opportunity to practice comprehensive health assessment skills and study the relationship between theory and practice.

Format: 2 lecture, 2 laboratory and 3 clinical hours/week

Prerequisites: Registration as a nurse and ANAT 1010.03 and PHYL 1010.06 co- or pre-requisite, or with instructor's consent. **THIS COURSE, PLUS NURS 2010.02, IS PRE-REQUISITE TO ALL OTHER REQUIRED NURSING COURSES FOR POST RNS.**

NURS 3010.02A: Pathophysiology and Nursing. Focuses on pathophysiological alterations from normal health. Manifestations of both acute and chronic illnesses are explored in terms of structural and functional changes from normal physiological functions.

Format: 2 lecture hours/week

Prerequisite: NURS 2010.02, 2020.02, 2030.02, 2040.02, 2200.03, 2210.04, 2220.06; MICR 1100.03; STAT 1060.03; or with permission of the professor for Basic students; NURS 2230.04 and 2010.02, or with the instructor's consent for Post RN students.

NURS 3020.03A: Teaching and Learning and Nursing. Focuses on the role of the nurse as an educator. Principles and theories of teaching and learning are addressed to help clients acquire knowledge, skills and attitudes that enable them to attain/maintain an optimal level of health.

Format: 2 lecture hours/week

Prerequisite: NURS 2010.02, 2020.02, 2030.02, 2040.02, 2200.03, 2210.04, 2220.06; MICR 1100.03; STAT 1060.03; or with permission of the professor for Basic students; NURS 2230.04 and 2010.02, or with the instructor's consent for Post RN students.

NURS 3030.03B: Nursing Research. Focuses on the application of the research process to nursing. Content areas include the logic and thought processes basic to research, research methodology, measurement techniques, ethical and legal implications of nursing research and analysis of the growing body of research based nursing knowledge.

Format: 2 lecture and 2 tutorial hours/week.

Prerequisite: NURS 2010.02, 2020.02, 2030.02, 2040.02, 2200.03, 2210.04, 2220.06; MICR 1100.03; STAT 1060.03; or with permission of the professor for Basic students; NURS 2230.04 and 2010.02, STAT 1060.03, or with the instructor's consent for Post RN students.

NURS 3200.03A: Nursing the Adult/Elderly with a Health Problem: Theory and Practice. Focuses on family-centred nursing management of adult and elderly clients with short-term acute health problems. Nursing and other relevant theories are applied to the nursing process in the care of individuals. Clinical experiences are mainly on short term surgical units.

Format: 1 lecture and 6 clinical hours/week

Prerequisite: NURS 2010.02, 2020.02, 2030.02, 2040.02, 2200.03, 2210.04, 2220.06, MICR 1100.03, STAT

1060.03 for Basic students;
NURS 2230.04 and 2010.02 for
Post RN students.

NURS 3210.04A or B: Nursing the Parents and Newborn: Theory and Practice. Examines the physiological, psychological and sociological determinants of the childbearing experience and the nurse's role with individuals and families in this phase of their development. Clinical experience involves the pre-natal, intra-partal and post-partal periods.

Format: 1 lecture and 6 clinical hours/week

Prerequisite: NURS 2010.02, 2020.02, 2030.02, 2040.02, 2200.03, 2210.04, 2220.06; MICR 1100.03; STAT 1060.03 for Basic students; NURS 2230.04 and 2010.02 for Post RN students.

NURS 3220.04A or B: Family Nursing: Theory and Practice. Students use the nursing process in the care of the family unit. Examines nursing, cultural, sociological and psychological theories and concepts and their relationships to the development of nursing skills necessary for the provision of care to the family unit.

Format: 2 lecture and 6 clinical hours/week; or 2 lecture hours/week, 2 laboratory hours/week and 3 clinical hours/week

Prerequisite: Successful completion of 2nd year for Basic students; NURS 2230.04 and 2010.02 for Post RN's

NURS 3230.05B: Nursing the Adult/Elderly with a Health Problem: Theory and Practice. Focuses on family-centred nursing management of adult and elderly clients with chronic health problems, of a medical nature. Emphasis is placed on theoretically based nursing strategies aimed at helping clients live with a chronic health problem.

Format: 2 lecture and 9 clinical hours/week

Prerequisite: NURS 3010.02, 3020.03, 3200.03 for Basic students; NURS 2230.04 and 2010.02 for Post RN students.

NURS 3240.03B: Clinical Nursing II (Summer Session). Focuses on nursing care of ill adult/elderly clients with problems requiring medical/surgical interventions.

Format: 40 clinical hours/week x 3 weeks

Prerequisite: NURS 3010.02, 3020.03, 3030.03, 3200.03, 3210.04, 3220.04, and 3230.05 for Basic students.

NURS 3250.03B: Clinical Nursing III (Summer Session). Focuses on nursing care of clients (individuals, families and aggregates) at various levels of health and illness. The experience offers the student an opportunity to promote health, prevent illness and provide care for the ill and

facilitate rehabilitation in community settings. Clinical experiences are with formal health care agencies. Students are required to provide their own transportation and accommodations.

Format: 40 clinical hours/week x 3 weeks

Prerequisite: NURS 3010.02, 3020.03, 3030.03, 3200.03, 3210.04, 3220.04, 3230.05, and 3240.03 for Basic students; NURS 2230.04, 2010.02, and 3220.04 for Post RN students.

NURS 4010.03B: Trends and Issues in Nursing. Provides the learner with opportunities to develop skills in analyzing contemporary issues in nursing and health care delivery systems that have impact on the profession of nursing. Students consider historical, present and future perspectives of specific issues in order to work toward resolution of issues.

Format: 2 lecture hours/week

Prerequisite: NURS 4030.03, 4200.04, NURS 4210.03 or 4220.03A, or with permission of the professor for Basic students; NURS 2230.04 and 2010.02 for Post RN students.

NURS 4020.01A or B: Advanced Skills in Helping Relationships and Interviewing. An advanced course in helping relationship theory involving a client population of individuals, families, and groups in a variety of clinical settings. Communication strategies for problem solving in complex health situations are addressed.

Format: 2 laboratory hours/week

Prerequisite: NURS 2010.02, 3010.02, 3020.03, 3030.03, 3200.03, 3210.04, 3220.04, 3230.05, 3240.03, 3250.03, or with permission of the professor for Basic students; NURS 2230.04 and 2010.02 for Post RN students.

NURS 4030.03A: Leadership in Nursing Practice. Focuses on the knowledge, skills and attitudes which facilitate leadership in nursing practice. Introduces theories, concepts and behaviours associated with leadership roles and explores them in relation to nursing.

Format: 2 lecture hours/week

Prerequisite: NURS 3010.02, 3020.03, 3030.03, 3200.03, 3210.04, 3220.04, 3230.05, 3240.03, 3250.03, or with permission of the professor for Basic students; NURS 2230.04 and 2010.02, or with permission of the professor for Post RN students.

NURS 4200.04A: Community Health Nursing: Theory and Practice I. An introduction to nursing and public health practice applied to the promotion and preservation of health, and the prevention of illness in client groups and communities. The philosophical basis, role,

setting and functions of community health nursing are examined. Emphasis is on assessing and planning nursing interventions with communities and groups.

Format: 1 lecture, 1 tutorial and 7 1/2 clinical hours/week
Prerequisite: NURS 3010.02, 3020.03, 3030.03, 3200.03, 3210.04, 3220.04, 3230.05, 3240.03, 3250.03 for Basic students; NURS 2230.04, 2010.02, 3220.04, for post RN students.

NURS 4210.03A or B: Nursing the Child/Adolescent with Health Problems: Theory and Practice. Focuses on a family-centred approach in the application of the nursing process to the care of children/adolescents with a health problem. Theories and concepts which help the student understand the impact of illness and hospitalization on the client are studied.

Format: 1 lecture and 6 clinical hours/week
Prerequisite: NURS 3010.02, 3020.03, 3030.03, 3200.03, 3210.04, 3220.04, 3230.05, 3240.03, 3250.03 for Basic students; NURS 2230.04, 2010.02, or with permission of the professor for Post RN students.

NURS 4220.03A or B: Mental Health and Psychiatric Nursing: Theory and Practice. Focuses on the nurse's role in working with clients (individuals and families) experiencing acute illness, and emotional concerns and disorders. Includes the concepts of mental illness, and psychiatric treatment and rehabilitation. Emphasis is placed on psychiatric nursing theories to promote communication skills.

Format: 1 lecture and 6 clinical hours/week
Prerequisite: NURS 3010.02, 3020.03, 3030.03, 3200.03, 3210.04, 3220.04, 3230.05, 3240.03, 3250.03 for Basic students; NURS 2230.04, 2010.02, or with permission of the professor for Post RN students.

NURS 4230.04B: Community Health Nursing: Theory and Practice II. Builds on the content of Community Health Nursing I with a focus on intervention strategies and evaluation methodology for the practice of community health nursing with client groups and communities. Examines the development of the health care delivery system, its function and the forces affecting its future.

Format: 1 lecture, 1 tutorial and 7 1/2 clinical hours/week
Prerequisite: NURS 4200.04

NURS 4240.06B: Clinical Nursing I. This senior clinical nursing class provides students with an opportunity to consolidate their nursing knowledge and skills with multiple clients as well as practice leadership skills learned in N4030.03A. Students may be able to choose a clinical setting based on their learning needs and special interest.

Format: 40 clinical hours/week x 5 weeks
Prerequisites: NURS 4010.03, 4020.01, 4030.03, 4200.04, 4210.03, 4220.03, 4230.04 for Basic students.

Restriction: Restricted to 4th year Basic students

Human Sexuality Workshop: This is a required 15 hour non-credit workshop designed to provide students with an understanding of matters concerning human sexuality in a forum with members of Nursing, Medicine and Theology. The course is taught in the third and fourth years of the basic degree programme. Post RN students normally take the course during their final year of study.

Format: Consult department

Nursing Elective Classes

Basic students are required to complete 3 credit hours of nursing electives during their final year. Post RN students must complete 5 credit hours of nursing electives during their programme. **NOT ALL NURSING ELECTIVES ARE OFFERED EVERY YEAR.** Please consult the School to ascertain the 1995-96 offerings. When resources allow, the following are offered:

NURS 4310.03B: Advanced Clinical Decision Making in Nursing

NURS 4320.03B: Transcultural Nursing. Cultural factors affecting health, health services, practitioners and nursing care will be studied. Principles and tools of transcultural nursing care will be studied using simulated and real cross-cultural nursing situations.
Format: 3 lecture hours/week

NURS 4330.03A or B: Self-Directed Learning Projects in Nursing. Students may carry out an independent study or project related to the theory or practice of nursing, under the direction of the faculty facilitator. Students will be encouraged to systematically identify, plan, execute and evaluate a learning project in nursing that is relevant to nursing practice.
Format: flexible according to study/project

NURS 4340.03B: Death and Dying: Implications for Nursing and Other Health Professions

NURS 4350.03B: Rehabilitation Concepts Applies to Nursing Chronically Ill and Disabled Adults

NURS 4360.03B: Management: The Process in Health Care Agencies. Focuses on management of resources to achieve goals within health care

agencies and institutions. The agency/institution is viewed as a system within which each manager uses a variety of theory and practice based techniques to establish goals, plan and utilize resources and evaluate outcomes. Emphasis is placed on the day to day use of management strategies, techniques and skills. Relevant theoretical constructs and research will be explained and discussed examining its implications for practice. Current management problems in nursing will be explored. This is a beginner level class in management with emphasis on managing nursing.

Format: Lecture/seminar
Prerequisites: NURS 4030.03, or with instructor's permission

Interdisciplinary Nursing Elective Classes

NURS 4370.03A: Women and Aging. As women grow older the experience of aging is generally more difficult for them than for men. This class will explore the issues related to socio-economic factors that are major determinants of the well-being of aging women. Topics will include; aging as a process; menopause, violence against older women ("granny bashing"), older women and housing; self-image and sexuality; health and the aging woman; and older women and poverty.

Format: lecture/discussion/seminar 2 hours
Prerequisites: SOSA 1000.06, 1100.06, 1200.06, or two courses in Women's Studies
Cross-listing: SOSA 3245.03/5245.03, WOST 3810.03

NURS 4800.03B: Interdisciplinary Course in Human Nutrition. The class is an interdisciplinary study of the basic principles of nutrition needs throughout the life cycle. Physiological, psychological, socio-economic, physical, educational and cultural determinants are explored to explain why the nutritional status of Canadians can vary and how this variation affects the development of chronic disease. Special emphasis is given to community nutrition in the Atlantic Region. Credit is not awarded for both NURS 2040.02 and NURS 4800.03.

Format: 3 lecture hours/week
Prerequisite: BIOL 1000.06 or with permission of the professor
Cross-listing: PHAR 4950.03, PHYT 3090.03, HEED 2250.03

Please Note: Descriptions for the following classes that qualify as nursing electives can be found in the Health Professions Interdisciplinary entry in this calendar.

HLTH 3000.03B: An Interdisciplinary Approach to Health Promotion. See class description in Health Professions, Interdisciplinary section of this calendar.

HLTH 4900.03A: An Interdisciplinary Approach to Gerontology (Social Perspectives). See class description in Health Professions, Interdisciplinary section of this calendar.

HLTH 4910.03B: An Interdisciplinary Approach to Gerontology (Health Perspectives). See class description in Health Professions, Interdisciplinary section of this calendar.

Classes Offered by Other Faculties

Classes offered by other faculties may be found in the calendar of the respective faculties. The following are required classes in the BScN degree.

CHEM 1430.06R: Introductory Chemistry and Biochemistry. See class description in Chemistry section of this calendar.

MICR 1100.03A: Health Science Microbiology. This class is given by the Department of Microbiology of the Faculty of Medicine to meet the needs of the students in the Faculty of Health Professions. Elementary bacteriology and immunology includes a study of the structure and physiology of microorganisms, the ways microorganisms cause disease in man and the ways they affect man's well-being. Laboratory work provides experience in the cultivation, isolation and identification of microorganisms and demonstrates their various activities.

NOTE: Students registering in this class must also register for either a morning or afternoon laboratory session.
Credit Hours: 3
Format: 1 lecture hour, 2 laboratory hours

ANAT 1010.03R: Basic Human Anatomy. See class description in Anatomy section of this calendar.

PHYL 1010.06R: Human Physiology. See class description in the Physiology and Biophysics section of this calendar.

Diploma Programme for Registered Nurses in Outpost and Community Health Nursing

The 15-month programme in Outpost and Community Health Nursing prepares registered nurses for positions in Canadian outpost settings where nurses are the only resident health-care professionals. Instruction during the programme is highly individualized and clinically oriented. One academic year, extending over a period of approximately eight months, is spent at the University. This is followed by a 28-week, University-directed internship located in northern Canada. Students are admitted to the programme in September. A shortened stream beginning in August and in January is offered for nurses with a baccalaureate degree in nursing. Students spend one expanded term

(approx. 16 weeks) at the University followed by a 21 week internship in northern Canada. A diploma in Outpost and Community Health Nursing is awarded at the completion of the programme. Current graduates of the programme, who are admitted to the Dalhousie BScN programme for registered nurses, can complete the BScN programme in approximately 16 months provided resources allow required nursing classes to be offered during the summer session.

Fees and a living allowance are paid by the sponsoring agency to all students. In return, all students are committed to a period of employment within an outpost setting with the sponsoring agency after completion of the programme.

The programme must be completed within 3 years of commencing classes.

Course of Study for Outpost Nursing

First Year: at the University: NURS 0550.03, NURS 0551.03, NURS 0640.03, NURS 0930.03, NURS 0940.03, NURS 0950.03, NURS 0960.03, NURS 4800.03, HEED 1163.03.

Internship: in northern Canada: NURS 0193.06, NURS 0191.06, NURS 0196.06.

Students with baccalaureate degrees in nursing are exempted from NURS 0550.03, NURS 0551.03, NURS 4800.03, NURS 0191.06 and possibly HEED 1163.03. Course descriptions are available from the School of Nursing.

Classes Offered

All Outpost nursing classes (numbered NURS 0550.03 through HEED 1163.03) are open only to students enrolled in the Outpost Nursing Programme.

NURS 0550.03A: Community Health Nursing and Health Education. An introduction to theories, concepts, roles, tools and functions of community/public health nursing. Emphasis is on assessing, planning and evaluating primary health care in collaboration with communities and groups in cross-cultural settings. Principles and theories of teaching and learning are examined with a focus on the nurse as an educator.

Format: Lectures, discussion, group exercises, term papers and presentations. 4 hours/week
Instructor: A. Vukic

NURS 0551.03B: Family Nursing. An introductory class examining theories, concepts and nursing skills necessary for the provision of care to the family unit. Health needs throughout the lifespan are examined and the influences of social and cultural factors explored. Clinical practice includes supervised home visiting to a family in the community. It offers the student an

opportunity to provide nursing care at various levels of health and illness as an individual and a member of the health team.

Format: Lectures, discussion, presentations. 3 hours/week, clinical 2 hours/week
Instructor: A. Vukic

NURS 0640.03A or B: Mental Health Issues. Mental health, as influenced by cultural, environmental, and developmental factors is addressed. Communication, leadership and problem solving skills are fostered through seminar discussion. Crisis theories and resolutions are explored. Emphasis is on cross-cultural community health nursing.

Format: seminars, group exercises, lectures, discussions. 2 hours/week
Instructor: A. Vukic

NURS 0930.03A or B: Clinical Medicine. Common medical problems are addressed in seminars, clinical teaching and guided experience at local hospitals under the direction of Outpost Nursing instructors and University Medical School personnel. Skill in taking histories and performing physical examinations is developed. Concepts related to health promotion, illness prevention and practice management in a remote northern setting are integrated throughout the course. Instruction and supervised practise in basic laboratory procedures is provided by the staff of the provincial pathology laboratory.

Instructors: K. Cockersell and K. Stares

NURS 0940.03A or B: Clinical Obstetrics and Gynaecology. A programme of seminars, clinical teaching, and practical experience is conducted under the direction of Outpost Nursing instructors and University Medical School personnel. This class emphasizes the evaluation and care of the normal obstetrical patient and her family. Attention is given to common gynaecological problems. Supervised clinical experience is provided at the Grace Maternity Hospital. Discussion of common abnormal conditions and their recognition is included. Concepts related to health promotion, illness prevention and practice management in a remote northern setting are integrated throughout the course.

Instructor: K. Stares

NURS 0950.03A or B: Clinical Paediatrics. Common paediatric problems are addressed in seminars, clinical teaching and guided experience at the IWK Children's Hospital under the direction of Outpost Nursing instructors and University Medical School personnel. Clinical placement in the office of a practising paediatrician is arranged. Skill in taking histories and examining children is developed. Consideration is given to normal growth and development and the health supervision of the well child. Concepts related to health

promotion, illness prevention and practice management in a remote northern setting are integrated throughout the course.

Instructor: R. Martin-Misener

NURS 0960.03A or B: Clinical Surgery. This class is designed to prepare the student to care for patients with minor surgical problems and to recognize and provide emergency care for patients with more serious conditions. Students will complete the Basic Trauma Life Support Programme. An introduction to commonly encountered eye problems is included. This class is directed by Outpost Nursing instructors and University Medical School personnel.

Instructor: K. Cockerell

NURS 0191.06A or B: Field Experience in Community Health Nursing. A six week period of supervised field experience in community health nursing is arranged at a northern health centre for outpost nursing students during their internship. It is designed to enable the student to practise, in a northern setting, the community health teaching offered previously in the programme.

NURS 0193.06A or B: Hospital Clinical Practicum. A 14-week period of supervised clinical experience at a small northern hospital is arranged for outpost nursing students during their internship. This experience builds on clinical teaching offered previously in the programme and provides opportunity for students to strengthen clinical skills and judgement in a practice setting. Student experience is directed by the medical staff of the hospital and an Outpost Nursing instructor. Assignment to medical-surgical, obstetrical, paediatric, and ambulatory patients is arranged. Students have opportunity, under supervision, to care for women during labour and to conduct normal deliveries.

NURS 0196.06A or B: Nursing Station Field Experience. A six-week period of supervised field experience at a northern nursing station is arranged for outpost nursing students during their internship. This placement is designed to integrate teaching previously given during the programme and also to provide opportunity for students to become familiar with the types of administrative and supervisory roles which a nurse assumes in this setting. Students have the opportunity to experience challenges relating to living and working within an unfamiliar culture and in a remote area.

HEED 1163.03A: Biostatistics and Epidemiology. See class description in Recreation, Physical and Health Education section of the calendar.

NURS 4800.03: Human Nutrition - Interdisciplinary Course. See class description under this title previously stated in this section.

Graduate Programme

For details of the Master's of Nursing programme, please consult the Faculty of Graduate Studies calendar.

School of Occupational Therapy

Location: Forrest Building, Room 215,
5869 University Avenue,
Halifax, N.S. B3H 3J5

Regional Facilities Currently Participating in the Fieldwork Programme

Practising occupational therapists in the Atlantic region give their time and expertise to a structured practical fieldwork education programme. The following facilities provide fieldwork education for students:

New Brunswick

Bio-Engineering Institute, Fredericton

Campbellton Regional Hospital, Campbellton
Centracare, Saint John

Centre Hospitaliere Restigouche, Campbellton
Chaleur Regional Hospital, Bathurst

Community Mental Health Services, Saint John

Dr. Everett Chalmers Hospital, Fredericton
Family and Community Social Services, Saint
John

Father J. Angus MacDonald Centre, Moncton
Hopital Docteur George L. Dumont, Moncton

Hopital l'Enfant Jesus, Caraquet

Moncton City Hospital, Moncton

New Brunswick Extra-Mural Hospital

Region 7 Hospital Corporation,

Chatham/Newcastle

Saint John Regional Hospital, Saint John

Stan Cassidy Centre for Rehabilitation,
Fredericton

Sussex Health Centre, Sussex

Tobique Valley Hospital Inc., Plaster Rock

Worker's Rehabilitation Centre, Grand Bay

Newfoundland

Bay St. George Senior Citizen's Centre

Children's Rehabilitation Centre, St. John's

Dr. G.B. Cross Memorial Hospital, Clarenville

Health Sciences Centre, St. John's

St. Clare's Mercy Hospital, St. John's

St. John's Home Care Programme

Trinity-Conception Regional Health Board

Trinity-Carbonear General Hospital

Waterford Hospital, St. John's

Western Memorial Hospital, Corner Brook

Nova Scotia

Camp Hill Medical Centre, Halifax

Cape Breton Hospital, Sydney

Eastern Shore Memorial Hospital, Sheet Harbour

Harbourview Hospital Corp, North Sydney

Health Services Association of the South Shore,

Bridgewater and Lunenburg

Izaak Walton Killam Hospital for Children,

Halifax

Northwoodcare Inc., Halifax

Nova Scotia Hospital, Dartmouth

Nova Scotia Rehabilitation Centre, Halifax

South Shore Memorial Hospital, Bridgewater

St. Martha's Hospital, Antigonish

Victoria General Hospital, Halifax

Yarmouth Regional Hospital, Yarmouth

Prince Edward Island

Community and Residential Services

Hillsborough Hospital, Charlottetown

Prince County Hospital, Summerside

Prince Edward Home, Charlottetown

Queen Elizabeth Hospital, Charlottetown

Workers Compensation Board, Charlottetown

Regional History and Mandate

The School of Occupational Therapy was established in 1982 as the only occupational therapy education programme in the Atlantic Region. The School exists in response to strong regional advocacy, particularly since 1958 when

a School was approved in principle by the University Senate. The regional orientation of the School fosters collaborative teaching, research and professional activities linking those at the University with occupational therapy and other service providers, government workers, and citizens in the four Atlantic Provinces.

What is Occupational Therapy?

Occupational therapy is a health profession concerned with restoring optimal occupational function, both physical and mental, in individuals from all age groups, and assisting them to resume a responsible role in the family and in society. "Occupation" refers to all activities in which someone (child or adult) engages, including self care, home and community activities, work-related activities, and social and leisure activities. The occupational therapist evaluates function through an analysis of human performance, relationships and situations. Occupational therapy engages a person in directed experiential learning and problem solving activities which are appropriate to the individual and which have been scientifically selected to accomplish a specific functional goal. The dysfunctional person is taught to set realistic goals. Through occupational therapy, the person is guided in the acquisition of adaptive skills which enable resumption of a productive and satisfying role in society. Occupational therapy services are best delivered in the community within the normal environment of the client, although initial services may be provided within a hospital or rehabilitation setting.

Career Opportunities

Occupational therapy practice is broad in scope and offers a wide range of career opportunities for both men and women as it is directed towards preventing or reducing the effects of occupational dysfunction arising from any cause in any age group. Job opportunities exist for occupational therapists in acute and chronic care hospitals, mental retardation facilities, mental health centres, rehabilitation centres, nursing homes and community service agencies. Career opportunities for occupational therapists in schools, government, industry and correctional services are increasing. Occupational therapists may find careers in administration, education, research or consulting. Normally, graduate education would be required for careers in education and research.

Licence to Practice Occupational Therapy

In some provinces, occupational therapists require a licence to practice. The School of Occupational Therapy has no jurisdiction in

matters relating to licensing. These functions are entirely under the control of the provincial licensing body. Information on provincial licensing regulations may be obtained from: the Nova Scotia Association of Occupational Therapists, Suite 740, 5991 Spring Garden Road, Halifax, Nova Scotia, B3H 1Y6; the New Brunswick Association of Occupational Therapists, c/o Occupational Therapy Services, Stan Cassidy Centre for Rehabilitation, 180 Woodbridge St., Fredericton, New Brunswick, E3B 4R3; the Prince Edward Island Association of Occupational Therapists, PO Box 2227, Charlottetown, P.E.I., C1A 3N3; or the Newfoundland and Labrador Association of Occupational Therapists, PO Box 5423, St. John's, Newfoundland, A1C B1B.

Professional Associations

The Canadian Association of Occupational Therapists represents the professional interests of occupational therapists across Canada at the national level. Membership is encouraged for students and graduates. Information on membership may be obtained from the School or by writing directly to: the Canadian Association of Occupational Therapists, 110 Eglinton Ave. W., 3rd Floor, Toronto, Ontario, M4R 1A3. Internationally, occupational therapy standards of education and practice are set and maintained by the World Federation of Occupational Therapists.

Provincial professional organizations represent the interests of occupational therapists within a province. Further information may be obtained by writing directly to the organization. In the Atlantic region, these are: the Nova Scotia Society of Occupational Therapists, Suite 740, 5991 Spring Garden Road, Halifax, Nova Scotia, B3H 1Y6; the New Brunswick Association of Occupational Therapists, c/o Occupational Therapy Services, Stan Cassidy Centre for Rehabilitation, 180 Woodbridge St., Fredericton, New Brunswick, E3B 4R3; the Prince Edward Island Occupational Therapy Society, PO Box 2248, Charlottetown, Prince Edward Island, C1A 8B9; the Newfoundland & Labrador Association of Occupational Therapists, PO Box 5423, St. John's, Newfoundland, A1C B1B.

School of Occupational Therapy Regulations

All students are required to observe the University and Academic Regulations as described in this calendar.

1. Workload

Students must have their programme approved by their faculty advisor in the School of Occupational Therapy before registration each year. In seeking this approval, students should have determined their eligibility for the proposed classes by having satisfied the

prerequisites prescribed. The elective classes must be at the 2000 level or higher. Electives should be chosen to expand knowledge in an area of special interest of relevance to occupational therapy. Electives must be approved by Director or faculty advisor. Except in special circumstances, a student's workload must not exceed the maximum workload described in Course of Study below. A maximum course load is 36, 35, and 34 credit hours respectively in years II, III, and IV (see Academic Regulation 4.1.3). For the purposes of residency, loan, and scholarship requirements 30 credit hours is considered a full course load in all years.

2. Grade Point Average Requirements

The grade point average system is described in the Academic Regulations, under 19.1. School regulations relating to GPA only apply to students whose initial registration in the School was in the Fall of 1990 or earlier (consult calendar of the appropriate year).

3. Grade Requirements for Academic Classes

Professional classes are all classes with Occupational Therapy numbers. A student must obtain a grade of at least C (GPA 2.00) in each professional class for that class to be counted as a credit for the degree or as a prerequisite for another professional class. Passing grade in all non-professional required classes and electives is D. In grade point average calculations a D counts 1.00 point (see Academic Regulation 19.1.1).

A student who earns a grade of C or better for term work but fails a final exam worth 40% or more may be given a grade of FM and be permitted to write a supplemental examination (Academic Regulation 18.6). In cases, where FM is not permitted, the student must repeat that class to obtain a passing grade.

4. Grade Requirements of Fieldwork Classes

Fieldwork is graded on a Pass/Fail system. A student must obtain a passing grade in each fieldwork placement in order to be eligible to proceed in the programme.

5. Requirements for Promotion

Promotion each year is dependent upon satisfactory completion of fieldwork and achievement of academic requirements. The fieldwork requirement is satisfactory completion of OCCT 2221.00 for promotion to third year, and OCCT 3319.00 & 3321.00 for promotion to fourth year.

6. Degree Requirements

To satisfy requirements for the Degree of Bachelor of Science in Occupational Therapy, a student must:

- accumulate at least 135 credit hours (or the equivalent for a transfer student) including all prescribed classes, with a cumulative GPA of at least 2.00, and
- satisfactorily complete 975 hours of fieldwork experience, additional to credit classes (OCCT 2221.00: 150 hours, OCCT 3319.00: 225 hours, OCCT 3321.00: 300 hours, OCCT 4420.00: 300 hours)

7. Class Changes

Academic Regulation 6 applies to all class changes in Occupational Therapy with the exception of 4000 level B classes (except 4418.00 to which Regulation 4 applies).

The last day for adding all other 4000 level B classes in the School of Occupational Therapy is Friday of the first week following study break (see Schedule of Academic Dates).

The last day for withdrawing from all other 4000 level B classes in the School of Occupational Therapy without academic penalty is Friday of the second week following study break.

8. Degree with Honours Requirements

All classes taken while registered in the School of Occupational Therapy will be included in the GPA calculation to determine honours standing. Honours standing is achieved by students who satisfy degree requirements with a cumulative GPA of 3.00 or higher, have no grade in an advanced class (2000 level and above) less than B- and achieve a minimum grade of A- in OCCT 4421.06 (independent research project).

9. Degree with First Class Honours Requirements

First class honours standing is achieved by students who satisfy degree requirements with a GPA of 3.70 or higher, have no grade in an advanced class (2000 level and above) less than B and achieve a minimum grade of A- in OCCT 4421.06 (independent research project).

10. Required Withdrawal From the Programme

A student is normally required to withdraw from the programme if at the end of the academic year:

- less than 22 credit hours have been accumulated in that year for full time students or less than the number of credit hours in which the student was registered have been accumulated for part-time students or
- having accumulated sufficient credit hours the required cumulative GPA is not attained.

A student who fails a repeated class (academic or fieldwork) is normally required to withdraw from the programme.

11. Appeals

A student wishing to appeal a decision based on School regulations, should in the first instance attempt to resolve the issue with the instructor(s) concerned in academic classes or with the fieldwork coordinator and preceptor in fieldwork classes before proceeding according to School Appeal Procedures, a copy of which may be obtained from the School Office. Briefly, such an appeal should be addressed to the Chairman of the School Committee on Studies and must clearly state the arguments and expectations of the petitioner (see Academic Regulation 26.2).

Programme Objectives

The Bachelor of Science programme in Occupational Therapy at Dalhousie University is designed to prepare generalist occupational therapists to be competent, responsible practitioners. This honours baccalaureate programme has been designed to emphasize the theoretical foundation and scientific principles which form the basis for occupational therapy practice. With this knowledge base, the students are guided in the development of the skills required by entry level occupational therapists through fieldwork experiences integrated with the academic curriculum.

The School of Occupational Therapy at Dalhousie University is a regional school serving the four Atlantic Provinces. Since many practice settings in the Atlantic region are non-traditional in nature, the programme is designed to provide students with opportunities to apply and practice skills in a variety of settings and with a range of clients from different age groups and with different types of occupational dysfunction. With this background, graduates will be prepared to accept the challenge of expanding the occupational therapy services in the Atlantic region.

The educational approach used in the Occupational Therapy programme at Dalhousie University is one which encourages logical thinking, creative problem solving and the application of scientific principles to the occupational therapy clinical reasoning process. The medium of occupational therapy is presented as purposeful activity in its broadest context. Students have an opportunity to familiarize themselves with a wide range of activities and to become adept at analyzing activities for therapeutic use.

The emphasis on the scientific nature of Occupational Therapy practice culminates in the fourth year of the programme in which students are required to complete a research project in conjunction with their final fieldwork placement. This project addresses a research question pertinent to occupational therapy practice in Atlantic Canada.

The Bachelor of Science (Occupational Therapy) programme embraces the educational standards of the Canadian Association of Occupational Therapists (CAOT) and is fully accredited by that body. Graduates are eligible to take the Certification Examination offered by CAOT. Successful completion of this examination is required for membership in CAOT and for licensure to practice in provinces where practice is governed by statute.

Programme

The degree of Bachelor of Science (Occupational Therapy) requires a minimum of four years of University study. The programme of study requires at least one year of general science followed by three years of occupational therapy. Applicants must successfully complete the prescribed first year course of study in the College of Arts and Science at Dalhousie University or the equivalent programme at another recognized university before they can be considered for admission to the School of Occupational Therapy. These requirements must be completed by May in the year of expected admission to the School of Occupational Therapy.

Fieldwork

Fieldwork is the practical component of the educational programme completed in a variety of sites in which students have direct contact with patients/clients with the guidance of a preceptor. It enables students to integrate theoretical knowledge with practice and to demonstrate their knowledge and professional competence in actual practice situations.

All Fieldwork is completed in full-time blocks which are integrated with the academic programme. The block curriculum design permits full use of clinical facilities throughout the Atlantic region and allows students the opportunity of gaining experience in other parts of Canada as well. The second year of the programme has a normal academic schedule as well as four weeks of fieldwork during the summer months. In the third and fourth year respectively, one 6-week block and one 7-week block of full-time fieldwork is included within the second academic term. During the 1237.5 fieldwork hours, each student must gain a balance of experience in addressing problems arising from both physical and psychosocial occupational dysfunction. As far as possible, students are placed to gain experience in at least one specialized programme such as programmes for children or elderly people or programmes in the area of vocational assessment. Students may be assigned to fieldwork placements in occupational therapy programmes in any of the four Atlantic provinces. Normally a student will complete at least two regional placements outside the Halifax/Dartmouth area and one 8-week placement (OCCT 4420.00) outside the Atlantic region for which there is a \$30.00

placement fee. Students are responsible for the placement fee and for travel and living costs associated with fieldwork. Placements will be arranged by the School and will be assigned on the basis of the student's previous fieldwork experience and level of preparation. Student preference is constrained by limited availability of fieldwork placements.

Fieldwork hours are completed in the following pattern, calculated on the basis of a 37.5 hour week:

- 4 weeks following Year 2: (OCCT 2221.00) 150.0 hours in the Atlantic region
 - 6 weeks during Year 3: (OCCT 3319.00) 225.0 hours in the Atlantic region
 - 8 weeks following Year 3: (OCCT 3321.00) 300.0 hours in the Atlantic region
 - 8 weeks following Year 3 or Year 4: (OCCT 4420.00) 300.0 hours outside of the Atlantic region
 - 7 weeks during Year 4: (as part of OCCT 4421.06) 262.5 hours in the Atlantic region
- TOTAL: 33 weeks; 1,237.5 hours**

Course of Study

The prescribed first-year classes are listed in the section describing admission requirements.

Year 2: ANAT 2170.06, 2100.03; PHYL 2030.06; OCCT 2207.03, 2208.03, 2210.02, 2213.03, 2215.03, 2218.04, 2221.00; and STAT 1060.03 (if no previous credit in Statistics).

Year 3: PHYL 3110.03; OCCT 3300.06, 3302.05, 3305.02, 3306.02, 3307.04, 3308.03, 3310.03, 3318.04, 3319.00, 3321.00, and one 3 credit hour elective in psychology or sociology, 2000 level or above.

Year 4: Health Services Administration (HEAS) 4001.03; OCCT 4420.00, 4400.01, 4404.03, 4407.03, 4419.06, 4421.06, 6 credit hours of electives in Occupational Therapy, 6 credit hours of electives chosen from Arts and Science, Administrative Studies, Education, Health Professions, or Medicine, 2000 level or above.

All classes are completed during the normal academic year with the exception of OCCT 2221.00, 3319.00, 3321.00, and 4420.00 which are completed during the summer months (see class descriptions).

Classes Offered

Required Classes

ANAT 2170.06R: Gross Anatomy. See class description in Anatomy section of this calendar.

ANAT 2100.03B: Neuroanatomy. See class description in Anatomy section of this calendar.

STAT 1060.03A: Introductory Statistics for Science and Health Science. See class description in Statistics section of this calendar.

PHYL 2030.06R: Human Physiology. See class description in the Physiology and Biophysics section of this calendar.

OCCT 2207.03A: Occupational Function: Life Span Development. Theories and processes of physical, psychological and social development throughout the life cycle are presented and related to occupational development through the life span. Roles and developmental life tasks are analyzed and discussed with particular reference to facilitation of adaptive occupational function. The course will also focus on the significance of human development to the practice of occupational therapy.

Instructor: TBA

Format: Lecture, 3 hours

Prerequisite: PSYO 1000.06, 1010.06 or 1500.06, SOSA 1000.06, 1050.06, 1100.06 or 1200.06

Restriction: Restricted to Occupational Therapy students.

OCCT 2208.03A: Occupational Therapy: Theory and Process. The theoretical base of occupational therapy practice is addressed through the work of Mosey, Kielhofner and other theorists. Students gain an appreciation of the relationship between theory and practice through client storytelling and experiential activities using a generic human occupation frame of reference.

Instructor: B. O'Shea

Format: client storytelling seminar 3 hours; lab 2 hours

Prerequisite: SOSA 1000.06, 1050.06, 1100.06 or 1200.06, PSYO 1000.06, 1010.06 or 1500.06

Restriction: Restricted to Occupational Therapy students.

OCCT 2210.02R: Kinesiology. The scientific approach to the analysis of human movement is introduced. Mechanical principles governing human motion and functional anatomy are discussed and inter-related to develop an understanding of the factors responsible for normal movement. Techniques of analysis of the physical components of activities using observation skills and motion analysis technology are also presented.

Instructor: TBA

Format: lecture/lab, 2 hours

Corequisite: ANAT 2170.06

Restriction: Restricted to Occupational Therapy students.

OCCT 2213.03B: Occupations - Analysis, Therapeutic Selection and Adaptation. The medium of occupational therapy intervention is occupation, defined in its broadest concept. The role of occupation in accomplishing life tasks, satisfying physical and emotional needs and restoring physical and mental occupational health is explored. Through independent learning modules and directed laboratory experience, students analyze a range of

occupations. Analysis of the physical, cognitive, perceptual and psychosocial demands of an occupation are related to the therapeutic selection and adaptation of occupation to meet client defined goals.

Instructor: Staff
Format: lecture/lab, 4 hours
Prerequisite: OCCT 2208.03
Corequisite: OCCT 2210.02, ANAT 2170.06
Restriction: Restricted to Occupational Therapy students.

OCCT 2215.03B: Occupational Assessment Description and Measurement. The course introduces students, prior to their first fieldwork experience, to the concepts, methods and issues in occupational assessment. Through self-directed learning modules, students analyze and practice qualitative and quantitative approaches for assessing individuals' occupational function within their environment. At an introductory level, students learn to develop occupational descriptions which are "trustworthy" and to complete "reliable", "valid" occupational measurement. Assignments require students to integrate, at a basic level, qualitative and quantitative data collection with knowledge of occupational therapy theory, occupational life span development, anatomy, kinesiology, professional practice, and occupational analysis, selection and adaptation. The ideas and methods introduced here are developed in students' fieldwork education, 3rd year therapeutic procedures courses, and 4th year courses in program design and scientific inquiry.

Instructor: E. Townsend
Format: problem-based seminars/labs/self-directed assignments, 5 hours
Prerequisite: PSYO 1000.06, 1010.06, or 1500.06; SOSA 1000.06, 1050.06, 1100.06 or 1200.06; STAT 1060.03; OCCT 2207.03 and 2208.03
Corequisite: ANAT 2170.06 and 2100.03; PHYL 2030.06; OCCT 2210.02, 2213.03, 2218.04
Restriction: Restricted to Occupational Therapy students.

OCCT 2218.04R: Introduction to Professional Practice. The professional skills and ethics fundamental to the practice of occupational therapy are introduced by means of seminar and practical experience. Both dyadic and group therapeutic interaction are examined using communication skills in a variety of professional relationships. Other practice skills such as professional behaviour, interviewing, and the application of the occupational therapy clinical reasoning process are also taught. Brief field experiences in clinical occupational therapy programmes augment didactic and experiential classroom instruction. These skills are applied during Fieldwork: Level 1.

Instructor: J. Ferguson
Format: seminar/practical, 2 hours

Co-requisite: OCCT 2207.03, OCCT 2208.03
Restriction: Restricted to Occupational Therapy students.

OCCT 2221.00B: Fieldwork I. This initial four-week field experience in an accredited setting in the Atlantic region introduces the student to occupational therapy practice environments. Here, under the on-going direction of a preceptor, students begin to observe and learn professional skills and patterns of behaviour. They practice specific knowledge application and skills with clients in harmony with the stated fieldwork learning objectives.

Co-requisite: all other prescribed second year classes except STAT 1060.03
Restriction: Restricted to Occupational Therapy students.

PHYL 3110.03A: Neurophysiology. The student is provided with the principles of neurophysiology. Current concepts of the organization and function of the mammalian nervous system are surveyed.

Instructor: D. Rasmussen
Format: lecture/tutorial, 5 hours
Prerequisites: PHYL 2030.06, ANAT 2100.03

OCCT 3300.06R: Medical and Surgical Conditions. Physicians and surgeons present the etiology, pathophysiology and medical management of medical and surgical conditions frequently encountered in practice by occupational therapists. Musculoskeletal, neurological, rheumatic, respiratory, cardiac and general medical conditions are covered. Specific management strategies relevant to different age groups are presented. Rehabilitation management of residual dysfunction is discussed in relation to the team role of the occupational therapist.

Instructor: S. Banks, Staff
Format: Lecture
Prerequisites: ANAT 2170.06, 2100.03, PHYL 2030.06; OCCT 2210.02
Corequisite: PHYL 3110.03
Restriction: Restricted to Occupational Therapy students.

OCCT 3302.05R: Mental Disorders. (OCCT 3302.05 replaces OCCT 2201.02 and OCCT 3301.03) This course provides an overview of the field of psychiatry and mental disorders. Students learn about legal and ethical guidelines for psychiatric diagnosis and treatment, and about the classification, epidemiology, multiple causation and assessment of mental disorders. The etiology, symptoms, behaviour, functional problems, treatment, management and prognosis of a variety of mental disorders occurring in persons of all ages including children, adolescents, adults and the elderly are reviewed. The management of mental disorders in those with developmental disabilities and those with chronic mental disorders is discussed. Other management issues such as indications for

individual or group, institutional or community treatment are considered.

Instructor: S. Doble, Staff
Format: Lecture, 3 hours
Prerequisites: PSYO 1000.06, 1010.06 or 1500.06; OCCT 2207.03
Restriction: Restricted to Occupational Therapy students.

OCCT 3305.02B: Therapeutic Procedures - Biomechanical. The principles and techniques of biomechanical analysis are applied to the development of joint protection programmes and programmes to increase joint mobility, muscle strength and endurance in conditions which result in musculoskeletal dysfunction. Mechanical principles are applied to the adaptation of equipment and procedures to achieve maximum restoration of occupational function. Graduated work conditioning programmes are discussed. Biofeedback is presented as an adjunct to therapeutic programmes.

Instructor: TBA
Format: Lecture/Lab 4 hours
Prerequisites: ANAT 2170.06; PHYL 2030.06; OCCT 2207.03, 2208.03, 2210.02, 2213.03, 2215.03, 2218.04
Corequisite: OCCT 3300.06
Restriction: Restricted to Occupational Therapy students.

OCCT 3306.02A: Therapeutic Procedures - Rehabilitative. The theory and principles of rehabilitation are presented and applied to the management of temporary and permanent disability. Evaluation tools used include occupational assessment, vocational and pre-vocational testing and environmental accessibility evaluation. The principle of adaptation applied to occupational performance, equipment, and environment is integrated with the problem solving approach in planning programmes to achieve maximum occupational function at home, at work, at school, and in the community.

Instructor: J. Ferguson
Format: Lecture/Lab, 4 hours
Prerequisites: ANAT 2170.06; PHYL 2030.06; OCCT 2207.03, 2208.03, 2210.02, 2213.03, 2215.03, 2218.04
Corequisites: OCCT 3300.06 and 3302.05
Restriction: Restricted to Occupational Therapy students.

OCCT 3307.04R: Therapeutic Procedures - Psychosocial. This course is designed to increase students' understanding of the psychosocial adaptation problems experienced by those with mental disorders, physical disorders, developmental disabilities, and lifestyle problems. Major psychosocial issues, such as the influences that change, loss of meaning and feelings of incompetence have on individuals' occupational functioning, will be explored. Students will be provided with opportunities to develop the ability to apply

theoretical frames of reference of the practice of psychosocial occupational therapy. The ability to determine the occupational needs of individuals experiencing psychosocial dysfunction, and to apply techniques and strategies to restore, maintain and/or develop occupational functioning will be emphasized. Through the use of case studies, students will learn how to develop and implement individual and group intervention programs in community-based and institutionally-based settings for clients at various stages of the life cycle.

Instructor: TBA
Format: Lecture/lab; 3 hours
Prerequisites: OCCT 2207.03, 2208.03, 2218.04, 2213.03, 2215.03
Co-requisite: OCCT 3302.05
Restriction: Restricted to Occupational Therapy students.

OCCT 3308.03R: Therapeutic Procedures - Neurodevelopmental. Current theories of the neurodevelopmental approach to the remediation of dysfunction resulting from neurological damage are presented. Theoretical constructs are applied to the development of occupational therapy programmes for clients with congenital, neonatal and acquired neurological defects. Evaluation tools and therapeutic strategies appropriate for neurological dysfunction are presented and practised. Among the current theorists discussed are Ayres, Bobath, Brunnstrom and Rood.

Instructor: E. Smits
Format: Lecture, 3 hours
Prerequisite: ANAT 2170.06, 2100.03; PHYL 2030.06; OCCT 2207.03, 2208.03, 2218.04, 2213.03, 2215.03
Co-requisites: PHYL 3110.03, OCCT 3300.06
Restriction: Restricted to Occupational Therapy students.

OCCT 3310.03A: Rehabilitation Technology. This class addresses primarily three areas of rehabilitation technology, namely orthotics, prosthetics and the use of computerized technical aids in occupational therapy. The principles and current theories of orthotic and prosthetic management of upper and lower limb problems are presented along with laboratory experience in design and construction of static and dynamic orthoses. Technical aids used in occupational therapy range from simple therapeutic computer applications to computerized environmental controls and communication aids. Emphasis is on problem analysis and design of simple devices and evaluation and selection of technology to solve occupational problems.

Instructor: TBA
Format: lecture/lab, 6 hours
Prerequisites: ANAT 2170.06; PHYL 2030.06; OCCT 2208.03, 2210.02, 2213.03, 2215.03, 2218.04
Co-requisites: OCCT 3300.06, 3305.02, 3306.02

308 Occupational Therapy

Restriction: Restricted to Occupational Therapy students.

OCCT 3318.04R: Professional Practice. This course expands on the clinical skills studied in OCCT 2220.02 and Fieldwork I to include an in-depth perspective of family dynamics pertinent to occupational therapists and a broad understanding of leadership, co-leadership, group dynamics, programme planning for groups, and analysis of group process.

Instructor: TBA
Format: lecture/practical, 2 hours
Prerequisites: All second year classes
Co-requisites: All third year classes except OCCT 3319.00 and OCCT 3321.00

Restriction: Restricted to Occupational Therapy students.

OCCT 3319.00B: Fieldwork II. This six-week field experience in the Atlantic region progresses the development of students' occupational therapy skills. Students continue to develop skills and patterns of behaviour and begin to develop role functions through modelling on the behaviours of their preceptor. Students progress in developing their professional reasoning skills in the context of client-centred problem solving with on-going coaching and monitoring by the preceptor.

Co-requisites: All third year classes except elective and OCCT 3321.00

Restriction: Restricted to Occupational Therapy students.

OCCT 3321.00B: Fieldwork III. In this eight week regional field experience, students assume partial responsibility for a small caseload with regular coaching by their preceptors. Experience is obtained in applying therapeutic principles to occupational problems. Students continue to develop skills and patterns of behaviour and begin to acquire competence in the role of occupational therapist. Students at this level complete a community project that enables the students to explore the community beyond the practice setting.

Co-requisites: All third year classes except elective

Restriction: Restricted to Occupational Therapy students.

HEAS 4001.03A: Health Services Management. The development and structure of the Canadian Health Care System are presented. The management cycle is taught with an emphasis on effective management of human resources.

Legal and ethical issues are explored in the context of health services management.

Instructor: TBA
Format: lecture

OCCT 4400.01A: Pharmacology. This class covers the effects, side effects, indications and contraindications of major classes of drugs used in selected medical and psychiatric conditions. The issue of compliance is discussed.

Instructor: Staff
Format: Lecture, 1 hour
Prerequisite: PHYL 3110.03, OCCT 3300.06, OCCT 3302.05

Restriction: Restricted to Occupational Therapy students.

OCCT 4404.03A: Occupational Therapy Programme Design and Evaluation. The process of how to design remediation, maintenance, promotion and prevention programmes to meet the occupational performance needs of various target populations is addressed. Students are provided with opportunities to explore how various factors, such as qualities of the setting and professional theoretical models, will influence the design and implementation of a programme. Strategies that one might utilize to enhance the process of developing and implementing programmes are identified. In order to ensure that programmes meet the needs of the target population, students determine how to develop evaluation protocols that will measure the process, impact and outcome of programmes.

Instructor: TBA
Format: lecture/lab; 3 hours
Prerequisites: all third year classes
Restriction: Restricted to Occupational Therapy students.

OCCT 4407.03A: Scientific Inquiry in Occupational Therapy. Basic research methodology and its application to occupational therapy practice are discussed. Emphasis is on programme evaluation and investigations based on scientific principles. Students learn to design clinical recording methods to facilitate analysis of therapy effects. Critical analysis and interpretation of research literature is included.

Instructor: E. Smits
Format: Lecture, 3 hours
Prerequisites: STAT 1060.03, OCCT 3321.00
Restriction: Restricted to Occupational Therapy students.

OCCT 4419.06R: Advanced Professional Practice. This class is designed to develop the leadership potential of student occupational therapists so that they are proactive practitioners in occupational therapy and society. Specifically, students are challenged to develop analyses and action strategies for shaping institutional and community environments. The emphasis is on creating therapeutic and living environments which enable people to identify and develop meaningful patterns of occupation despite disabilities, difficult life transitions, or social disadvantages. Building particularly on OCCT 2218.04 and OCCT 3318.04, student will be guided to integrate previous academic and fieldwork learning on working with individuals, families and groups while exploring their leadership potential as occupational therapy resource persons, advocates, policy and programme developers, educators, consultants and community developers. To promote

leadership, the class emphasizes problem-based and experimental learning.

Instructor: E. Townsend
Format: Lecture/Project; 4 hours
Prerequisites: All third year classes
Restriction: Restricted to Occupational Therapy students.

OCCT 4420.00A or B: Fieldwork IV. Eight weeks are spent in practice under professional direction outside the Atlantic region. Students develop competence in applying theoretical knowledge and clinical skills to identification and definition of client problems, planning and conducting programmes and measuring goal attainment. Under supervision, students assume responsibility for a caseload of approximately 75% of that of an entry level therapist. Opportunities for involvement in community health care programmes are included. This class would normally be completed in the summer preceding the fourth year.

Prerequisite: OCCT 3321.00
Restriction: Restricted to Occupational Therapy students.

OCCT 4421.06R: Independent Study and Advanced Fieldwork. Students complete a scientific study of an approved topic under the direction of an assigned tutor. Topics must be relevant to current occupational therapy practice. Seven weeks of fieldwork experience relevant to the topic of study are used to increase knowledge and experience in the area and allow collection of data pertinent to the study. A seminar presentation and typewritten report.

Instructor: TBA
Prerequisites: STAT 1060.03, all third year classes
Corequisites: OCCT 4404.03, 4407.03, 4419.06
Restriction: Restricted to Occupational Therapy students.

Occupational Therapy Electives

OCCT 4412.03B: Advanced Neurodevelopmental and Sensory Integration Therapy. An in-depth analysis of advanced theories and techniques of neurodevelopmental and sensory integration therapy. Experience in applying these therapeutic procedures to clinical problems is gained in laboratory sessions and through individual field tutoring.

Instructor: E. Smits
Prerequisites: ANAT 2100.03; PHYL 3110.03; OCCT 3308.03 and 3321.00
Restriction: Restricted to Occupational Therapy students.

OCCT 4416.03B: Vocational Rehabilitation. The role of the occupational therapist in vocational rehabilitation is explored. Job analyses, pre-vocational skills exploration and evaluation, job sample design and evaluation, situational assessment and work adjustment programmes are major topics. Work related aptitude testing and career counselling methods are discussed in relation to individuals

experiencing physical, cognitive and emotional dysfunctions. The use of work information indexes and relevant community resources is emphasized.

Instructor: Staff
Prerequisites: OCCT 3305.02, 3306.02, 3321.00
Restriction: Restricted to Occupational Therapy students.

OCCT 4425.03B/4426.03B/4427.03B: Directed Study in Occupational Therapy. In this class students may individually or in small groups explore a particular topic within occupational therapy under the direction of a faculty member. The topic and requirements for the class are jointly decided by the students and the professor involved. An outline of the objectives and evaluation methods for the class must be approved by the Committee on Studies before class work begins. A paper or presentation prepared for this class may not be submitted for credit in any other class.

Instructor: Staff
Prerequisite: Permission of Committee on Studies
Restriction: Restricted to Occupational Therapy students.

HLTH 4900.03A: An Interdisciplinary Approach to Gerontology (Social Perspectives). See class description in Health Professions, Interdisciplinary section of this calendar.

HLTH 4910.03B: An Interdisciplinary Approach to Gerontology (Health Perspectives). See class description in Health Professions, Interdisciplinary section of this calendar.

 D. Wright, BSc (Laurentian), PhD (UBC)

Introduction

Oceanography is an inter-disciplinary science that includes studies of tides and currents, the chemistry of sea water, plants and animals that live in the sea, and ocean bottom sediments and underlying crustal structures. The Atmospheric Science group applies physics, mathematics and other basic sciences to the study of the atmosphere, its weather, and its climate. In addition, they conduct field and laboratory measurement programmes and analyze data from these and other experiments; and as well, model climate-related processes at less than global scale. Career oceanographers are employed in Canada in a few universities, in various federal laboratories that are engaged in both basic research and applied problems which meet a national need, such as fisheries investigations, exploration for offshore mineral resources, and studies of ice in navigable waters, and in a number of private companies interested in marine environmental protection or exploration.

A good background in basic science is a necessary prerequisite to entering the department. Properly prepared undergraduates are permitted to take one or more graduate classes as electives. There are graduate introductory classes which survey the entire field and advanced classes in each of the major specialties - physical, chemical, geological and biological oceanography and atmospheric sciences.

In addition, several undergraduate classes are offered. Classes marked * are not offered every year. Please consult the timetable on registration to determine if this class is offered.

Classes Offered

OCEA 2850.06R: Introduction to Oceanography. A general survey of Oceanography showing how the oceans, which account for more than 70% of the earth's surface, function as a dominant environmental force. Consideration also is given to man's impact on this ecological system. Designed to give a background or feeling for the ocean, what oceanography is, and what oceanographers do. It is not a good "background to science" class, since little feeling will be obtained for scientific techniques which would otherwise be acquired in a laboratory class. Most of the material covered is descriptive rather than

basic, inasmuch as it is impossible in the time allowed and the material covered to also teach the basic required sciences.

Instructors: R.O. Fournier

Format: Lecture 3 hours

Prerequisites: Restricted to second year, or more advanced students

OCEA 2851.03A/2852.03B: Introduction to Oceanography. These classes will cover topics already described under OCEA 2850.06 and are only open to Marine Biology Co-Op students that are unable to take OCEA 2850.06 due to their work term schedules. These students must take both classes as they are mandatory requirements for Marine Biology Honours. The format, instructor and pre-requisites are the same as for OCEA 2850.06.

OCEA 3000.03B: The Atmosphere. The purpose of this class is to provide understanding of the basic physical and chemical processes determining the evolution, behaviour and anthropogenic modification of the atmosphere. Topics include: (a) formation and evolution of the atmosphere, chemical composition, recent anthropogenic changes, greenhouse gases, stratospheric ozone; (b) atmospheric motions, mesoscale and large scale dynamics, general circulation, numerical weather prediction and general circulation models; (c) solar radiation as a source of atmospheric motions, terrestrial radiation, energy balance, scattering and absorption of radiation in the atmosphere, elements of radiative transfer; (d) hydrological cycle, thermodynamics of water vapor, phase transitions, role of aerosols and clouds, precipitation; and (e) climate models, past climate, global change, anthropogenic effects.

Instructor: I. Folkins

Prerequisites: MATH 1000.03/1010.03 or equivalent and PHYC 1000.06 or 1100.06 or equivalent

SCIE 3000.06R: Science Fundamentals. See class description in Science, Interdisciplinary section of this calendar.

OCEA 3170.03A: Physics and Chemistry of the Ocean. This class outlines concepts in physical and chemical oceanography with special emphasis on the ocean's role in the global biogeochemical and physical/climate systems. This class is in two parts. In the first part, topics include: the oceans as a physical system, water properties, basic dynamical concepts, the forces creating oceanic motion, ocean circulation, shelf and coastal processes. In the second part topics include: the oceans as a chemical system, composition of sea water, control of pH and redox potential, nutrient chemistry, trace elements, organic materials, distributions and geochemical cycles.

Instructor:

B. Ruddick, B. Boudreau

Format: Lecture 3 hours

Prerequisites: MATH 1000.03/1010.03, plus first-year chemistry, or equivalent or permission of the instructor.

Restriction: Restricted to third and fourth-year students.

***OCEA 4080.03A or B: Time Series Analysis II.** See class description for STAT 4400.03, in the Statistics section of this calendar.

OCEA 4110.03B: Introduction to Geological Oceanography. This class is intended to give a broad survey of topics in marine geology and geophysics for new students in Oceanography at a graduate level. No previous background in Geology or Geophysics is required. The course content covers recent methods and observations with quantitative applications to an understanding of geophysical and geological processes. Some topics covered in Part 1 are plate tectonics and seismic, heat flow, gravity, and magnetic methods. In Part 2 patterns and processes of sediment transport and deposition are explored. Some laboratory exercises augment the lectures, including a field cruise to Bedford Basin.

Instructor: P. Hill

Format: Lecture 3 hours

Prerequisites: Instructor's consent

Cross-listing: OCEA 5110.03

OCEA 4120.03A: Introductory Physical Oceanography. This class explores the physical forces driving the oceans, and describes the responses of ocean water to these forces. Scales of ocean motion discussed range from currents of oceanic dimensions, like the Gulf Stream, through tides and waves, down to very small-scale random movements of water known as turbulence. The class also includes a brief introduction to practical aspects of instruments and methodology, via a field trip and a laboratory session. This class takes a quantitative approach in which equations describing the fluid motions and phenomena are derived, analyzed, and discussed. Quantitative problem-solving is emphasized in assignments. Those desiring a more qualitative approach are urged to consider OCEA 4170.03.

Instructor: B. Ruddick

Format: Lecture 3 hours

Prerequisites: MATH 1000.03, MATH 1010.03, classic calculus or equivalent, or permission of the instructor.

Restriction: Restricted to third and fourth-year students.

Cross-listing: OCEA 5120.03

OCEA 4130.03A or B: Introductory Chemical Oceanography. This class covers the major and minor constituents of sea water, the controls on its chemical composition, nutrient cycling, gas exchange and the influence of the oceans on atmospheric chemistry. Other topics included are chemical tracers, and radiochemical dating methods, stable isotope studies, chemical speciation and chemical models of sea water.

Instructor: R.M. Moore
Format: Lecture 3 hours, some labs
Prerequisites: Instructor's consent
Cross-listing: OCEA 5130.03

OCEA 4150.03A: Principles of Biological Oceanography. Quantitative descriptions of biological oceanographic processes are used to explore interactions with physical and chemical processes in various oceanic ecosystems. Topics discussed range from factors affecting rates of microalgal photosynthesis to expected response of the ocean ecosystem to global variation in carbon dioxide and climate. Laboratory emphasizes independent, original research.

Instructor: C.M. Boyd
Format: Lecture 2 hours, lab 1 plus hours
Prerequisites: BIOL 2060.03 or equivalent and instructor's consent.

Cross-listing: BIOL 4660.03

***OCEA 4160.03B: Fisheries Oceanography.** Students who cannot demonstrate competence with fundamental statistical analysis will not be permitted to enrol. Familiarity with the fundamentals of population dynamics, ecology, physical oceanography, calculus, statistics, and computerized analysis is ESSENTIAL. The class will focus on the ecology of marine fisheries (including a consideration of significant advances made in freshwater systems) with emphasis on the biotic and abiotic influences on population dynamics and production. Areas to be covered include reproduction, early life history, feeding, growth, metabolism, mortality, and recruitment variability and forecasting. Emphasis will be placed on how hydrological and meteorological process influence the above. Some emphasis will also be placed on population and community ecology as well as fishery management techniques and models. The class will place emphasis on the primary literature, current problems and hypotheses, and fruitful research directions, approaches, and techniques.

Instructor: TBA
Format: Lecture 2 hours, tutorial/lab 1 hour
Prerequisites: BIOL 2060.03; MATH/STAT 1060.03 and/or 1070.03.

Instructor's consent
Cross-listing: BIOL 4369.03B, OCEA 5160.03

OCEA 4210.03A: Time Series Analysis in Oceanography. Time series analysis in both the time and frequency domain is introduced. The course is applied and students are required to develop their own computer programs in the analysis of time series drawn from real problems. Topics to be discussed include the nature of time series, stationarity, auto and cross covariance functions, the Box-Jenkins approach to model identification and fitting, power and cross spectra and the analysis of linear time-invariant relationships between pairs of series.

Instructor: K. Thompson
Format: Lecture 3 hours
Prerequisites: Instructor's consent

Cross-listing: STAT 4390.03/5390.03, OCEA 5210.03

***OCEA 4230.03B: Biology of Phytoplankton.** The role of phytoplankton as primary producers of organic material in the sea, and as agents of biogeochemical transformations, explored in the context of interactions with physical and chemical oceanographic processes. Emphasis is on the current literature.

Instructor: M. Lewis
Format: Lecture 3 hours, some labs
Prerequisites: Instructor's consent
Cross-listing: OCEA 5230.03

***OCEA 4280.03A: Chemical Sedimentology and Early Diagenesis.** The present course aims at a quantitative understanding of the chemistry of sedimentary systems and the changes that occur during early burial history. Thermodynamic, kinetic and transport models are employed to describe and conceptualize the biological, chemical and physical processes responsible for these modifications. Some topics to be covered include compaction, formation and dissolution of carbonate and siliceous sediments, organic matter degradation and nutrient regeneration, iron and manganese diagenesis and the formation of ferromanganese nodules, and basalt-sediment interactions.

Instructor: B. Boudreau
Format: Lecture 3 hours
Prerequisites: knowledge of physical chemistry/ intermediate calc./Prof's consent

Cross-listing: OCEA 5280.03

***OCEA 4311.03A/4312.03B: Fluid Dynamics I and II.** An introduction to the theory of fluid dynamics, with some emphasis on geophysically important aspects. Part I: flow kinematics, equations of motion, viscous flow, potential flow and basic aerodynamics; Part II: open channel flow, compressible, rotating and stratified flows, hydrodynamic stability, convection and turbulence. A knowledge of methods of mathematical physics is a desirable prerequisite. Some laboratory experiments on stratified and rotating flows are included in Part II.

Instructor: D. Kelley, B. Boudreau
Format: Lecture 3 hours
Prerequisites: Intended for first year graduate students in physical oceanography, but graduate students or senior undergraduates in Mathematics or Physics are invited to take it (subject to instructor approval)

Cross-listing: PHYC 4311.03/4312.03, PHYC 5311.03/5312.03, OCEA 5311.03/5312.03

***OCEA 4330.03B: Benthic Ecology.** An advanced level class concentrating on the major problem of benthic ecology, such as how food is supplied to benthic animals, what factors control the structure of biological communities, and how

the benthos is related to processes in the sediments. Year-to-year the course content changes, keeping up with current problems of research workers in this discipline.

Instructor: J. Grant
Format: Lecture 3 hours
Prerequisites: Instructor's consent
Cross-listing: BIOL 4666.03, OCEA 5330.03

***OCEA 4931.03B: History of Marine Sciences.**

This class describes the development of the marine sciences from biological, chemical, physical and geological knowledge going back to the 17th century or earlier. It includes the important voyages of exploration, the development of marine biology, ocean circulation and plate tectonics, also the importance of technological changes upon marine science.

Instructor: E.L. Mills
Format: Lecture 3 hours
Prerequisites: Instructor's consent
Cross-listing: BIOL 4664.03, OCEA 5331.03, SCIE 4001.03

***OCEA 4380.03B: Marine Modelling.** A graduate level survey of modelling techniques applied to biological-physical problems in oceanography. Lecture material includes: philosophy of modelling, dimensional analysis, parameterization of unresolved processes, numerical representation of ordinary or partial differential equations, model validation and fundamental limits to predictability and frequency domain analysis. Students are given the opportunity to study special topics in the current literature, e.g., prey-predator models, spatial patchiness models, models of the biomass size spectrum, models of pollutant dispersal, etc.

Instructor: M. Lewis
Format: Lecture 3 hours
Prerequisites: Instructor's consent
Cross-listing: OCEA 5380.03

***OCEA 4411.03A: Dynamic Meteorology I.** The basic laws of fluid dynamics are applied to studies of atmospheric motion, including the atmospheric boundary layer and synoptic scale weather disturbances (the familiar highs and lows on weather maps). Emphasis will be placed on the blend of mathematical theory and physical reasoning which leads to the best understanding of the dominant physical mechanisms.

Instructors: Q. Fu/W. Hyde
Format: Lecture 3 hours
Prerequisites: Instructor's consent
Cross-listing: PHYC 4411.03/5511.03, OCEA 5511.03

***OCEA 4412.03B: Dynamic Meteorology II.** The approach is the same as for 4411.03, with emphasis placed on synoptic-scale wave phenomena, frontal motions, and the global circulation. An introduction to numerical techniques and their use in weather forecasting

models and studies of climate is included. Additional special topics are covered at the discretion of the instructor.

Instructors: Q. Fu/W. Hyde
Format: Lecture 3 hours
Prerequisites: PHYC/OCEA 4411.03 or instructor's consent
Cross-listing: PHYC 4412.03/5412.03, OCEA 5412.03

***OCEA 4500.03A: Atmospheric Physics I.** See class description for PHYC 4500.03 in the Physics section of this calendar.

***OCEA 4510.03B: Atmospheric Physics II.** See class description for PHYC 4510.03 in the Physics section of this calendar.

***OCEA 4515.03R: Weather Briefing.** Weather briefing is intended to develop skills in presenting a coherent and scientifically sound discussion of the current weather using real-time weather maps and data. It is primarily for students in the Meteorology Diploma Programme.

Instructor: Staff
Cross-listing: PHYC 4515.03

OCEA 4520.03A: Introduction to Meteorology. This is a self-contained class that provides an introduction to the main ideas and concepts in meteorology. The emphasis will be on developing an understanding of how the atmosphere works and to begin to "read" and appreciate the ever-changing sky and weather. Mathematics will be used only occasionally (some first year calculus and algebra). Class participation will be encouraged by using a discussion and seminar format in the afternoon classes. The class is open to all students of all interests and disciplines.

Instructor: G. Lesins
Format: Lecture 3 hours
Prerequisites: Instructor's consent
Cross-listing: PHYC 4520.03/5520.03, OCEA 5520.03

***OCEA 4530.03B: Introduction to Radiation and Climate.** This course provides the student with an understanding of the origin, composition and thermal structure of the atmosphere, and radiative transfer through clear and cloudy atmospheres. There will be some discussion of the atmospheric general circulation, radiative transfer, atmosphere-ocean-biosphere interaction, and climate change.

Instructor: P. Chylek
Format: Lecture 3 hours
Prerequisite: Instructor's consent
Cross-listing: PHYC 4530.03/5530.03, OCEA 5530.03

***OCEA 4541.03A: Synoptic Meteorology I.** See class description for PHYC 4540.03 in the Physics section of this calendar.

***OCEA 4550.03B: Synoptic Meteorology II.** See class description for PHYC 4550.03 in the Physics section of this calendar.

314 Oceanography

OCEA 4595.03A or B: Atmospheric Chemistry.

This class will discuss the reactions that govern the distribution of chemical species in the troposphere and stratosphere. It will include such topics as the ozone layer and the reasons for its depletion over Antarctica, the formation of acid-rain, and photochemical smog. Students taking this course should either be taking "Introduction to Meteorology" simultaneously, or have some other previous exposure to Atmospheric Science.

Instructor : I. Folkins
Format : Lecture 3 hours
Prerequisite: Instructor's Consent
Cross-listing: OCEA 5595.03

OCEA 4600.03B: Invertebrate Fisheries and Aquaculture.

Subject matter will deal with commercially exploited invertebrates (crustaceans and molluscs) with a heavy emphasis on bivalves. Topics to be covered include: (1) Review of the major invertebrate harvest fisheries (locations, methods, population cycles, fisheries models) (2) Biology and ecology of the Bivalvia (feeding, bioenergetics, growth, and reproduction) (3) Shellfish aquaculture (methods, species, site location, economics). These topics will be covered with respect to the Maritimes as well as non-local fisheries. Course structure will be a mixture of lecture and class discussions, supplemented by visits to aquaculture sites. Course requirements will include a research paper and oral presentations.

Instructors: J. Grant, G. Newkirk, R. Mohn
Format: Lecture/discussion 3 hours
Prerequisites: BIOL 2001.03, 2060.03, and 3321.06; fundamental knowledge of statistics; permission of instructor
Cross-listing: BIOL 4600.03/5600.03, OCEA 5600.03

D. Wheeler-Usher, BSc(Pharm) (Dal),

MSc(Pharm) (Oregon State)

Preceptors (1994)

The pharmacist preceptors listed below gave their time and expertise to a structured practical training programme. The programme is administered by the College with the support of the Pharmacy Licensing Bodies in the Maritimes. It requires the third year students to demonstrate their knowledge and professional competency in actual practice situations in community and hospital pharmacy.

History

Formal pharmacy education in the Maritime provinces began in 1908, with evening classes in pharmacy and chemistry conducted in the Nova Scotia Technical College. Success of these classes encouraged the Nova Scotia Pharmaceutical Society to establish the Nova Scotia College of Pharmacy in 1911. The College was affiliated with Dalhousie University in 1912.

The New Brunswick Pharmaceutical Society and the Prince Edward Island Pharmaceutical Association were admitted to affiliation with the College in 1917 and 1950, respectively. With the affiliation of the former society, the College was renamed the Maritime College of Pharmacy.

In 1961, the Maritime College of Pharmacy was admitted into Dalhousie University as the College of Pharmacy, a constituent part of the new Faculty of Health Professions. A four-year baccalaureate programme was introduced.

In 1966, a Master's programme was established, followed by a Doctor of Philosophy programme in 1977.

In 1972, a twelve month pharmacy residency programme was initiated by Camp Hill Hospital in cooperation with the College of Pharmacy. Programmes were initiated at the Halifax Infirmary in 1974, at the Victoria General

Hospital in 1981 and at the Saint John Regional Hospital in 1982.

In the fall of 1968, the College of Pharmacy moved into the George A. Burbidge Pharmacy Building. This building, the former Medical Sciences Building was renamed in honour of the first Dean of the College, in recognition of his contribution to pharmacy education in the Maritimes. Present facilities accommodate approximately 260 undergraduate and 12 graduate students.

College of Pharmacy Regulations

All students are required to observe the University and Academic Regulations as described in this calendar.

There is, within the College of Pharmacy, a Committee on Studies that assesses the academic performance of each student in the College.

Academic Requirements

1. A student must obtain a grade of at least C (C is not acceptable) in each professional class for that class to be counted as credit for the degree or as a prerequisite for another professional class. A student who earns a grade of less than C in a professional class but is still eligible to continue in the College of Pharmacy must repeat that class until a grade of C or better is obtained.
2. Any student failing a professional class for the second time must withdraw from the College of Pharmacy.
3. Students are required to attend class to the satisfaction of their instructors. Attendance is mandatory in laboratory, tutorial and seminar classes and externship programmes offered by the College of Pharmacy unless otherwise specified by the instructor.
4. When the work of a student becomes unsatisfactory or his/her attendance irregular, the student may be required to discontinue and be excluded from the class concerned.
5. If laboratory work or assignments are not completed in a satisfactory manner in any class or classes, credit for the class is withheld until all work has been satisfactorily completed.
6. In the case of failure in the laboratory portion of a pharmacy class, the laboratory, together with the corresponding lecture portion of the class, must be repeated.
7. As an academic requirement, students are assessed in each year on their aptitude and fitness for the profession of pharmacy. A student who, in the judgement of the faculty, fails to attain a satisfactory standard in the assessment may be retired from the College of Pharmacy.

8. Failure in Pharmacy 3000.00 (PTP) results in the student having to repeat the course at its next regular offering.

Externship Programmes

Students may be required to complete externships programmes (currently Pharm 3000.00B and clerkship programme) outside the Halifax/Dartmouth area. Students are responsible for any travel and living expenses associated with externship programmes.

Grading System

College regulations relating to GPA apply to students whose initial registration in the College was in the fall of 1990 or earlier (consult calendar of appropriate year). Students entering in the fall of 1991 and beyond will be governed by revised regulations found in the Academic Regulations section of this calendar.

1. Credit Hours

For classes offered by the College of Pharmacy, one credit hour is defined as one hour of lecture per week per term, or three hours of laboratory per week per term.

2. Requirements for Degree

To satisfy the requirements for the degree of Bachelor of Science in Pharmacy a student must:

- accumulate at least 134 credit hours (or its equivalent for transfer students), with an overall (cumulative) GPA of at least 2.00 in the prescribed classes; and
- accumulate at least 104 credit hours (or its equivalent for transfer students), with an overall (cumulative) GPA of at least 2.00 in the prescribed professional classes.

Note: For a list of prescribed and professional classes see the section "Prescribed Classes."

Reassessment of a Grade

See Academic Regulation 18.7. In all cases of reassessment, the calculations used to arrive at the final grade will be checked. In those classes where the student has had ample time to consider marks obtained for all work done, except for the final examination, reassessment in such classes shall be done on the final examination only. For other classes, a reassessment shall include the results from all work not previously available to the student during the term.

Appeals

Students wishing to appeal a decision based on Academic Regulations should request from the Director the appeal procedure.

Programmes Offered

The College of Pharmacy offers a four-year programme leading to the degree of Bachelor of Science in Pharmacy (BScPh), one- or two-year programmes of study and research leading to the

degree of Master of Science (MSc), and a programme of advanced study and research leading to the degree of Doctor of Philosophy (PhD).

The undergraduate programme, which admits 66 students into the first professional year, has a patient-oriented curriculum integrating clinical pharmacy with the pharmaceutical sciences. This programme is more completely described in the following pages. More information on the graduate degree programmes may be obtained from the Faculty of Graduate Studies Calendar.

The College participates with the Camp Hill Medical Center, The Victoria General Hospital, and The Saint John Regional Hospital in twelve-month post-graduate pharmacy residency programmes. These programmes orient the resident to various aspects of institutionalized health care with emphasis placed on drug therapy in patient care. They provide an opportunity for the residents to use professional judgement in evaluating drug information, drug therapy and in communicating with members of the health professions and with patients. A certificate is issued to candidates successfully completing pharmacy residency programmes that are accredited with the Canadian Hospital Pharmacy Residency Board.

The Pharmacy Library, housed on the first floor of the Burbridge Building, is the only branch library of the W. K. Kellogg Health Sciences Library located next door in the Sir Charles Tupper Medical Building. Holdings in the Pharmacy Library include several thousand bound volumes, microforms, and approximately 200 serial subscriptions relating to pharmacy and allied sciences. In addition, there are three pharmacy-related CD-ROM databases available for end user searching.

Career Opportunities

Pharmacy is a health science concerned with many aspects of the use of drugs for the health care of the patient. This includes the preparation of suitable materials for use as medicines from natural and synthetic sources, the compounding of drugs and the dispensing of suitable medication, the taking of medication histories, keeping patient drug profiles, counselling patients on their prescribed medication, educating patients on their self-medication habits, monitoring drug interactions, adverse drug reactions and patients' compliance with their drug treatment, and the provision of information on drugs to patients and other health professionals.

Pharmacy graduates have a wide range of career opportunities. The majority enter community pharmacy practice. Hospital pharmacy also provides an interesting challenge for pharmacists, particularly in view of their

expanding role within the clinical setting. The pharmaceutical industry provides opportunities for pharmacists in the fields of sales, production, research and quality control.

The increased role of federal and provincial governments in public health has provided opportunities for pharmacists in analytical laboratories and in administrative positions as government inspectors and health supplies officers. Opportunities may also be available in universities as teachers and researchers.

A Bachelor of Science in Pharmacy is necessary for those who wish to practice as pharmacists. For those who wish to enter research or teaching, a Master of Science degree or further postgraduate study is usually required.

Practice Requirements

1. Licence in Pharmacy

The College of Pharmacy, being purely educational, has no jurisdiction in matters relating to licensing or to registration as a Pharmaceutical Chemist (Pharmacist). These functions are entirely under the control of the provincial licensing body concerned. A period of practical training or apprenticeship is required before a graduate in pharmacy is licensed as a pharmacist. Information regarding licensing or registration in each province may be obtained from the respective provincial society: the Registrar of the New Brunswick Pharmaceutical Society, Heritage Court, Suite 204, 95 Foundry Street, Moncton, N.B., E1C 5H7; the Registrar of the Prince Edward Island Board of Pharmacy, PO Box 1084, Charlottetown, P.E.I., C1A 7M4; or the Registrar of the Nova Scotia Pharmaceutical Society, 1526 Dresden Row, PO Box 3363, Halifax South Postal Station, Halifax, N.S., B3J 3J1.

2. Pharmacy Examining Board of Canada (PEBC)

The Pharmacy Examining Board of Canada was created by Federal Statute on December 21, 1963, to establish qualifications for pharmacists acceptable to participating pharmacy licensing bodies. The Board provides for annual examinations and issues a certificate to the successful candidate which may be filed with a Canadian provincial licensing body in connection with an application for licence to practice pharmacy under the laws of that province. Baccalaureate graduates from the College of Pharmacy are eligible to write these examinations. Successful completion of these examinations is a prerequisite to licensure for Dalhousie graduates in all provinces except Prince Edward Island. Information relative to the dates of examinations, application forms, etc., may be obtained through the Director's Office, College of Pharmacy.

Student Pharmacy Society

The basic aims of the Student Pharmacy Society are to promote a closer liaison with the other societies on campus, to give the pharmacy students a strong position with regard to Student Council activities, to provide a means of communications between students and their respective licensing bodies in the Maritimes, and to provide an organizational body which plans and finances the various unique Pharmacy Society activities.

Membership in the Pharmacy Society includes membership in the Canadian Association of Pharmacy Students and Interns and representation in the Canadian Pharmaceutical Association.

Prescribed Classes

The curriculum of the College of Pharmacy is undergoing a major revision, commencing in 1992/93. Thus, the incoming first year class will receive instruction under the new curriculum, while the three senior classes will continue under the previous curriculum.

All classes offered are within the normal academic year with the exception of PHAR 3000.00. PHAR 3000.00 includes a practical training programme which the student must complete on a full-time basis in a pharmacy, normally during the month of May following the third year of study.

The following are descriptions of classes which are expected to be offered in the academic year 1995-96.

Year 1: PHAR 1110.06, PHAR 1700.03, ANAT 1010.03, MICR 2020.03, CHEM 2400.06, STAT 1060.03, and one additional full credit or two half-credits in non-science elective(s).

Year 2: PHAR 2130.06, PHAR 2800.03, PHAR 2120.03, PHAR 2320.03, PHAR 2510.06, PHAR 2310.03, PHYI 4403.06, BIOC 3101.03, BIOC 3102.03

Year 3: PHAR 3510.06, PHAR 3320.06, PHAR 3140.03, PHAR 3141.03, PHAR 3110.03, PHAR 3000.00, PHAR 3700.03, PHAC 3470.06

Year 4: PHAR 4510.06, PHAR 4511.02, PHAR 4530.03, PHAR 4720.03, PHAR 4810.03, PHAR 4110.03, and one additional full credit class or two half credit classes in Pharmacy electives.

Classes Offered

Professional Classes

PHAR 1110.06R: Introduction to Pharmacy. An introduction that includes a description of the roles and the responsibilities of the pharmacist in practice, the prescription, pharmaceutical calculations, an introduction to communication skills, an introduction to drug information, and a

programmed text approach to medical terminology. The major topics are dosage forms and compounding and dispensing techniques. Laboratory work concentrates on the compounding and dispensing of examples of the dosage forms discussed in class. Dispensing labs and seminars are compulsory parts of this class.
Instructor: B. Wilson
Format: lecture 3 hours; lab 3 hours or seminar 2 hours; tutorial 1 hour

PHAR 1700.03A: Pharmacy Administration I. An introduction to the history of Pharmacy, pharmacy organizations, law, and business management.

Instructor: N. Wentzell
Format: Lecture 3 hours

PHAR 2120.03B: Biopharmaceutics. The class deals with the application of physicochemical and physiological factors in the design and delivery of drug dosage forms. Topics include: drug design and drug development, routes of drug administration, membrane structure and transmembrane transport of drug molecules, physicochemical and physiological factors in drug absorption, distribution and elimination, biopharmaceutical consideration of new drug delivery systems.

Instructor: I. Abraham
Format: Lecture 2 hours
Prerequisites: PHAR 1110.06
Corequisites: PHAR 2130.06

PHAR 2130.06R: Physical Pharmacy. Fundamentals: Properties of solutions: non electrolytes, electrolytes. Isotonic solutions. Ionic equilibria. Buffers. Solubility and distribution. Kinetics - fundamentals, chemical stability of drugs. Accelerated stability analysis. Diffusion. Dissolution of drugs. Rheology. Interfacial phenomena: (a) surface tension, wettability; (b) absorption at various interfaces; (c) electrokinetic phenomena. Colloid systems: macromolecules, association colloids and dispersion colloids. Kinetic stability of dispersions, drug preparations. Coarse dispersions: suspensions, emulsions. Physical properties of drugs - measuring methods.

Instructor: E.V. Butler
Format: Lecture 3 hours, 1st term; lecture 2 hours, lab 3 hours/2nd term; tutorial 1hr/week

Prerequisites: CHEM 1140.06; STAT 1060.03; PHAR 1110.06 and CHEM 2400.06

Corequisites: PHAR 2120.03
Recommended: Continuous study following the guidelines distributed for each topic. Participation in tutorials and small group classes

PHAR 2310.03A: Pharmaceutical Analysis. Topics include gravimetric, volumetric, chromatographic, and spectrophotometric methods of analysis of drug products, and

principles and methodology of drug product quality assurance.

Instructor: D.K. Yung
Format: Lecture 2 hours, lab 3 hours
Prerequisite: CHEM 2400.06
Recommended: Review of general chemistry

PHAR 2320.03B: Medicinal Chemistry I. Introductory medicinal organic chemistry, including a review of functional groups and acid-base properties of organic molecules, an introduction to heterocyclic chemistry and to the prediction of water solubilities of organic compounds. Medicinal chemistry topics covered are receptors and drug-receptor interactions, introduction to structure-activity relationships, quantitative structure-activity relationships, organic chemistry, as studies in CHEM 2400.06, is assumed.

Coordinator: P.S. Farmer
Instructors: P.S. Farmer, P.K.F. Yeung, D.K. Yung

Format: Lecture 3 hours
Prerequisite: CHEM 2400.06

PHAR 2510.06R: Therapeutics I. This class introduces the application of pharmaceutical care in regard to selected disease states and drug and non-drug therapy. Both prescription drugs and non-prescription drugs are considered.

Coordinator: S. Mansour
Format: lecture/seminar, 3 hours
Prerequisites: Successful completion of first year pharmacy
Corequisites: PHTL 4403.06, PHAR 2120.03 and PHAR 2320.03

PHAR 2800.03A: Introduction to Hospital Pharmacy. This class provides the student with a general overview of hospital pharmacy and the day-to-day activities of a hospital pharmacist. The role of the hospital pharmacist in activities ranging from drug distribution, pharmaco-economic analyses, and clinical pharmacy services are presented along with general topics including the role of pharmacy technicians, a no IV admixture preparation.

Coordinator: T. Sorensen
Format: 2 hours lecture, 3 hours lab (every other week)
Prerequisites: Successful completion of first year pharmacy

PHAR 3000.00B: Practical Training Programme. A structured practical training programme consisting of five consecutive weeks to be completed in May, after the third year academic programme. This programme studies prescription compounding and dispensing in both community and hospital pharmacies and is conducted in the presence of a practising pharmacist preceptor. As well, nonprescription drugs and accessories, patient counselling and communications, laws and regulations, management and administration, are all stressed. Students are responsible for finding their own practice sites for this programme.

Instructor: K. Shipp
Format: 5 weeks (175 hours)
Prerequisite: Completion of third year

PHAR 3110.03R: Introduction to Computer Dispensing and Prescription Management. Students are introduced to basic prescription filling procedures on two prescription management systems.

Instructor: L. Raische
Format: 1½ hours lecture, 3-4 hours lab
Prerequisites: Successful completion of second year

PHAR 3140.03A: Pharmacokinetics. Students are introduced to the basic principles of pharmacokinetics, such as quantitative aspects of drug absorption, distribution, metabolism and excretion.

Instructor: I. Abraham
Format: 2 hours lecture
Prerequisites: PHAR 2120.03, PHAR 2130.03

PHAR 3141.03B: Clinical Pharmacokinetics. This class deals with topics in clinical pharmacokinetics including: management of patients with renal failure, kinetics in pregnancy, placental drug transfer, hepatic drug clearance, transfer of drugs in breastmilk, relationship of pharmacokinetics and pharmacological response, non-linear pharmacokinetics, kinetics in geriatrics and pediatrics and the application of these principles to the clinical pharmacokinetics of representative drugs.

Instructor: M. Wright
Format: Lecture 3 hours
Prerequisite: PHAR 3140.03

PHAR 3320.06R: Medicinal Chemistry II. Principles of medicinal organic chemistry are demonstrated through an examination of the major classes of drugs in use today. Drug action, drug toxicity, and drug interactions are discussed in the context of mechanism and structure-activity relationships. The class is organized by classes of drug action, broadly: nonmessenger targets for drug action, drugs acting on neurotransmitters and their receptors, and drugs acting on hormones and their receptors. Current thorough understanding of the principles of organic chemistry, as studied in CHEM 2400.06, is assumed.

Coordinator: P.S. Farmer
Instructors: P.S. Farmer, D.K. Yung
Format: Lecture 3 hours
Prerequisite: PHAR 2320.03
Corequisites: PHAC 3470.06, PHAR 3510.06

PHAR 3510.06R: Therapeutics II. Therapeutic and prophylactic use of prescription and some OTC drugs are discussed. Application of drug and disease knowledge to patient-focused care is emphasized.

Coordinator: A.M. Whelan
Instructor: Staff
Format: 2 hours lecture, 1 hours seminar (average)

Prerequisites: PHAR 2410.06, PFTYL 4403.06, MICR 2020.03, BIOC 3101.03 and 3102.03
Corequisites: PHAC 3470.06 or 3480.06; PHAR 3140.03 and 3141.03

PHAR 3700.03B: Pharmacy Administration II. This class provides the student with basic pharmacy-related communication skills. In addition, students examine the concept of professionalism and are introduced to various health care professions.

Coordinator: K. Janke
Format: 3 hours lecture/seminar
Prerequisites: PHAR 1700.03

PHAR 4000.06R: Pharmaceutical Investigation. Library, laboratory, clinical and/or field investigations related to an area in pharmacy, carried out by an individual (preferable) or a small group of students under the supervision of one or more faculty members. Presentation of seminars on the completed project is required. A written report must be submitted. A paper or a presentation which is prepared for this class may not be submitted for credit in any other class.

Coordinator: E.V. Butler
Instructor: Staff
Format: 6-8 hours of independent study per week

Prerequisites: Approval of the project by the Committee on Studies before registration in the class. The project proposal should be presented for consideration before the end of the previous academic term if possible.

PHAR 4010.03A, 4020.03B, 4030.03R: Directed Study in Pharmacy. For a description of these half classes, see the full class Pharm 4000.06.

Coordinator: E.V. Butler
Instructor: Staff
Format: 6-8 hours of independent study per week for Pharm 4010.03 and 4020.03. 3-4 hours of independent study per week for Pharm 4030.03.

Prerequisites: Approval of the project by the Committee on Studies before registration in the class. Projects should be presented for consideration before the end of the previous academic term.

PHAR 4110.03A: Senior Dispensing Lab. This class is concerned with the proper compounding and dispensing of pharmaceutical products, and professional communication techniques.

Instructor: B. Zwicker
Format: TBA
Prerequisites: Successful completion of third year pharmacy

PHAR 4130.03A: Physicochemical/Industrial Aspects of Controlled Release Drug Delivery: An Introduction. New trends in drug delivery: sustained, controlled, topical and targeted drug

delivery. Application areas of controlled release of substances. Scale-up and technology transfer procedures and related problems, in general. History of the development of new delivery systems. How to do literature search. (R. Foy, Librarian)

Liposomes: types of liposomes, methods of preparation, special influencing parameters of liposomes on drug encapsulation, release. Technological problems in liposome production. Application areas. Polymers in drug delivery: selections of polymers - biodegradable and non-biodegradable polymers. Bioadhesive polymers, multi-layered polymeric compositions (patch). Microcapsules - microspheres, nanoparticles. Special parameters of polymers influencing drug delivery. Technological problems. Application areas. Other drug delivery systems.

Physical/chemical properties and specific surface characteristics of drugs and vesicles; their effect on drug delivery. Selected methods for measuring these parameters (theory and lab demonstration).

Instructor: E.V. Butler
Format: lecture 1 hrs, seminar/workshop 1 hr, lab/workshop 3 hrs during the last two weeks of the term.

Prerequisites: PHAR 2120.03, 2130.06, 3250.02; CHEM 2400.06; STAT 1060.03 or equivalent for Pharmacy students. For students with a background other than pharmacy; consent of instructor.

Cross-listing: PHAR 5130.03

Note: The course is given every other year. During the alternate years, however, request for course will be considered.

PHAR 4140.03A: Introduction to Therapeutic Drug Monitoring. The application of fundamental pharmacokinetic principles to the solution of commonly encountered therapeutic problems. Specific areas of focus will be on the estimation of drug dosage and adjustment, the underlying assumptions of commonly used dosing algorithms, reliability of analytical techniques, and the basic concepts of population pharmacokinetics. This class is presented in a problem-based format:

Instructor: M.R. Wright
Format: Seminar 3 hours
Prerequisites: PHAR 3140.03, 3141.03 or equivalent, permission of instructor

PHAR 4141.03B: Current Topics in Xenobiotic Disposition. Application and extension of pharmacokinetic/pharmacodynamic principles to biologically active compounds outside those associated with patient management. The integration of biopharmaceutic/pharmacodynamic information to forensic applications, human/animal exposure to

herbicides/pesticides, environmental contamination, application to biotechnology, detection to illicit drug use, and drug testing in sports will be examined.

Instructor: M.R. Wright
Format: Seminar 3 hours
Prerequisite: PHAR 3140.03 or equivalent, permission of instructor
Note: Preference will be given to students within the College of Pharmacy

PHAR 4150.03A or B: Computer Dispensing and Prescription Management. Students fill a selection of difficult prescriptions for a patient base with a variety of allergies/disease states/drug plans, to best utilize computer menu options. Also covered are reports, auxiliary patient counselling and drug interaction programs.

Instructor: K. Munroe
Format: lecture 3 hours, lab 5-6 hours
Prerequisite: PHAR 3110.03 or instructor's consent

PHAR 4250.03B: Advanced Pharmacokinetics. Course is designed for students with research career interests in pharmacokinetics, pharmaceutical dosage form development, clinical pharmacology, drug metabolism and toxicology.

Topics include application of Laplace Transforms in the solution of linear mammillary compartmental models, physiologically-based (perfusion) models, drug absorption models, concept of drug distribution and clearance, noncompartmental analyses of pharmacokinetics data based on statistical moment theory; nonlinear pharmacokinetic; absorption kinetics of sustained-release medications.

Instructor: I. Abraham
Format: Lecture 2 hours
Prerequisites: PHAR 3250.02, 4100.05; MATH 2000.06 or consent of instructor
Cross-listing: PHAR 5250.03

Note: The course is given every other year, check with the College.

PHAR 4330.03B: Herbal Remedies. Herbal remedies, "health foods", and pharmaceutical agents of plant origin are examined with respect to history, traditional usage, constituents, pharmacology and toxicology. An introduction to the chemistry, pharmacology and toxicology of the major plant constituents is presented. The course emphasizes safety and efficacy of herbs and formulated herbal products.

Instructor: R.F. Chandler
Format: Lecture 3 hours
Prerequisite: Consent of instructor
Recommended: Some knowledge of organic chemistry, human physiology and pharmacology is strongly recommended.

PHAR 4340.03R: Drug Design. The increasing role of biochemical knowledge in lead generation in drug design is emphasized, followed by consideration of available methods for lead exploitation. The subject is studied by reviewing examples of drug discovery.

Instructor: P.S. Farmer
Format: Seminar 2 hours 1st term, term paper 2nd term
Prerequisites: Instructor's consent

PHAR 4351.03A: Medical Biotechnology I. An introduction to biotechnology fundamentals from a medical perspective. Topics will include a DNA recombinant technology, the polymerase chain reaction, immunochemical techniques, tissue culture, monoclonal antibodies and hybridoma technologies.

Instructor: A.K. Kirumira
Format: Lectures 3 hours, some demonstrations
Prerequisite: BIOC 3101.03 and 3102.03; PHAC 3470.06 and consent of instructor

PHAR 4352.03B: Medical Biotechnology II. A discussion of the applications of biotechnology in medicine and pharmacy. Topics will include modern vaccines, antibiotics and interferon production, technology of innovative biotech drugs, medical diagnostic devices, genetic and immunoadaptive therapy, biotech drug delivery and monitoring systems, forensic medicine and DNA finger printing.

Instructor: A.K. Kirumira
Format: Lectures 3 hours, some demonstrations
Prerequisite: BIOC 3101.03 and 3102.03; PHAC 3470.06; PHAR 4351.03 and consent of instructor

PHAR 4510.06A: Therapeutics III. A discussion of the application of pharmaceutical sciences to various diseases, pharmaceutical care, therapeutic use of drugs and drug induced disease is presented. Emphasis is placed on self-directed learning. Case study seminars are conducted in conjunction with instruction and application of clinical pharmacy principles.

Co-ordinator: TBA
Instructor: Staff
Format: TBA
Prerequisites: BIOC 3101.03 and 3102.03; PHAC 3470.06 or 3480.06; PHAR 3510.06, 3140.03, and 3141.03, consent of instructor.

PHAR 4511.02B: Therapeutics IV. A clinical clerkship in participating hospitals that applies clinical pharmacy principles and therapeutic knowledge.

Coordinator: K. Shipp

PHAR 4530.03A: Introductory Drug Metabolism and Toxicology. Topics include chemical and biochemical aspects of drug metabolism, factors influencing drug metabolism, toxicity related to drug metabolism,

treatment of poisoning, drug disposition and aging, forensic toxicology, application of pharmacokinetics, metabolism, and pharmacodynamics in novel drug development.

Instructor: P. Yeung
 Format: Lecture 2 hours
 Prerequisites: BIOC 3101.03 and 3102.03; PHAC 3470.06 or 3480.06; PHAR 3500.09, 3300.05, 3310.03 or consent of the instructor.

PHAR 4550.03B: Pharmacy Home Health Care. Topics include operation of a pharmacy-based home health care centre and the use of durable medical equipment, surgical supplies and appliances, health supports and orthotic fittings, home diagnostics, electromedicals, sports medicine, incontinence/urologicals, and nutritional support.

Instructors: TBA
 Format: Lecture 3 hours
 Prerequisites: Consent of Instructor
 Co-requisites: PHAR 4510.06

PHAR 4570.03A or B: Pharmacology of Drug Abuse. The education objectives of this class are to extend the student's knowledge of the pharmacology of drugs of abuse, to enable the student to develop an insight into the biochemical mechanism and consequences of abuse, and to develop in the student an appreciation of the pharmacological basis for the use of drugs during rehabilitation.

Instructor: G.M. McKenzie
 Format: Lecture 2 hours
 Prerequisite: PHAC 3470.06

PHAR 4720.03A: Pharmacy Administration III. This class provides students with a basic understanding of various components within the health care system. In addition, students are exposed to financial analysis, human resource management, marketing and pharmacy law.

Coordinator: K. Janke
 Format: 3 hours lecture/seminar
 Prerequisites: PHAR 1700.03

PHAR 4810.03A: Hospital Pharmacy. An in-depth study of the principle elements of hospital pharmacy practice. Emphasis will be placed on enabling the student to acquire practical knowledge and skills to assist in performing a hospital pharmacist's function.

Instructor: TBA
 Format: TBA
 Prerequisites: Successful completion of third year pharmacy

PHAR 4900.03B: Drug Information. Topics include sources of drug information, how and when these sources should be used and comparisons of the information found in each, formulating and communicating responses to drug information requests, evaluation of drug literature, drug utilization review, evaluation of drug advertisements and research methods.

Instructors: M. MacCara, I. Sketris
 Format: Lecture 3 hours

Prerequisites: PHAR 3500.09; PHAC 3470.06 or 3480.06

Corequisite: PHAR 4500.13

PHAR 4910.03A or B: Advances in Drug Metabolism and Disposition. Topics include methods for isolation, quantitation, and characterization of drugs and their metabolites in biological samples, immunoassays and their applications, kinetics and dynamics of drugs and their metabolites and their clinical relevance, cardiovascular system in health and disease, pharmacokinetics and pharmacodynamic modelling.

Instructors: P. Yeung, M. Quilliam, G. Klassen, and T. Pollak
 Format: Lecture 2 hours

Prerequisites: BIOC 3101.03 and 3102.03; PHAC 3470.06 or 3480.06; PHAR 3500.09, 4930.02, or instructor's consent

Cross-listing: PHAR 5910.03

PHAR 4950.03B: Interdisciplinary Course in Human Nutrition. See class description for Nurs 4800.03 in the Nursing section of this calendar.

Classes Offered by other Departments

ANAT 1010.03R: Human Anatomy. See class description in Anatomy section of this calendar.

BIOC 3101.03A: Biological Chemistry for Students of Pharmacy. Students will first be introduced to the structures and functions of proteins and nucleic acids, including an outline of the topic of genetic engineering. Next, the phenomena of enzymic catalysis will be examined in some detail. Finally, the topic of biological membrane structure and the chemical forms of energy storage will be explored.

Instructor: D.W. Russell
 Format: Lecture 3 hours, lab 2 hours, tutorial 1 hour
 Prerequisite: CHEM 2400.06

Note: BIOC 3101.03 is a prerequisite for BIOC 3400.03 (a fourth year elective).

BIOC 3102.03B: Metabolism for Students of Pharmacy. The class, using the chemical background gained in BIOC 3101.03, will examine the generation, storage, liberation, and uses of biological energy.

Instructor: D.W. Russell
 Format: Lecture 3 hours, lab 2 hours, tutorial 1 hour
 Prerequisite: BIOC 3101.03

CHEM 2400.06R: Introductory Organic Chemistry. See class description in the Chemistry section of this calendar.

HLTH 4900.03A: An Interdisciplinary Approach to Gerontology. See class description in the Health Professions, Interdisciplinary section of this calendar.

HLTH 4910.03B: An Interdisciplinary approach to Gerontology. See class description in the Health Professions, Interdisciplinary section of this calendar.

HLTH 3000.03B: An Interdisciplinary Approach to Health Promotion. See class description in the Health Professions, Interdisciplinary section of this calendar.

MICR 2020.03B: General Microbiology. This class is geared to students in pharmacy and in other health-oriented curricula. It provides a brief introduction of microbial structure, physiology, and genetics in relation to microbial pathogenesis. General concepts and practices of sterilization and disinfection, antibiotics, and immunity will be examined with emphasis on mechanism of action. Bacterial, fungal, parasitic, and viral pathogens of medical importance will be discussed according to the mode of entry, transmission, clinical features, prevention, and chemotherapy. Laboratory sessions using demonstration and/or experimentation are designed to complement the lectures and to provide a practical appreciation in the isolation, identification, cultivation, and control of microorganisms.

Instructor: S.H.S. Lee
Format: lecture 3 hours, lab 3 hours
Prerequisite: BIOL 1000.06 or instructor's consent

PHAC 3470.06R: The Influence of Chemical Agents on Living Organisms. An introduction to the actions of drugs on physiological and biochemical functions of man and lower animals. The basic mechanisms of actions and structure-activity relationships of various groups of pharmacological agents are stressed and wherever possible, discussed at the molecular and macro-molecular level of cell organization. Factors influencing the absorption, distribution, biotransformation, and excretion of drugs are discussed, as are potential uses.

Coordinator: G. McKenzie
Instructor: Staff
Format: Lecture 3 hours

PHYL 4403.06R: Human Physiology. See class description in the Physiology and Biophysics section of this calendar.

STAT 1060.03A or B: Introductory Statistics for non-Mathematicians. See class description in the Statistics section of this calendar.

Electives

The first year elective may be any non-science full credit class or two non-science half classes. The student should discuss the available electives with his or her faculty counsellor. Electives for the fourth year of study must be approved by the Committee on Studies.

 PhD (Tor)

Beginning in Philosophy

There are many different ways of beginning in philosophy. The Dalhousie Philosophy Department offers three sorts of classes for beginners: (1) general survey introductions, which will give you a taste of a variety of questions and answers; (2) introductions to special areas; (3) logic, which is the study of the

theory and techniques of good reasoning. Students wishing to major in philosophy are encouraged to begin with Introduction to Philosophy (either PHIL 1000.06, or PHIL 1010.06, or PHIL 2040.03, or PHIL 2050.03) in which a wide range of philosophical issues is discussed. But any student in any year may begin philosophy with a class that has no prerequisites. These include the 1000-level classes and many of the classes at the 2000-level. Any of these classes provides the student with a good introduction to philosophical thinking. Choose the class that best suits your interests - it's not necessary to start with a general survey. Some 2000-level classes have prerequisites which can be met either by a philosophy class or a class in another relevant discipline. The King's College Foundation Year satisfies the requirement of a previous philosophy class. Classes at the 3000-level and beyond usually have further requirements. See the class descriptions below.

Degree Programmes**BA with Honours in Philosophy**

Students wishing to specialize in philosophy should take an honours degree, the normal preparation for graduate study in philosophy.

Departmental Requirements**Classes required in Honours:**

at least 10 credits in Philosophy of which at least 9 and no more than 11 are beyond the 1000 level

Select at least one credit from the following:

Philosophy (logic) full-credit: 1111.06;
 half-credit: 1112.03, 2100.03, 2130.03, 2140.03,
 2660.03, 3060.03, 3900.03

Select at least one credit from the following:

Philosophy (history) half-credit: 2350.03,
 2370.03, 2610.03, 2620.03, 3630.03, 3640.03

At least three credits at or above the 3000 level.

At least one credit at the 4000 level.

Honours Qualifying Exam**BA with Advanced Major in Philosophy****Departmental Requirements****Classes required in Advanced Major**

at least 6 and no more than 9 credits in Philosophy beyond the 1000 level, including 3 beyond the 2000 level

Select at least one half credit from the following:

Philosophy (logic) full-credit: 1111.06;
 half-credit: 1112.03, 2100.03, 2130.03, 2140.03,
 2660.03, 3060.03, 3900.03

Select at least one credit from the following:

Philosophy (history) half-credit: 2350.03, 2370.03, 2610.03, 2620.03, 3630.03, 3640.03

At least three credits at or above the 3000 level.

BA with Major in Philosophy

Departmental Requirements

Classes required in major:

at least 4 and no more than 8 credits in Philosophy beyond the 1000 level

Select at least one half credit from the following:

Philosophy (logic) full-credit: 1111.06; half-credit: 1112.03, 2100.03, 2130.03, 2140.03, 2660.03, 3060.03, 3900.03

Select at least one half credit from the following:

Philosophy (history) half-credit: 2350.03, 2370.03, 2610.03, 2620.03, 3630.03, 3640.03

At least two credits at or above the 3000 level.

All students planning to take a degree in philosophy should first talk to an undergraduate advisor in the department.

Classes Offered

Note: Many classes are listed as being exclusionary to one another. This means that students may not take both classes so designated. The class numbers designate classes which, prior to 1984-85, were numbered without the last digit (zero), e.g., the present class PHIL 2130.06 was previously called Philosophy 213. The prerequisite and exclusionary designations below should be interpreted accordingly. Detailed descriptions are available from the department on request.

Note: Classes marked * may not be offered every year. Please consult the current timetable on registration to determine if these classes are offered.

1000-Level

PHIL 1000.06R: Introduction to Philosophy. An introduction to a variety of philosophical problems, such as the relation of mind to body, freedom of the will, the foundation of morality, the existence of God, the nature of personal identity, and the possibility of knowledge based on reason and experience. Sections differ somewhat in approach and requirements.

Consult the department to find out which ones especially suit you. This class does not satisfy the Faculty Writing Requirement.

Instructor: Staff
Format: Lecture/discussion 2 hours
Exclusion: PHIL 1010.06, PHIL 1020.06, PHIL 2000.06, PHIL 2040.03 and PHIL 2050.03

PHIL 1010.06R: Introduction to Philosophy. See description for PHIL 1000.06. This class does satisfy the Faculty Writing Requirement.

Instructor: Staff
Format: Writing Requirement, lecture/discussion 2-3 hours
Exclusion: PHIL 1000.06, PHIL 1020.06, PHIL 2000.06, PHIL 2040.03 and PHIL 2050.03

***PHIL 1080.03A or B: Reasoning Skills.** Thinking clearly and effectively is something that people can learn to do. Understanding some basic concepts as well as mastering certain practical techniques can help in this. In this class you will learn about classifying concepts and how to define them; about the nature of arguments and the way to bring their structure to the surface by diagramming techniques; about some of the classic fallacies people commit in their reasoning; about some of the basic concepts and procedures of Logic. This class does not satisfy the logic requirement for the major or honours in Philosophy.

Instructor: T. Vincl
Format: Lecture/discussion 2 hours
Exclusion: PHIL 1090.03, and PHIL 2150.03

***PHIL 1090.03A or B: How to Win an Argument.** This class is devoted to developing the practical skills involved in evaluating reasoning and producing convincing arguments. Note this class does not count toward satisfying the logic requirement for the major or honours programme.

Instructor: T. Tomkow
Format: Lecture/discussion 2 hours
Restriction: For first year students only.
Exclusion: PHIL 1080.03, and PHIL 2150.03

PHIL 1100.03A or B: Legal Thinking. Examination of controversial legal cases leading to increased understanding of the nature of law and the techniques of practical moral reasoning.

Instructor: N. Brett
Format: Lecture/discussion 2 hours

***PHIL 1111.06R: Logic: Elementary Symbolic Logic.** An introduction to an artificial language constructed so as to make the operations of reasoning more precise. Meets logic requirement for majors only if taken in first year.

Instructors: P. Schotch, R. Martin
Format: Lecture/discussion 2-3 hours
Exclusion: PHIL 1112.03, PHIL 2110.06 and PHIL 2130.03

***PHIL 1112.03A or B: Logic: Elementary Symbolic Logic.** An abbreviated version of PHIL 1111.06. Meets logic requirement for majors only if taken in first year.

Instructors: P. Schotch, R. Martin
Format: Lecture/discussion 2 hours
Exclusion: PHIL 1111.06, PHIL 2110.06 and PHIL 2130.03

2000-Level

*PHIL 2040.03A/PHIL 2050.03B: Introduction to Philosophy I and II. See description for PHIL 1000.06 above. A student may take either or both half-year classes. Neither class satisfies the Faculty Writing Requirement.

Instructor: Staff
 Format: Lecture/discussion 2 hours
 Exclusion: PHIL 1000.06, PHIL 1010.06, PHIL 1020.06 and PHIL 2000.06

PHIL 2070.06R: Foundations of Political Thought II: Rights, Rationality, and Democracy. See class description for POLI 2401.06, in the Political Science section of this calendar.

*PHIL 2080.06R: Ethics in the World of Business. Business practices are sometimes in accord with moral principles, sometimes at odds with them. Where in business is it easiest to be scrupulous? Where is it hardest? Could things be changed for the better, and, if so, what would be involved?

Instructor: Staff
 Format: Lecture/discussion 2-3 hours
 Exclusion: PHIL 2081.03

*PHIL 2081.03A, B, or R: Ethics in the World of Business. See description for 2080.06.

Instructor: Staff
 Format: Lecture/discussion 2-3 hours
 Exclusion: PHIL 2080.06

*PHIL 2100.03A or B: Logic: Logic and Knowledge. An introduction to logic, theory of knowledge, and some basic concepts used in contemporary philosophy, through the use of the notion of "possible worlds".

Instructor: R.M. Martin, K. Vihvelin
 Format: Lecture

PHIL 2130.03A or B: Logic: Deduction. A systematic introduction to the operations of formal deductive logic. The same topics are covered as in PHIL 1111.06, but at a quicker pace, with considerable attention devoted to the relation between artificial and natural language and to the philosophical problems that arise from the study of reasoning. No previous study of logic is presupposed.

Instructor: P.K. Schotch, R. Campbell
 Format: Lecture/discussion 2 hours
 Exclusion: PHIL 1111.06, PHIL 1112.03 and PHIL 2110.06

PHIL 2140.03A or B: Logic: Logical Theory I. An introduction to metalogic, with special attention to the soundness and completeness of formal systems, and to the philosophical evaluation of non-classical logics.

Instructor: P.K. Schotch
 Format: Lecture/discussion 2 hours
 Prerequisite: PHIL 1111.06, PHIL 1112.03 or PHIL 2130.03

PHIL 2160.03A or B: Philosophical Issues of Feminism. An exploration and examination of

some of the concepts, issues, and arguments underlying feminist claims and perspectives. Such topics as pornography, rape, mothering, the nature of gender, and feminism's responses to racism will be considered.

Instructor: S. Sherwin, S. Campbell
 Format: Lecture/discussion 3 hours
 Cross-listing: WOST 2500.03

PHIL 2175.03A or B: Introduction to Philosophy of Education. A lecture/discussion class dealing with a broad range of philosophical questions about education including the use of slogans, multiculturalism, teacher education, and the role of the teacher. Students may also take PHIL 2180.03.

Instructor: W. Hare
 Format: Lecture/discussion 2 hours
 Restriction: Not open to first year students
 Cross-listing: EDUC 4221.03

PHIL 2180.03A or B: Issues in Philosophy of Education. An introductory level, lecture/discussion class dealing with some fundamental issues in philosophy of education, including indoctrination, open-mindedness and bias-free teaching. Open to students who have taken PHIL 2175.03 or EDUC 4221.03.

Instructor: W. Hare
 Format: Lecture/discussion 2 hours
 Restriction: Not open to first-year students
 Cross-listing: EDUC 4222.03

*PHIL 2200.06R: Philosophy of Religion. An introduction to the philosophy of religion, examining such questions as: Why is religion so difficult to define? Is it rational to believe in a divine being? Can religious experiences be validated?

Instructor: Staff
 Format: Lecture/discussion 2 hours
 Exclusion: PHIL 2205.03

*PHIL 2205.03A or B: Philosophy of Religion. See description for PHIL 2200.06.

Instructor: Staff
 Format: Lecture/discussion 2 hours
 Exclusion: PHIL 2200.06

*PHIL 2260.03A or B: Philosophy of Art. Examines questions such as: What is art? Can judgements of artistic value be rational and objective? Can fear of fictional objects be real fear? Can music be a language?

Instructor: S.A.M. Burns
 Format: Lecture/discussion 2 hours

PHIL 2270.06R: Foundations of Political Thought I: Order, Knowledge, and Natural Law. See class description for POLI 2400.06, in the Political Science section of this calendar.

PHIL 2350.03A or B and *PHIL 2370.03A or B: History of Philosophy: Ancient Philosophy I and II. The beginnings of Western philosophy are studied in the writings of pre-Socratics, Plato, Aristotle, and their successors.

Instructors: T. Vinci, S.A.M. Burns
 Format: Lecture/discussion 3 hours

Prerequisite: One previous class in philosophy

***PHIL 2361.03A or B and *PHIL 2362.03A or B: Classical and Early Christian Philosophy.** See class descriptions for CLAS 2361.03B and CLAS 2362.03, in the Classics section of this calendar.

***PHIL 2360.06R: Medieval Philosophy.** See class description for CLAS 3380.06, in the Classics section of this calendar.

***PHIL 2410.03A or B: Philosophy of Psychology.** An examination of philosophical issues arising from the scientific study of the mind.

Instructor: T. Tomkow, M. Hogan
Format: Lecture/discussion 2 hours

Prerequisite: One previous class in philosophy or psychology

***PHIL 2480.03A or B: Environmental Ethics.**

This class will examine the relationship of humankind to nature and contemporary environmental problems from a philosophical perspective. Areas looked at will include pollution, energy, rare species, and environmental law, with a special emphasis on ethical issues in agriculture. An overall question of the class will be whether or not we need reform or radical change in our relationship to nature.

Instructor: Staff
Format: lecture and discussion

***PHIL 2550.03A or B: Marxist Theory and Its Upshot in the Modern World.** Marxist theory combines themes of Hegelian philosophy with the economics of the British classical school. The class will consider how the mature works of Marx and Engels express this combination. It will then trace the fate of the combination in diverse attempts to fit it to circumstances, in Western Europe and in Russia, that Marx did not foresee. Finally it will ask how far any of these versions of Marxism is relevant to the current epoch.

Instructor: Staff
Format: Lecture/discussion 2 hours
Cross-listing: POLI 2455.03/5455.03

PHIL 2610.03A or B: History of Philosophy: The Rationalists. The philosophy of Descartes, Spinoza, and Leibniz.

Instructors: S. Campbell, S.A.M. Burns
Format: Lecture/discussion 3 hours
Prerequisite: One previous class in philosophy

PHIL 2620.03A or B: History of Philosophy: The Empiricists. The philosophy of Locke, Berkeley, and Hume, with an introduction to Kant.

Instructors: S.A.M. Burns, T. Vinc, D. Macintosh

Format: Lecture/discussion 3 hours
Prerequisite: One previous class in philosophy

***PHIL 2660.03A or B: Logic: Understanding Scientific Reasoning.** An introduction to the

principles of scientific prediction and rational choice. The class examines the workings of chance, or probability, and the theory of games.

Instructor: Staff
Format: Lecture/discussion 2 hours

***PHIL 2700.06R: Philosophy in Literature.** A study of some philosophical themes in modern literature. All readings will be literary works.

Instructor: R.M. Martin
Format: Lecture/discussion 2 hours
Exclusion: PHIL 2705.03

***PHIL 2705.03A or B: Philosophy in Literature.** See description for PHIL 2700.06.

Instructor: R.M. Martin
Format: Lecture/discussion 2 hours
Exclusion: PHIL 2700.06

PHIL 2710.03A or B: Existentialism. A general introduction to existentialist themes and authors including Kierkegaard, Nietzsche, Sartre, and Camus.

Instructor: N. Brett
Format: Lecture/discussion 2 hours
Exclusion: PHIL 2170.06

PHIL 2800.06R: Ethics and Health Care: (formerly Ethics & Medicine). Modern health care generates moral problems which cannot be settled on the basis of medical knowledge alone but need to be considered in the light of moral philosophy. Among the problems to be considered in this class are: euthanasia, informed consent, confidentiality, paternalism, coercion, abortion, and the allocation of scarce resources.

Instructor: S. Sherwin
Format: Lecture/discussion 3 hours

3000-Level

PHIL 3051.03A or B: Theory of Knowledge. A study of fundamental issues in the theory of knowledge. The class examines Skepticism, Rationalism, and Empiricism, and investigates the nature of knowledge, belief, meaning, evidence, and truth. Questions are raised about perception and memory and their relation to knowledge as well as questions about our knowledge of ourselves and other people. Attention is given to ancient and modern authors.

Instructors: R. Campbell, D. Macintosh, T. Vinc

Format: Lecture/discussion 3 hours

Prerequisite: PHIL 2610.03, PHIL 2620.03 or permission of the instructor

Exclusion: PHIL 3050.06
Cross-listing: PHIL 5051.03

***PHIL 3060.03A or B: Logic: Logical Theory II.** Devoted primarily to the study of formal semantics and its relation to symbolic language.

Instructor: P.K. Schotch
Format: Lecture/discussion 2 hours

Prerequisite: PHIL 2130.03, PHIL 2140.03 or permission of the instructor

Cross-listing: PHIL 5060.03

330 Philosophy

PHIL 3100.06R: Ethics. A systematic study of the foundation of morality, including readings from Kant, *Foundation of the Metaphysics of Morals*; Hume, *A Treatise of Human Nature*; and Rawls, *A Theory of Justice*.

Instructor: N. Brett, R. Campbell, K. Vihvelin

Format: Lecture/discussion 3 hours

Prerequisite: 2 previous classes in philosophy

Exclusion: PHIL 3105.03

Cross-listing: PHIL 5100.06

***PHIL 3105.03A, B, or R: Ethics.** An abbreviated version of PHIL 3100.06.

Instructor: N. Brett, K. Vihvelin

Format: Lecture/discussion 2-3 hours

Prerequisite: 2 previous classes in philosophy

Exclusion: PHIL 3100.06

Cross-listing: PHIL 5105.03

PHIL 3170.03A or B: Theories of Feminism. A study of the theoretic underpinning of the major feminist theories in critical comparison, concentrating on the ideological disputes and the implications for traditional approaches to social and political thought.

Instructor: J. Arscott, S. Sherwin

Format: Seminar 2 hours

Prerequisite: 2 previous classes in Philosophy or Women's Studies

Cross-listing: POLI 3428.03, PHIL 4170.03, WOST 3500.03

***PHIL 3211.03A or B: Philosophy of Law.** Is coercion central to the concept of law? How are law and morality related? These and other issues relating to the analysis and evaluation of law will be dealt with in a way that utilizes specific statutes and cases, e.g. the Narcotics Control Act and the Morgentaler Case.

Instructor: N. Brett.

Format: Lecture/discussion 2 hours

Prerequisite: Two previous classes in philosophy, or instructor's consent

Cross-listing: PHIL 5211.03

***PHIL 3265.03A or B: Aesthetics.** This class examines major texts in philosophical aesthetics. We begin with relevant parts of Kant's *Critique of Judgement* and conclude with a consideration of Wittgenstein's contribution, especially in *Lectures and Conversations*, and *Culture and Value*.

Instructor: S.A.M. Burns, S. Campbell

Format: Lecture

Prerequisite: PHIL 2260.03 or instructor's consent

Cross-listing: PHIL 5265.03

PHIL 3300.03A or B: Philosophy of Language. What does it mean to say that the elements of language have meaning?

Instructors: M. Hogan, D. MacIntosh, R. Martin

Format: Lecture/discussion 2 hours

Prerequisite: Two previous classes in philosophy including one logic class, half- or full-year

Cross-listing: PHIL 5300.03

***PHIL 3420.03A or B: Philosophy of Biology.** The class begins with a general introduction to the philosophy of science, focusing on the often conflicting criteria for evaluating scientific theories. The relative importance of successful novel predictions, consistency, simplicity, scope, and fruitfulness are assessed in relation to the current status of Darwinian evolutionary theory. In considering the competing views of Popper, Hempel, Kuhn, Lakatos, and Giere, emphasis will be placed on the logic of scientific reasoning and the question whether there can be objectivity and progress in science. The class then turns to issues surrounding the role of teleology in current biological thought: the interpretation and significance of biological functions, the debate about whether genes are the fundamental units of natural selection, and the alleged reduction of modern genetics to physics and chemistry. Finally, the class considers the implications of human sociobiology for matters of traditional philosophical concern: the possibility of biological determinism, the origins of morality, and the reliability of cognitive functions.

Instructor: R. Campbell

Format: Lecture/discussion 2 hours

Prerequisite: One previous class in philosophy or biology

Exclusion: PHIL 2420.03

Cross-listing: BIOL 3580.03, PHIL 5420.03

***PHIL 3427.03A or B: Women in Western Political Thought.** The role of women in political life has been vilified, praised or ignored by major thinkers. Pertinent texts will be read along with interpretations by modern feminists in order to assess why the formal political enfranchisement of women has not resulted in greater substantial equality.

Instructor: J. Arscott

Format: Lecture and discussion 2 hours

Prerequisite: POLI 2400.06/PHIL 2270.06 or POLI 2401.06/PHIL 2070.06, or instructor's permission

Exclusion: POLI 2327.03

Cross-listing: POLI 3427.03, WOST 2600.03

PHIL 3431.03A or B: The Political Imagination in Literature. After having looked at how the study of literature both complements and supplements the social scientific approach to understanding politics, the seminar will analyze the implicit and explicit treatment of a number of political themes in a list of works by both modern and classical novelists and playwrights.

Instructor: J. Arscott

Format: Seminar 2 hours

Prerequisite: POL 2400.06 or 2401.06, or instructor's permission

Cross-listing: POL 3431.03/5431.03

***PHIL 3440.03A or B: Philosophy of Mind.** A systematic study of the mind-body problem and/or theories of personal identity.

Instructor: T. Tomkow

Format: Lecture/discussion 2 hours
Prerequisite: Two previous classes in philosophy
Exclusion: PHIL 4460.03

***PHIL 3460.03A or B: Mind and Brain.** An interdisciplinary approach, combining philosophical analysis and neuroscientific data to study current controversies about the relation between brain function and conscious experience, such as why consciousness evolved and how it is organized in the normal human brain, and whether the mental can be construed as itself physical.

Instructor: M. Hogan, T. Tomkow
Format: Lecture/discussion 2 hours
Prerequisite: Two previous classes in philosophy
Cross-listing: PHIL 5460.03

***PHIL 3475.03A or B: Democratic Theory.** See class description for POL 3475.03 in the Political Science section of this calendar.

***PHIL 3520.03A or B: Philosophy of Social Science.** An examination of philosophical questions about the presupposition, aims, and methods of the social sciences, for example, whether the quantitative methods of the natural sciences are appropriate in the social sciences.

Instructor: Staff
Format: Lecture/discussion 2 hours
Prerequisite: One previous class in philosophy, political science, economics, or sociology and social anthropology
Exclusion: PHIL 3510.03 and PHIL 2510.03
Cross-listing: POLI 3496.03

***PHIL 3530.03A or B: Freedom, Action, and Responsibility.** An investigation of the nature of action, seeking criteria for individuating, describing, and explaining actions. Topics may include the roles of volitions, intentions, motives, and reasons in actions; responsibility for actions and the concept of free actions.

Instructors: P. Schotch, D. MacIntosh
Format: Lecture/discussion 2 hours
Prerequisite: Two previous classes in philosophy
Exclusion: PHIL 4450.06, PHIL 4530.03
Cross-listing: PHIL 5530.03

***PHIL 3630.03A or B: History of Philosophy: Kant.** Special attention will be paid to Kant's metaphysics.

Instructor: T. Vinci
Format: Lecture/discussion 2 hours
Prerequisite: PHIL 2610.03 or PHIL 2620.03 or permission of the instructor
Cross-listing: PHIL 5630.03

***PHIL 3640.03A or B: History of Philosophy: Twentieth-Century Philosophy.** The Twentieth Century has been a period of revolutionary change in Anglophone philosophy. This class surveys the most influential figures, including Frege, Russell, Wittgenstein, and Quine.

Instructor: D. MacIntosh
Format: Lecture/discussion 2 hours
Prerequisite: One previous class in the history of philosophy or permission of the instructor
Cross-listing: PHIL 5640.03

***PHIL 3670.03A or B: Philosophy of Science.** Induction, probability, and explanation are studied with special attention to the nature of scientific theories. No scientific background is presupposed.

Instructor: D. MacIntosh
Format: Lecture/discussion
Prerequisite: At least two previous classes in philosophy, including one half- or full-year logic class such as PHIL 2660.03
Cross-listing: PHIL 5670.03

***PHIL 3720.06R: Phenomenology of Literature.** The class will examine how philosophical and literary works function in terms of their uses of language, presentation of ideas, and articulation of experience. What is the difference between literature and philosophy? How can literature increase one's understanding of the real world? Readings will include both literature and philosophy.

Instructor: Staff
Format: Lecture/discussion
Prerequisite: A class in history of philosophy or permission of instructor. Previous study of literature is desirable
Cross-listing: PHIL 5720.06

***PHIL 3851.03A or B: Metaphysics.** A study of topics such as the nature of substance and change, body and mind, cause and effect, and the concept of existence.

Instructor: M. Hogan, T. Tomkow
Format: Lecture/discussion
Prerequisite: Two previous philosophy classes including at least one half- or full-year logic class
Exclusion: PHIL 3850.06
Cross-listing: PHIL 5851.03

***PHIL 3900.03A or B: Logic: Logic and Philosophical Analysis.** This class will examine the application of logical theory to philosophical problems and issues in the philosophy of logic. Topics in this area include: reference and definite descriptions, problems of intensionality, relativized identity and sortals, bivalence and the sorites paradox, logicism and set theoretic paradoxes, trans-world identity, paradoxes of confirmation, counterfactuals, multivalued logic, quantum logic, Arrow's theorem, analyticity and the a priori, negative existentials.

Instructor: R. Campbell
Format: Lecture/discussion
Prerequisite: Two previous philosophy classes including one half- or full-year class in modern symbolic logic

Cross-listing: PHIL 5900.03

4000-Level

Note: Classes at this level are intended for advanced undergraduates with a strong background in philosophy. No specific prerequisites are listed, but it is assumed that normally a student will have already taken relevant classes at the 3000-level. Classes with titles beginning "Topics in . . ." have no description, since the selection of topics and instructor is determined after the time of calendar preparation. The format for these classes is seminar, 2 hours, and enrolment is limited to 15. Interested students should consult the department for up-to-date information.

*PHIL 4055.03A or B: Topics in Epistemology
Cross-listing: PHIL 5055.03

*PHIL 4070.03A or B: Topics in Philosophical Psychology
Cross-listing: PHIL 5070.03

*PHIL 4080.03A or B: Topics in Logical Theory
Cross-listing: PHIL 5080.03

*PHIL 4115.03A or B: Topics in Ethics I
Cross-listing: PHIL 5115.03

*PHIL 4120.03A or B: Theory of Rational Decision. A study of foundational problems in contemporary theory of rational decision, drawing on work by philosophers, psychologists, economists and mathematicians.
Instructor: R. Campbell, D. Macintosh
Cross-listing: PHIL 5120.03

*PHIL 4125.03A or B: Topics in Ethics II
Cross-listing: PHIL 5125.03

*PHIL 4190.03A or B: Topics in the History of Philosophy I
Cross-listing: PHIL 5190.03

*PHIL 4191.03A or B: Topics in the History of Philosophy II
Cross-listing: PHIL 5191.03

*PHIL 4192.03A or B: Topics in the History of Philosophy III
Cross-listing: PHIL 5192.03

*PHIL 4200.03A or B: Topics in Normative Theory
Cross-listing: PHIL 5200.03

*PHIL 4215.03A or B: Topics in the Philosophy of Law
Cross-listing: PHIL 5215.03

*PHIL 4220.03A or B: Contemporary Philosophical Issues. Intensive study of a few topics which are currently being debated and may fall outside of or cut across standard classification of areas of interest. Examples are: artificial intelligence, probability, sociobiology, theories of causation, reduction.
Instructor: Staff

Cross-listing: PHIL 5220.03

*PHIL 4430.03A or B: Game Theory as a Foundation for Ethics and Politics. The most innovative recent work in ethical theory has applied the theory of games to the perennial problem of the social contract. To what extent can any organized society to which people freely adhere be represented as constituted by rules arrived at by rational agents trying each to arrive at the best bargain about rules with the other agents present? These rules can be regarded simultaneously as the foundation of political organization and as elementary rules of ethics, and a study of this topic forms the basis of the class.

Instructor: Staff

Format: Seminar

Prerequisite: Permission of the instructor

Cross-listing: POLI 4485.03 and ECON 4447.03

*PHIL 4470.03A or B: Utilitarianism, Classical Liberalism, and Democracy. The study of two beliefs characteristic of classical liberalism: that good government is strictly limited government, and that there is no standard for social policy beyond the combination of personal preferences.

Instructor: Staff

Format: Seminar

Prerequisite: Permission of the instructor

Cross-listing: POLI 4479.03/5479.03, ECON 4446.03/5446.03, PHIL 5470.03

*PHIL 4480.03A or B: Social Choice Theory. Arrow's theorem brings together the theory of voting and welfare economics, seemingly leading both (and the theory of democracy as well) to ruin. This class will consider how to cope with the problem. Cross-listed in Economics and Political Science.

Instructor: Staff

Format: Seminar

Prerequisite: Permission of the instructor

Cross-listing: POLI 4480.03/5480.03, ECON 4448.03/5448.03, PHIL 5480.03

*PHIL 4500.03A or B: Topics in Feminist Philosophy. In this class we shall explore some of the current research in a focused area of feminist philosophy, such as feminist ethics, feminist epistemology, feminist philosophy of science, or postmodern feminism.

Instructor: S. Sherwin

Format: seminar, 2 hrs

Prerequisite: strong background in philosophy or feminist theory (normally including at least one previous class in feminist philosophy or instructor's consent)

Cross-listing: WOST 4500.03, PHIL 5500.03

*PHIL 4510.03A or B: Topics in the Philosophy of Language

Cross-listing: PHIL 5510.03

*PHIL 4600.03A or B: Philosophy of Religion

Cross-listing: PHIL 5600.03

***PHIL 4690.03A or B: Topics in the Philosophy of Science**

Cross-listing: PHIL 5680.03

***PHIL 4801.03A or B: Topics in Ethics and Health Care**

Instructor: S. Sherwin

Prerequisite: PHIL 3800.06

Cross-listing: PHIL 5801.03

***PHIL 4855.03A or B: Topics in Metaphysics**

PHIL 4940.03A or B/4960.03A or B/ 4980.03A or B/ 4950.06R/ 4970.06R/ 4990.06R: Directed Reading. Consult department for details. In

special cases, classes to suit individual interests can be developed jointly by a student and an instructor.

Instructor: Staff

Prerequisite: Permission of instructor

Changes and Additions

As the Calendar goes to press before plans for the next academic year are completed, there may be significant changes in the classes listed above. In particular, not all classes are offered in each academic year. Students should consult the Department for names of instructors and revisions.

Introduction

Physics is the study of the fundamental properties of energy and matter, and of the space in which they are found. It seeks to describe and explain the great diversity of nature with the fewest and simplest hypotheses, and to show the underlying similarities of seemingly diverse phenomena. It requires imagination disciplined by logic, and its success is judged by whether or not nature confirms its predictions when tested by experiment. An understanding of physics must be built on a good foundation. The various programmes are arranged to do this in an orderly, efficient way.

First Year Classes

There are five first year classes. Physics 1000.06 and 1450.06 are general interest classes for BA students and are not acceptable as prerequisites for further classes in physics. Physics 1000.06, 1100.06, and 1300.06 all give a general introduction to physics, but each has its own particular approach and selection of topics.

Physics 1000.06R is a survey class offering a wide range of topics in both classical and modern physics. It is primarily intended for students in arts and science, has regular tutorials, no labs, does not use calculus, and is not normally accepted as a prerequisite for advanced physics classes.

Physics 1100.06R is primarily for students intending to make a study of a physical science or engineering; it has regular labs, occasional tutorials, uses calculus, and is the accepted prerequisite for advanced physics classes. Background in physics equivalent to Nova Scotia Grade XII is strongly recommended.

Physics 1300.06R is an introductory class which is oriented towards the health sciences and is primarily intended for students in biology, pre-medicine, pre-dentistry and allied health sciences. The class incorporates labs and tutorials, and is accepted as a prerequisite for advanced physics classes when Mathematics 1000.03A and 1010.03B are taken concurrently.

Degree Programmes

Students should consult the "Degree Requirements" section of this calendar for specific regulations.

BSc with Honours in Physics

All students who intend to take a BSc with Honours in Physics are encouraged to discuss their programme with staff members of the department, and to consult with the Chairperson or Undergraduate Advisor of the department at the beginning of the second year.

Departmental Requirements

Classes required in Honours:

- 1000 level: PHYC 1100.06 or 1300.06
- 2000 level: PHYC 2000.03, 2005.03, 2010.03, 2015.03
- 3000 level: PHYC 3000.03, 3010.03, 3090.03, 3140.03, 3200.03, 3210.03
- 4000 level: PHYC 4000.03, 4100.03, 4151.03, 4152.03, 4160.03, 4230.03 plus one other full credit at the 4000 level

Other required classes:

CHEM 1010.06; MATH 1000.03/1010.0; MATH 3110.03, 3120.03 plus 2 other 2000 level Math credits not including MATH 2060.03.

Honours Qualifying Exam

Students with special interests must select electives carefully. The following suggestions may serve as a guide.

Applied Physics Option: PHYC 3250.03, 3340.03, 3440.03, 3810.03, 4220.03, 4800.03.

Theoretical Physics Option: PHYC 4170.03, 4180.03, 4480.03, 4650.03/4660.03, 4800.03; Mathematics classes such as complex variables, modelling, or advanced differential equations.

BSc with Honours in Physics (Applied Physics Stream)

Students with an interest in the applications of physics to technology and industry are encouraged to consider the Co-operative Education Programme in Physics. See the description below of the Co-op Programme. Note that the mixture of academic and work terms extends the total degree time by one year.

- Year 1:** PHYC 1100.06; CHEM 1010.06 or equivalent; MATH 1000.03 and 1010.03; COMP 1400.03 and 1410.03; elective
- Year 2:** PHYC 2000.03, 2005.03; MATH 2001.03 or 2480.03, and 2030.03; Elective - A term; From January 1st - Work term I; Summer: (Option for) Computing Science elective, and elective.
- Year 3:** From September 1st - Work Term II; PHYC 2010.03, 2015.03; MATH 2002.03 or 2490.03, and 2040.03; Elective - B term; Summer: Work term III.
- Year 4:** PHYC 3000.03 or 3340.03, 3010.03, 3140.03, 3200.03, 3210.03, 3250.03, 3440.03, 3810.03; MATH 3110.03, 3120.03; Summer: Work term IV.
- Year 5:** PHYC 4000.03, 4151.03, 4160.03, 4100.03, 4230.03, 4___03, 4800.03; Technical electives: one and a half.

The technical elective classes may be selected from TUNS or Dalhousie classes in Materials Science, Computing Science, Physical Chemistry, Medical Engineering, Oceanography, Meteorology, etc., in consultation with the programme coordinator.

Combined Honours

Students interested in both physics and another science may wish to take a BSc with Honours in Physics and the other subject combined. Students contemplating such a programme should, in any case, consult the departments before the beginning of their second year of study.

Combined Honours in Physics and Computing Science

Students who are interested in a core programme in physics with a substantial

component of computing science may wish to take a combined honours programme in the two subjects. An approved selection of classes which meets this objective is as follows:

Year 1:	PHYC 1100.06; COMP 1400.03, 1410.03; MATH 1000.03/1010.03; CHEM 1010.03; Elective (language and humanities group, which also satisfies the writing requirement).
Year 2:	PHYC 2000.03, 2005.03, 2010.03, 2015.03; COMP 2430.03, 2610.03; MATH 2000.06, 2030.03, 2040.03.
Year 3:	PHYC 3000.03, 3010.03, 3090.03, 3140.03, 3200.03, 3210.03; COMP 2350.03, 2700.03; MATH 3110.03, 3120.03.
Year 4:	PHYC 4100.03, 4151.03, 4152.03, and one of 4000.03, 4160.03 or 4220.03; COMP 3040.03, 3170.03, 3250.03, 3700.03; Elective (social sciences group).

Co-operative Education Programme in Physics

The Co-operative Programme provides physics students with an integrated pattern of academic study and supervised work terms in industry, government laboratories and institutes, etc. The programme enables students to obtain a better appreciation of the practical problems they will face in their physics careers upon leaving the university. The work term experience gives students an opportunity to orient themselves at an early stage towards the practical application of their newly acquired knowledge, and adds to their motivation for academic study.

Honours Co-op in Physics

Departmental Requirements

Same as for the regular Honours in Physics as above with the addition of the following:

- Four supervised work terms

Honours Qualifying Examination

Eligibility

Students entering their second year of an honours programme in physics or combined honours programme at Dalhousie are eligible for admission.

The Work Study Programme

The Programme consists of 8 academic terms and 4 supervised work terms. The academic programme and required classes are the same as for the BSc degree with Honours in Physics. In addition, in year 2, Co-op students are required to participate in the non-credit co-op orientation programme.

Further Information

For further information contact the Programme Co-ordinator, Co-operative Education Programme in Physics, Department of

Physics, Dalhousie University, Halifax, N.S. B3H 3J5.

Advanced Major (20-credits)

Departmental Requirements

Classes required in Advanced Major:

1000 level:	PHYC 1100.06 or 1300.06
2000 level:	PHYC 2000.03, 2005.03, 2010.03, 2015.03 plus one other Physics credit at or above the 2000 level not including classes listed below.
3000 level:	At least 3 credits at or above the 3000 level

Other required classes:

MATH 1000.03/1010.03 or MATH 1500.06; MATH 2000.06 or equivalent

Advanced Major Co-op (20-credits)

Same as for the regular Advanced Major in Physics as above with the addition of the following:

- Four supervised work terms

See Co-operative Education Programme in Physics and Work Study Programme above for details

Bachelor's Degree/Major in Physics (15-credits)

PHYC 2450.06, 3402.03, 4020.03 may not be included in a "Major" to satisfy regulation 11.1(b)(d). (These classes may, however, be taken as additional electives with a "Major"). At least two 3000-level classes must be included, but if the combination PHYC 3000.03/3010.03 and 3340.03 is chosen, there must be one additional full-credit.

BSc Major in Physics

(Example only, other possibilities exist):

Departmental Requirements

Classes required in major:

1000 level:	PHYC 1100.06 or 1300.06
2000 level:	PHYC 2000.03, 2005.03, 2010.03, 2015.03
3000 level:	Two credits at or above the 3000 level not including 3402.03 or 4020.03

Other required classes:

MATH 1000.03/1010.03; MATH 2000.06 or equivalent

BSc Major in Physics, with Diploma in Engineering

The physics content of this programme might be as follows:

Year 1:	PHYC 1100.06
Year 2:	PHYC 2000.03, 2005.03, 2010.03, 2015.03

Year 3: PHYC 3160.03, 3170.03, 3340.03, Physics elective. Other possibilities exist.

For the remainder of the programme, consult the Engineering Department.

Earth System Science

Classes in Physics can form part of an integrated programme in Earth System Science. For more information, see the Earth System Science section of this calendar. Interested students are encouraged to consult with the Undergraduate Advisor.

Geophysics

For those interested in Geophysics, refer to classes ESCI 2050.03, 3130.03, 4270.03, 4280.03, and 4290.03, listed under Earth Sciences.

Diploma in Meteorology

Please note: Applications are not being accepted for the Diploma in Meteorology for the 1995-96 academic year. Please contact the Registrar's Office for further details concerning applications for 1996-97.

Degree Requirements

Required classes

PHYC 4500.03/4510.03, 4520.03, 4530.03, 4540.03/4550.03

OCEA 4411.03/4412.03, 4120.03, 4515.03

- One approved elective
- Required GPA for graduation - 1.70
- Total credits required - 5

For admission into this programme, which has a limited enrolment, a general BSc degree in Physics or other appropriate subject is required. A strong background in Physics and Mathematics is necessary, and classes taken should also include Statistics and Computing Science. For students enrolled in a BSc programme at Dalhousie, the following classes are recommended: PHYC 1100.06, 2000.03, 2005.03, 2010.03, 2015.03, 3160.03/3170.03; MATH 1000.03/1010.03, 2000.03, 2030.03/2040.03, 2070.03/2080.03, 3110.03/3120.03; and COMP 1400.03/1410.03.

After completion of the Diploma programme, students are eligible for admission into a graduate Atmospheric Science programme at Dalhousie.

Classes Offered in Physics

Classes marked * are not offered every year. Please consult the timetable on registration to determine if this class is offered.

PHYC 1000.06R: Survey of Physics. A survey of physics is not normally accepted as a prerequisite to advanced classes in physics. It is designed for students in arts and science who want to be exposed to a wide range of topics in physics. Topics covered include motion, force,

momentum, energy, heat electricity and magnetism, waves, light, relativity, quantum theory and atomic radiations, the atomic nucleus and nuclear reactions, astrophysics and cosmology.

This course requires a reasonable background of high school mathematics, i.e. algebra, trigonometry, geometry, but not calculus. Problem sets are assigned each week, for which help may be obtained in a scheduled afternoon tutorial hour and through the Physics Resource Centre at other times. Since this class has no lab, some medical and dental schools may not accept it as a required physics class.

Format: Lectures 3 hours, tutorial 1 hour
Instructor: C. G. White
Prerequisite: Familiarity with algebra, graphs and trigonometry
Exclusion: Credit will be given for only one of PHYC 1000.06, 1100.06, 1280.03/1290.03, or 1300.06

PHYC 1100.06R: Introduction to Physics. Primarily for students interested in the physical sciences. Students beginning this class should be familiar with algebra, graphs and trigonometry, and should be taking calculus (MATH 1000.03/1010.03) concurrently. The class concentrates on three main areas: mechanics, oscillations and waves, electricity and magnetism. As far as possible, the basic ideas are introduced through in-class demonstrations, enabling students to relate the verbal and mathematical descriptions to events in the real world. In addition, students are able to explore the physical world via labs every second week. **Note:** Section 02 is for Engineering students only.

Format: lecture 3 hours, lab 3 hours (number of labs = 13)
Instructors: M. Calkin, D. Goble, D. Labrie, R. March, A. Simpson
Prerequisites: Students should have a background in Physics equivalent to the Nova Scotia XII level.
Exclusion: Credit will be given for only one of PHYC 1000.06, 1100.06, 1280.03/1290.03, or 1300.06

SCIE 1200.06R: The Cosmos, Earth and Life. See class description in Science, Interdisciplinary section of this calendar.

PHYC 1280.03A/1290.03B: Introduction to Physics. These two half classes are, as a pair, equivalent to PHYC 1100.06. They are available ONLY to accommodate special circumstances; permission from the Department is required.
Exclusion: Credit will be given for only one of PHYC 1000.06, 1100.06, 1280.03/1290.03, or 1300.06

PHYC 1300.06R: Physics In and Around You. An introduction to physics for students in biology, and those preparing for medicine, dentistry and allied health sciences. It is accepted as a prerequisite to advanced classes in

physics when combined with MATH 1000.03 and 1010.03. After introducing basic concepts in physics, every opportunity is used to apply these concepts by using realistic biological examples, e.g. forces and torques are directly related to muscle action, fluids to blood circulation, sound to hearing.

Format: lecture 3 hours, lab 3 hours

Instructor: G. F. O. Langstroth

Prerequisite: Students beginning this class should be familiar with trigonometry and algebraic equations.

Exclusion: Credit will be given for only one of PHYC 1000.06, 1100.06, 1280.03/1290.03, or 1300.06

PHYC 1450.06R: Astronomy: The Evolving Universe. This class meets the science distribution requirements for BA students. The class does not count as a prerequisite for any other science class. Our world, in the largest sense, is our universe. This class will start by looking at the static night sky, the properties and numbers of stars that are visible. Then stellar evolution, leading up to supernovae, pulsars and black holes, will be studied. Further topics covered will go outward, covering the origin and evolution of the universe itself, and then inward to examine the Solar System. The level is non-calculus with a minimum of mathematics. Included will be some of the historical evolution of the perception of our universe.

Format: lecture 2 hours, tutorial 1 hour

Instructor: W. Zukauiakas

Exclusion: Credit will be given for only one of PHYC 1450.06 and 2450.06.

PHYC 2000.03A: Oscillations and Waves. Topics discussed include the description of sinusoidal oscillations, vibrations of different physical systems, resonance, standing waves, wave synthesis, travelling waves, interference and diffraction.

Format: lecture 3 hours, lab 3 hours

Instructor: A. M. Simpson

Prerequisites: PHYC 1100.06 or SCIE 1500.30, a 1000-level calculus class, or permission of the instructor.

PHYC 2005.03A: Mechanics and Relativity. Topics include coordinate systems, collisions in three dimensions, angular momentum, rigid body motion, central force motion and orbits, the special theory of relativity, relativistic coordinate transformations, relativistic momentum and energy.

Format: lecture 3 hours, tutorial 3 hours

Instructor: M.G. Calkin

Prerequisites: PHYC 1100.06 or SCIE 1500.30, a 1000-level calculus class, or permission of the instructor.

PHYC 2010.03B: Electricity and Magnetism. This class begins by studying electrostatics, electric fields and electric potential, then conductors in static fields, energy storage and

capacitance. Magnetic fields and forces, electromagnetic induction and Maxwell's equations are discussed.

Format: lecture 3 hours, lab 3 hours

Instructor: B.L. Blackford

Prerequisites: PHYC 1100.06 or SCIE 1500.30 (PHYC 2000.03 and PHYC 2005.03 recommended), and a 1000 level calculus class

PHYC 2015.03B: Modern Physics. This introduction to quantum physics discusses some of the difficulties of classical physics in explaining blackbody radiation, photoelectric effect and the Compton effect. The concept of wave-particle duality is introduced for light and particles, de Broglie waves and electron diffraction are discussed. The Schrodinger equation is applied to one-dimensional examples. The concept of tunnelling is used to explain field emission, alpha decay, and the scanning tunnelling microscope. Applications of modern physics are discussed and illustrated through the tutorial sessions.

Format: lecture 3 hours, tutorial 3 hours

Instructor: D. Labrie

Prerequisite: PHYC 1100.06 or SCIE 1500.30 (PHYC 2000.03 and PHYC 2005.03 recommended) and a 1000 level calculus class

***PHYC 2240.03A: Intermediate Physics for Medicine and Biology I.** This course will apply first year knowledge of Physics and Mathematics to the understanding of the physical principles of physiological and biological systems. The course covers the application of physics as well as the instrumentation used to measure physiological properties in Medicine and Biology, Biomedical Engineering and Environmental Science. Topics include: basic thermodynamics, transport through membranes, electrophysiology, feedback and control, as well as the principles behind electrical measurement techniques such as the electrocardiogram.

Format: lecture 3 hours

Instructor: G.F.O. Langstroth

Prerequisites: PHYC 1100.06 or 1300.06R; SCIE 1500.30; a 1000-level calculus; or permission of the instructor.

*Offered in alternate years beginning in 1994-95.

***PHYC 2250.03B: Intermediate Physics for Medicine and Biology II.** This course follows the same approach as PHYC 2240.03. It focuses on the nature of different forms of radiation and its interaction with living organisms. Particular attention is given to imaging techniques for the examination of internal organs and the effects of radiation in our environment on humans. Topics include ultrasound, nuclear medicine, X-ray tomography, magnetic resonance imaging, and exposure to ultraviolet and nuclear radiation.

Format: lecture 3 hours

Instructor: G.F.O. Langstroth

Prerequisite: PHYC 2240.03 or permission of the instructor.

*Offered in alternate years beginning in 1994-95.

PHYC 2450.06R: Astronomy. An introduction to astronomy for science students. Topics discussed include: the observation and exploration of the planets, the origin and evolution of stars (including white dwarfs, pulsars, quasars, black holes), the structure of galaxies, and cosmology.

Format: lecture 3 hours
Instructor: P.H. Reynolds
Prerequisite: One first-year science class
Exclusion: Credit will be given for only one of PHYC 1450.06 and 2450.06.

SCIE 3000.06R: Science Fundamentals. See class description in Science, Interdisciplinary section of this calendar.

PHYC 3000.03A/3010.03B: Experimental Physics. Designed to give students a chance to do non-set experiments and thereby encounter and solve, on their own, the problems of experimentation. As the number of experiments is small (four to six), students should achieve a real understanding of a few physical phenomena. Topics cover a wide range of fields such as atomic physics, nuclear physics, solid state physics and electronics. A measurement of one of the fundamental constants such as c , G or e is required. Other than this, the student is free to choose the field of experimental study.

Format: lecture 3 hours, lab 6 hours
Instructor: A.M. Stimpson (lectures), G. Stroink (labs)
Prerequisites: PHYC 2000.03, 2005.03, 2010.03 and 2015.03.

PHYC 3090.03A or B: Advanced Classical Mechanics. Topics include: central force motion, the principle of virtual work, Lagrange's equations, the principle of least action, Hamilton's equations, canonical transformations, Hamilton-Jacobi equation.

Format: lecture 3 hours
Instructor: M. G. Calkin
Prerequisite: MATH 2000.06 or equivalent; PHYC 2005.03

PHYC 3140.03A: Introduction to Quantum Physics. The experimental basis of the wave-particle duality of light is discussed and the existence of diffraction patterns for particles is used to motivate the construction of wave equations for particles. The determination and interpretation of solutions of Schrodinger's equation are illustrated by simple examples. The three dimensional Schrodinger equation is discussed, with special emphasis on the hydrogen atom. The concept of electron spin is also introduced.

Format: lecture 3 hours
Instructor: M.G. Calkin
Prerequisite: MATH 2000.06 or equivalent; PHYC 2015.03

PHYC 3160.03A: Topics in Physics. An introduction to thermodynamics and statistical mechanics.

Format: lecture 3 hours
Instructor: B.L. Blackford
Prerequisite: PHYC 2005.03, 2010.03
Exclusion: Credit will not be given for PHYC 3160.03 and either of PHYC 3200.03 or 3210.03.

PHYC 3170.03B: Topics in Physics. This class is complementary to PHYC 3160.03 and also continues the application of quantum principles to various regions of modern physics begun in Physics 2015.03. In this class, quantum principles will be applied to atoms, molecules, solids, nuclei, and elementary particles. Some special applications will include lasers, semiconductors, and nuclear fusion.

Format: lecture 3 hours
Instructor: M.H. Jericho
Prerequisite: PHYC 2015.03, 3160.03

PHYC 3200.03A: Thermodynamics. An introduction to the basic concepts and laws of classical thermodynamics. Topics include equations of state, heat engines, thermodynamic functions, and phase equilibrium.

Format: lecture 3 hours
Instructor: D.B.I. Kiang
Prerequisites: Some knowledge of partial derivatives, e.g., MATH 2000.06 or equivalent

PHYC 3210.03B: Statistical Mechanics. In this class the tools are developed to link the physical laws of the microscopic world to those of the macroscopic world, and the underlying atomic processes of the laws of thermodynamics are explored.

Instructor: H.J. Kreuzer
Prerequisites: PHYC 3200.03 or equivalent; MATH 2000.06 or equivalent

PHYC 3250.03A or B: Computational Methods in Physics. Computers have changed the way physics is done. This course will provide experience in computer-based techniques, not only as a means to solve physics problems but also to build intuition and understanding of physics. Topics include computer simulations of dynamics phenomena, numerical integration, differentiation, roots, differential equations, Fourier analysis, etc. Programming languages (True-Basic) and spreadsheets (Excel) are both used.

Format: lecture/lab 3 hours
Instructor: B.L. Blackford
Prerequisite: Completion of a second year programme in physics, including MATH 2000.06 or 2500.06, or permission of the instructor.

PHYC 3340.03A: Electronics. Topics include: carrier transport in semiconductors, properties of diodes and transistors, transistor amplifiers,

operational amplifiers, logic elements, digital devices, and ac circuits.

Format: lecture 3 hours, lab 2 hours

Instructor: B.E. Paton

Prerequisites: PHYC 2010.03; or MATH 2000.06 or equivalent.

PHYC 3440.03A or B: Optics. Topics are selected from areas such as electromagnetic theory, interaction of light with matter, propagation of light, geometrical optics, polarization, interference, and diffraction.

Format: lecture 3 hours

Instructor: S.T. Nugent

Prerequisites: PHYC 2010.03; MATH 2000.06 or equivalent; The student should be familiar with vector analysis, Maxwell's equations, and the use of complex exponential functions.

PHYC 3810.03B: Microcomputers and the Real World. Subject material: measurement theory, modern sensors, microcomputer architecture, 68000 family of computers, software simulation of digital electronic circuits, machine language programming, assembly language and interfacing techniques, development of "intelligent" instruments.

Format: lecture 3 hours, computer lab 3 hours

Instructor: B. E. Paton

Prerequisites: PHYC 2000.03/2010.03

Cross-listing: COMP 3810.03

PHYC 4000.03A or B: Advanced Lab. This is a physics and engineering-physics laboratory class in which students in groups of two work largely on their own initiative. The student may select experiments from the fields of optics, acoustics, solid state devices, and low temperature physics. Detailed laboratory reports on the experiments are required and students are expected to demonstrate a good grasp of underlying physical principles.

Format: lab 6 hours

Instructor: M. H. Jericho

Prerequisites: Fourth-year standing in physics or permission from the instructor.

***PHYC 4020.03B: Special Topics in the History and Philosophy of Science.**

Format: Seminar 3 hours

Instructor: R. Ravindra

Prerequisites: 3rd year standing or above

Cross-listing: COMR 3532.03/3533.03

*This class is not given every year.

PHYC 4100.03A or B: Electrodynamics. Topics include the wave equation and solutions, waves at metallic boundaries, the inhomogeneous wave equation, radiation from moving charges, scattering and dispersion.

Format: lecture 3 hours

Instructor: D.A. Tindall

Prerequisites: PHYC 2010.03, 4160.03; MATH 3110.03/3120.03

Cross-listing: PHYC 5100.03

PHYC 4151.03A: Quantum Mechanics. General formulation of quantum mechanics, illustrated by spin systems and one-dimensional problems, angular momentum, stationary states, time evolution, variational methods, WKB approximation, and path integrals.

Format: lecture 3 hours

Instructor: D.J.W. Geldart

Prerequisite: PHYC 3140.03

Cross-listing: PHYC 5151.03

PHYC 4152.03B: Quantum Mechanics. This is a continuation of PHYC 4151.03. Path integral approach to quantum mechanics, angular momentum theory and applications; density operators, systematic development of time-independent perturbation theory; identical particles; and scattering theory.

Format: lecture 3 hours

Instructor: D. Kiang

Prerequisites: PHYC 4151.03

Cross-listing: PHYC 5152.03

PHYC 4160.03A: Mathematical Methods of Physics. Topics discussed include: complex variable theory, Fourier and Laplace transform techniques, special functions, partial differential equations.

Format: lecture 3 hours

Instructor: J. G. Cordes

Prerequisites: MATH 3110.03/3120.03, or permission of instructor.

Cross-listing: PHYC 5160.03

PHYC 4170.03B: Topics in Mathematical Physics. This class is a continuation of PHYC 4160.03 and deals with special topics in mathematical physics selected from areas such as the Green's function technique for solving ordinary and partial differential equations, scattering theory and phase shift analysis, diffraction theory, group theory, tensor analysis, and general relativity.

Format: lecture 3 hours

Instructor: J. G. Cordes

Prerequisite: B- standing in PHYC 3000.03/3010.03 or equivalent

Cross-listing: PHYC 5170.03

PHYC 4180.03A or B: Nuclear and Particle Physics. This is an introductory class in nuclear physics. Topics discussed include: nucleon-nucleon interactions, nuclear structure, gamma transitions, alpha decay, beta decay, nuclear reactions and elementary particle physics.

Format: lecture 3 hours

Instructor: R.A. Dunlap

Prerequisite: PHYC 3140.03

Cross-listing: PHYC 5180.03

***PHYC 4220.03A: Microcomputer-Based Instrumentation.** Subject material: instrument design, analog to digital and digital to analog techniques, custom interfacing to sensors, algorithms, parallel and serial output data links,

software testing and debugging, hardware testing and debugging, research project.

*This class is not offered every year.

Format: lecture 3 hours
Instructor: B. E. Palon
Prerequisite: PHYC 3810.03
Cross-listing: PHYC 5220.03

PHYC 4230.03A or B: Introduction to Solid State Physics. An introduction to the basic concepts of solid state physics which are related to the periodic nature of the crystalline lattice.

Topics include crystal structure, X-ray diffraction, phonons and lattice vibrations, the free electron theory of metals, and energy bands.

Format: lecture 3 hours
Instructor: D. A. Tindall
Prerequisite: PHYC 3140.03 or permission of instructor.

Cross-listing: PHYC 5230.03

PHYC 4311.03A/4312.03B: Fluid Mechanics I/II. See class description for OCEA 4311.03/4312.03, in the Oceanography section of this calendar.

PHYC 4411.03A: Atmospheric Dynamics I. (not offered 1995-96) See class description for OCEA 4411.03 in the Oceanography section of this calendar.

PHYC 4412.03B: Atmospheric Dynamics II. (not offered 1995-96) See class description for OCEA 4412.03 in the Oceanography section of this calendar.

***PHYC 4460.03A or B: Optics.** A continuation of PHYC 3440.03, dealing with coherence, polarization, scattering by matter, the electromagnetic properties of matter, including crystals, reflection, refraction and double refraction.

Format: lecture 3 hours
Prerequisites: PHYC 3440.03; registration requires prior departmental consent.

PHYC 4480.03A or B: Applied Group Theory. See class description for MATH 3320.03 in the Mathematics section of this calendar.

PHYC 4500.03A: Atmospheric Physics I. (not offered 1995-96) Main topics covered in this class are atmospheric thermodynamics and atmospheric radiation.

Format: lecture 3 hours
Instructor: D.F. Goble
Prerequisites: At least one 3rd year physics class, preferably thermodynamics.

Cross-listing: OCEA 4500.03/5500.03, PHYC 5500.03

PHYC 4510.03B: Atmospheric Physics II. (not offered 1995-95) The major topic covered in this class is cloud physics. Other topics include atmospheric optics, atmospheric acoustics, lightning and radar techniques.

Format: lecture 3 hours
Instructor: D.F. Goble

Prerequisite: PHYC 4500.03
Cross-listing: OCEA 4510.03/5510.03, PHYC 5510.03

PHYC 4520.03A: Introduction to Atmospheric Science. (not offered 1995-96) This class provides the student with an understanding of the thermal structure of the atmosphere, air mass and frontal theory, and weather generating physical processes and their consequences. Other topics include atmospheric radiation, dynamic meteorology, climatology, and the physics of clouds and storms.

Format: lecture 3 hours
Instructor: G. Lesins
Prerequisite: Permission of instructor
Cross-listing: OCEA 4520.03/5520.03, PHYC 5520.03

PHYC 4530.03B: Introduction to Radiation and Climate. (not offered 1995-96) This class provides the student with an understanding of the origin, composition and thermal structure of the atmosphere and radiative transfer through clear and cloudy atmospheres. There will be some discussion of the general atmospheric circulation, radiative transfer at the ocean surface, and climate change.

Format: lecture 3 hours
Instructor: P. Chylek
Prerequisite: Permission of instructor
Cross-listing: OCEA 4530.03/5530.03, PHYC 5530.03

PHYC 4540.03A: Synoptic Meteorology I. (not offered 1995-96) This class introduces principles and techniques of meteorological analysis, diagnosis of weather systems and prognosis of system motion and development. A brief review is presented of meteorological instrumentation, observational procedures, codes and analysis techniques essential to the study of the main subject matter. Atmospheric systems and processes are carried out during the tutorial-laboratory period.

Format: lecture 2 hours, tutorial-laboratory 3 hours
Instructor: S. Miller
Prerequisite: At least one third-year physics class
Cross-listing: OCEA 4541.03/5541.03, PHYC 5540.03

PHYC 4550.03B: Synoptic Meteorology II. (not offered 1995-96) This class extends the analysis and diagnosis of atmospheric dynamics and weather processes introduced in PHYC 4540.03. Modern statistical and computer methods and satellite techniques are discussed. Case studies of atmospheric systems and processes are carried out during the tutorial-laboratory period.

Format: lecture 2 hours; tutorial-laboratory 3 hours
Instructor: S. Miller
Prerequisite: PHYC 4540.03
Cross-listing: OCEA 4550.03/5550.03, PHYC 5550.03

***PHYC 4650.03A/4660.03B: Relativity and Cosmology.** (not offered 1995-96) A review of differential geometry will be given followed by an introduction to the general theory of relativity. Various topics will be discussed, including: linearized theory and gravitational radiation, spherically symmetric metrics and the Schwarzschild Solution, gravitational collapse, black holes, and cosmology.

Format: lecture 3 hours

Instructor: TBA

Prerequisite: MATH 3050.06 or permission of instructor

Cross-listing: MATH 4650.03/5650.03, PHYC 5650.03/5660.03

*This class is not given every year.

PHYC 4900.03R: Research Project. Students with a good academic record and an interest in original research are encouraged to undertake a research project under the direction of an individual faculty advisor. Interim progress reports and a formal final report are required. The class grade will be based on an evaluation of these reports.

Format: Independent research

Coordinator: D.A. Tindall

Instructor: Staff

Prerequisite: High academic standing and permission of the Chair of the Physics Department

PHYC 8890.00: Co-op 2nd Year Seminar
(non-credit)

PHYC 8891.00: Co-op Work Term I

PHYC 8892.00: Co-op Work Term II

PHYC 8893.00: Co-op Work Term III

PHYC 8894.00: Co-op Work Term IV

Graduate Studies

The Department of Physics provides courses of study leading to MSc and PhD degrees. Areas of research include: solid state, geophysics, medical physics, low energy nuclear physics, low temperature physics, theoretical physics, atmospheric physics and oceanography. Consult the Graduate Studies Calendar, or contact the Graduate Co-ordinator for the Physics Department.

Physiology and Biophysics

Location: Sir Charles Tupper Building, 3rd Floor, Halifax, N.S. B3H 4H7
Telephone: (902) 494-3517

Professors

J.A. Armour, BSc (McG), MD (Western), PhD (Loyola)
 R.P. Croll, BSc (Tufts), PhD (McG)
 A.S. French, MSc, PhD (Essex)
 D. Guernsey, BA (Lehigh), MS (Bridgeport), PhD (Hawaii), Major appointment - Dept. of Pathology
 E.M. Horacek, MSc(Eng) (Frague), PhD (Dal)
 M. Horackova, MSc, PhD (Prague)
 G.A. Klassen, MD (UBC), FRCP(C), Major appointment - Dept. of Medicine
 T.F. McDonald, BSc (Alta), PhD (Dal), DIC (Imperial College)
 I.A. Melnertzhagen, BSc (Aberdeen), PhD (St. Andrews), Major appointment - Dept. of Psychology, Interim Director Neuroscience Institute
 W.H. Moger, BS (Cornell), PhD (Calif)
 M.R. Oulton, BA (Acadia), PhD (Dal), Major appointment - Dept. of Obstetrics/Gynecology
 D. Rasmussen, BA (Colo C), MA, PhD (Dal)
 W.G. Tattou, BSc, MD (Alta), PhD (Toronto)
 M. Willkinson, BSc (Southampton), PhD (Lond), Major appointment - Dept. of Obstetrics/Gynecology
 H. Wolf, Dipl Ing (Munich), PhD (Dal)
 A.Y.K. Wong, BSc, MSc, PhD (Dal)

Associate Professors

R.E. Brown, BSc (Victoria), MA, PhD (Dal), Major appointment - Dept. of Psychology
 C.L. Kozey, BPE (UNB), MSc (Waterloo), PhD (Dal)
 J.D. Dudar, BSc, MSc (Alta), PhD (Dal)
 A. Fine, AB (Harvard), VDM, PhD (Penn)
 D.J. Hirsch, MD (Dal), Major appointment - Dept. of Medicine
 J.G. Holland, BSc, MD (Dal), joint appointment - Dept. of Medicine
 M.G. Murphy, BSc, MSc, PhD (Dal)
 P.R. Murphy, MSc, PhD (Dal), Graduate Studies Coordinator
 N. Morgunov, BSc, MSc, PhD (Tor)
 D. Pelzer, MD (Heidelberg)
 G. Stroink, PhD (McG), Major appointment - Dept. of Physics

Assistant Professors

B. Chauhan, PhD (Wales), Major appointment - Dept. of Medicine
 M. Gardner, MD (Dal), FRCP (C), FACC, Major appointment - Dept. of Medicine
 B. Hanna, BSc (UBC), MDCM, PhD (McG), Major appointment - Dept. of Pediatrics
 A. Kholopov, MSc (Moscow State) PhD (USSR Acad of Sci)
 K. Landymore, BSc, MD, PhD (Dal), Major appointment - Dept. of Obstetrics/Gynecology
 S. Martin, BA (MSVU), MSc (Alta), PhD (Calgary), Major appointment, Professor and Chair, Dept of Biology, Mount Saint Vincent University
 S. Pelzer, BSc, MSc, PhD (Freiburg)
 R. Rittmaster, BA (Brown), MD (Tufts Med Sch), major appointment Dept of Medicine

Lecturer

S.P. Handa, MD (Punjab), FRCP(C), FACP

Instructor

C. Couture, BA (Dal)

Introduction

The Department of Physiology and Biophysics offers a wide range of undergraduate and graduate classes in addition to those restricted to students in the faculties of Medicine and Dentistry. The Department does not offer a specific Bachelor's degree programme (see the Graduate Studies Calendar for details on the Master and Doctorate degree programmes).

The classes listed below are aimed at providing the student with an understanding of the functioning of the human body. The broad survey courses (1010.06, 2030.06, 4403.06) are pitched at different levels. This meets the needs of students who require a specific level for their particular programme or for entry into a further degree programme. Students who are not in the Faculty of Health Professions are generally placed in the 4403.06 class. The Distance Education class C1000.06 is open to all students. Students wishing to enrol in other specialized classes require permission from the Course Director or Department Head.

Students who have previously taken biology, chemistry, physics and similar will be best equipped to study physiology. However, there are no strict requirements for the general classes, and students of all stripes have successfully completed them in the past.

Classes Offered

Note: Students in the Faculty of Arts and Social Sciences or the Faculty of Science must attain permission from the Faculty to enrol in Physiology and Biophysics classes. This permission must be in writing, and presented to the Registrar's Office upon registration for the classes.

344 Physiology and Biophysics

PHYL C1000.06R: Human Physiology. A full-credit distance education class equivalent to PHYL 1010.06 (a requirement of the Dalhousie BScN and other Health Professions degrees). The class is based on a selected textbook and study guide supported by an extensive student-friendly package including a step-by-step guide, learning objectives, supplementary material, mail-in assignments, and videotape laboratories. The class is normally given in the Regular session (Sept - Apr), as well as in the Spring session (May - June). More flexible schedules can be considered. Distance Education classes have an additional, non-refundable, fee of \$100 over and above the listed tuition fees.

Director: N. Morgunov (Physiology and Biophysics)
Prerequisite: Intro classes in Biology, Chemistry and Physics. Permission of the instructor is required.
Cross-listing: BIOL 3077.06

PHYL 1010.06R: Human Physiology. This is an introductory physiology class directed mainly at health professional students. The functions of body organs and body systems and the integration of functions in the whole organism are studied.

Director: J. Dudar
Format: 3 lecture hours, 1-3 hour tutorial/ laboratory

PHYL 2030.06R: Human Physiology. The function of organs and body systems is presented through lectures and laboratory work. Special emphasis is on the integration of function in the whole organism. A medium-level class directed at Health Professions students.

Director: K. Landymore
Format: Lecture/Tutorial, 4 hours; Lab, 3 hours (B-term only)
Prerequisite: two classes from Biology, Physics, Chemistry
Co-requisite: ANAT 2170.06

PHYL 3110.03A: Neurophysiology. The student is provided with the principles of neurophysiology. Current concepts of the organization and function of the mammalian nervous system are surveyed. The class is mainly directed at Physiotherapy and Occupational Therapy students.

Director: R. Croll
Format: lecture/tutorial, 5 hours
Prerequisites: PHYL 1010.06 or 2030.06, ANAT 2100.03

PHYL 3120.03A or B: Exercise Physiology. The student is given a thorough understanding of skeletal muscle physiology and insight into the short and long term response to work. The material is related to normal and pathological conditions. This class is mainly directed at Physiotherapy and Occupational Therapy students.

Director: H. Wolf
Format: lecture/lab 4 hrs
Prerequisite: PHYL 1010.06 or 2030.06

PHYL 4403.06R: Human Physiology. A higher-level class that concentrates on the organ systems and physiological systems in humans.
Format: lecture 3 hours

School of Physiotherapy

Location: 5869 University Avenue, Forrest Building, 4th Floor, Halifax, N.S. B3H 3J5
Telephone: (902) 494-2524
Fax: (902) 494-1941

Director

L. Makrides, MCSP, BPT (Sask), MSc (Ottawa), PhD (McM)

Faculty Advisors

D. Egan (Academic Co-ordinator)
 G. Wainwright (Academic Clinical Co-ordinator)

Academic Staff

Professors

D.A. Egan, MCSP, DipTP, MSc (Western), PhD (Curtin)
 L. Makrides, MCSP, BPT (Sask), MSc (Ottawa), PhD (McM)
 G.I. Turnbull, MCSP, DipTP, BPT (Man), MA (Dal), PhD (Rhodes)
 J. Walker, Certs. Phys. Ther. (N.Z.), DipTP, BPT, MA (Man), PhD (McM)

Associate Professors

C.L. Kozey, BPE (UNB) MSc (Waterloo), PhD (Dal)

Assistant Professors

M. Earl, BSc(Kin) (Waterloo), BSc(PT) (Western), MSc (Waterloo), PhD (Waterloo)
 A. Fenety, BSc (UNB), DipPT (Man), MSc (FT) (Alberta)
 M. MacKay-Lyons, BSc(PT) (Tor), MSc(PT) (USC)

Lecturer

G. Wainwright, BSR (UBC)

Faculty Honorary Appointments To Clinical Facilities

C.L. Kozey, BPE (UNB), MSc (Waterloo), PhD (Dal), (Nova Scotia Sports Medicine Clinic)

Honorary Appointments

L. Holt, BS, MS (Springfield Col.), PhD (S. Ill.), Associate Professor
 K.C.W. Hill, MCSP, DipTP, MSc (Dal), Associate Professor
 T.J. Murray, MD, FRCP (C) Professor, Department of Medicine
 C.A. Putnam, BPE (Man), MS (Wash), PhD (Iowa), Associate Professor
 W.D. Stanish, MD, FRCS (C), Associate Professor, Department of Surgery

Cross Appointments

C.L. Kozey, BPE (UNB), MSc (Waterloo), PhD (Dal), Associate Professor, Department of Physiology and Biophysics; School of Recreation, Physical and Health Education
 L. Makrides, MCSP, BPT (Sask), MSc (Ottawa), PhD (McM), School of Recreation, Physical, & Health Education; Professor, Department of Physiology and Biophysics
 G.I. Turnbull, MCSP, DipTP, BPT (Man), MA (Dal), PhD (Rhodes), Associate Professor, School of Recreation, Physical and Health Education
 J.M. Walker, Certs. Phys. Ther. (N.Z.), DipTP, BPT, MA (Man), PhD (McM), Associate Professor, Department of Anatomy, Faculty of Medicine

Special Lecturers

A. Hackett, BScPT (Dal)
 W. Levy, DipPT (Dal)
 D. O'Leary, BScPT (Dal), CCSP
 S. Sanford-Smith, BSc, BSc(PT) (Dal)
 J. Tasker, BSc(PT) (Dal)

Provincial Clinical Co-ordinators

J. O'Dea, BSc(PT) (McGill) Newfoundland
 Karen Grotterod, BSc(PT) (Dal) New Brunswick
 T. Nicholson, BSc(PT) (Dal), Prince Edward Island

Introduction

The School of Physiotherapy was established in 1963. A two-year programme leading to a Diploma in Physiotherapy was offered by Dalhousie, the course of study being followed by a compulsory five-month internship period prior to eligibility for licence to practise physiotherapy. This Diploma programme was

terminated at the end of the 1976-77 academic year. In 1975 the Senate of Dalhousie approved the implementation of a four-year programme leading to a Bachelor's Degree. The BSc (Physiotherapy) degree which replaced the Diploma programme comprises a general Arts and Science first year with required subjects followed by three professional years of study as outlined. During this course of study clinical training is undertaken. In addition to the major commitment to graduate academically and clinically, highly qualified physiotherapists, the school offers non-credit workshops and seminars as part of a continuing education programme for graduates in Physiotherapy.

The School offered a post-diploma programme which enabled Diploma holders to obtain a BSc (Physiotherapy) degree, however the last students were admitted in the 1990-91 academic year.

Affiliated Institutions

At present clinical instruction and practice during the course of study is undertaken with the guidance of clinical instructors in a variety of placements including clinics in Newfoundland, New Brunswick, Nova Scotia and P.E.I. See preceding list for affiliated institutions. Clinical experience is also obtained in other centres across Canada and in the U.K.

Field Experience

Throughout the course of study students learn to apply their academic knowledge in a variety of situations. During the summer following the second year of study a compulsory brief period of orientation is undertaken to familiarize the students with the practice of physiotherapy. During all clinical placements, students are engaged in clinical practice under the guidance of clinical instructors. During these clinical placements the student's performance is evaluated by the staff of the Physiotherapy Department in which they are practising and students must maintain a satisfactory level of performance together with demonstrated suitability to pursue a career in Physiotherapy. A compulsory period of clinical practice between the third and fourth years offers the student the opportunity to obtain experience across Canada and in Britain. The students choose specific placements from amongst clinical facilities associated with Dalhousie's School of Physiotherapy.

Clinical practice is also a requirement of the fourth year of study.

Career Opportunities

The profession of Physiotherapy (or Physical Therapy) offers a varied, interesting and worthwhile career to both men and women in a variety of settings. Upon graduation, traditionally most Physiotherapists have worked in hospital-based departments rotating through

various areas of interest prior to becoming more deeply involved in any specific area. Increasingly, opportunities are available in rehabilitation centres, extended care units, special schools, or with local government agencies, industrial health units, sports clubs and private clinics. Alternatively, experienced physiotherapists may operate a private practice. Interested persons can pursue Graduate Degrees in related areas leading to careers in teaching and/or research. A number of graduate programmes in Physiotherapy are available at universities in Canada and an MSc (Physiotherapy) is proposed for Dalhousie.

License to Practise Physiotherapy

Physiotherapists practising in Canada must be licensed with the appropriate Provincial Licensing Body. The school itself has no jurisdiction in matters related to licensing, and Dalhousie University cannot accept responsibility for changes in licensing regulations which may occur from time to time.

The Canadian Physiotherapy Association (CPA), the national professional organization, recommends minimum academic and clinical curriculum content for membership. The degree course at Dalhousie University is designed to fulfil the present requirements by the time the students graduate. Currently, membership or eligibility for membership in the CPA entitles the Physiotherapist to apply for Provincial licensing through the appropriate provincial body. A Physiotherapy National Examination was implemented in 1993. Graduates are strongly advised to seek further information and clarification from the College of Physiotherapists of Nova Scotia.

Students' Society

The Physiotherapy Students' Society gives incentive to the students to participate in school, campus and community activities and to participate in both local and national professional activities.

Association Membership

Information regarding membership in the various Physiotherapy Associations can be obtained from the following sources: The Canadian Physiotherapy Association (890 Yonge St., 9th Floor, Toronto, Ontario, M4W 3P4); The Chartered Society of Physiotherapy (14 Bedford Row, London, WC1R 4ED, England); The American Physical Therapy Association (1111 North Fairfax St., Alexandria, Virginia, 22314, U.S.A.); The World Confederation of Physical Therapy, Secretary General (16/19 Eastcastle Street, London, W1N 7PA, England); The Canadian University Service Overseas, (CUSO) (151 Slater Street, Ottawa, Ontario, K1P 5H5).

School of Physiotherapy Regulations

1. All students are required to observe the University regulations and Academic Regulations as described in this Calendar.
2. Regular and punctual attendance at classes is required of all students. When the work of a student becomes unsatisfactory or if attendance is irregular, the student may be required to withdraw from the School.
3. Promotion each year is contingent upon satisfactory academic and clinical performance.
4. Students whose clinical performance is unsatisfactory will be required to withdraw from the School.
5. Except in special circumstances students may not carry a course load in excess of the normal load as set down in the calendar of the School of Physiotherapy.
6. Students are normally required to take a full course load as prescribed by the School in order to complete the requirements for the degree. In special circumstances, and with the permission of the Committee on Studies, a student may undertake a reduced course load. In such cases the requirements for the degree must be completed within six years of initial registration.

Students who fail a class on two occasions are not permitted to repeat the class and thus must withdraw from the School of Physiotherapy.

Failed Year

The student is considered to have failed the year if the student has failed to meet the required GPA for that year. See University Regulations 19.1 and 20.2.

Credit Hours

Each full class is assigned a value of six credit hours, and each half class is assigned a value of three credit hours except where otherwise stated.

Grading System

In classes where professional skill acquisition and competence are required (PHYT 2021.03, 2041.03, 3000.03, 3010.04, 3020.03, 3030.04, 3050.04, 3061.03, 3062.03, 3500.00, 4070.03, 4071.03, 4072.03, 4060.06), the minimum passing grade will be a C. For classes which have distinct sections (PHYT 3020.03, 4070.03, 4071.03, 4072.03), each section must be passed with a minimum grade of C. In all other classes the passing grade is D.

Grade Point Average Requirements

The grade point average system is described in the Academic Regulations. School regulations relating to GPA apply to students whose initial

registration in the School was in the Fall of 1990 or earlier (consult calendar of appropriate year).

Voluntary Withdrawal

Students who voluntarily withdraw from the School of Physiotherapy, having satisfactorily completed courses toward the BSc (Physiotherapy) degree, with the intention of returning at a later date are advised that re-acceptance is contingent upon there being an available place.

Appeal

A student wishing to appeal a decision based on School regulations should in the first instance attempt to resolve the issue with the instructor(s) concerned, before proceeding as per School Appeal Procedures. A copy may be obtained from the School office. See Academic Regulation 26.2.

Degree Programmes

BSc (Physiotherapy) Degree Programme

The programme for the BSc (Physiotherapy) Degree is composed of a minimum of four years of study at University.

Academic Requirements

First Year

During this year students are registered in the College of Arts and Science at Dalhousie or in an equivalent course of study at another University. Applicants are advised that a minimum C standing in each prerequisite class (Dalhousie or equivalent) is required for consideration for admission into the School of Physiotherapy. An overall average of at least 70% is required. Possession of the minimum standing does not, however, guarantee admission owing to the competition for the limited number of places in the programme.

College of Arts and Science

The required course of study includes five full classes, or their equivalent, comprising two science classes (Physics plus Chemistry or Biology), one social science class (Psychology, or Sociology and Social Anthropology), Statistics and 1½ electives (one credit (1.0) must fulfil a writing requirement). All prerequisite classes must be completed by the end of the normal academic year preceding the year of anticipated admission to the School of Physiotherapy.

Year 1: The pre-requisite classes at Dalhousie University are as follows: Physics plus Chemistry or Biology. Acceptable classes are: CHEM 1010.06, 1020.06, 1030.06, 1040.06; BIOL 1000.06 or 1001.06; PHYC 1100.06 or 1300.06. One class from Psychology or Sociology and Social Anthropology. Acceptable Dalhousie

University classes are PSYO 1000.06 or 1010.06 or 1500.06; SOSA 1000.06 or 1050.06 or 1100.06 or 1200.06. Statistics plus 1½ electives (one credit (1.0) must fulfil a writing requirement). Students studying at Universities other than Dalhousie are requested to ensure that the pre-requisite classes they are taking are equivalent to the classes listed above by contacting the Registrar's Office. CPR (Cardiopulmonary Resuscitation) Certification must be completed by the end of Year 2.

Second, Third and Fourth Years: Students must obtain a minimum GPA of 2.00 in each of the final three years of study and an overall final GPA of at least 2.00. Additionally, promotion to the fourth year of study is contingent upon a satisfactory clinical report (passing grade "C" required) with regard to the summer clinical placement between the third and fourth years of study (PHYT 3500.00).

Faculty of Health Professions Required Classes

Year II: PHYL 2030.06; ANAT 2100.03, 2170.06, 2160.03; PHYT 2021.03, 2041.03, 2051.03, 2061.03, 2070.02, 2080.01, Four-week summer clinical orientation.

Year III: PHYT 3000.03, 3010.04, 3020.03, 3030.04, 3050.04, 3061.03, 3062.03; PHYL 3110.03, 3120.03; PSYO 2120.03; Elective; PHYT 3500.00.

Year IV: PHYT 4021.03, 4022.03, 4060.06, 4050.03, 4070.03, 4071.03, 4072.03; HEAS 4001.03; STAT 1060.03; Elective.

Electives

All electives must be approved by the School of Physiotherapy. The required fourth-year elective is expected to be beyond the 1000 level and must be taken in the Fall Term.

Students who have successfully completed, prior to admission, classes equivalent to the required classes in the programme of study may apply for transfer credit through the Office of the Registrar.

Clinical Practicum

After the second year, students engage in a four week clinical orientation (May/June). Throughout the third and fourth years, students engage in clinical practice under the guidance of clinical instructors. A compulsory full-time period of clinical practice is undertaken for approximately seventeen weeks between the third and fourth years (PHYT 3500.00). A compulsory period of clinical practice (PHYT 4060.06) is a requirement of fourth year. Students will be assigned clinical placements throughout the Atlantic provinces and across Canada. The cost of travel and lodging are the responsibility of the student. In some instances, a nominal stipend may be provided. Students must successfully complete all clinical placements in the sequence outlined herein. Students must have settled all financial

obligations to the University prior to undertaking any period of clinical practice.

Classes Offered

Year II Required Classes

PHYL 2030.06R: Human Physiology. See class description in the Physiology and Biophysics section of this calendar.

PHYT 2021.03A: Clinical Physiotherapy I. Introduction to the principles and clinical skills involved in therapeutic intervention, including effective communication skills; professional ethics and conduct; handling and mobilizing of patients; and use of ambulatory aids.

Instructor: M. MacKay-Lyons
Format: Lecture/Lab 5 1/2 hours
Co-requisites: PHYT 2061.03; ANAT 2170.06

PHYT 2041.03B: Clinical Physiotherapy II. A continuation of PHYT 2021.03 with increasing emphasis on clinical problem solving and progressive exercise design.

Instructor: M. MacKay-Lyons
Format: Lecture/Lab 5 1/2 hours
Prerequisite: PHYT 2021.03
Co-requisites: PHYT 2061.03; ANAT 2170.06

PHYT 2051.03A: Kinesiology. This class will provide the student with the basic concepts associated with the study of human movement. The emphasis will be on the mechanical and physiological factors affecting normal human movements, although clinical examples are used to stress important concepts.

Instructor: C.L. Kozey
Format: lecture (3 hours), lab
Co-requisites: PHYT 2061.03; ANAT 2170.06

PHYT 2061.03R: Clinical Structure & Function. Knowledge of gross anatomy of the human body and associated surface anatomy is used to appreciate the relationship of anatomical structures during functional activities and applied to the assessment of muscle and joint function.

Instructor: J. Tasker
Format: Lecture/Lab 3 hrs alternate weeks
Co-requisite: ANAT 2170.06

ANAT 2170.06R: Gross Anatomy. The gross structure of the human body is studied region by region through the use of lectures, dissection and demonstrations in Radiological Anatomy.

Instructor: TBA
Format: Lecture/Lab 7 hours
Prerequisite: Admission to School

PHYT 2070.02A or B: Microbiology. An introductory class in Microbiology offered by the Department of Microbiology and Immunology within the Faculty of Medicine. See class description for MICR 2020.03 in the Microbiology and Immunology section of this calendar.

Instructor: Staff
Co-requisites: PHYL 2030.06, PHYT 2061.03, ANAT 2170.06

Cross-listing: MICR 2020.03

PHYT 2080.01A: Pathology. An introductory class in Pathology offered by the Department of Pathology within the Faculty of Medicine. Consult department for further details.

Instructor: Staff
Format: Lecture 1 hr

ANAT 2100.03B: Neuroanatomy. A class in Neuroanatomy offered by the Department of Anatomy and Neurobiology. See class description in the Anatomy and Neurobiology section of this calendar.

Instructor: D. Hopkins
Format: lecture/lab 3 hrs
Prerequisite: ANAT 2160.03
Co-requisite: ANAT 2170.06

ANAT 2160.03A: Human Histology. A histology class for physiotherapy students covering cells, tissues, and selected organs.

Instructor: H. Dickson
Format: lecture 2 hrs/lab 3 hrs
Co-requisite: ANAT 2170.06

Summer Clinical Orientation:
Co-ordinator: G. Wainwright
Format: 4 weeks, 0 credit hrs

Year III Required Classes

PHYT 3000.03A: Assessment. This class presents the student with both theory and practice in the physiotherapeutic aspects of the clinical assessment of musculoskeletal disorders.

Instructor: D. Egan
Format: lecture/lab 5 hrs
Prerequisite: successful completion of the Year II, BSc(PT) course of study and 4 weeks of clinical orientation

PHYT 3010.04A or B: Clinical Therapeutics I - Orthopaedic Conditions. This class will provide the student with an overview of common orthopaedic conditions and their medical/surgical and physiotherapeutic management.

Instructor: A. Fenety
Format: lecture, lab, seminar
Prerequisite: successful completion of the Year II BSc(PT) course of study and 4 weeks of clinical orientation

PHYT 3020.03A or B: Clinical Therapeutics III - Rheumatology/Amputees. This class is designed to prepare the student for the understanding and physiotherapeutic management of patients with rheumatoid disease and the rehabilitative needs of patients with amputations.

Instructors: S. Sanford-Smith, W. Levy
Format: lecture/lab 5 hrs

Prerequisite: successful completion of the Year II BSc(PT) course of study and 4 weeks of clinical orientation

PHYT 3030.04B: Clinical Therapeutics IV - Neurological Conditions. This class provides the student with a foundation of knowledge and specialized techniques to employ in the physiotherapy assessment and management of clients with disorders of the nervous system.

Instructor: G. Turnbull

Format: lecture/lab, 3 hrs

Prerequisite: successful completion of the Year II BSc(PT) course of study and 4 weeks of clinical orientation

PHYT 3030.04A: Clinical Therapeutics II - Cardiorespiratory. This class provides the student with the knowledge and skills necessary for the management of patients with cardiac and respiratory conditions.

Instructor: L. Makrides

Format: lecture, Lab and clinical sessions

Prerequisite: successful completion of the Year II, B.Sc. (PT) course of study and 4 weeks of clinical orientation

Classes designated as Clinical Therapeutics I, II, III, IV, include lectures from the teaching staff of the Departments of Medicine, Surgery, Paediatrics, Neurosurgery, Obstetrics and Gynecology of the Faculty of Medicine, and these are integrated with the Physiotherapeutic procedures taught by the Faculty of the School. The topics covered include conditions commonly encountered in orthopaedics, rheumatology, spinal cord injury and disease, central and peripheral nervous system lesions, medical and surgical chest conditions, vascular diseases, ante- and post-natal care together with the prevention and treatment of post-surgical complications.

PHYT 3061.03B: Electro-Physical Agents in Physiotherapy I. This class is designed to assist students to acquire skills and knowledge in the area of electro-physical agents. Topics covered include the theoretical and practical application of superficial heating and cooling, deep heating and phototherapy. The class will cover the applied physics; physiological basis and effects; indications and contra-indications; and dangers and precautions of cryotherapy, wax, moist heat, infrared radiation, ultrasound, short wave diathermy, microwave diathermy, ultraviolet light and laser bio-modulation.

Instructor: Marie Earl

Format: lecture 2 hrs, lab 3 hours

Prerequisite: successful completion of the Year II BSc(PT) course of study and 4 weeks of clinical orientation.

PHYT 3062.03A: Electro-Physical Agents in Physiotherapy II. The class is designed to cover various therapeutic uses of electric currents.

Class material will include the theoretical and practical application of electro-diagnosis, electrical stimulation and biofeedback, including the applied physics; physiological basis and effects; indications and contra-indications; dangers and precautions of electro-diagnostic testing, therapeutic electrical stimulation and electromyographic biofeedback.

Instructor: Marie Earl

Format: lecture 2 hrs, lab 3 hrs

Prerequisite: successful completion of the Year II BSc(PT) course of study and 4 weeks of clinical orientation.

PHYL 3110.03A or B: Neurophysiology. See class description in the Physiology and Biophysics section of this calendar.

PHYL 3120.03A or B: Exercise Physiology. See class description in the Physiology and Biophysics section of this calendar.

PHYT 3500.00B: Clinical Practicum. Summer clinical practicum. All students must undertake at least 17 weeks between Years III/IV in an approved clinical setting. Satisfactory clinical performance is mandatory (passing grade C required).

Co-ordinator: G. Wainwright

PSYO 2120.03B: Clinical Psychology. See class description in the Psychology section of this calendar.

Year IV Required Classes

PHYT 4021.03A: Research Methods. The class is designed to provide the students with the background necessary to understand the research process. Topics of particular interest to Physiotherapy research are discussed (i.e. Ethics in human research, single subject designs, group designs, etc.)

Instructor: C. Kozey

Format: lecture 3 hrs

Pre/Co-requisite: An approved class in statistics

PHYT 4022.03B: Research Methods. The class familiarizes students with the research process through the undertaking of a research project.

Co-ordinator: C. Kozey, faculty advisors

Format: few scheduled sessions, work with faculty advisor

Prerequisite: PHYT 4021.03

HEAS 4001.03A: Health Services Management. The development and structure of the Canadian health care system are presented. The management cycle is taught with an emphasis on the effective management of human resources. Legal and ethical issues are explored in the context of Health Services Management.

Instructor: TBA

Format: lecture 3 hrs

Prerequisites: Required Year II and III PHYT Classes

PHYT 4070.03A or B: Clinical Therapeutics V - Part I. The purpose of this class is to further develop the ability to formulate and implement a reasoned physiotherapy management plan for patients with a variety of musculoskeletal problems. The class will focus on spinal and peripheral joint disorders and aims to develop expertise in patient assessment and management in specific areas by the expansion of knowledge and skills related to etiology, mechanisms, pathophysiology, treatment and other health care procedures.

Instructor: D. Egan
Format: Lecture 4 hrs, Lab 2 hrs
Prerequisites: successful completion of Year III BSc(PT) programme of study and clinical practicums

PHYT 4071.03A or B: Clinical Therapeutics V - Part II. This class builds on knowledge and experience gained in PHYT 3050.04 and PHYT 3030.04. The purpose of this class is to further develop the ability to formulate and implement a reasoned physiotherapy management plan, in the specific areas of neurology and cardiac rehabilitation. The class aims to further develop expertise in patient assessment and management in these areas by expansion of knowledge and skills related to etiology, mechanisms pathophysiology, treatment and other health care procedures.

Instructors: L. Makrides, G. Turnbull
Format: Lecture 4 hrs, Lab 2 hrs
Prerequisites: successful completion of Year III BSc(PT) programme of study and clinical practicums

PHYT 4072.03: Clinical Therapeutics V - Part III. The purpose of this class is to further develop the ability to formulate and implement a reasoned physiotherapy management plan for patients with paediatric and geriatric problems. The class aims to further develop expertise in patient assessment and management by expansion of knowledge and skills related to etiology, pathophysiology, ergonomics, treatment, and other health care procedures.

Instructor: J.M. Walker
Format: lecture/seminar 4 hrs, lab 2 hours
Prerequisites: successful completion of Year III BSc(PT) programme of study and clinical practicums

PHYT 4050.03B: Psychiatry. An understanding of common psychiatric disorders that students will meet in clinical practice is developed. The class is given by members of the Department of Psychiatry in the Faculty of Medicine.

Instructor: TBA
Format: lecture 3 hrs
Prerequisite: PSYO 2120.03

PHYT 4060.06R: Clinical Practice. All students must undertake at least 8 weeks in the practice of Physiotherapy in an approved setting and submit a Special Topics paper/project.

Satisfactory clinical performance is mandatory prior to graduation (passing grade C required).

Co-ordinator: G. Wainwright
Prerequisite: successful completion of Year III BSc(PT) programme of study and clinical practicums

STAT 1060.03A: Introductory Statistics. See class description in the Statistics section of this calendar.

Elective Classes

HLTH 3000.03B: An Interdisciplinary Approach to Health Promotion. See class description in Health Professions, Interdisciplinary section of this calendar.

PHYT 3070.03A/3080.03B: Directed Study. Under the guidance of a member of Faculty of the School of Physiotherapy a student may undertake a detailed study related to the theory or practice of physiotherapy or associated topics. A variety of subjects ranging from detailed literature surveys to more clinically oriented areas are available to the students; evaluation is based upon the collection and presentation of the material.

Co-ordinator: D. Egan
Format: Independent study - no scheduled hours
Restriction: Restricted to 3rd and 4th year physiotherapy students

PHYT 3090.03B: Interdisciplinary Class in Human Nutrition. See class description for NURS 4800.03 in the Nursing section of this calendar.

HLTH 4900.03A/4910.03B: Interdisciplinary Approach to Gerontology. See class descriptions in the Health Professions, Interdisciplinary section of this calendar.

Political Science

Location: Arts and Administration
Building, 3rd Floor, Halifax, N.S.

K. Fierbeck, BA (Alta), MA (York), PhD (Cantab)
R.G. Finbow, BA (Dal), MA (York), PhD (London)
B. Harvey, BA, MA, PhD (McGill)

Research Associate

F.W. Crickard, BA, MA (Dal), (R-Adm., Ret'd)

What is Political Science?

Politics has been described as "Who Gets What, When, How, Why" in society. The study of politics, or Political Science, is one of the oldest academic disciplines known to humankind. In Ancient Greece political philosophers concerned themselves with

creating a good society, and balancing justice with order. Today Political Scientists still study these matters, but the discipline has grown to encompass many aspects of government, such as parliaments, electoral processes and constitutions; or external relations, including issues of war, peace and poverty.

Political Science is important to society because, in an age of complex government, an educated citizenry is the best safeguard for democracy. Political Science is valuable for individuals who want to know more about the values, laws, institutions and policy mechanisms that govern their lives in society, and as well, the differences between their system of government and those in other countries. Beyond this, Political Science is an especially useful preparation for students who wish to pursue careers in teaching, law, public service or business.

Dalhousie University's approach to Political Science is a blend of traditional and modern analysis. The Department offers work in classical political philosophers; and most classes emphasize government structure and policy making, including domestic public administration and foreign policy. Other classes deal with political behaviour such as public opinion or interest group activity. Classes in modern research methods, including quantitative analysis, are also offered.

The admission requirements for Political Science are listed under the Faculty of Arts and Social Sciences. There are no additional requirements for Political Science beyond those of the Faculty.

Students majoring in Political Science are encouraged to seek advice from Professors David Black and Frank Harvey, Coordinators of Major Programmes in developing a programme of studies. Students taking an Honours Degree should seek advice from Professor Kathedne Fierbeck, Honours Coordinator. Professor Robert Boardman is the Coordinator of Graduate Studies.

For General Interest

Students who have not yet decided on a major, or are looking for an elective in Political Science, are advised to take one of the Introductory classes. These are POLI 1100.06 (various sections), and POLI 1103.06 (which fulfils the writing class requirement). There are no prerequisites for these classes. Each also fulfils the introductory class requirement for Major, Advanced Major, and Honours programmes in Political Science.

Degree Programmes

Students concentrating in Political Science may take a major programme, advanced major, or honours programme. The degree

requirements are spelled out in University and Faculty Regulations, and in department regulations outlined below. The specific classes to be taken in each individual programme are chosen in consultation with the relevant faculty adviser from the Department. Undergraduate programmes may emphasize one of the sub-fields of Political Science (Canadian Government and Politics, Comparative Government and Politics, Political Theory and Methodology, and International Politics and Foreign Policy) or may consist of a general selection of classes from the Department's offerings.

Honours Programme

An honours programme normally consists of a first-year level class and not less than nine nor more than eleven additional classes in Political Science. Although nine to eleven classes represents the range allowed under the general university regulations, the Department recommends quite strongly that the normal honours programme consist of nine classes past the first-year class, including the honours essay. The intent of this recommendation is to encourage our honours students to take supporting class work in related disciplines.

Any exceptions to the requirements stipulated below can only be obtained through written petition to the Undergraduate Committee, which reserves the authority to determine admission into the Honours programme in these cases.

Core Classes

For the purpose of the honours programme the Department has designated five second-year classes as honours core classes. These core classes represent the political science sub-fields of Canadian politics, comparative politics, political philosophy (two classes) and international politics. The core classes by area are as follows:

Canadian politics: POLI 2200.06: Canadian Government and Politics

Comparative politics: POLI 2300.06: Comparative Politics

Political philosophy: POLI 2400.06: Foundations of Political Thought I or POLI 2401.06: Foundations of Political Thought II

International relations: POLI 2500.06: World Politics

Departmental Requirements

Classes required in Honours:

2000 level: Three core classes, one of which must be either POLI 2400.06 or 2401.06; plus four other Political Science credits at or above the 2000 level not including those listed below

3000 level: POLI 3494.06
4000 level: POLI 4600.06

To gain admittance into the Honours programme, students must have:

- i) a B average in their last ten credits
- ii) a B+ average in a group of four Political Science classes, which must include:
 - 2 core classes (one of which is POLI 2400.06 or 2401.06)
 - POLI 3494.06
 - one full credit at the 3000-level in Political Science

Students should sign into the Honours programme at the end of their third year.

The core class requirements are designed (1) to give breadth to the honours programme, (2) to provide all honours students with a grounding in the normative questions of the discipline as well as the foundations of empirical inquiry, and (3) to expose prospective honours students to the various sub-fields that may be chosen for emphasis in individual programmes.

Overall, these requirements leave a minimum of two optional credits, which may be taken at the second, third or fourth-year levels.

The honours essay is counted as one credit. It is prepared during the fourth year under the supervision of a faculty member. The essay shows the student's ability to develop a systematic argument with reference to pertinent literature and other such data or analytical materials as may be appropriate. The credit number for the honours essay is POLI 4600.06. Arrangements are made for honours students in the last year to meet their supervisor with some regularity to discuss and ultimately present the work represented in their essay. Honours students will also be expected to participate in the Honours Seminar, which will count toward the "21st" grade required by the University.

Combined Honours

(Please be sure to read the FASS requirements for the Combined Honours Programme listed in the Degree Requirements section of this Calendar)

Several of the more common combined honours programmes are: Political Science and Philosophy; Political Science and History; Political Science and Economics; Political Science and Sociology; and Political Science and International Development Studies. Students interested in taking any of these combined honours programmes or in discussing other possible programmes should consult initially with the Honours Supervisor.

To obtain a Combined Honours, with an emphasis upon Political Science, students must have

- i) two core classes in Political Science, one of which is POLI 2400.06 or 2401.06 (note that the prerequisite for these classes is an introductory class in Political Science);

- ii) a methods class in one of the two fields (i.e., POLI 3494.06, or a Methods class in another field);
- iii) at least two full credits at an advanced level in Political Science (in addition to 3494.06); and
- iv) POLI 4600.06

To gain admittance into the Combined Honours programme, with an emphasis upon Political Science, students must have a B+ average in a group of three Political Science classes comprised of two core classes (one of which is 2400.06 or 2401.06) and 3494.06.

Students who take a combined Honours, with an emphasis on a subject OTHER than Political Science, must take a minimum of

- i) one core class in Political Science (note that the prerequisite for core classes is an introductory class in Political Science);
- ii) one credit in a methods class (either in Political Science or in another field);
- iii) one full credit in Political Science at an advanced level; and
- iv) one other Political Science class beyond the 1000-level.

To gain admittance into the Combined Honours programme, with an emphasis upon a subject OTHER than Political Science, students must have a B+ average in a group of two Political Science classes, including a core class.

Advanced Major Programme

The Advanced Major Programme offers the opportunity for students to design a more focused study within a specific subfield of Political Science. The Advanced Major Programme is a 20 credit course: students must have a minimum of seven and a maximum of ten Political Science courses in total; three of these classes must be beyond the 2000-level.

Departmental Requirements

Classes required in Advanced Major:

- 1000 level: POLI 1100.06 or 1103.06
- 2000/
- 3000 level: two full-credits at the 2000 level, four additional credits in Political Science of which at least three must be at or above the 2000 level

Other required classes:

ENGL 1000.06 or King's Foundation Year Programme

Other requirements:

- one full-credit in a second language, normally French;
- one half-credit in quantitative analysis or research methods, in consultation with the Department advisor;
- the equivalent of one full-credit introductory class in each of at least two of the following

subjects: Economics, History, Philosophy, Sociology and Social Anthropology, and Psychology.

Major Programme

Departmental Requirements

at least four, but not more than eight, classes in political science at the 2000 level or above

Classes required in Major:

- 1000 level: one full-credit introductory class.
- 2000 level: at least two full classes from among the second-year level offerings and these classes should be selected from at least two sub-fields.
- 3000 level: at least two additional full classes should be taken from third-year level offerings.

Summer School Classes

The Department normally offers one of the Introductory classes and at least one second-year class in the summer sessions. For details, see the University's summer school calendar.

Classes Offered

Class descriptions are listed under five headings:

- 1) Introductory
- 2) Canadian Government and Politics
- 3) Comparative Government and Politics
- 4) Political Theory and Methodology
- 5) International Politics and Foreign Policy

The first digit of each class number thus indicates year, or level, of class. Except for 1000-level classes, the second digit denotes the sub-field within which the class is listed.

No student may take more than one first-year class but some second-year classes require no prerequisite. The prerequisites listed with each class are intended to show the sort of preparation the instructor anticipates. A student will usually take one second-year class in a field before taking a 3000-level class in the same field. Students without the appropriate 2000-level may obtain admission to 3000-level classes only with special permission of the instructors of those classes.

Classes marked * are not offered every year. Please note that some classes listed may not be offered in 1995-96. Classes listed as "A or B" may be taught in either the first or second term. For final listings check with the Department office or the current timetable on registration.

(1) Introductory

There are usually two or three sections of POLI 1100.06, each a full-year class taught by a different instructor. The topics vary a little from section to section and from year to year. POLI 1103.06 has a content similar to POLI 1100.06.

POLI 1100.06R: Section 1, Introduction to Government and Politics. Designed to develop a basic understanding of government and politics in liberal democratic states, but with the major emphasis on Canada, the class examines the concept of democratic government, the role and structure of governmental institutions, political mechanisms and processes, concepts and ideologies, and comparisons with alternative regimes.

Instructor: staff
Format: Lecture 3 hours

POLI 1100.06R: Section 2, Introduction to Government and Politics. This class introduces the basic institutions of government, the processes of politics and the social environment which influences them. Different ideologies and competing interpretations of democratic government are discussed in the second term. The nature and distribution of political power will be a principal theme, as students are helped to understand the fundamental debates within the discipline.

Instructor: staff
Format: Lecture 3 hours

POLI 1103.06R: Introduction to Government and Politics. The approach and format in POLI 1103.06 is similar to that in POLI 1100.06 above. This class is also designed, however, to serve as the Department's designated Writing Class.

Instructor: Staff
Format: Writing Requirement, lecture 3 hours

(2) Canadian

POLI 2200.06R: Canadian Government and Politics. The class examines the Confederation debate, 1864-67, and the constitution of the new federation, the British North America Act. It studies the Act's development via constitutional amendment and the practice of judicial review. The review of the Canada Act, 1982, completes this section of the class. In the second section, the class deals with governmental institutions, the Crown, cabinet government and Parliament. The third and final section covers elections, the electoral system and political parties.

Instructor: J. Smith
Format: Lecture 3 hours
Prerequisites: Introductory Political Science class or instructor's permission.
Cross-listing: Canadian Studies

***POLI 3205.03A or B: Canadian Political Thought.** The class examines enduring controversies in Canadian politics. Examples include: the nature of Canadian federalism; partisanship and party government; parliamentary versus republican institutions; religion and politics. These controversies are examined as they have been articulated in speeches, pamphlets and articles by people active in public life.

Instructor: J. Smith
Format: Seminar 2 hours

Prerequisite: POLI 2200.06
Cross-listing: POLI 5205.03

POLI 3206.03A or B: Constitutional Issues in Canadian Politics. These are political issues that possess an important constitutional dimension. They include judicial review and the role of the Supreme Court of Canada, constitutional amendment, the representation formula, the Charter of Rights and Freedoms, language rights and the Crown.

Instructor: J. Smith
Format: Seminar 2 hours
Prerequisite: POLI 2200.06
Cross-listing: POLI 5206.03

***POLI 3212.03A or B: The Politics and Government of Nova Scotia.** (Not offered in 1995-96)

***POLI 3214.03A or B: Quebec Politics.** This class is an examination of the historical, sociological, linguistic, cultural and political position of modern Quebec within Confederation. It will draw on a wide range of sources, including film, theatre, literature and music as well as the standard texts. A knowledge of spoken and written French would be helpful.

Instructor: Staff
Format: Seminar 2 hours
Prerequisite: POLI 2200.06
Cross-listing: POLI 5214.03

***POLI 3216.03A or B: Local and Regional Government.** The unique character of municipal government is examined in terms of its historical evolution and present structure and operation. Special attention is given to city government and to recent reforms at the regional and metropolitan level.

Instructor: D.M. Cameron
Format: Lecture & Discussion 2 hours
Prerequisite: POLI 2200.06 or equivalent
Cross-listing: POLI 5216.03, PUAD 6400.03, and Canadian Studies

***POLI 3220.03A or B: Intergovernmental Relations in Canada.** The territorial division of political power and the relations that have developed between governments are considered, with emphasis on the impact on policy outcomes.

Instructor: H. Bakvis
Format: Seminar 2 hours
Prerequisite: POLI 2200.06 or instructor's permission
Cross-listing: POLI 5220.03, PUAD 6750.03, and Canadian Studies

***POLI 3224.03A or B: Canadian Political Parties.** The Canadian party system, viewed as an integral part of the entire political system, presents a number of interesting questions for exploration, such as the alleged fickleness of voters, the role of party leaders, and the manner in which parties contribute to Canadian democracy. The particular themes emphasised will vary from year to year.

Instructor: H. Bakvis

Format: Lecture & Discussion 2 hours
Prerequisite: POLI 2200.06 or instructor's permission. Students will find it helpful to have some background in statistics or methodology, such as POLI 3494.06.

Cross-listing: POLI 5224.03, and Canadian Studies

***POLI 3233.03A or B: Canadian Political Economy.** This seminar class, for graduates and senior undergraduates, will survey the major themes and perspectives in the literature on Canadian political economy. It will introduce students to the traditional staples, metropolitan-hinterland, Laurentian and frontier approaches. It will survey contemporary perspectives - pluralist, elitist, neo-Marxist, and institutionalist. The nature of Canada's economic development, the role of the state in economic life, and the relative importance of commercial, industrial, resource and tertiary sectors will be examined. Canada's imperial and continental relationships, the debate over free trade, cultural and economic nationalism, and Canada's contemporary position in a global political economy will also be considered. Other themes include the position of women, the welfare state in crisis, industrial relations, native and immigrant communities, environmental politics and the impact of political economy on national unity.

Instructor: R. Finbow
Format: Seminar 2 hours
Prerequisite: Open to graduate students and senior undergraduates, who have completed classes on Canadian politics, or permission of the instructor.

Cross-listing: POLI 5233.03

***POLI 3235.03A or B: Regional Political Economy in Canada.** The class surveys the interaction between politics and economics in Canada with emphasis on the question of regional development. It will canvass competing explanations for differences in economic development among Canada's regions with special emphasis on Maritime economic problems, highlighting both the political sources of regional disparities and continuing efforts to rectify them. Distinctive Western, Quebec and Ontario concerns will also be covered. Seminars, for graduates and senior undergraduates, will feature student presentations and research projects.

Instructor: R. Finbow
Format: Seminar 2 hours
Prerequisites: Open to graduate students and senior undergraduates, who have completed classes on Canadian politics, or permission of the instructor.

Cross-listing: POLI 5235.03, and Canadian Studies

***POLI 3245.03A or B: The Judicial System and Canadian Government.** (Not offered in 1995-96)

***POLI 3250.06R: Canadian Public Administration.** This class examines the organization and management of the executive-bureaucratic structures of government for the formulation and management of public policy and public services. It considers the design and operation of the cabinet system and ministerial portfolios; relations between ministers and the career public service; policy and budgetary processes; and, the structural designs of departments, agencies, crown corporations and regulatory commissions. A major focus will be the effects of the new public management on public administration, as governments in Canada, as elsewhere, seek to cope with budgetary restraints, increased demands for quality services and public participation, and greater effectiveness in securing results.

Instructor: P. Aucoin
Format: Lecture and discussion 2 hours
Prerequisite: POLI 2200.06R or instructor's permission

***POLI 4228.03B: Interest Groups: Function and Management.** This class will attempt a systematic examination of the function and management of interest groups in Canada and, to a lesser extent, other western countries. It will begin by considering the functions such groups perform for their supporters on the one hand and, on the other, the role they play in (1) maintaining political systems; (2) securing and modifying public policy, and (3) implementing programmes. It will explore the ways in which their structures and behaviour patterns vary according to the resources of the groups themselves, the nature of their concerns and the demands of the political/ bureaucratic systems in which they operate. An important feature of the class will be a discussion of the internal management of groups. This discussion will include a review of how membership is secured and retained how group resources are obtained and applied; the role of professional staff in developing group positions and in interacting between the interest group and government officials. In conclusion the class will examine the role of interest groups in policy processes and the relationship between that role and the prospects for democracy in western politics.

Instructor: staff
Format: Seminar 2 hours
Prerequisite: POLI 2200.06 or instructor's permission

Cross-listing: POLI 5228.03, PUAD 6505.03, and Canadian Studies

***POLI 4240.03A: Policy Formulation in Canada.** A comprehensive examination of the three critical questions in the study of policy formulation in Canada: 1) The function of the state; 2) The question of why governments develop policies; and 3) The means by which

governments authoritatively develop policies. The discussion links these variables with a macro level analysis of the scholarly approach to decision-making. The emergence of tension resulting from the development of superindustrial society and from regionalism in the Canadian community provides policy problems on which the general theoretical analysis is hinged.

Instructor: P. Brown
Format: Seminar 2 hours
Prerequisite: Open to Honours students in their fourth year and to graduate students.
Cross-listing: POLI 5240.03, PUAD 5120.03, and Canadian Studies

***POLI 4241.03B: Introduction to Policy Analysis.** This class examines four aspects of policy analysis: (1) The role of the analyst in modern government; (2) The analyst's working environment; (3) Techniques used in carrying out research and preparing position papers; (4) and the analyst's responsibilities to government and to the public in determining what information should reach decision-makers.

Instructor: staff
Format: Seminar 2 hours
Prerequisite: POLI 4240.03 or instructor's permission
Cross-listing: POLI 5241.03, PUAD 5121.03, and Canadian Studies

(3) Comparative

POLI 2300.06R: Comparative Politics. The methodology and scope of comparative politics including an analysis of institutions and behaviour is examined through general overviews and more detailed studies of selected Western liberal democratic, Communist and Third World countries. Topics include presidential and parliamentary regimes; theories of the state; political culture, ethnicity and nationalism; and policy outcomes.

Instructor: D. Black
Format: Lecture 3 hours
Prerequisites: Introductory political science class or instructors' permission

***POLI 3302.03A or B: Comparative Development Administration.** Some analytical and normative issues of public administration in developing countries are examined including the scope of development administration as a sub-field of public administration; public sector organization and management including public services, public enterprises, decentralisation and rural development, financial systems, human resource management, aspects of state economic management with Japanese and South Korean case studies; and institutional aspects of aid administration with CIDA and World Bank cases.

Instructor: D. Black
Format: Seminar 2 hours
Prerequisite: POLI 2300.06 or equivalent or instructor's permission

Cross-listing: POLI 5302.03, PUAD 6780.03

***POLI 3303.03A: Human Rights and Politics.** (Not offered in 1995-96)

***POLI 3304.03A or B: Comparative Federalism.** A seminar class which examines the theory and practice of federalism within a comparative framework. The actual federations discussed depends in part on student interest but usually includes both established federal nations and those moving in that direction.

Instructor: H. Bakvis
Format: Seminar 2 hours
Prerequisite: POLI 2200.06 or POLI 2300.06 or instructor's permission
Cross-listing: POLI 5304.03, PUAD 6755.03

***POLI 3311.03A or B: Sport and Politics.** This class examines the role of sport in domestic, transnational and international politics. It addresses the gap in much of mainstream political science concerning the pervasive influence of popular cultural trends and practices on political relations. Some topics include: the role of sport in political socialization and the creation of national identity; the politics of the Olympic Games, and sport and political change in South Africa.

Instructor: D. Black
Format: Seminar
Prerequisite: POLI 2300.06 or permission of instructor

***POLI 3315.03A or B: African Politics.** The diversity of states, politics, economy and society in post-colonial sub-Saharan African is examined in this seminar. Topics include theoretical approaches, economic frameworks, governmental regimes, structural adjustments, civil society, and intra-regional political economies, and selected aspects of policy such as economic reform, political liberalisation, women and development, drought and ecology, AIDS and health.

Instructor: D. Black
Format: Seminar 2 hours
Prerequisite: POLI 2300.06 or equivalent or instructor's permission
Cross-listing: POLI 5315.03

***POLI 3360.03A or B: Politics in Latin America.** (Not offered in 1995-96)

***POLI 3379.06R: U.S. Constitution, Government, and Politics.** The purpose of this seminar class is to gain a thorough and critical understanding of the American political process. To this end, a series of topics are examined, beginning with the framing of the constitution and concluding with questions about political culture. There is considerable emphasis on formal and informal political institutions, especially political parties and elections.

Instructor: J. Smith
Format: seminar, 2 hours
Prerequisites: POLI 2200.06 or POLI 2300.06 or instructor's consent

358 Political Science

Cross-listing: POLI 5379.03

(4) Theory and Methodology

POLI 2400.06R: Foundations of Political Thought I. Order, Knowledge and Natural Law: This class introduces students to political philosophy, the first (and arguably the most important) branch of the modern discipline of political science. Hobbes is the only author examined in both classes. The class may be taken for credit before, after, or concurrently with the other class. Either POLI 2400.06 or 2401.06 satisfies the minimum requirement in political philosophy for an Honours degree in Political Science.

Selections from some of the most well-known texts in the history of western political thought, including Plato's *Republic*, Aristotle's *Politics*, and Hobbes' *Leviathan*, will be examined critically in order to understand the central place that order, knowledge, and natural law have played in the development of the modern study of politics.

Instructor: Staff
Format: Lecture 2 hours
Prerequisite: POLI 1100.06, 1103.06, FYP, or any introductory Philosophy class.

Cross-listing: PHIL 2270.06

POLI 2401.06R: Foundations of Political Thought II: Rights, Rationality and Democracy. This class introduces students to political philosophy, the first (and arguably the most important) branch of the modern discipline of political science. Hobbes is the only author examined in both classes. The class may be taken for credit before, after, or concurrently with the other class. Either POLI 2400.06 or POLI 2401.06 satisfies the minimum requirement in political philosophy for an Honours degree in Political Science.

An overview of early modern and modern political thought, this class examines the bases of political obligation and the political requirements of justice. While the class surveys the works of political theorists from Hobbes up to the present day, the emphasis is upon the normative issues underlying many of today's political debates.

Instructor: K. Fierbeck
Format: Lecture 2 hours
Prerequisite: POLI 1100.06, 1103.06, FYP, or any introductory Philosophy class

Cross-listing: PHIL 2070.06

***POLI 3427.03A or B: Women in Western Political Thought.** The role of women in political life has been vilified, praised or ignored by major thinkers. Pertinent texts will be read along with interpretations by modern feminists in order to assess why the formal political enfranchisement of women has not resulted in greater substantial equality.

Instructor: Staff

Format: Lecture and discussion 2 hours
Prerequisite: POLI 2400.06/PHIL 2270.06 or POLI 2401.06/PHIL 2070.06, or instructor's permission

Exclusion: POLI 2327.03

Cross-listing: WOST 3600.03

***POLI 3430.03A or B: The Political Philosophy of Plato.** It has been said that the history of western political philosophy merely constitutes footnotes to Plato. This seminar examines a number of problems posed for scholars in interpreting Plato's work. The main focus is a close critical reading of one or more of Plato's 'political' dialogues, but we shall also place Plato in his historical context, with regard to classical Greek political thought in general, and Plato's great student Aristotle in particular.

Instructor: Staff

Format: Seminar 2 hours

Prerequisite: POLI 2400.06 or 2401.06 or instructor's consent

Cross-listing: POLI 5430.03

***POLI 3431.03A or B: The Political Imagination in Literature.** After having looked at how the study of literature both complements and supplements the social scientific approach to understanding politics, the seminar will analyze the implicit and explicit treatment of a number of political themes in a list of works by both modern and classical novelists and playwrights.

Instructor: Staff

Format: Writing Intensive, seminar 2 hours

Prerequisite: POLI 2400.06 or POLI 2401.06, or instructor's permission

Cross-listing: POLI 5431.03

***POLI 3435.03A or B: Machiavellian Politics.** (not offered in 1995-96)

***POLI 3445.03A or B: Entitlement and Property.** How is the ownership of property justified philosophically? Beginning with the early modern theorists' accounts of private property, this seminar examines how the concept of "entitlement to property" has been influenced by the development of economic theory, democratic ideals, and contemporary political and economic relations.

Instructor: K. Fierbeck

Format: Seminar 2 hours

Prerequisite: POLI 2400.06 or POLI 2401.06 or instructor's consent

Cross-listing: POLI 5445.03

***POLI 3475.03A or B: Democratic Theory.** Democracy is an essential component of legitimacy for all western states: few would be inclined to assert their "undemocratic" nature. But what are the essential characteristics of democracy; and to what extent must modern democratic theory remain grounded in nineteenth-century western liberal thought? While this course has a predominantly theoretical orientation, it will include an examination of the relations between democratic theory and

economic production/redistribution; as well as an investigation into how democratic theory can be developed in non-western political contexts.

Instructor: K. Fierbeck
Format: Seminar 2 hours
Prerequisite: POLI 2400.06 or POLI 2401.06 or instructor's consent
Cross-listing: POLI 5475.03

POLI 3494.06R: Introduction to Political Inquiry. A variety of methods employed in contemporary political analysis to explain political events are analyzed critically, including consideration of the general question of the requirements of explanation in political science. Causal explanation and problems in the development and verification of social scientific theory are emphasized. A particular substantive issue unifies discussion of the various methods of explanation and a research project in that issue permits the use of some of the tools of analysis discussed in connection with social scientific theory. The second part of the class will cover topics related to research design, data gathering and aggregate data analysis, and computer programming using SPSS.

Instructor: K. Fierbeck/F. Harvey
Format: Lecture and Discussion 3 hours
Prerequisite: Introductory Political Science class or instructor's permission.
Exclusion: POLI 2494.06

***POLI 4479.03A or B: Liberalism.** Liberalism takes a variety of forms and includes many topics including the rule of law, limited government, the free exchange of goods, entitlement to property, the self, and individual rights. Its philosophical and political assumptions provide the intellectual context within which its account of the individual, its vision of the community and its preferred allocation of resources will be assessed.

Instructor: Staff
Format: Seminar 2 hours
Prerequisite: Normally, classes in philosophy or political science or economics; consult instructor.

Cross-listing: PHIL 4470.03/5470.03, ECON 4446.03/5446.03, POLI 5479.03

***POLI 4490.03A or B: Social Choice Theory.** Arrow's theorem brings together the theory of voting and welfare economics, seemingly leading both (and the theory of democracy as well) to ruin. This class will consider how to cope with the problem.

Instructor: Staff
Format: Seminar 2 hours
Prerequisite: Permission of the instructor
Cross-listing: PHIL 4490.03/5490.03, ECON 4448.03/5448.03, POLI 5480.03

***POLI 4496.03A or B: Philosophy of the Social Sciences.** This class will identify three active sides of social science - naturalistic, interpretative, critical. It will consider how, in method and sorts of questions, inquiries on the

critical side reduce to a mixture of activities on the other two. It will then explore in detail the intimate relations between naturalistic and interpretative inquiries.

Instructor: Staff
Format: Seminar 2 hours
Prerequisite: Permission of the instructor
Cross-listing: PHIL 2510.03

(5) International

POLI 2500.06R: World Politics. To provide a framework for analysis and understanding of contemporary international events, this class deals with the variety of "actors" in world political (principally but not exclusively states), and examines some concepts in the field.

Instructor: F. Harvey
Format: Lecture and discussion 2 hours
Prerequisite: Introductory Political Science class or instructor's permission.

POLI 2510.06R: Canadian External Relations. A general survey of Canadian foreign and defence policies and of the processes by which these policies are made. Some of the persistent pressures and constraints which Canadian policy makers are forced to take into account are examined.

Instructor: D.W. Stairs
Format: Lecture and discussion 3 hours
Prerequisite: Introductory class in Political Science of instructor's permission.

***POLI 3525.03A or B: Comparative Foreign Policy Simulation.** This class is designed for advanced (i.e., 3rd/4th year) undergraduate and graduate students in Political Science. Once students become familiar with basic concepts, theories and decision-making frameworks developed within the sub-field of comparative foreign policy (part 1), they will be expected to apply what they have learned through participation in an interactive computer simulation involving other teams throughout North America (and possibly Europe). As they attempt to implement policy initiatives and work in teams to resolve international disputes, students will confront foreign policy issues in a context that provides an authenticity of experience. The objective is to enable students to create and test organizational skills, understand the interdependence of international issues, appreciate cultural differences and approaches to world problems, and use computers for multinational communications.

Instructor: F. Harvey
Format: Seminar 2 hours
Prerequisite: POLI 2500.06 or 3531.03

***POLI 3531.03A or B: The United Nations in World Politics.** The evolution of the United Nations from its early concentration on problems of collective security, through the period of preventive diplomacy and anti-colonialism, to its present role as a forum for the aspirations and demands of the Less Developed Countries is

reviewed. The more distant future, and the continuing relevance of the United Nations in world politics, and how its role and objectives should be determined, are considered.

Instructor: R. Boardman
Format: Seminar 2 hours
Prerequisite: Class in international politics or instructor's permission
Cross-listing: POLI 5351.03

***POLI 3535.03A or B: The New International Division of Labour.** This seminar provides an overview of the global political economy in the current post-Bretton Woods and -Cold War period. It treats the New International Division of Labour/Power from several theoretical and political perspectives, from comparative foreign policy to feminism. Issues addressed include the Newly Industrialising Countries, the Middle Powers and the Fourth World; new functionalism; popular participation; and alternative futures.

Instructor: T. Shaw
Format: Seminar 2 hours
Prerequisite: Class in international politics or instructor's permission.
Cross-listing: POLI 5535.03

***POLI 3537.06R: Management and Conservation of Marine Resources.** This is an intensive programme on the problems of managing the multiple uses of the Exclusive Economic Zone. It covers the New Law of the Sea and its many implications for politics and management, the social, economic and technical aspects of managing living resources, non-living resources, shipping, ports and harbours, coastal management and the protection of the environment; national legislation and required institutional infrastructure, regional cooperation and cooperation with international institutions.

Instructor: E.M. Borgese
Format: Seminar 2 hours
Prerequisite: Class in international politics or instructor's permission. Offered as a summer class only: consult instructor.

***POLI 3540.03A or B: Foreign Policy in the Third World.** This seminar offers a comparative perspective on the political economy of foreign policy in Africa, Asia, the Middle East, and South America at the end of the twentieth century. Its focus is how such state and non-state actors in the South relate to the New International Divisions of Labour and Power given the demise of both Bretton Woods and Cold War global regimes. In addition to selective case studies of both large and small states - from Brazil, India, Indonesia, and Nigeria to Botswana, Jamaica, Kuwait, and Singapore - it treats formal and informal external relations, from regional intergovernmental institutions to non-governmental coalitions. It also examines new forms of regional conflict and cooperation, including guerrilla struggles and civil societies. It emphasises the incidence and impact of

structural adjustment programmes and conditionalities along with the emergence of "new" issues such as debt, democracy, ecology, gender, refugees, and technology. A range of alternative approaches is identified and evaluated appropriate to the contemporary period of revisionism.

Instructor: T.M. Shaw
Format: Seminar 2 hours
Prerequisite: class in international politics or instructor's permission
Cross-listing: POLI 5540.03

***POLI 3544.03A or B: Political Economy of Southern Africa.** An introduction to the comparative politics, economic structures and international relations of Southern Africa, which provides a study of regional political economy with both empirical and theoretical significance. The primary focus is on regional conflict and change, especially on transformation and reaction, given the contemporary global context.

Instructor: T. Shaw
Format: Lecture and seminar 2 hours
Prerequisite: Class in international politics or instructor's permission.
Cross-listing: POLI 5544.03

***POLI 3550.03A or B: Japanese Foreign Policy.** This class focuses on the course of Japan's foreign policy since 1945, and the factors that have shaped its approaches to regional and international issues. Topics are studied in the contexts of Japanese history, cultural traditions, its economy, and domestic politics.

Instructor: R. Boardman
Format: Lecture/seminar 2 hours
Prerequisite: Class in international politics or instructor's permission

***POLI 3570.06R: Canadian Foreign Policy.** The seminar examines post-World War II Canadian foreign policy in three parts: (1) a detailed analysis of major policy developments, using the case-study approach; (2) an investigation of selected recurrent and contemporary themes, issues, and problems, and (3) an investigation of the general factors that may help to "explain" the form and content of Canadian foreign policy, with particular reference to the institutions and processes through which policy decisions are made. The primary emphasis is on politico-security issues, although other subjects are also considered.

Instructor: D. Stairs
Format: Writing Intensive, seminar 2 hours
Prerequisite: A class in international politics, Canadian politics, or Canadian history in the 20th century, or with the permission of the instructor. Restricted to students in their third or fourth years.

Cross-listing: POLI 5570.06

***POLI 3571.06R: Strategy and Canadian Defence Policy.** This seminar examines

post-World War II Canadian defence policy in three parts: 1. An analysis of important cases of policy development. 2. An investigation of certain persistent themes and current issues (e.g., Canada-U.S. defence relations; defence funding; weapons procurement; the role of women in the forces; civil-military relations, etc.) 3. An assessment of the major determinants of policy and prescriptions for the future.

Instructor: D. Middlemiss
Format: Seminar 2 hours
Prerequisite: Class in international politics or instructor's permission
Cross-listing: POLI 5571.06

***POLI 3574.03A or B: American Foreign Policy. Why Americans make the kind of foreign policy they do and the decision process and relevant methodologies for examining decision strategy are examined. Students develop an ability to explain foreign policy decisions of the United States.**

Instructor: G. Winham
Format: Seminar 2 hours
Prerequisite: Course in international politics, US politics or history, or instructor's consent
Exclusion: POLI 3572.06
Cross-listing: POLI 5574.03

***POLI 3575.03A or B: Nuclear Weapons and Arms Control in World Politics. The seminar examines the technological, doctrinal, and political aspects of the nuclear weapons "problem" and the arms control "solution". It also assesses the fate of contemporary nuclear arms control efforts.**

Instructor: D.W. Middlemiss
Format: Seminar 2 hours
Prerequisite: Class in international relations or defence policy, or with instructor's permission.
Cross-listing: POLI 5575.03

***POLI 3581.03A or B: Diplomacy and Negotiation. This class examines the practice of diplomatic negotiation in international relations. Attention is directed towards historical development and change in diplomatic practice, and to the nature and role of negotiation in the contemporary international system. Various examples of diplomatic negotiations are studied, ranging from bilateral negotiations such as nuclear arms talks or the Canada-US Free Trade Agreement, to multilateral negotiations such as the UN Conference of the Law of the Sea or GATT negotiations. Students are expected to participate in a simulation exercise and to prepare a term paper on a selected case of international negotiation.**

Instructor: G. Winham
Format: Seminar 2 hours
Prerequisite: Class in international politics or instructor's consent
Cross-listing: POLI 5581.03

***POLI 3585.03A or B: Politics of the Environment. Environmental issues have become increasingly important on international agendas. In this class, political analysis of these questions is grounded in a global ecological perspective. The topics for discussion include acid rain and other problems in the relations between advanced industrialized countries; the role of international institutions and international law in promoting environmental conservation; the environmental dimension of international development; and the politics of the transnational environmental movement.**

Instructor: R. Boardman
Format: Seminar 2 hours
Prerequisite: A class in international politics or foreign policy, or instructor's permission.
Cross-listing: POLI 5585.03

***POLI 3589.03A or B: The Politics of the Sea. The major issues involved in the Law of the Sea, the differing interests of different countries, the developing legal framework, and the political process of the on-going negotiations are covered.**

Instructor: Staff
Format: Seminar 2 hours
Prerequisite: Preference is given to graduate students, although mature students from other relevant disciplines are welcome.
Cross-listing: POLI 5589.03

***POLI 3591.03A or B: Comparative Maritimes Strategies and Oceans Policy. With enormous maritime responsibilities, spread over an area that is beyond the national ability to regulate, the domestic and international forces affecting maritime security and oceans policy require continuing study and discussion in Canada. The following are among the topics to be covered in the class: the military dimensions of oceans, including comparative naval strategies, proliferation of naval weaponry, arms control, and disarmament, conflict resolution and other collective/cooperative security arrangements; the role of international law at sea; the use of rules of engagement as a means of exercising political control. Students will be expected to participate in one or more simulation exercises throughout the class.**

Instructor: P. Haydon/F. Crickard
Format: Lecture/seminar 2 hours

***POLI 3596.03A or B: Theories of War and Peace. This class examines critically a broad range of theories of the causes, persistence, and termination of war.**

Instructor: F. Harvey
Format: Seminar 2 hours
Prerequisite: Class in international politics or instructor's permission
Cross-listing: POLI 5596.03

POLI 4636.03 A or B: Nationalism and Statecraft. An examination of the sources,

ingredients and consequences of contemporary nationalism, with particular reference to its implications for the conduct of international politics. In the early sessions of the class, pertinent literature from the pre-World War II period will be evaluated for its relevance to our understanding of current circumstances, in which the apparent revival of nationalist impulses has coincided with intensifying manifestations of functional interdependence.

Instructor: D. Stairs

Format: Seminar

Restriction: Restricted to students in their fourth year

Cross-listing: POLI 5636.03

POLI 3601.06R: Readings in Political Science. A full-year reading class, taught only by special arrangement between individual students and individual instructors.

Instructor: Staff

Cross-listing: POLI 5601.06

POLI 3602.03A or B: Readings in Political Science. A one-term reading class, taught only by special arrangement between individual students and individual instructors.

Instructor: Staff

Cross-listing: POLI 5602.03

POLI 3603.03A or B: Readings in Political Science. A one-term reading class, taught only by special arrangement between individual students and individual instructors.

Instructor: Staff

Cross-listing: POLI 5603.03

POLI 4600.06R: Honours Essay. Political Science undergraduates in the Honours programme are required to attend the Honours seminar as scheduled. This seminar is designed as a research seminar for Honours students.

Instructor: K. Flerbeck, Honours Co-ordinator.

Restriction: Restricted to Political Science Honours students in their final year.

 Universität Berlin) (MSVU)

Introduction

Psychology is an experimental science; its purpose is to discover the conditions which control the activities of animals and people, to measure these conditions and the responses they produce, and to use this knowledge to invent ways of predicting behaviour and changing it. It is a subject for inventive but also scientifically rigorous people, better suited to those who want to find out for themselves than to those who want to be told what to believe.

Psychology at Dalhousie treats behaviour as a natural phenomenon, and in that sense shares much with the other life sciences. Today, for example, the boundary that historically has separated psychology from zoology, physiology, or even cellular biology has begun to blur. On the other hand, important ties are being made to such disciplines as anthropology and sociology. The student will find that the diverse subject matter includes three major levels of analysis: the organism, the organism's biological machinery, and the broader social-environmental context in which particular behaviour patterns are expressed. Meaningful integration of these diverse levels and forms of analysis is an intellectual challenge of major proportions. Similarly, the time perspectives of immediate causation, development, evolution, and function all contribute to the modern approach to behavioural science; each must be evaluated in relation to the others.

General Interest Classes

Non-majors are encouraged to enrol in Psychology 1000.06, 1010.06 or 1500.06 and all 2nd year classes. Major and Honours students in Psychology are given preference for PSYO 2000.03 and 2500.03. In all classes for which Psychology 1000.06, 1010.06 or 1500.06 is a prerequisite, a minimum grade of B-, in the 1000-level class, is required to be admitted to the upper-level Psychology class.

Laboratories

Several courses include a laboratory component, and there are two types of laboratories used. One type is a research laboratory in which students will conduct research, collect data and write reports on the results of the research. All major and honours students must take the second-year research laboratory course (PSYO 2000.03) and at least one third-year research laboratory course (full-year for honours students.)

The second type of laboratory is a proficiency or skills laboratory, which usually involves additional work in computer exercises related to the lecture material and course readings.

Enrolment Limitations

Lecture classes are limited by room size and, in the case of introductory classes, by the

number of sections offered. Additional size restrictions are imposed on laboratory classes because of equipment limitations and the much closer supervision required. Size limitations on second- and third-year laboratory classes are specified under the listings for those classes. Major and honours students are required to take second-year prerequisites for at least two third-year laboratory classes. Laboratory classes fill rapidly, and not all laboratory classes are offered every year.

Degree Programmes

The department offers the 15- and 20-credit BA or BSc Major degrees, and the BA or BSc Honours degree. While these programmes are described below, a more detailed and up-to-date description is available from the Psychology Information Desk in a pamphlet titled "A Student's Guide to Psychology Classes".

NOTE: Students who major in Psychology cannot use cross-listed Neuroscience classes for their minor or as electives.

BA or BSc with Honours in Psychology

Students enrolled in the honours programme must take at least nine and no more than eleven full credits beyond the introductory level in their area of concentration. Requirements for the Honours Degree in Psychology are listed below.

It is recommended that students in this programme take 2000.03 and 2500.03 and as many classes from the core programme (see the requirement below) as possible in the second year. Honours students are advised to complete Psychology 3500.06 prior to the fourth year. 4000-level seminars may be taken in the third and fourth years. 2000- or 3000- level classes may be taken at any time provided that the student meets the necessary prerequisites.

Although there is considerable flexibility for the student, it is important to plan carefully (this is especially true for those considering graduate work in Psychology). If you would like to be admitted to the honours programme or if you need advice in planning your programme, see Dr. J.W. Clark. The Psychology Department also offers a BSc honours degree in Neuroscience, described elsewhere in this calendar.

Departmental Requirements

Classes required in Honours:

- | | |
|-------------|--|
| 1000 level: | PSYO 1000.06 or 1010.06 or 1500.06 with a grade of "B-" or better |
| 2000 level: | PSYO 2000.03 (with a grade of B or better), 2500.03 plus 4 more classes at 2000 level. Of those four, no more than two may be taken in a single year from any one of the following groups: |

- A. 2071.03*, 2072.03*, 2370.03, 2170.03, 2270.03
- B. 2080.03*, 2090.03*, 2120.03, 2280.03
- C. 2130.03*, 2150.03*, 2190.03*
- D. 2160.03*, 2140.03*, 2460.03

* These classes are prerequisites for 5000-level research laboratory classes. Major students must take at least two of those prerequisites in their second year, and those prerequisites must be selected from more than one of the groupings.

- 3000 level:** PSYO 3500.06 plus two 3000-level credits, one of which is a full lab class from the following: 3040.06, 3050.06, 3070.06, 3082.03, 3091.03, 3122.03, 3130.06, 3160.03,
- 4000 level:** PSYO 4500.06 plus one credit from the 4th year seminars, 4000 to 4440.

One other credit at or above the 3000 level.

Qualifying Exam

Combined Honours

It is possible for students to take an honours degree combining psychology with a related arts or science subject. In such a combined honours programme the student must take eleven full credits beyond the 1000-level in two areas of specialization, with not more than seven full credits in either area. The student in the combined honours programme normally writes a thesis (or the equivalent) in the elective major area in which the majority of classes are taken. Any student intending to take a combined honours degree should consult with the two respective departments to arrange programme details.

Major in Psychology, BA or BSc

The required classes for students who intend to major in psychology are listed below. Although there is considerable freedom of choice, the prospective major should plan carefully and obtain advice from one of the student advisors. At the Psychology Information Desk the student can be put in touch with an advisor.

Main Requirement for BA

Students majoring in Psychology with a BA degree are required to complete a half credit in Statistics (STAT 1060.03). Refer to the Student's Guide to Psychology Classes, available at the Psychology department.

Departmental Requirements

Classes required in Advanced Major:

- 1000 level:** PSYO 1000.06 or 1010.06 or 1500.06 with a grade of "B-" or better
- 2000 level:** PSYO 2000.03 plus 1.5 other credits at the 2000 level. Of

those 1.5, no more than two may be taken in a single year from any one of the following groups:

- A. 2071.03*, 2072.03*, 2370.03, 2170.03, 2270.03
- B. 2080.03*, 2090.03*, 2120.03, 2280.03
- C. 2130.03*, 2150.03*, 2190.03*
- D. 2160.03*, 2140.03*, 2460.03

* These classes are prerequisites for 3000-level research laboratory classes. Major students must take at least two of those prerequisites in their second year, and those prerequisites must be selected from more than one of the groupings.

- 3000 level:** Four credits at or above the 3000 level of which one must be a lab class from the following: 3040.06, 3050.06, 3070.06, 3082.03, 3091.03, 3122.03, 3130.06, 3160.06

Departmental Requirements

Classes required in Major:

- 1000 level:** PSYO 1000.06 or 1010.06 or 1500.06 with a grade of "B-" or better
- 2000 level:** PSYO 2000.03 plus 1.5 other credits at 2000 level. No more than two of these may be taken in a single year from any one of the following groups:
- A. 2071.03*, 2072.03*, 2370.03, 2170.03, 2270.03
 - B. 2080.03*, 2090.03*, 2120.03, 2280.03
 - C. 2130.03*, 2150.03*, 2190.03*
 - D. 2160.03*, 2140.03*, 2460.03

* These classes are prerequisites for 3000-level research laboratory classes. Major students must take at least two of those prerequisites in their second year, and those prerequisites must be selected from more than one of the groupings.

- 3000 level:** Two credits at the 3000 level of which one must be a lab class from the following: 3040.06, 3050.06, 3070.06, 3082.03, 3091.03, 3122.03, 3130.06, 3160.06

Other Programmes

A variety of other programmes is available in cooperation with other departments. These programmes are designed to meet the needs of students whose specific interests may lie in areas other than those covered by the major and honours programmes offered by the department. Interested students should contact Dr. R. Brown for further information.

Repeating Classes

Students may repeat a class in which they have earned a passing grade only with written permission from the department. Refer to Regulation 19.4 (Academic Regulations section of this calendar) for further information.

Classes Offered

Not all of the classes listed below are offered every year. Please consult the current timetable on registration to determine if a class is offered. Classes marked A or B are half-credit classes, offered in one term only, not both.

PSYO 1000.06R: Introduction to Psychology. Students interested in the biological and social bases of behaviour in both humans and animals may complete the class with an understanding of how the senses work and of how, for instance, we learn to see; of the different kinds of memory, how they operate, and how they are affected by disorders of the brain; of the way in which hereditary and environmental factors interlock to produce these complex sequences of behaviour which distinguish one species from another; of the way in which children learn their native language; of how the form of an animal society can be predicted from a knowledge of a limited number of ecological facts. PSYO 1000 meets three hours a week for lectures. The grade is based on a number of examinations given at intervals throughout the year.

Format: lecture 3 hours
Instructor: Staff

PSYO 1010.06R: Introduction to Psychology. The content of PSYO 1010.06 is similar to that of PSYO 1000.06 but the manner of teaching is different. This class involves written work and is most suitable for students who are able to work on their own. In PSYO 1010.06 there are no lectures, but students meet individually with a tutor to discuss the material and have their quizzes assessed. The textbook and accompanying notes are divided into a number of units. Students prepare answers to a number of questions that are given with each unit. When they feel they have mastered the content of a unit, they write a quiz consisting of two short answer questions they have seen in advance. Then they review and discuss their quiz with their tutor. If the student's answer is judged to contain all the essential information in a clear and concise form, he or she proceeds to the next unit. If the tutor judges the student's knowledge of the unit to be inadequate, he or she must take another quiz on the same material. The student must pass a quiz in a unit before he or she can proceed to the next unit. The grade for the class is based entirely on the number of units the student completes within scheduled time limits during the academic year (for example, in 1994-95, 17 of 26 units for a D, 26 of 26 for an A). Students must meet their tutors during the scheduled class time.

A handout giving more information about this class can be picked up at the reception desk in the Psychology Department.

Format: tutorials 2-3 hours
Instructor: staff

PSYO 1500.06R: Introduction to Psychology. The content of PSYO 1500.06 is similar to that of

regular PSYO 1000.06 classes. The major difference is that there are in-class laboratories in PSYO 1500.06. The purpose of these labs is to familiarize students with the methods of studying behavioural processes in an objective way. Students will serve as subjects in classroom studies to discover how perception and memory can be studied in a scientific manner. It is expected that one laboratory project will be written up each term. The demands imposed on students in PSYO 1500.06 will be comparable to that imposed in other introductory psychology classes.

Format: lecture 3 hours
Instructor: S. Nakajima

PSYO 2000.03A: Methods in Experimental Psychology. An introduction to the methodological tools research psychologists use to study behaviour. Emphasis is placed on experimental design and the legitimacy of inferences derived from experimental results. Lectures proceed from a discussion of the general problems of using the scientific method in studying behaviour to a more specific examination of the analytic procedures commonly employed to investigate human and animal behaviour. Students conduct and analyze in written reports a series of experiments in the laboratory that illustrate important concepts discussed in class. Students taking PSYO 2000.03 must attend the first lecture session. Due to enrolment limitations, preference will be given to students majoring in Psychology or Neuroscience, unless space is available after the first class.

Format: Writing Internave, lecture 2 hours, lab 2 hours
Instructor: P. Dunham, R. Hoffman and J. Leary
Prerequisite: A grade of B- or better in PSYO 1000.06 or 1010.06 or 1500.06

PSYO 2071.03A: Introduction to Neuroscience. This class introduces a number of aspects of this field emphasizing analyses which are precise at the neuronal level. A general introduction is provided by the vertebrate visual system, concentrating upon the analysis of visual information in the mammalian visual cortex. This is followed by consideration of muscle spindles and other receptors of the motor nervous system; a brief treatment of the anatomy of the mammalian brain and a more detailed analysis of the cerebellum; the other major components of the motor pathways to the spinal cord; spinal reflexes and the integrative action of neurons.

Format: lecture 3 hours
Instructor: LA. Meinertzhagen
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06 (with a grade of B- or better), BIOL 1000.06 or 2020.03, or consent of instructor

Cross-listing: NBSC 2071.06

PSYO 2072.03B: Cellular Neurobiology. Building on the knowledge of holistic aspects of brain function gained in PSYO 2071.03, this class explores the neuronal basis of activity in all nervous systems. Starting with an analysis of the structure of neurons, the function of nerve cells will be explored with respect to the ionic and molecular basis of resting potentials and of electrical activity in nerve cells; synaptic transmission; the release and postsynaptic action of synaptic transmitters; aspects of the neurochemistry of synaptic transmitters and of drug action; and glial cells. Cellular phenomena relevant to neurological dysfunction will be discussed.

Format: lecture 3 hours
Instructor: S.R. Shaw
Prerequisites: PSYO/NESC 2071.03 or consent of instructor
Cross-listing: NESC 2072.03

PSYO 2080.03A or B: Social Psychology. Some major issues in social psychology are introduced through a critical analysis of theories and research in which the actions of individuals are seen as products of their social context. Both the lectures and the textbook are intended to promote a close and sceptical evaluation of our knowledge of our obedience and rebellion, our affections and hostilities, our willingness to help and injure, our attempts to explain ourselves and others, our erotic orientations and gender roles. Questions on such matters are given to the students to work on out of class and the examinations are composed of some of those questions.

Format: lecture 3 hours
Instructor: J.W. Clark
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06 (with a grade of B- or better)

PSYO 2090.03A or B: Developmental Psychology. People change with age. This class examines the changes that occur in humans from conception through adolescence. Biological, social, cognitive, and linguistic aspects of development are considered. Theory, research, and practical implications are integrated throughout the class.

Format: lecture 3 hours
Instructor: C. Moore
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06 (with a grade of B- or better)

PSYO 2130.03A or B: Introduction to Cognitive Psychology. Lectures focus on the processes involved in transforming sensory information into the meaningful, coherent world of everyday experience we know. Initially, emphasis is on the visual system, and how information within that system is structured and organized, followed by a consideration of the character of the internal representations used in thinking and remembering.

Format: lecture 3 hours

Instructor: B. Barhard
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06 (with a grade of B- or better)

PSYO 2140.03A or B: Learning. Traces the experimental study of learning from the turn-of-the-century research of Pavlov and Thorndike to the present. Development of the field of animal learning is described in terms of the ways in which particular conceptions of the learning process have guided experimentation, and have in turn been revised on the basis of the outcomes of that experimentation. Some important concepts discussed are: association, attention, biological constraints on learning, classical conditioning, discrimination, expectancies, law of effect, learning-performance distinction, operant conditioning, S-S and S-R bonds, and stimulus control. The value of various approaches is discussed with respect to several goals: (1) providing general principles of learning; (2) understanding the behaviour of particular species; (3) direct application to human problems. Emphasis is on understanding why researchers in animal learning do what they are currently doing (given the goals and the historical context), rather than on learning a number of facts about animal learning.

Format: lecture 3 hours
Instructor: V. LoLordo
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06 (with a grade of B- or better)

Cross-listing: NESC 2140.03

PSYO 2150.03A or B: Perceptual Processes. Perception deals with the way in which our senses provide us with information about our environment. This class focuses on the process by which sensory experiences are coded, how they are interpreted by the nervous system, and how experience modifies perception.

Format: lecture 3 hours
Instructor: J. McNulty
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06 (with a grade of B- or better) or BIOL 1000.06

Cross-listing: NESC 2150.03

PSYO 2160.03A or B: Animal Behaviour. An examination of the natural and, to a lesser extent, the laboratory behaviour of several intensively-studied groups of animals. Foraging and communication, predation and defense, sex and aggression, homing and migration are studied as they occur in such organisms as bees and ants, moths, bats, various birds, and chimpanzees.

Format: lecture 3 hours
Instructor: B.R. Moore
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06 (with a grade of B- or better) or BIOL 1000.06

PSYO 2170.03A or B: Hormones and Behaviour. An introduction to the endocrinological bases of

mammalian social behaviour. Emphasis is on the mechanisms by which the hormones of the hypothalamus, pituitary gland, gonads and adrenal gland control sexual, aggressive and maternal behaviour. Other topics covered are: hormone receptors in the brain; the menstrual cycle and human reproduction; puberty; sex differences in the brain; the pineal gland; neuro-transmitters; pheromones; crowding and social stress.

Format: lecture 3 hours
Instructor: R.E. Brown
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06 (with a grade of B- or better) or BIOL 1000.06.

Cross-listing: NESC 2170.03

PSYO 2190.03A or B: Language and the Brain. An introduction to the processes in the use of language by human beings. The main topics are: 1) the structure of the language; 2) the function of language; 3) the process of comprehension; 4) the process of production; 5) acquisition of language; and 6) language disorders and brain damages.

Format: lecture 3 hours
Instructor: M. Yoon
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06 (with a grade of B- or better)

Cross-listing: NESC 2190.03

PSYO 2220.03A or B: Abnormal Behaviour. This class involves the study of a broad range of manifestations of abnormal behaviour in adults (e.g., anxiety disorders, substance abuse/dependence, schizophrenia, affective disorders, personality disorders). For each disorder, various theoretical accounts of etiology and approaches to intervention will be considered. This class focuses not only on what is known about the causes and treatments of abnormal behaviour, but also on the scientific techniques clinical psychologists have developed to better understand and better intervene with various forms of behavioural dysfunction.

Instructor: S. Stewart
Format: lecture 3 hours
Prerequisites: PSYO 1000.06 or 1010.06 or 1600.06 (with a grade of B- or better)

Exclusion: Credit will not be given for both PSYO 2220.03 and PSYO 3121.03.

PSYO 2270.03A or B: Human Neuropsychology. This class explores not only normal but also abnormal brain function, as revealed by the consequences of trauma, disease, and surgical intervention. Aphasia, epilepsy, the role of brain chemicals in behaviour, cerebral asymmetry, and localization of brain function are examples of the topics covered.

Format: lecture 3 hours
Instructor: M. Ozler
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06 (with a grade of B- or better)

Cross-listing: NESC 2270.03

PSYO 2280.03A or B: Personality. In this class a person is treated as a unified whole. Personality deals with questions such as: Is a science of persons possible? What forms can it take? Are there types of personalities, or is each individual's personality unique? Is an individual's life history an expression of his or her personality, or is personality description merely a summary statement of behaviour whose cause lies elsewhere?

Format: lecture 3 hours
Instructor: J. Barreal
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06 (with a grade of B- or better)

PSYO 2370.03A or B: Drugs and Behaviour. An introduction to behavioural psychopharmacology. The lectures involve basic anatomy, physiology, and chemistry of the nervous system. Behavioural effects and underlying mechanisms of various psychoactive drugs will be discussed. Specific topics will cover alcohol, tobacco, amphetamines, cocaine, opiates, hallucinogens, tranquilizers, and antipsychotic drugs.

Format: lecture 3 hours
Instructor: S. Nakajima
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06 (with a grade of B- or better)

Cross-listing: NESC 2370.03

PSYO 2460.03A or B: Adaptive Behaviour. Adaptation between organisms and their environments is a common theme that can be used to link research in the behavioural and biological sciences. In this course three basic issues are addressed: (1) How do we evaluate the balance among internal and external events that define adaptive behaviour? (2) How do we separate individual properties of adaptive control systems while also determining rules by which these properties fit together? (3) How do genetic substrates and developmental events combine to set the boundaries of adaptive performance? Answers to these questions rest upon the dual tendencies for adaptive systems to be both interactive and self-organized.

Underlying issues here are examined with current data from behavioural and biological disciplines, in which different specific adaptations, different levels of organization and different time frames of operation are compared.
Format: lecture 3 hours
Instructor: J. Fentress
Prerequisite: PSYO 1000.06 or 1010.06 or 1500.06 (with a grade of B- or better) or BIOL 1000.06

PSYO 2500.03B: Contemporary Research Problems in Psychology. As a continuation of PSYO 2000.03, this class introduces prospective honours students to the design, execution and analysis of independent research. Each student works with a supervisor on a one to one basis

preparing a research project which the student then conducts. The lecture periods are devoted to an introduction to the design and statistical analysis of experiments. In the lab meetings, the student will give oral reports on the proposed research. At the end of the course formal oral reports will be given in an all-day conference for the entire class. A formal written report on the research is submitted at the end of the term.

This class is a preparatory class for students planning to do an Honours degree in psychology, and admission will be restricted to students whose academic record indicates an ability to perform at the Honours level. No one will be admitted until they have completed PSYO 2000.03 with a grade of B or better; a high level of performance in other Psychology classes along with an overall average of B+ (GPA 3.30) will normally be expected.

SIGNATURE REQUIRED

Format: lecture 2 hours, lab 2 hours
Instructor: J. Leary, R. Hoffman
Prerequisite: PSYO 2000.03, with grade of B or better and permission of the instructor

PSYO 3000.06R: Independent Research in Modern Psychology. Primarily for honours students wishing further experience and understanding of psychological research. A student in the class chooses a member of staff who serves as an adviser throughout the academic year, and under whose supervision independent research is conducted.

SIGNATURE REQUIRED

Format: lab 4 hours
Instructor: D. Mitchell
Prerequisites: PSYO 2000.03 and previous or concurrent enrolment in two other 3000-level classes; and the prior consent of the instructor.
Cross-listing: NESC 3000.06

PSYO 3010.06R: Advanced General Psychology. For the advanced student, a review of general psychology with the aim of consolidating the student's knowledge. The method is unconventional. With the assistance of the instructor, the student prepares the material assigned to PSYO 1010.06 at a level which enables him or her to instruct introductory students in individual tutorials. The class is designed primarily for honours students, and prospective students are advised to consult the instructor in the spring of the preceding year.

SIGNATURE REQUIRED

Format: lecture 2 hours, tutorials 3 hours
Instructor: staff
Prerequisite: PSYO 2000.03, advanced classes in psychology and permission of the instructor

PSYO 3040.06R: Learning and Motivation. An examination in detail of selected topics within the field of learning and conditioning. The

emphasis is on identification and clarification of fundamental processes, their boundaries, biological significance and evolutionary history.

Format: lecture 3 hours, research lab 2 hours

Instructor: B.R. Moore

Prerequisite: PSYO 2000.03 and 2140.03

PSYO 3050.06R: Perception. This class considers the way in which information about the world is provided by the senses and how we use this information in our behaviour. The material falls into four sections. (1) The methodological and theoretical problems peculiar to the study of sensation and perception; (2) The transformation of physical stimulus energy into neural energy; (3) The physiological and psychophysical analysis of the sensory systems with particular emphasis on vision; and (4) The development of perception and its relation to the anatomical and physiological development of the sensory pathways. The experimental work has been selected for its importance in the theoretical understanding of perceptual processes and consists of a general introduction to the apparatus and methods used in perceptual research.

Format: lecture 3 hours, research lab 2 hours

Instructor: D.E. Mitchell

Prerequisite: PSYO 2000.03 and 2150.03

Cross-listing: NESC 3050.06

PSYO 3070.06R: Behavioural Neuroscience. Behavioural neuroscience concerns itself with the neural mechanisms underlying a variety of behavioural phenomena. Its subject matter includes the neural mechanisms involved in the regulation of motivational systems (feeding, drinking, temperature regulations, sexual behaviour and other reproductive behaviours), the regulation of sleep and waking, motor and sensory system function, learning and other forms of behavioural plasticity, memory and the physiological mechanisms underlying behavioural disorders. Students should be familiar with experimental research methods, and have some background in biological or neural aspects of psychology. This laboratory class requires considerable time commitment by students who want to explore direct involvement in research in this area.

SIGNATURE REQUIRED

Format: lecture 3 hours, lab 2+ hours

Instructor: B. Rusak

Prerequisite: PSYO 2000.03; at least one of: PSYO/NESC 2071.03, 2150.03, 2170.03, 2270.03, 2370.03, and permission of instructor

Cross-listing: NESC 3070.06

PSYO 3071.06R: Behavioural Neuroscience. Students in this class attend the same lectures and write the same examinations as in PSYO/NESC 3070.06, but do not participate in the associated laboratory work, and do not receive credit for a laboratory course toward

meeting the departmental laboratory requirement. For a class description, see the entry for PSYO/NESC 3070.06. Students cannot receive credit for both PSYO/NESC 3070.06 and PSYO/NESC 3071.06.

Format: lecture 3 hours
Instructor: B. Rusak
Prerequisite: PSYO 2000.03; at least one of: PSYO/NESC 2071.03, 2150.03, 2170.03, 2270.03, 2370.03, or permission of instructor
Cross-listing: NESC 3071.06

PSYO 3075.03A or B: Physiological Psychology. In Physiological Psychology we study current theory and research about the relation between brain function and behaviour. More specifically, the focus is upon the psychological consequences of physiological events in the nervous system. Among the topics included might be selections concerning brain processes underlying: hunger and thirst, sexuality and reproduction, arousal and attention, memory systems, movement and motor control, tactile senses and pain perception, states of consciousness, emotion and stress, speech and language.

Format: lecture 3 hours
Instructor: M. Ozler
Prerequisite: PSYO 2000.03 and one of PSYO 2071.03, 2270.03, 2370.03
Cross-listing: NESC 3075.03

PSYO 3082.03A or B: Experimental Social Psychology. The primary goal of this class is to develop students' skill level in empirical analysis in social psychology. We examine how the tools of science can be used to help us understand more about social thinking and social behaviour. The class is primarily a skills course; in other words, emphasizing active student learning rather than didactic teaching. Students will be required to complete two research projects during the term. The projects will involve testing subjects, coding data, computer data analysis, and report writing. Familiarity with computer-based statistical analysis and text processing is strongly recommended.

Format: lecture 1 hour, research lab 2 hours
Instructor: M. Sullivan
Prerequisites: PSYO 2000.03 and 2080.03

PSYO 3091.03A or B: Methods in Developmental Psychology. This class is a survey of the research methods that are used in Developmental Psychology. It largely assumes knowledge of basic methodology and design issues common to all areas of Psychology and concentrates on those methods that are of special relevance to the study of development in humans from birth through childhood. In addition to the lectures, students will carry out a number of research exercises to gain experience in conducting research with children.

Format: lecture 2 hours, research lab 1 hour
Instructor: C. Moore

Prerequisite: PSYO 2000.03 and 2090.03

PSYO 3092.03A or B: Early Development. This class examines development in infancy and the preschool period. The main theme of the class is to show how perceptual, cognitive, emotional, social, and linguistic changes occurring during the first five years of life are integrated in the psychological life of the child to allow the development of social understanding.

Format: lecture 3 hours
Instructor: C. Moore
Prerequisites: PSYO 2000.03 and 2090.03

PSYO 3121.03A or B: Adult Psychopathology. This class is concerned with the disorders of psychological functioning seen in adults. A wide range of disorders will be touched upon. Particular attention is given to disorders as they highlight current theory and controversy. Schizophrenia, mood disorders, anxiety disorders, organic syndromes and dementia are examined with regard to both biological and psychological mechanisms. Assessment and research techniques are discussed with emphasis on recent advances in brain imaging techniques.

Format: lecture 3 hours
Instructor: J.F. Connolly
Prerequisite: PSYO 2000.03 and 2120.03

PSYO 3122.03A or B: Methods in Experimental Clinical Psychology. This class focuses on the methods used in the experimental study of abnormal human behaviour. Students learn how to conduct research on topics in applied clinical psychology. Lectures proceed from a discussion of the general problems of using the scientific method in studying abnormal behaviour, to a more specific examination of the analytic procedures commonly employed to investigate topics in clinical psychology. Students conduct a series of research projects in the laboratory by serving both as subjects and experimenters. These studies will illustrate some of the important concepts discussed in class. Students are required to analyze the results of these studies in written lab reports. Due to enrolment limitations, this class will be limited to students majoring in Psychology, unless space is available after the first class.

Format: lecture 2 hours; lab 2 hours
Instructor: S. Stewart
Prerequisite: PSYO 2120.03 and 2000.03 or permission of instructor

PSYO 3129.03A or B: Childhood Psychopathology. This class examines a wide range of behaviour disorders in children (e.g., reading disability, autism, attention deficit disorder). The goal is to gain a better understanding of the nature of these disorders by exploring empirical findings from both the social and physical sciences. Discussion will focus on problems of definition, and the relative merits of different theoretical accounts. Data on therapeutic outcome and ethical issues regarding intervention will also be considered.

Format: lecture 3 hours, proficiency lab

Instructor: P. McGrath
Prerequisite: PSYO 2000.03 and 2120.03

PSYO 3130.06R: Cognitive Psychology. Cognitive psychology deals with how we gain information about the world, how such information is represented and transformed as knowledge, how it is stored and how that knowledge is used to direct our attention and behaviour. It involves the processes of perception, memory, attention and thinking. This class focuses not only on what is known about human cognition, but also on techniques cognitive scientists have developed to discover this knowledge.

Format: lecture 2 hours, research lab 2 hours

Instructor: P. McMullen
Prerequisites: PSYO 2000.03, and either 2130.03, 2150.03, 2270.03 or consent of instructor

PSYO 3150.03A or B: Introduction to Hearing and Speech Mechanisms. Hearing and speech are two behavioural capacities of fundamental importance to normal human communication. This lecture class is designed to provide a basic understanding of the peripheral and central neural mechanisms of hearing, and of some psychological and physiological processes involved in speech production and speech perception. The class is intended for those students anticipating more advanced training in neural mechanisms of hearing, speech science, human communication disorders and/or audiology. The class emphasizes normal hearing and speech mechanisms, but will address pathology where evidence from pathological subjects is pertinent to understanding normal function. Class content: introductory acoustics; structure and function of the outer and middle ear; structure and function of the cochlea; hair cell physiology and sensory transduction; coding of simple and complex sounds in the auditory nerve; sound localization mechanisms as an example of the correspondence between the physical properties of the stimulus, neural sensitivity and behavioural performance; theories of speech production; theories of speech perception; acoustic and linguistic contributions to speech perception.

Format: lecture 3 hours

Instructor: D. Phillips
Prerequisites: PSYO 2000.03, 2150.03 or 3050.06, or permission of instructor; PSYO 2071.03 strongly recommended

Cross-listing: NESC 3150.03

PSYO 3160.06R: Ethology. Ethology is the biological study of behaviour. It uses psychology, genetics, physiology, ecology and evolutionary theory to solve problems in the development, function and causation of behaviour across all animal species. These diverse approaches to the study of animal behaviour are presented in naturalistic and

experimental situations. In laboratory exercises qualitative and quantitative records of behaviour are made in the field and in the laboratory. There are several group research projects (first term) and an individual research project (second term).
Format: lecture 2 hours, research lab 2 hours

Instructor: J. Fentress
Prerequisites: PSYO 2000.03 and 2160.03, or BIOL 1000.06 and permission of the instructor

Cross-listing: NESC 3160.06

PSYO 3197.03A or B: Human Communication. An introduction to the cognitive and social processes of communication among human beings by the use of language or other symbols as abstract mental tools. The main topics are: 1) the nature of linguistic signs; 2) mental representation; 3) deixis; 4) implicature; 5) presupposition; 6) speech acts; and 7) structure of conversation.

Format: lecture 3 hours

Instructor: M. Yoon
Prerequisite: PSYO 2000.03 and 2190.03 or 2130.03

PSYO 3260.03A or B: Biological Rhythms. The temporal structure of animal and human physiology is governed by both homeostatic mechanisms and by a system of biological clocks. These internal clocks generate rhythms with various periods in virtually every physiological and behavioural system. Daily (circadian) clocks are the most prominent; they generate rhythms in sleep, reproduction, intellectual performance and many other functions. This class examines the nature of these biological clocks and their physiological substrates, with an emphasis on the neural mechanisms involved in rhythm generation and synchronization in a variety of species. It also explores the hypothesized role of circadian mechanisms in sleep disorders, jet lag and depression.

Format: lecture 3 hours

Instructor: B. Rusak
Prerequisite: PSYO 2000.03, or BIOL 1000.06
Cross-listing: NESC 3260.03

PSYO 3270.03A or B: Developmental Neuroscience. This class introduces students who are already familiar with the structural organization and functional properties of the mature nervous system to aspects of neural development, especially at the cellular level. The first part of the class will link the early events of neural development to general embryonic development. Cell determination, pattern regulation, cell production, cell-lineage analysis, and neuronal differentiation, movement and migration will be discussed. Special attention will then be given to later developmental events such as neuronal growth cones, cell death, growth factors, neuron-neuron interactions and synapse formation using invertebrate and vertebrate examples.

Format: lecture 3 hours

Instructor: M. Yoon
Prerequisite: PSYO 2000.03 and PSYO/NESC 2071.03 and 2072.03
Cross-listing: NESC 3270.03

PSYO 3370.03A or B: Neuroscience Laboratory I. The two classes 3370.03 and 3371.03 (see next entry) are coordinated and provide introduction to several techniques used in contemporary neuroscience. The following information applies to these classes as a pair, within which the exact distribution of experimental approaches may vary from year to year according to availability of equipment and material, and numbers enrolled. Usually, electrical recording methods from several types of preparation are emphasized in 3370.03, while detailed neuroanatomically-based approaches are favoured in 3371.03. Regularly scheduled labs with students working in groups of 2 or 3 under supervision are supplemented by occasional lectures, in both classes. Students become familiar with electrical recording and stimulation methods and related techniques, currently using both sensory and motor system preparations. Neuroanatomical analysis is introduced by way of techniques usually selected from the following: Golgi impregnation of neurones, immunocytochemistry, dye-tracing of connections, and electronmicroscopy of the visual system or central nervous system. Lab II (3371.03) usually runs in the second term for selected, advanced students, building upon foundations laid in 3370.03 but using different practical approaches.

SIGNATURE REQUIRED

Format: lab 3 hours
Instructor: S.R. Shaw
Prerequisites: PSYO 2000.03 and PSYO/NESC 2071.03 and 2072.03, or 3270.03, and instructor's consent

Cross-listing: NESC 3370.03

PSYO 3371.03A or B: Neuroscience Laboratory II. For a description of this neuroscience lab class, see the entry under 3370.03 above; usually, 3371.03 is coordinated closely with 3370.03.

Format: lab 3 hours
Instructor: I.A. Meinertzhagen
Prerequisites: PSYO/NESC 3370.03 and instructor's consent

Cross-listing: NESC 3371.03

PSYO 3390.03A or B: Cognitive Development. In this class we trace the development of the child's knowledge from birth to adolescence. Piaget's theory provides the background for the study of recent progress in our understanding of children's concepts of the physical world.

Format: lecture 3 hours
Instructor: Staff
Prerequisites: PSYO 2000.03 and 2090.03 or consent of instructor

PSYO 3500.06R: Statistical Methods in Psychology. This class is primarily intended for honours students, but other students may be

admitted with the consent of the instructor. This class is designed to enable students to understand parametric and nonparametric statistical procedures and their descriptive and inferential application to behavioural research. In addition, students learn to execute computer programmes for data organization and analysis. Class work includes lecture, seminar, and statistical/computer assignments.

Format: lecture 2 hours, skills lab 2 hours
Instructor: J. McNulty
Prerequisite: PSYO 2000.03 and 2500.03, or consent of instructor

PSYO 3580.06R: History of Psychology. In writings dating from antiquity to the early years of the 20th century, we explore the understanding of such abiding sources of our curiosity as individual, racial and sexual differences, the distinctions between man and animal, the sources of odd actions, the nature of the brain and of vision.

Format: seminar 3 hours
Instructor: J.W. Clark
Prerequisite: PSYO 2000.03 or consent of the instructor

PSYO 3590.03A or B: Perceptual Development. This class examines the development of visual and auditory capacities in human infants and in a variety of animal species with sensory systems like our own. The neural events that underlie these developmental changes in the various sensory pathways will be discussed. The class will also grapple with the old question of how early sensory experience influences our perceptual abilities.

Format: lecture 3 hours
Instructor: D. Mitchell
Prerequisite: PSYO 2000.03
Cross-listing: NESC 3590.03

PSYO 3760.03A or B: Neuroethology. Neuroethology is the study of the neural bases of animal behaviour. The class will emphasize cellular approaches toward understanding the integrative mechanisms of the nervous system which underlie complex behaviours. Feature detectors, command systems and motor programme generators will be examined in depth using examples from vertebrate preparations. Cellular bases of higher order functions such as motivation, learning and choice will be explored if time permits.

Format: lecture 3 hours
Instructor: Staff
Prerequisites: PSYO 2000.03 and PSYO 2160.03 or 2071.03 or BIOL 2020.03 or consent of the instructor

Cross-listing: NESC 3760.03

4000-Level Seminars

These seminars (4000-4440) are intended for 3rd and 4th year honours students. Third-year students are eligible provided they obtain permission from the instructor, and the needs of all the fourth-year honours students are met. The

topics covered in these classes vary from year to year. Consult the department for the specific course descriptions.

PSYO 4000.03A or B: Senior Seminar. This class is an individually tailored reading or study class. It is designed to allow a student to focus on a particular issue, or set of related issues, that are not part of the regular programme. Students may register for this class if they can find a staff member who is prepared to supervise the course of study. Before attempting to register for this class, a student must provide the chairperson of the Undergraduate Programme Committee with: a) a one page description of the proposed course of study, b) a letter from a staff member agreeing to supervise the programme outlined. A copy of the completed project, and a mark, must be submitted to the Undergraduate Programme Committee chairperson by 15/Dec or 15/Apr.

SIGNATURE REQUIRED

Format: 2 hours
 Instructor: Staff
 Cross-listing: NESC 4000.03

PSYO 4001.03A or B: Contemporary Issues in Psychology.

Format: 2 hours
 Instructor: Staff

PSYO 4040.03A or B: Learning Applications in Clinical and Social Psychology.

Format: 2 hours
 Instructor: Staff

PSYO 4050.03A or B: Topics in Perception. See class description for NESC 4050.06 in the Neuroscience section of this calendar.

PSYO 4070.03B: Neuroscience Seminar.

Format: 2 hours
 Instructor: Staff
 Prerequisites: PSYO 2071.03, 2072.03 or 3270.03, or consent of the instructor

Cross-listing: NESC 4070.03, ANAT 5070.03

PSYO 4080.03A or B: Topics in Social Psychology and Personality.

Format: 2 hours
 Instructor: Staff

PSYO 4090.03A or B: Development of Social Behaviour.

Format: 2 hours
 Instructor: Staff

PSYO 4120.03A or B: Topics in Clinical Psychology.

Format: 2 hours
 Instructor: Staff

PSYO 4130.03A or B: Topics in Human Information Processing.

Format: 2 hours
 Instructor: Staff

PSYO 4140.03A or B: Animal Learning Topics.

Format: 2 hours
 Instructor: Staff

PSYO 4160.03A or B: Topics in Behavioural Biology.

Format: Writing Intensive, 2 hours
 Instructor: Staff
 Cross-listing: NESC 4160.03

PSYO 4230.03A or B: Human Performance Topics.

Format: 2 hours
 Instructor: Staff

PSYO 4440.03A or B: Topics in Infant Development.

Format: 2 hours
 Instructor: Staff

PSYO 4500.06R: Honours Thesis. The purpose is to acquaint the student with a current experimental problem and the related research procedures in experimental psychology. Each student works with a staff member who advises the student about research in the area of interest, and closely supervises an original research project carried out by the student. The students meet together occasionally throughout the year to describe their proposed research and their progress. Each student must submit a formal written report of the completed research in APA style. The final grade is based upon the originality and skill displayed in executing the project, with emphasis upon the submitted report and an oral presentation.

Instructor: J.W. Clark and Staff
 Restriction: Restricted to honours students in their graduating year
 Cross-listing: NESC 4500.06

Introduction

The School of Public Administration prepares students for careers in government agencies, public corporations, social service agencies, and para-public organizations. It imparts a knowledge of the substance and processes of public policy and of the machinery of government. It provides an appreciation of, and training in, the techniques of political and economic analysis and evaluation. It develops a capacity for financial and personnel management. It fosters professional attitudes appropriate to public service.

The School's aim is to promote effective, efficient and accountable management - management of government and management in

government. Public managers today must grapple with both new and traditional problems. The public demands economy, effectiveness, efficiency and accountability from the public service. To meet these demands, public managers require an appreciation of, and broad professional training in, the most up-to-date, administrative practices and methods.

These needs are addressed through two graduate programmes - the MPA and the DPA - and the undergraduate Certificate in Public Administration. All three programmes are interdisciplinary in nature and are built around the principle that, though administration is a general, or generic, process, the environment of the public sector is so distinct that public administration should be treated as a field worthy of study in its own right.

The Certificate in Public Administration (CPA Programme)

The CPA is intended primarily for public servants who do not have an undergraduate degree. The programme consists of undergraduate classes designed to provide a general introduction to the structure and organization of government and the principles of public administration.

Requirements (1 year)

- Total credits required - 5
- Required GPA for graduation - 1.70
- Required classes
 - POLI 2200.06
 - COMM 1101.03 / 1102.03 or POLI 3494.06
 - COMM 2301.03, 2302.03
 - PUAD 2249.03, 2250.03
- 1 elective approved by the school

Classes Offered

PUAD 2249.03A: Organization Theory for Public Administration. This class introduces students to the study and practice of public administration by way of an examination of the structure, design and behaviour of the complex organizational systems through and within which public administration is practised. It outlines the principal theoretical issues inherent in public administration insofar as the administration of public affairs relates to the ways in which governments are organized, and organize themselves, to perform their multiple and varied functions. The course focuses on public administration but it also draws upon literature that encompasses both private and public administration with relevant comparisons and differences considered where appropriate. In so doing, it acknowledges not only the degree to which organizational theories themselves are generic to all forms of administration but also the

phenomena of non-profit organizations in the private sector and commercial enterprises in the public sector. The example, illustrations and cases used for the consideration of actual organization structure, design and behaviour are drawn primarily from the Canadian experience of public administration at all three levels of government.

Instructor: H. Bakvis
Format: seminar 2 hours

PUAD 2250.03B: Management in the Public Sector. This class is designed for undergraduate students in Public Administration, Commerce, Political Science and the Health Professions who require an introduction to the principles and methods used in the operation of government organizations. The class introduces the student to the management of Canadian government organizations at the federal, provincial and municipal levels. Students are shown how managers in departments work within a framework of government-wide policies of personnel and financial management. In order to understand those policies the class reviews the recent development of public sector management in Canada and then looks in detail at the processes of personnel and financial management.

Instructor: P. Brown
Format: seminar 2 hours

Application Procedure

Application forms are available from the Office the Registrar of Dalhousie University. Applications should be submitted as early as possible, and not later than June 1 in the academic year in which studies are to commence.

Further information on the Certificate or other programmes of the School of Public Administration may be obtained from: Administrative Secretary, School of Public Administration, Dalhousie University, Halifax, Nova Scotia, B3H 3J5, (902) 494-3742.

Part-time Study

Students may complete the Certificate through part-time study at the rate of not more than two credits during the academic year. One further credit can be taken in each summer session.

Credits

Normally, four of the five credits in the programme must be taken at Dalhousie University and at least three of the five credits after the student has registered in the programme.

Classes taken for the Certificate may be credited toward a Bachelor's degree, but a

student must complete at least five of the subjects required for the degree after the awarding of the Certificate.

The Special Certificate Programme

The Special Certificate programme is a course of studies which give students who do not satisfy the general requirements for admission to the Faculty of Graduate Studies an opportunity to qualify for admission to the DPA and MPA degrees. Individuals with a minimum of 10 years work experience in an administrative position who have (1) completed a full year of university study and (2) achieved a professional designation (e.g., the Certificate in Municipal Administration from Henson College) can be considered.

Successful completion of the Certificate, with an average grade of B+ and with no grade below B-, may constitute a basis for a recommendation from the School for admission to the Faculty of Graduate Studies.

Individuals interested in enrolling in the Special Certificate Programme should consult the School before filing applications and should include with their applications a resume and a statement of their reasons for wishing to undertake the programme.

L.A. MacGregor, BPE (Dal), MS (Illinois), Co-ordinator of the Field Experience Program in Physical Education
L. Makrides, MCSP, BPT (Seak), MSc (Ottawa), PhD (McM), major appointment in the School of Physiotherapy
T.L. Maloney, BPE, BEd (Alberta), MA (Western), PhD (Alberta)
J.F. McCabe, BPE, BA (UNB), MSc, EdD (Tenn)
L.L. McIntyre, MD, MHSc (Tor), FRCP(C), Dean of the Faculty of Health Professions
C.A. Putnam, BPE (Man), MS (Wash), PhD (Iowa), Graduate Coordinator

P.D. Richards, Teach. Cert. (Trent Park Col), Laban Arts of Movement Centre Certificate (England), MA (Colorado)
C.A. Savoy, BPE (UNB), EdM (Boston), PhD (Tenn)
L.J. Verabioff, BA BPHÉ (Queen's), MS (Michigan), PhD (Ohio State), Head of the Physical Education and Kinesiology Division

Assistant Professors

L.J. Barnes, BPE, MSc (Dal)
C.D. Hood, BPE (Calgary), MS, PhD (Illinois)
C.R. Mangham, BEd, MA (UBC), PhD (Oregon)
D.P. McGuire, BA (Wright State), MA (Cincinnati), Head of the Health Education Division
J.A. Scott, BPE (Calgary), MS (Oregon), Co-ordinator of the Activity Programme in Physical Education
A.D. Yarr, BPE, MPE (UBC)

Special Lecturers

R.J. Hoyle, BA, MA (Cambridge), MSc (Dal)
R.L. Kirby, MD (Dal), FRCP(C), major appointment in the Department of Medicine
H.A. Noble, BSc (Springfield Col.), AIE (London), DPE (Acadia), LLD (Dal)
K.D.R. Travers, BScHE, MAHEc (MSVU), PhD (Dal), Pdt, major appointment at Mount Saint Vincent University

Purposes of the School

The School of Recreation, Physical and Health Education assumes the responsibilities for undergraduate studies in the Divisions of Health Education, Physical Education and Kinesiology and Leisure Studies, and for the conduct of graduate education and research.

Information about the graduate programmes available in Kinesiology, Health Education and Leisure Studies is available in the Calendar of the Faculty of Graduate Studies.

Limited Enrolment

All programmes offered by the School of Recreation, Physical and Health Education have enrolment limits. Applicants should refer to Table II in the FEES section of this calendar, or consult with the School.

School of Recreation, Health, & Physical Education Regulations

1. All students must observe the University and Academic Regulations described in this Calendar.
2. All students must attend the classes of their prescribed course regularly and punctually. When the work of a student becomes unsatisfactory or attendance is irregular, the student may be required to discontinue the class concerned.

3. Grade Point Average Requirements

The grade point average system is described in the Academic Regulations. School regulations relating to GPA apply to students whose initial registration in the School was in the Fall of 1990 or earlier (consult the calendar of the appropriate year).

4. Students expecting to receive a BSc (Kinesiology) degree with honours are required to maintain a GPA of 3.00 or better over the last 3 years and all grades counting toward an honours degree must be C or better.

5. Supplemental Examinations

The School of Recreation, Physical and Health Education does not offer supplemental examinations in any of its programmes.

6. Academic Appeals Procedures

6.1 Appeals to Division Committee on Studies:

In each of the divisions in the School of Recreation, Physical and Health Education (Health Education, Physical Education and Kinesiology, Leisure Studies) a Committee on Studies exists for the purpose of hearing initial student appeals of academic decisions.

The student appellant is responsible for the preparation of all documentation in support of his/her appeal.

The student must submit the appeal to the appropriate division head who will convene a meeting of the Committee on Studies.

The student has the right to appear before the Committee on Studies and he/she should notify the division head of his/her desire to do so. The student also has the right to be represented by an advocate of his/her choice.

The decision of the divisional Committee on Studies shall be conveyed to the student, in writing, by the division head immediately after the conclusion of the appeal. This notification should include information about procedures to appeal to the School's Committee on Studies.

If the student's appeal is denied, the student may appeal to the School's Committee on Studies by the procedures identified below. This appeal must be presented to the School's Director within 30 days of notification from the division head of the result of the appeal at the division level.

If the student's appeal is upheld, two things may happen:

In the case of division regulations, the matter need go no further and implementation is carried out by the division head.

In the case of the School/Faculty regulations, the division head is responsible for presenting the case to the Committee on Studies of the School of Recreation, Physical and Health Education.

6.2 Appeals to the Committee on Studies of the School of Recreation, Physical and Health Education:

As noted above it is the responsibility of the student to forward the necessary documentation to the School's Committee on Studies when the appeal is initiated by the student. Otherwise, it is the responsibility of the division head.

As Chair of the School's Committee on Studies, the Director will inform the student of his/her right to appear before the Committee. The student will also be informed of his/her right to be represented by an advocate of his/her choice. The decision of the School's Committee on Studies shall be conveyed in writing to the student by the Director immediately after the conclusion of the appeal. If the student's appeal is denied this notification shall include information about procedures to appeal to the Committee on Studies of the Faculty of Health Professions (see Academic Regulation 26.2). It should be noted that this appeal to the Faculty of Health Professions Committee on Studies must be presented within 30 days of notification from the School of the disputed academic decision.

If the student's appeal is supported, two things may happen: In the case of School regulations, the matter need go no further and implementation is carried out by the Director of the School.

In the case of Faculty of Health Professions regulations, the Director of the School is responsible for presenting the case to the Committee on Studies of the Faculty of Health Professions.

7. Student Advisory Programmes

Although many classes are compulsory in the School's programme, considerable latitude exists for the development and extension of individual interests. To help in planning a total personal programme each student is assigned an adviser from the teaching staff. Advisers can help students to select classes, avoid common pitfalls, choose activities, interpret regulations and solve various types of problems. Although students are responsible for their own programmes and for maintaining high academic standards, they should consult their advisor regularly and whenever problems may occur.

8. Student Exchange Programme

A reciprocal exchange programme operates between the School and Chelsea School of Physical Education, Sports Science, Dance and Leisure, University of Brighton, Eastborne Campus, England. Students of good academic ability may apply to participate in this study opportunity in their second or third year. The School has been involved with one-for-one exchange programmes since 1972.

Contact the School of Recreation, Physical and Health Education for further information.

Bachelor of Science (Health Education)

Admission Criteria

See Admission Requirements section of this calendar.

Course of Study Overview

The Bachelor of Science in Health Education is a four year degree programme offered by the Health Education Division since 1975. The goal of health education is to promote, maintain or improve individual, family and community health through educational processes.

The responsibilities of health educators include: assessing health education needs; planning, conducting and evaluating health education programmes; coordinating health education activities and resources; promoting health education throughout the community; and professional development.

The BSc (HE) programme guides students in attaining: 1. knowledge, attitudes and practices conducive to a healthy lifestyle, 2. professional preparation for a career in school or community health education, and 3. academic preparation for advanced study and research in health education or health-related fields.

Employment and Further Study

Graduates of the BSc (HE) programme are qualified for employment with government departments, health agencies, health and fitness centres, health promotion businesses, industries, medical care centres, professional organizations, schools and senior citizens' centres.

Some graduates qualify to pursue further study in fields such as business administration, education, health administration, health education, health promotion, medicine, nursing, public relations and other areas concerned with health promotion.

Description of the Programme

BSc (Health Education) students earn their degrees by completing at least 120 credit hours of studies. They major either in School Health Education or Community Health Education.

The Division requires those who major in School Health Education to minor in another subject that is applicable to a subject taught in the public schools. There are several ways to meet this Divisional requirement, and further information is available from the Division. In all cases, meeting the requirements for a "teaching minor" involves classes outside the Faculty of Health Professions.

The School Health Education stream is limited to ten students per year (five Elementary Minors and five Secondary Minors) selected on the basis of internal criteria established by the Division.

Graduates who majored in School Health Education qualify for a Nova Scotia Teacher's Certificate (Level 5). Nova Scotia's officials have reciprocal agreements with counterparts in several other provinces to recognize teachers' certificates, thus improving the job mobility of teachers within Canada. Because Dalhousie University is one of the few institutions in Canada where school health education specialists are prepared, these agreements have special importance for these BSc (Health Education) graduates.

The Division requires Community Health Education majors to choose between two minor areas of concentration: Administration & Evaluation or Lifestyles Education. As is true of School Health Education majors, Community Health Education majors meet the Division's requirements by taking a variety of classes that take them beyond the Faculty of Health Professions' boundaries. All new students' first year programme should include: HRED 1395.02, 1495.02 and 1595.02; Introduction to Anatomy; Introduction to Biology or Physiology; Introduction to Psychology or Sociology; a full-year Humanities class; KINE 1230.03. Students eligible for transfer credit for any of these classes may consider enrolling in other required classes such as HRED 2250.03 (see prerequisite), 2350.03 or a Health Education elective such as HRED 2204.03. Other course considerations should be approved by the Head of the Health Education Division.

Class selection in subsequent years will be made in consultation with the student's academic advisor once the student's major and minor area of study have been determined.

Beginning in the fall term of 1994, Health Education students are required to obtain basic level certification in first aid and cardiopulmonary resuscitation as a degree requirement prior to graduation. (See Division Head for details).

Failure to pass HRED 4493.09 or HEED 4495.15 may result in a student being required to take additional classes to make up for academic or skill level inadequacies prior to re-enrolling in those classes.

A student who wishes to take classes in Health Education as a non-major must apply as a special student in Health Professions, for a one-year period. This status is approved by the Director of the School of Recreation, Physical and Health Education in consultation with the Head of the Health Education Division. Under this arrangement students may take up to three, 3-credit-hour classes.

Health Education Classes Offered

HEED 1163.03: Biostatistics and Epidemiology. This class provides an understanding of epidemiology, the basic science of preventive medicine and public health. The student is

introduced to such concepts as the "epidemiological method" and its application to the study of the distribution and dynamics of disease in a population. By means of a problem solving approach, the class helps to provide some of the basic tools necessary to study the occurrence of disease in order to determine such issues as the severity of an outbreak, agents of the disease, and risk factors and causation.

Instructor: Staff
Format: Lecture, 3 hours
Restriction: Restricted to Outpost and Community Health Nurses

HEED 1395.02: Introduction to Health Education. This class will examine the fundamental concepts, terminology, issues and skills associated with health education as a process and as a profession. Emphasis will be placed on how health education relates to existing health and social policies, health promotion, prevention and treatment. Students will begin to develop a personal and professional philosophy of health and health education.

Instructor: Staff
Format: Lecture/discussion, 3 hours per week for the first 2/3 of the Fall term (Sept-Nov).
Restriction: Restricted to Health Education majors

Skills Seminar for First Year Students: An introduction to some fundamental professional and academic skills is provided for one hour following each class in HEED 1395.02 and HEED 1495.02 throughout the Fall term. These are non-credit sessions.

Instructor: L. Barnes
Restriction: Restricted to Health Education majors

HEED 1495.02: Fundamentals of School Health Education. Taught November - February.

Through readings, presentations and discussions, students learn about the major components of the school health programme, including health services, provision of a healthful environment and school health instruction. Writing skills are emphasized. In addition to the regular classroom meetings, the class includes a concurrent series of seminars and a school health education field experience. The field experience occurs for two weeks following the University's spring examination period.

Instructor: L. Barnes
Format: Lecture/ discussion/ seminar/ field experience, 3 hours per week for the last 1/3 of the Fall term and the first 1/3 of the Spring term November - February, plus the Spring field experience.

Restriction: Restricted to Health Education majors

HEED 1595.02: Fundamentals of Community Health Education. Taught February - April. Students become familiar with the role of a community health educator. Topics include needs assessment, programme planning and evaluation. Skills stressed in HEED 1395.02 and HEED 1495.02 will continue to be developed. In addition to the regular classroom meetings, the class includes a concurrent series of seminars and a community health education field experience. The community health education field experience occurs for two weeks following the school health field experience that is part of HEED 1495.02.

Instructor: Staff
Format: Lecture/ discussion/ seminar/ field experience, 4 hours per week in the last 2/3 of the Spring term February - April, plus the Spring field experience.
Restriction: Restricted to Health Education majors

HEED 2204.03: Consumer and Environmental Studies. This class introduces students to factors that cause changes in the environment and consequently affect health. The concepts of ecology and consumerism are examined and students are expected to apply these in their personal environments. The consumer's role and responsibilities in relation to personal health status are perused.

Instructor: Staff
Format: Lecture/discussion, 3 hours

HEED 2250.03: Interdisciplinary Course in Human Nutrition. See class description for NURS 4800.03, in the Nursing section of this calendar.

HEED 2425.03: Group Dynamics. Group dynamics, including leadership, decision making, group goals, communication, controversy, creativity, conflict, use of power, cohesion, group norms and problem solving, comprise the content of this class. The approach to learning is experiential. The potential of students will be utilized and each one is expected to function as a teacher and helper, as well as a learner.

Instructor: Staff
Format: Seminar, 3 hours

HEED 2390.03: Drug Use in Society. International, national and regional issues of promotion, prevention, treatment and legislation of drug use are examined. Recreational, over-the-counter, and some prescription drugs will be considered.

Instructor: C.R. Mangham
Format: Lecture, 3 hours

HLTH 3000.03B: An Interdisciplinary Approach to Health Promotion. See class description in Health Professions, Interdisciplinary section of this calendar.

380 Recreation, Physical & Health Education

HLTH 300L03B: Drug Issues: An Interdisciplinary Perspective. See class description in Health Professions, Interdisciplinary section of this calendar.

HEED 3225.03: Mental Health. Concepts and issues of mental health (biological, psychological and sociological) are explored through an examination of related theories, research, writings and practices. Emphasis is placed on mental health promotion, but mental illness and its treatment is included. Additional information is provided about the role of community mental health organizations and agencies. Some experiential techniques are used to demonstrate the function of self-awareness and interpersonal communication in mental health.

Instructor: D. McGuire
Prerequisite: PSYO 1000.06 or 1010.06; KINE 1230.03; or permission of instructor
Format: Seminar, 3 hours

HEED 3351.03: Injury Prevention and Safety Education. Students are introduced to the concept of safety, causes and effects of injuries, and strategies for reducing same through safety education. Specific study of injuries, their causes and preventive measures and programs is preceded by a review of definitions of health, health promotion/education, and safety education. This is a professionally oriented class in which students are asked to obtain data that focuses on injuries and subsequently, design programmes to reduce the number and effect of injuries. In doing so, consideration must be given to programmes and materials already in existence.

Instructor: L. Maloney
Format: Lecture/discussion, 3 hours.
Restriction: Restricted to School of Recreation, Physical and Health Education students, limited space for other students will be made available.

HEED 3401.03: Selected Communicable Diseases. Interactions among people, their environment, and the causal agents of communicable diseases are explored. Specific communicable diseases are examined in order to discuss the role of health education in disease prevention.

Instructor: L. Barnes
Format: Lecture/discussion, 3 hours. Offered in alternate years beginning in 1991-92.
Prerequisite: Microbiology 1100.03 and Biology 1000.06
Restriction: Restricted to students in their third or final year

HEED 3402.03: Selected Chronic Degenerative Diseases. This class explores the epidemiology of various chronic diseases and the broader social and health issues surrounding them. The class emphasizes preventable illness and

includes a health promotion perspective. Some of the specific topics to be covered are chosen by the students.

Instructor: Staff
Format: Lecture/discussion, 3 hours.

Offered in alternate years beginning in 1992-93
Prerequisite: BIOL 1000.06 or an introductory genetics class
Restriction: Restricted to students in their third or final year

HEED 4395.03: Community Health Education Planning. Issues and methods involved in the process of community health education planning are studied. Community analysis, goal and objective setting, developing education strategies and programme implementation and evaluation techniques constitute the components of planning covered in this class.

Instructor: L. Maloney
Format: Seminar, 3 hours
Prerequisites: HEED 1395.02, 1495.02, 1595.02
Restriction: Restricted to Health Education majors in their third or final year

HEED 4412.03A or B: Human Sexuality. This class is concerned with basic knowledge and understandings regarding biomedical, psychological, historical, legal, religious, semantic and comparative cultural aspects of human sexuality from conception to senility. Consideration is given to adjustment needs and problems of children and adults in contemporary Canadian society and to educational efforts to help with them.

Instructor: R. Beazley
Format: Lecture/discussion, 3 hours

HEED 4493.09: School Health Education Field Placement. During the first 10 weeks of the Spring term (January -March) students will intern in school settings on a full-time basis. During the concluding three weeks of the term, seminars will be conducted on campus and in community settings. They provide a forum for presenting information, sharing ideas and concerns, evaluating internships and preparing to find a job.

Instructor: L. Barnes
Format: Field Placement/Seminar
Prerequisite: HEED 4494.03
Restriction: Restricted to Health Education majors in their final year

HEED 4494.03B: School Health Education Planning. Planning for school health education is the focus of this class. Planning includes: clarifying one's point of view about school health education, assessing needs and structuring content, organizing the health instruction program, stating goals and objectives, developing teaching strategies, assembling resources and designing evaluation techniques.

Instructor: R. Beazley
Format: Lecture/discussion, 3 hours

Prerequisites: HEED 1395.02, HEED 1495.02, and HEED 1595.02
Restriction: Restricted to Health Education majors

HEED 4495.15: Health Education Internship. During the first 10 weeks of the class, students will intern in school or community health education settings on a full-time basis. Details about the internships are contained in the Internship Programme Handbook. During the concluding three weeks of the term, seminars will be conducted on campus and in community settings. They provide a forum for presenting information, sharing ideas and concerns, evaluating internships and preparing to find a job.

Instructor: L. Maloney
Format: Field placement/seminar
Prerequisites: HEED 3395.03 or HEED 4494.03
Restriction: Restricted to Health Education majors in their final year

HEED 4496.03: Methods and Materials for Elementary School Health Education. Students examine and develop various health education materials designed for the elementary grades. Resource material and teaching strategies are discussed in connection with drug education, diseases, mental health, consumer health, dental health, family living, safety education, personal hygiene or other emerging topics. Emphasis is on identifying local resources and developing materials.

Instructor: L. Barnes
Format: 3 hours per week
Prerequisites: 12 credit hours in health content or public school teaching experience in a health-related area, or instructor's consent.
Restriction: Restricted to students in their third or final year of a teacher education program.

HEED 4497.03: Methods and Materials for Junior High School Health Education. Students become acquainted with a range of teaching methods and procedures used in junior high school health education. Resource material is discussed and developed in topic areas such as drug education, communicable and chronic diseases, aging, mental health, consumer and environmental health, family living and human sexuality, health counselling and guidance. Emphasis is on the use of local resources and materials.

Instructor: L. Barnes
Format: 3 hours per week
Prerequisite: 12 credit hours in health content or public school teaching experience in a health-related area, or instructor's consent.
Restriction: Restricted to students in their third or final year of a teacher education program.

HLTH 4900.03A/4910.03B: An Interdisciplinary Approach to Gerontology. See class description in Health Professions, Interdisciplinary section of this calendar.

HEED 4903A or B or R: Directed Studies in Health Education.** The purpose of the directed study is to allow students to develop an area of specialization with library, laboratory or field research under the tutelage of an appropriate faculty member.

Instructor: Staff
Format: Tutorial, 3 hours
Prerequisites: Fourth year status; a GPA of at least 2.80; a "B" grade in an earlier class in the area of study (where appropriate); consent of advisor; consent of tutor.

HEED 4906R: Directed Studies in Health Education.** The purpose of the directed study is to allow students to develop an area of specialization with library, laboratory or field research under the tutelage of an appropriate faculty member.

Instructor: Staff
Format: Tutorial, 3 hours
Prerequisites: Fourth year status; a GPA of at least 2.80; a "B" grade in an earlier class in the area of study (where appropriate); consent of advisor; consent of tutor.

Bachelor of Science (Kinesiology)

Course of Study

The BSc programme in Kinesiology is designed to provide students with an opportunity for the scientific study of human movement. Emphasis of study is primarily in exercise physiology, biomechanics and motor performance. As part of their course work, students take science classes that will supplement their kinesiology classes in the three areas of emphasis. Generally, these science classes will be in the areas of biology, psychology, mathematics, chemistry or physics. For example, a student can complete a BSc programme in Kinesiology with an emphasis in exercise physiology and biology, as these are complementary areas of study. Other complementary areas are motor performance and psychology, biomechanics and mathematics/physics.

Both a general and honours programme are offered. Generally, it is possible to switch between the general and honours programmes. However, honours standing is achieved by students who satisfy the degree requirements with a cumulative GPA of 3.00 or higher. Students should refer to the honours programme description below for more detail.

382 Recreation, Physical & Health Education

Students receiving an honours degree must also complete an honours seminar and thesis in the fourth year.

Transfer Students: BSc (Kinesiology)

Students who transfer and have completed two of the five science electives in the first year of the Kinesiology General Program may register in the second year programme for transfer students. All other students should seek advice from their academic advisor before registering for any classes.

The second year program requirements for transfer students is as follows:

ANAT 1020.03	3
KINE 1230.03	3
KINE 2310.03	3
KINE 2320.03	3
KINE 2330.03	3

Open Elective ¹	6
Total	30

¹Electives may be chosen from the Faculties of Arts, Science, Health Professions, Management Studies and Medicine. BIOL 1000.06 is strongly recommended.

The third and fourth year programmes for transfer students are the same as those outlined previously.

Four Year Bachelor of Science (Kinesiology) Honours Programme

Students who wish to complete the Honours Programme may apply at the end of their third year of study. To be admitted into the programme students must have obtained a GPA or 3.00 based on the previous two years of academic work; completed KINE 4440.03 with a minimum of a B-, as well as the specified classes

defined in the first two years of the Honours Programme. Application is made through the Division Head by April 1st.

³Electives must be at the 2000 level or above.

Classes Offered - BSc (Kinesiology) Programme

ANAT 1020.03: Basic Human Anatomy. See class description in Anatomy section of this calendar.

PHYL 1010.06: Human Physiology. See class description in Physiology and Biophysics section of this calendar.

PHYL 2030.06: Human Physiology. See class description in Physiology and Biophysics section of this calendar.

KINE 1104.03: Introduction to Kinesiology. The objective of this class is to introduce students to Kinesiology as a discipline and for them to learn about the sub-disciplines and the content areas that contribute to the general body of knowledge in Kinesiology. In addition to understanding what these sub-disciplines are, students will gain an understanding of the interrelationships between these sub-disciplines and the types of careers that students can enter. Students will be exposed to discipline content as well as the methods of measurement and evaluation and the technology involved in each of the disciplines. Problem Based Learning (PBL) will be used as the class instruction method.

Instructor: G. Elder
Restriction: Restricted to Recreation, Physical and Health Education students. Others by special permission with priority to Health Professions students.

KINE 1230.03: Human Growth & Development. A study of factors influencing human growth and development from birth to maturity, as revealed by observational and experimental studies.

Instructor: N. Kemp
Format: Lecture, 3 hours
Restriction: Restricted to Recreation, Physical and Health Education students. Others by special permission with priority to Health Professions students.

KINE 2310.03: Physiology of Exercise. This is an introductory class for students with a basic knowledge of anatomy and physiology. It concentrates on the respiratory, cardiovascular and neuromuscular systems in terms of their involvement during exercise, their adaptation to different types of training and how they limit performance during exercise in different environmental conditions.

Instructor: Staff
Format: Lecture/Lab, 3 hours
Prerequisites: ANAT 1020.03 and PHYL 1010.06 or PHYL 2030.06
Restriction: Restricted to Recreation, Physical and Health Education students. Others by special permission with priority to Health Professions students.

KINE 2320.03: Applied Anatomy and Kinesiology. Emphasis is on the anatomical and kinesiological foundations of human movement. Neuro-anatomical and musculo-skeletal structures are explored in order to establish the understandings necessary for accurate analysis of human activity.

Instructor: L. Holt
Format: Lecture/Lab, 3 hours
Prerequisites: ANAT 1020.03 and PHYL 1010.06 or PHYL 2030.06

384 Recreation, Physical & Health Education

Restriction: Restricted to Recreation, Physical and Health Education students. Others by special permission with priority to Health Professions students.

KINE 2330.03: Motor Control & Learning. This class deals with efficiency in completing movements to achieve a desired goal. It involves systematic changes in perception of the environment, decisions about what movements to make, as well as changes in how these movements are carried out. This class covers what is known about these processes as well as how this information can be applied.

Instructor: J. McCabe
Format: Lecture/Lab, 3 hours
Restriction: Restricted to Recreation, Physical and Health Education students. Others by special permission with priority to Health Professions students.

KINE 2465.03: Biomechanical Analysis. The purpose of this class is to introduce students to the area of biomechanics in human motion analysis. Students will be exposed to the concepts of kinematic and kinetic analysis of motion, as well as muscle forces and moments of force as applied to the human system. Examples used in class will be taken from the areas of skill performance, rehabilitation and ergonomics. In addition to providing students with a basis for applied applications, the class will also provide a solid base for those students wishing to pursue further study in the field of biomechanics.

Instructor: Staff
Format: 3 hr lecture/2 hr lab
Prerequisite: First year Physics is highly recommended.

Restriction: Restricted to Recreation, Physical and Health Education students. Others by special permission with priority to Health Professions students.

KINE 3476.03: Principles of Ergonomics. This class applies health and human performance concepts in kinesiology to the workplace. The class content includes: identifying characteristics of work environments and the effect on performance and health, the design of effective workplaces and the use of training and educational programmes to increase productivity and to reduce injuries.

Instructor: J. McCabe
Format: Lecture/Fieldwork
Prerequisite: KINE 2330.03

KINE 4414.03: Physical Fitness Assessment & Programme Design. Evaluation of various methods of physical fitness assessment, designing fitness programmes for diverse populations and identifying motivational techniques with emphasis on the areas of cardiovascular fitness, weight reduction, pre-

and post-natal programmes and the elderly. In addition, laboratory work teaches the techniques of administering various fitness tests.

Instructor: P. Campagna
Format: Lecture/Lab, 3 hours
Prerequisite: KINE 2310.03

KINE 4416.03: Neuromuscular Principles of Movement. The objectives of this class are to develop an understanding of the neuromuscular system in terms of its structure at both the macro and micro levels, the central and peripheral mechanisms involved in regulating and controlling the recruitment of muscles, and the properties of the individual motor units. There will be a focus on how these mechanisms adapt with training and disuse, the factors which determine maximal strength and power, and the causes of muscle fatigue. Finally, the changes that occur in muscle in response to injury and disease will be examined.

Instructor: G. Elder
Format: Lecture, 3 hours
Prerequisite: KINE 2310.03

KINE 4419.03: Physiological Bases of Sport. Human physiological adaptation to varying levels of exercise will be examined and the conditioning elements key to various sports analysed. The biological prerequisites for the attainment of the highest levels of athletic performance will be reviewed in concert with the appropriate application of scientific principles of training. Attention will be given to effective training design. The relationship of the body's oxygen transport and energy systems to performance enhancement will form a major emphasis, together with consideration of the role of ergogenic, environmental, age, gender and other factors affecting physical performance.

Instructor: N. Kemp
Format: Active learning
Prerequisite: KINE 2310.03 or equivalent

KINE 4424.06: Advanced Fitness Assessment, Exercise Prescription and Lifestyle Counselling. The objective of this class is to provide the student with advanced techniques to assess physical fitness, design physical activity/exercise programmes and lifestyle counselling skills. In addition, this class will satisfy the student to write the Canadian Society for Exercise Physiology's national Certified Fitness Appraiser examination.

Instructor: P. Campagna
Format: Lecture/Lab
Prerequisite: PHY 1010.06 or 2030.06; ANAT 1020.03; KINE 2310.03, 4414.03, 4419.03; Standard Test of Fitness Appraiser (STFA), CPR.

Recommended: In addition to the prerequisites there are a number of classes that are highly recommended: KINE 1230.03, PHY 4410.03, HBED 2250.03 and LEIS 3362.03.

KINE 4440.03: Seminar - Research Interpretation and Undergraduate Paper. For those who plan to pursue graduate studies, the application of the processes of science to the field are discussed in a series of lectures to introduce the student to the language and methods of science in general. The assignments lead to the proposing and conducting of a small investigation appropriate to student interests which is written in the format of a journal appropriate to the question addressed. Selected studies are presented to the class.

Instructor: Staff
Format: Lecture/Discussion/Lab, 3 hours

KINE 4466.03: Advanced Biomechanics. This class takes a quantitative approach to understanding human movement, muscle function and the structure of biological tissue from a mechanical perspective. Concepts presented in the class will be illustrated with examples taken from the areas of sport, exercise, sports medicine and rehabilitation. Students will be introduced to several techniques used in biomechanics research.

Instructor: C. Putnam
Format: Lecture/Lab, 3 hours
Prerequisite: KIN 2465.03

KINE 4476.03: Skilled Performance. This class is concerned with some of the many factors related to skilled motor performance; the efficient and consistent attainment of predetermined movement goals. To a great extent this class will focus on characterizing expertise at various levels of skilfulness rather than the acquisition of motor skill. In addition, some of the concepts related to expertise and skilfulness will only minimally involve movement activities.

Instructor: J. McCabe
Format: Lecture, 3 hours
Prerequisite: KIN 2330.03

KINE 48 .03 A or B: Directed Studies in Kinesiology.** Senior undergraduate students develop an area of specialization under the direction of a faculty member.

Instructor: Staff
Format: experimental research (laboratory experiment) or other research study, 3 hrs

Prerequisites: 1. third- or fourth-year status; 2. a GPA of 3.00 plus a "B" grade or better in an upper level class in the area in which the research will be conducted (e.g. biomechanics, exercise physiology, motor behaviour); 3. Research Methods; 4. Statistics; consent of instructor and Division Head. Intention to register for a Directed Study should be confirmed with the divisional secretary by April 1st of the preceding academic year.

Format II: literature research, 3 credit hours
Prerequisites: the same as those for experimental research directed studies described under Format I above except that classes in research methods and statistics are not required.

KINE 49 .06 R: Directed Studies in Kinesiology.** Senior undergraduate students develop an area of specialization under the direction of a faculty member.

Instructor: Staff
Format I: experimental research (laboratory experiment) or other research study, 6 hrs

Prerequisites: 1. third- or fourth-year status; 2. a GPA of 3.00 plus a "B" grade or better in an upper level class in the area in which the research will be conducted (e.g. biomechanics, exercise physiology, motor behaviour); 3. Research Methods; 4. Statistics; consent of instructor and Division Head. Intention to register for a Directed Study should be confirmed with the divisional secretary by April 1st of the preceding academic year.

Format: literature research, 6 credit hours
Prerequisites: the same as those for experimental research directed studies described under Format I above except that classes in research methods and statistics are not required.

NOTE: Students may not take more than a total of 6 credit hours of experimental research or literature research directed studies.

KINE 8880.00: Honours Research & Thesis. The Honours Programme requires the completion of an extra credit beyond the required 120 credit hours for the BSc (Kinesiology) degree. This credit will be obtained through the presentation of a research paper. The method by which this additional credit is obtained is referred to as the Honours Qualifying Examination. A pass/fail grading system will be used.

Students who wish to meet this requirement must meet the same prerequisites as those for Format I, experimental research, for Directed Studies (KINE 48** .03 above).

Five Year Combined Bachelor of Physical Education/ Bachelor of Education Degree

The combined BPE/BEEd programme prepares students for a teaching career. The basis of the BPE/BEEd degree therefore consists of both theory classes and pedagogical classes.

386 Recreation, Physical & Health Education

Studies in the general education area occupy about one-third of the total curriculum and have three overlapping purposes. The first is to contribute to a liberal education. The second is to provide background studies of specific importance to Physical Education. The third is to provide for deeper study in another academic discipline. This choice will depend upon the student's interest, although, if a general school teaching qualification is desired, the student must choose a subject that is taught in the school curriculum. Students must complete at least 4 full credits in the second subject, 3 of which must be beyond the 1000 level.

The theory classes are intended to provide a foundation for understanding the administrative, historical, measurable, philosophical and scientific aspects of Physical Education.

Programme of Study

The programme is jointly administered by the School of Recreation, Physical and Health Education and the School of Education at Dalhousie University. It is considered an integrated programme. Students are therefore expected to meet the BEd requirements before they are accepted into the joint BPE/BEd programme. For specific admission details refer to the "Admissions Information" section of this calendar.

To continue in the BEd programme, a 'B' average in the second subject area and a 'B' average overall in Arts and Science is required each year. Graduates of the BPE/BEd programme will receive a teaching license from the Nova Scotia Department of Education. Graduates without the BEd will not be eligible to receive a teaching license.

¹Electives may be chosen from the Faculties of Arts, Science, Health Professions (excluding Physical Education, Kinesiology, Leisure Studies and Health Education classes), Management Studies and Medicine.

²Electives may be chosen from the Faculties of Arts, Science, Health Professions, Management and Medicine.

³Includes 4 weeks of teaching internship in the Halifax Metro area at the end of the Spring term, following examinations.

⁴PE 4496 students are assigned full-time to schools in the Metro area as of September 1 or whenever school begins, until approximately December 5. No other classes may be scheduled during this period.

⁵Includes 4 weeks of student teaching in chosen second subject area in the Halifax Metro area at the end of the Spring term, following examinations.

⁶Includes 3 weeks of full-time field experience, beginning approximately at the end of October. The field experiences in PHSE 4496.12 and EDUC 4902.03 will be at the same school.

Field Experiences

Field experiences in the primary subject area of Physical Education and the second subject area in Education are indicated as part of the courses listed above. These experiences will include observation and involvement in school or community programmes. Students who intend to gain teacher certification must complete the practice teaching experience successfully.

Students must provide their own transportation for their field work.

Activity Programme

Activity classes are held on Tuesday and Thursday mornings all year in Years 1 through 3. These are lab sections of PHSE 1195.03, 2295.03, 3398.06 and 3402.06. In addition, specialization classes are completed in Year 4 in Dance and a team sport.

Special Considerations

If a student is interested in special programmes such as remedial physical education or outdoor education, every effort will be made to provide a field experience that would include work in these areas.

Classes of Instruction - BPE/BEED Programme

ANAT 1020.03: Basic Human Anatomy. For class description see Anatomy section of this calendar.

PHYL 1010.06: Human Physiology. This class is taught by the Department of Physiology and Biophysics and is an introductory physiology class for health professions students. The functions of body organs and body systems and the integration of functions in the whole organism are studied.

Instructor: Staff
Format: Lecture, 2 hours, lab/tutorial, 1-3 hours

PHYL 2030.06: Human Physiology. The function of organs and body systems is presented through lectures and laboratory work. Special emphasis is on the integration of function in the whole organism. Note: This class is designed for students who have completed at least one year of university study.

Instructor: Staff
Format: Lecture/Lab/Tutorial, 6 hours

PHSE 1195.03: Introduction to Teaching. Examines the profession of teaching with emphasis on the area of Physical Education. Purposes of education, teacher roles and a brief

388 Recreation, Physical & Health Education

Introduction to the teaching process are included. Includes one week of observation and teaching at the end of the spring term.

Instructor: L. Verabloff
Format: Lecture, 3 hours
Restriction: Limited to BPE/BED students only

PHSE 2220.03: Measurement & Evaluation in Physical Education. An introduction to the fundamentals involved in measurement and evaluation, including writing objectives, designing and administering tests, organizing and analyzing test results. Tests used to measure physical fitness, specific motor skills and health knowledge are investigated.

Instructor: staff
Format: Lecture/lab, 3 hours

PHSE 2295.03: Instructional Techniques in Physical Education. A continuation of work begun in PHSE 1195.03 with emphasis on instructional techniques. Class management and planning will be areas of major concentration. The class includes theoretical content as well as appropriate field work related to teaching.

Instructor: A. Scott
Format: Lecture/field work, 3 hours
Prerequisite: PHSE 1195.03
Restriction: Limited to BPE/BED students only

PHSE 2384.03: Physical Activity for Disabled Persons. The etiology and effects of the more prevalent disabling conditions form the bases of strategies for teaching, coaching and rehabilitating those affected. Emphasis is placed on the physical components of disability and the adaptation of the environment and equipment to facilitate learning of ADL skills and sport. A practicum is required.

Instructor: L. Hoyt
Format: Lecture, 3 hours
Cross-listing: EDUC 4684.03

PHSE 3398.06: Practical Studies Secondary. This class is designed for students who wish to specialize in secondary physical education. Students completing the class will have practised basic skills for teaching team, individual, dual and fitness activities. Analysis of teacher behaviour and practice in using a variety of teaching styles receive emphasis. Visits to schools are included. Four weeks of full-time student teaching are included at the end of the spring term.

Instructor: L. Verabloff
Format: Lecture/lab/field work, 6 hours
Prerequisite: PHSE 2295.03
Restriction: Limited to BPE/BED students only

PHSE 3402.06: Elementary Physical Education. This class is designed for students who wish to specialize in elementary physical education. Special projects with young children are developed by the class. Class includes field trips to innovative school, preschool and community

organization programmes. Four weeks of full-time student teaching are included at the end of the spring term

Instructor: L. MacGregor
Format: Lecture/lab, 6 hours
Prerequisite: PHSE 2295.03
Restriction: Limited to BPE/BED students only

PHSE 4250.03: Organization & Administration of Physical Education & Recreation. This class focuses on the administrative and planning processes involved in the development and implementation of recreation and leisure programmes in both community and public school settings. Students will have the opportunity to apply and test programming principles through practical experiences in planning, organizing, and administering special events.

Instructor: C. Savoy
Format: Lecture, 3 hours

PHSE 4395.03: Curriculum Planning and Development. An introduction to basic curriculum theory and programme development principles. Developing a curriculum philosophy, objectives, course and unit plan and programme evaluation are covered. Appropriate field work is included.

Instructor: A. Yarr
Format: Lecture/field work, 3 hours
Prerequisite: PHSE 3398.06 or PHSE 3402.06 or permission of instructor

PHSE 4410.03: Care and Prevention of Athletic Injuries. The class offers a fundamental understanding of the maintenance of health (personal hygiene, nutrition, prevention of common ailments and injuries). More specifically it will deal with first aid, sports injuries, their prevention and treatment. Students will acquire practical skills in taping techniques and cardiopulmonary resuscitation.

Instructor: Staff
Format: Lecture/lab, 3 hours

PHSE 4475.03: Psychology of Sport and Physical Activity. This class offers an awareness and understanding of the phenomena involved in mental preparation in sport and physical activity. It will systematically analyze, investigate and assess psychological skills, attributes and preparation in these areas and their applications in other environments. Emphasis will also be placed upon personal experience and practical application.

Instructor: C. Savoy
Format: Lecture, 3 hours
Prerequisite: KINE 2330.03 or permission of instructor

PHSE 4496.12: Teaching Practicum in Physical Education. During the fall term students are placed in schools for full-time student teaching. Students are required to obtain experience in applying basic teaching skills as well as becoming familiar with how schools are

organized and administered. Being able to analyze teacher behaviour to provide assistance to fellow students is also expected. CPR/First Aid certification is a required part of this class. Students will also be required to attend a Leadership Outdoor Camp in the early fall. In addition, as future professionals, students will be expected to attend the annual professional conference for the Teachers Association for Physical Education. Seminars will be scheduled on a weekly basis to provide opportunities to share student teaching experiences and to discuss topics of relevant interest.

Instructor: L. MacGregor
Format: Seminar/field work, 12 hours
Prerequisite: PHSE 3398.06 or PHSE 3402.06
Restriction: Limited to BPE/BED students only

PHSE 4497.03: Philosophy for Physical Educators. An introduction to "thinking with concepts" provides a foundation for choice analysis in a seminar presentation. An introduction to existentialism is presented, with emphasis on choice, freedom and responsibility.

Instructor: A. Yarr
Format: Lecture, 3 hours

HLTH 4900.03A/4910.03B: An Interdisciplinary Approach to Gerontology. For class description see Health Professions, Interdisciplinary section of this calendar.

PHSE 4803A or B or R: Directed Studies in Physical Education.** Senior undergraduate students develop an area of specialization under the direction of a faculty member.

Instructors: Staff
Format: 3 hours
Prerequisites: third- or fourth-year status; a GPA of at least 3.00 a "B" grade in an earlier class in the area in which the project will be conducted (where appropriate); consent of instructor and Division Head. Intention to register for a Directed Study should be confirmed with the divisional secretary by April 1st of the preceding academic year. Students may not take more than a total of 6 credit hours of directed studies.

PHSE 4906R: Directed Studies in Physical Education.** Senior undergraduate students develop an area of specialization under the direction of a faculty member.

Instructors: Staff
Format: 6 hours
Prerequisites: third- or fourth-year status; a GPA of at least 3.00 a "B" grade in an earlier class in the area in which the project will be conducted (where appropriate); consent of instructor and Division Head. Intention to

register for a Directed Study should be confirmed with the divisional secretary by April 1st of the preceding academic year. Students may not take more than a total of 6 credit hours of directed studies.

Bachelor of Recreation

Program Description The focus of the Bachelor of Recreation degree is recreation administration. The objectives of the program are as follows:

1. to provide the student with a broad educational exposure to various social science and humanities disciplines (e.g. Psychology, Sociology, Economics, Political Science, Anthropology, History);
2. to familiarize students with current social science-based research in leisure studies, including an understanding of research methods and statistics;
3. to provide the student with the necessary skills and knowledge for entry into the roles of leadership, advocacy, consultancy and education in recreation and leisure services;
4. to provide the student with the opportunity to design a specific interest area within recreation administration. These specializations will be based on student interest, market demand and availability of appropriate classes. Examples include: therapeutic recreation, experiential education, arts administration, sport administration, commercial recreation, tourism, municipal administration and leisure counselling. The program of studies is developed in consultation with the student's advisor.
5. to provide the necessary background to enable students to pursue graduate work in leisure studies, management studies or the social sciences and humanities;

Bachelor of Recreation Programme of Study

The minimum requirement for entry into the Bachelor of Recreation programme is successful completion of one year university with a GPA of 2.30 or higher. First year students interested in the Bachelor of Recreation programmes should consider the following classes:

First Year	Credit Hours
PSYO 1000.06, 1010.06 or 1050.06 or equivalent	6
SOSA 1000.06 or 1200.06 or equivalent	6
POLI 1100.06 or ECON 1100.06 or equivalent	6
Electives	12
Total	30

NOTE: One of the above classes must be a writing class.

390 Recreation, Physical & Health Education

Students need to complete the above classes prior to graduation. Students may be accepted to the Bachelor of Recreation programme after successfully completing one year of university with a grade point average of 2.30 without some of the above pre-requisites. The student should recognize that this would require a longer period to complete the requirements for the Bachelor of Recreation degree.

Second Year	Credit Hours
LEIS 2110.03	3
LEIS 2126.03*	3
LEIS 2127.03	3
LEIS 2128.03	3
LEIS 2326.03	3

LEIS 4482.03**	
LEIS 4492.03*	
LEIS 4494.03	
Electives	6
Total	30

NOTE: A minimum of 24 credit hours of electives must be taken outside of the school. A minimum of 12 credit hours of electives must be taken within the designated area of concentration.

*Offered alternate years beginning 1991-92

**Offered alternate years beginning 1992-93

Classes Offered - BRec Program

A. Recreation Theory Classes

LEIS 2110.03: History of Leisure. This class aims to make students familiar with the historical roots of the leisure pursuits of humankind. Sport, dance and recreation in ancient and primitive societies are explained and critically analyzed as are activities in early civilizations.

Instructor: A. Young
Format: Lecture, 3 hours

LEIS 2126.03A: Introduction to Leisure Studies. An understanding of the place and potential of leisure in Canadian life is essential if we are to move beyond the conviction that only labour is to be valued. This foundation class introduces leisure forms and concepts including play, sport, culture and social leisure. It provides an overview of leisure service delivery and issues related to access to meaningful leisure opportunities. Opportunities for increasing writing skills, library utilization, verbal expression and computer skills are provided. A practicum is included.

Instructor: J. Singleton
Format: Lecture/required lab experience, 3 hours

Restriction: Restricted to Bachelor of Recreation Students

LEIS 2127.03: Psycho-Social Theory and Leisure. This class will provide an introductory analysis of leisure in modern society from sociological and social psychological perspectives. The role of leisure in the everyday life of individuals will be discussed in terms of social relationships, social interaction and theories of attitude and motivation, etc. In addition, since the role and function of leisure is affected by political, economic and cultural systems, a main-level perspective on leisure will also be provided by focusing on topics such as the influence of modern technology, the commercialization of leisure, the influence of social institutions and of the mass media.

Instructor: C. Hood
Format: Lecture, 3 hours
Prerequisite: SOSA 1000.06 or 1200.06; and PSYO 1000.06

LEIS 2128.03: Socio-Cultural Bases of Physical Activity. The class will provide an introduction to the sociological and cultural analysis of sport, exercise, and physical activity. The class will provide an overview of diverse topics as well as detailed analysis of selected topics. Topics will be examined at theoretical, empirical and issue-related levels and will include sociological theories, competition in sport, deviance in sport, violent behavior, gender relations, interpersonal relations, and sport and politics.

Instructor: C. Savoy
Format: Lecture, 3 hours

Recreation, Physical & Health Education 391

LEIS 2326.03: Leisure and the Arts. This class will introduce the student to the fine and performing arts and their relationship to leisure. The changing role of art in society will be discussed, as will such concepts as: the nature of art; the creator, art object and audience connection; and artistic activities as work or leisure.

Instructor: P. Richards
Format: Lecture, 3 hours

LEIS 2361.03B: Recreation Administration I - Introduction to Recreation Administration & Program Planning. An introductory class in administrative processes, management theories and the planning and designing of recreational programs and leisure experiences.

Instructor: Staff
Format: Lecture, 3 hours

LEIS 2382.03: Adventure-Based Experiential Education. Outdoor education in one form or another is included as an integral part of most recreational programs. However, there are values of outdoor adventure activities which go beyond the usual rationale for recreation programs. These include personal development, citizenship training, leadership development and community service. This class will explore some of the educational philosophies which rely on an experiential base. Included will be an opportunity for hands-on experiences in developing, planning and evaluating an adventure-based program which has potential beyond the traditional recreation outcomes. A practicum will be included.

Instructor: A. Richards
Format: Lecture, 3 hours
Cross-listing: EDUC 4642.03

LEIS 2384.03: Leisure and Special Populations. An introduction of current philosophy, issues and practices relating to leisure opportunities for persons who, due to physical, mental and social conditions, have difficulty gaining access to community services. An analysis of leisure behaviours, barriers and needs will be provided through the classroom and a practicum.

Instructor: R. Lyons
Format: Lecture, 3 hours

LEIS 3157.03: History of Dance. This class traces the development of dance in Western Civilization. The changing role of dance in society will be discussed, as will its relationship to the other arts. Sample dances from the different periods of history will be taught to illustrate the changing styles and patterns of dance.

Instructor: P. Richards
Format: Lecture, 3 hours
Cross-listing: MUSC 3361.03

LEIS 3296.03: Leadership and Small Group Dynamics. This class will focus primarily on the function of leadership and the process of small group dynamics as applied to the recreation professional. Emphasis will be placed on the

achievement of individual and group goals in recreation settings. In addition, effective leadership of individuals and groups within a community, through direct experience and observation, will be emphasized.

Instructor: Staff
Format: Lecture, 3 hours
Prerequisite: LEIS 2126.03 or consent of instructor

LEIS 3360.03: Analysis of Leisure Delivery. The organization and delivery of leisure in Nova Scotia and Canada are examined with an emphasis on identifying consumer needs. The effectiveness of the leisure service agencies, i.e., government, public non-profit and commercial, will be examined, using a case study approach. The impact of the macroenvironment, political, social, physical and economic, will also be analysed.

Instructor: Staff
Format: Lecture, 3 hours
Prerequisite: LEIS 3361.03 or consent of the instructor

LEIS 3361.03: Recreation Administration II - Facility & Personnel Management. This class is designed to provide insight into the organizational structure and governance in leisure service agencies, address the process and functions of personnel management, and review trends in facilities design, development and maintenance.

Instructor: N. Ipson
Format: Lecture, 3 hours
Prerequisite: LEIS 2361.03

LEIS 3362.03: Recreation Administration III - Fiscal Management & Marketing. This class is designed as a fundamental analysis of the budget process and to provide insight into innovative fiscal management, marketing and privatization.

Instructor: N. Ipson
Format: Lecture, 3 hours
Prerequisite: LEIS 3361.03

LEIS 3420.03: Introduction to Research Methods. The purpose of this class is to give students a basic understanding of the logic and goals of social science research. The class will focus on factors that need to be taken into account in designing or evaluating research studies. Both qualitative and quantitative methods will be discussed with an emphasis on interview and survey research and on evaluation research.

Instructor: Staff
Format: Lecture, 3 hours

LEIS 3480.03: Introduction to Statistics. This class will provide an introduction to basic statistical concepts through the use of practical examples. Both descriptive and inferential statistics will be reviewed, with emphasis on the analysis and interpretation.

Instructor: A. Young
Format: Lecture, 3 hours

392 Recreation, Physical & Health Education

LEIS 3491.03: Sociology of Leisure. This will be an advanced undergraduate class on societal influences on leisure. Building on some of the material covered in Psycho-Social Theory and Leisure, the class will discuss various concepts and approaches which provide a framework for understanding the changing role of leisure in Canadian society. Students will be exposed to some of the current theoretical and methodological debates in the field of leisure research.

Instructor: Staff
Format: Lecture, 3 hours offered alternate years beginning 1990-91
Prerequisite: LEIS 2127.03 or at least two classes from the Sociology and Social Anthropology Department
Cross-listing: SOSA 3110.03/5110.03

LEIS 4361.03: Sport Administration. The administration of sport at the national, provincial, community and club level will be examined. Critical to this overview will be an in-depth consideration of the administration of amateur sport in Nova Scotia and the role of government, sport governing bodies and educational institutions. Major issues confronting amateur sport at the national and international levels, such as commercialization, marketing and sponsorship in sport, will also be examined.

Instructor: Staff
Format: Lecture, 3 hours, offered alternate years beginning 1991-92
Prerequisite: LEIS 2128.03 or consent of the instructor

LEIS 4362.03: Park Management & Natural Resource Development. Basic issues in park management and natural resource development are examined with a focus on planning, design, development and maintenance of the outdoor environment for leisure activity.

Instructor: Staff
Format: Lecture, 3 hours
Prerequisite: LEIS 2126.03 and LEIS 2361.03 or consent of the instructor

LEIS 4363.03: Arts Administration. This class will focus on current issues in the arts, arts boards, financial management in the arts, negotiating and writing contracts, and marketing the arts. Issues involved in presenting performances will also be studied.

Instructor: P. Richards
Format: Lecture, 3 hours, offered alternate years beginning 1992-93
Prerequisite: LEIS 2326.03, 3361.03 and 3362.03 or consent of the instructor

LEIS 4426.03: Leisure Enhancement: III and Disabled Persons. This class provides students with an understanding of disabling conditions and their leisure implications. It provides

instruction in leisure facilitation techniques such as assessment procedures, task analysis, activity analysis and other program enhancement strategies through classroom lectures and a practicum.

Instructor: C. Hood
Format: Lecture, 3 hours offered alternate years beginning 1992-93
Prerequisite: LEIS 2384.03 or consent of the instructor

LEIS 4482.03: An Experiential Approach to Youth Development. Youth as a sector of society and as a stage in human development is of great significance in the study of leisure. Particularly relevant is the issue of unemployment and underemployment which has created a number of problems such as low self-worth, alcohol abuse, teenage suicide, etc. There are programs being developed to address these problems, many of which are experientially based, e.g., Outward Bound, study service, service learning and national service. This class will study the phenomenon of youth development in the light of experiential educational approaches. During the class there will be an expectation that the students will meet and interact with a variety of youth. Practicum included.

Instructor: A. Richards
Format: Lecture, 3 hours offered alternate years beginning 1992-93
Prerequisite: LEIS 2382.03 or consent of the instructor

LEIS 4492.03: Leisure Counselling & Education. Simply defined, leisure counselling is a helping process which facilitates interpretive, affective and/or behavioral changes in others toward the attainment of their leisure well being. This class will provide students with a basic introduction to leisure counselling and education. It will include an historical perspective, definitions, philosophies, models, issues and an exposure to the education and counselling techniques.

Instructor: R. Lyons
Format: Lecture, 3 hours
Prerequisite: LEIS 1126.06 and LEIS 2127.03 or consent of the instructor

LEIS 4494.03: Canadian Sport History. This class analyzes the historical antecedents of sport in Canadian life from a Nova Scotian perspective. Sports such as football, basketball and track and field are discussed, as well as sport heroes and issues including the historical role of women and minority groups in sport.

Instructor: A. Young
Format: Lecture, 3 hours
Prerequisite: LEIS 2110.03 or consent of the instructor

LEIS 4495.03: Leisure Issues Seminar. This senior level class covers a broad range of issues facing leisure studies and the recreation profession. Students have the opportunity of gaining in-depth knowledge through dialogue about and investigation of selected issues.

Instructor: Staff
Format: Seminar, 3 hours
Prerequisite: LEIS 3296.03, 3360.03, 3420.03 and 3480.03, or the consent of the instructor
Restriction: Restricted to Bachelor of Recreation students

LEIS 4497.12: Internship in Recreation Administration. This class is an extended to professional development placement during the Spring term and usually occurs during the final year of study. It requires a special investigative project in conjunction with the placement agency.

Instructor: Staff
Format: Placement, 12 weeks Spring term
Restriction: Restricted BRec students in their final year.

HLTH 4900.03A/4910.03B: An Interdisciplinary Approach to Gerontology. See class description in Health Professions, Interdisciplinary section of this calendar.

LEIS 49 .03A or B or R: Directed Studies in Leisure Studies.** Senior undergraduate students develop an area of specialization under the direction of a faculty member.

Instructors: Staff
Format: Library survey or other research study, 3 hours
Prerequisites: Fourth year status, a GPA of at least 3.00, a "B" grade in an earlier class in the area in which the project will be conducted (where applicable), consent of advisor, consent of faculty. Intention to register for a Directed Study should be confirmed with the divisional secretary by April 1st of the preceding academic year. Students may not take more than a total of 6 credit hours of directed studies.

LEIS 49 .06R: Directed Studies in Leisure Studies.** Senior undergraduate students develop an area of specialization under the direction of a faculty member.

Instructors: Staff
Format: Library survey or other research study, 6 hours
Prerequisites: Fourth year status, a GPA of at least 3.00, a "B" grade in an earlier class in the area in which the project will be conducted (where applicable), consent of advisor, consent of faculty. Intention to register for a Directed Study should be confirmed with the divisional secretary by April 1st of the preceding academic year. Students may not take more than a total of 6 credit hours of directed studies.

B. Required Arts and Science Classes

SOSA 1000.06, 1100.06 or 1200.06: An Introductory Sociology or Social Anthropology Class. For class description please refer to the Sociology and Social Anthropology Department entry in this calendar.

PSYO 1000.06: Introduction to Psychology. For class description please refer to the Psychology Department entry in this calendar.

POLI 1100.06: Introduction to Political Science. For class description please refer to the Political Science Department entry in this calendar.

OR

ECON 1100.06: Introduction to Economics. For class description please refer to the Economics Department entry in this calendar.

Electives

Classes may be taken as electives across divisions with permission from the student's adviser. Classes are described under the program in which they are designated, i.e., Health Education (HEED), Kinesiology (KINE), Leisure Studies (LEIS) and Physical Education (PHSE).

Introduction

The Russian Studies Department offers classes in Russian language, literature, culture and history. Since Russia plays a crucial role in today's world and makes important contributions in a wide variety of scientific, technical, and humanistic fields, knowledge of its linguistic and cultural backgrounds can prove advantageous in many areas of study. Recent radical shifts in the country have significantly widened opportunities for using Russian in business, law, science, and government.

In the language classes emphasis is placed on gaining a thorough grasp of Russian grammar combined with practical competence in speaking, reading, and writing. Sections are small and intensive. Classroom work is supplemented by computer-assisted language learning programmes and audio-visual materials at the Learning Laboratory. Study of Russian literature begins with a general survey intended for first or second year students, followed by monograph, period, and genre classes. Literature classes are generally offered in both English and Russian in order to give as many students as possible from other disciplines the opportunity to become acquainted with this important part of Russian life.

Classes in Russian culture and civilization are intended to introduce students to art, architecture, music, religion, and other areas of Russian life which are necessary to understand the language and literature. Films, guest speakers, and evenings of Russian poetry are scheduled periodically. The Dalhousie Association of Russian Students organizes a variety of events throughout the year.

Major or honours students may, with the approval of the Russian Studies Department,

take up to one semester (5 full credits) of work at a University in Russia and receive credit at Dalhousie. Qualified students are urged to participate in the Intensive Russian Programme, founded by Dalhousie, which enables Canadian students to study for a semester at St. Petersburg State University, or Moscow Pedagogical University.

Degree Programmes

Classes in the Russian Studies Department are open to students either (1) as electives in any degree programme; (2) as constituents of a major or honours degree in Russian; or (3) with classes in another discipline forming part of a combined honours degree.

Honours in Russian Studies

Departmental requirements:

Classes required in Honours:

- 1000 level: RUSS 1000.06
- 2000 level: RUSS 2002.03, 2003.03, 2051.03 and 2052.03, plus 5 other credits at or above the 2000 level and not including those listed below.
- 3000 level: Two credits at 3000 level or higher, one being RUSS 3002.03 and 3003.03
- 4000 level: RUSS 4000.06

Other required classes:

½ class in Russian History (normally HIST 3090.03).

Honours Thesis.

Advanced Major in Russian Studies

Departmental requirements:

Classes required in Advanced Major:

- 1000 level: RUSS 1000.06
- 2000 level: Three credits at or above the 2000 level including RUSS 2002.03, 2003.03, 2051.03 and 2052.03
- 3000 level: Three credits at or above the 3000 level, one being RUSS 3002.03 and 3003.03
- 4000 level: Russian 4000.06

Other required classes:

½ class in Russian History (normally HIST 3090.03).

Major in Russian Studies

Departmental Requirements

Classes required in Major:

- 1000 level: RUSS 1000.06
- 2000 level: RUSS 2002.03, 2003.03, 2051.03, and 2052.03
- 3000 level: Two credits at or above the 3000 level, one being RUSS 3002.03 and 3003.03

Classes Offered

Classes in Language

RUSS 1000.06R: Elementary Russian. For students who have little or no previous knowledge of the Russian language. Equal emphasis is placed on developing oral and reading skills with a sound grammatical basis.

Format: Instruction/drill 4 hours

Prerequisite: None

RUSS 2002.03A: Intermediate Russian I. A continuation of RUSS 1000.06. Oral and reading skills and a further knowledge of grammar are developed through study and discussion of Russian texts.

Format: Instruction/drill 6 hours

Prerequisite: C+ in Russian 1000.06 or permission of instructor

RUSS 2003.03B: Intermediate Russian II. A continuation of RUSS 2002.03.

Format: Instruction/drill 6 hours

Prerequisite: RUSS 2002.03 or equivalent

Exclusion: RUSS 2000.06

RUSS 2029.03A: Conversation. Development of conversational skills and vocabulary building.

Format: Conversation practice

Prerequisite: RUSS 1000.06 and concurrent enrolment in RUSS 2002.03 or permission of instructor.

Exclusion: RUSS 2001.06

The following B term classes are offered in Russian only as part of the Department's Intensive Russian Programme.

RUSS 2010.06B/3010.06B: Grammar. (See listing under Intensive Russian Programme.)

RUSS 2031.03B/3031.03B: Conversation and Phonetics. (See listing under Intensive Russian Programme.)

RUSS 2032.03B/3032.03B: Translation. (See listing under Intensive Russian Programme.)

RUSS 2035.03B/3050.03B: Literature: Reading and Analysis. (See listing under Intensive Russian Programme.)

RUSS 3002.03A: Advanced Russian I. Conducted in Russian. Following a thorough review, this class concentrates on expanding all aspects of the student's knowledge of Russian grammar. Texts are read extensively and intensively. Discussion and compositions are based on the assigned readings.

Format: Lecture and discussion 5 hours

Prerequisite: RUSS 2000.06 or equivalent

Exclusion: RUSS 3000.06

RUSS 3003.03B: Advanced Russian II. A continuation of RUSS 3002.03.

Format: Lecture and discussion 5 hours

Prerequisite: RUSS 3002.03 or equivalent

Exclusion: RUSS 3000.06

RUSS 3029.03A: Conversation. Development of conversational skills and vocabulary building.

Format: Conversation practice

Prerequisite: Student must be enrolled in the 3rd year grammar class or must have permission of instructor.

Exclusion: RUSS 3010.06

RUSS 4000.06R: The Structure of Contemporary Standard Russian. Required for honours candidates. Conducted in Russian. Systematic study of the structure of Russian: analysis of special problems in phonology, morphology, syntax, and stylistics. Tailored to the individual needs of the student, with emphasis on practical applications of linguistic insights.

Format: Lecture and discussion 3 hours

Prerequisite: RUSS 3000.06 or permission of the instructor

Classes in Literature and Culture

Note: Classes marked * are not offered every year. Please consult the current timetable on registration to determine if these classes are offered.

***RUSS 1020.03A or B: Russian Culture and Civilization under the Tsars.** Conducted in English. The class traces developments in the Russian arts: painting, sculpture, theatre and music. Religious and secular ideas are also discussed.

Format: Lecture and discussion 2 hours

RUSS 1070.03A or B: Modern Russian Culture and Civilization. Conducted in English. The cultural and political history of 20th century Russia.

Format: Lecture and discussion 2 hours

RUSS 2022.03A: Imperial Russia. Equivalent to the first half of HIST 2020.06. Chronologically it covers the imperial period of Russian history, from Peter the Great to the Revolution of 1917.

Format: Lecture and discussion

Exclusion: May not be taken by students who have completed HIST 2020.06, RUSS 2021.06

RUSS 2023.03B: Soviet Russia. Equivalent to the second half of HIST 2020.06. Chronologically covers the Soviet period of Russian history, from 1917 to Gorbachev.

Format: Lecture and discussion

Exclusion: May not be taken by students who have completed HIST 2020.06 or RUSS 2021.06

RUSS 2051.03A or B: Survey of Russian Literature. Conducted in English with section in Russian for majors. Required for majors and honours candidates. An overview of Russian literature from its beginnings through Tolstoy.

Format: Writing Requirement (when taken in combination with RUSS 2052.03), lecture and discussion 3 hours

Exclusion: RUSS 2050.06

RUSS 2032.03A or B: Survey of Russian Literature. Conducted in English with section in Russian for majors. Required for majors and honours candidates. An overview of Russian literature from Chekhov to the present.

Format: Writing Requirement (when taken in combination with RUSS 2051.03), lecture and discussion 3 hours

Exclusion: RUSS 2050.06

***RUSS 2061.03A or B: Russian Modernism.** Conducted in English. A study of trends in literature and the arts at the turn of the century. Known as "The Silver Age", this is one of the most innovative and dynamic periods in Russian culture.

Format: Lecture and discussion 2 hours.

Exclusion: RUSS 2340.03

***RUSS 2062.03A or B: Literature of Revolution - The 1920s in Russian Literature.** Conducted in English. A study of experiment and submission during one of the most exciting, diverse, and frustrating periods in Russian letters. "Socialist realism" was not yet official doctrine; innovation in literature was tolerated. Writers openly pondered the role of the individual and culture in the new collective society. Close reading and discussion of texts by Pasternak, Babel, Zamyatin, Olesha, Pilnyak, Zoshchenko, and Bulgakov.

Format: Lecture and discussion 2 hours.

Exclusion: RUSS 3250.03

***RUSS 2070.03A or B: Russian Literature and Culture since Stalin's Death.** Conducted in English. The literary and cultural history of Russia after Stalin's death in 1953. Among the major issues considered are the significance of Stalin's death, the "Thaw" and de-Stalinization, *perestroika* and literature since *glasnost*. Writers read include Pasternak, Solzhenitsyn, N. Mandelstam, Rasputin, Trifonov.

Format: Lecture and discussion 2 hours

***RUSS 2191.03A or B: Survey of Russian Theatre.** Conducted in English with a section in Russian for majors. An overview of Russian writing for the theatre, with emphasis on the nineteenth and twentieth centuries. Plays examined include those of Pushkin, Griboedov, Gogol', Ostrovsky, Turgenev, Sukhovo-Kobylin, Chekhov, Gorkii, Andreev, Bulgakov, Shvarts and Alimatov.

Format: Lecture and discussion 2 hours

***RUSS 2270.03A or B: The Russian "Heroine".** Conducted in English. The strong spiritual and moral force which Russian women have exerted on their society is richly reflected in literature. The class focusses on the portrayal of several literary heroines and discusses their impact on both the literary imagination and society.

Format: Lecture and discussion 2 hours

***RUSS 2500.03A or B: Tolstoy.** Conducted in English. An introduction to the work of this

enigmatic spiritual giant of Russian literature. Reading includes *War and Peace*, *Anna Karenina*, and *Resurrection*.

Format: Lecture and discussion 3 hours

***RUSS 2600.03A or B: Russian Satire and Humour.** Conducted in English. Russian satirical and humorous literature written within the last two centuries. Russian satire and humour have made a great contribution to the world's treasures in this genre. Students read masterpieces by Gogol (*Dead Souls*) and Dostoevsky (*The Devils*). Lectures cover some of the immortal comedies of Russian literature and the early humorous stories of Chekhov. For the period after the 1917 Revolution stories by Soviet satirists, including Zoshchenko and Bulgakov, are discussed as well.

Format: Lecture and discussion 2 hours

***RUSS 2750.03A or B: Dostoevsky and the Russian Idea.** Conducted in English. Dostoevsky's novels are of the highest importance in understanding the fate of Russia and the thoughts of other great Russian authors and thinkers. *Crime and Punishment* and *The Brothers Karamazov* are taken as the basis for discussion. The works of I. Turgenev and Lev Tolstoy are discussed together with the ideas of such great Russian philosophers as V. Solovyev and N. Berdyaev.

Format: Lecture and discussion 2 hours

***RUSS 2760.03A or B: Dostoevsky and Western Literature.** Conducted in English. With all his love for Russia, Dostoevsky treasured the West and its literature. It is impossible to understand Dostoevsky and his main novels, including *The Idiot* and *The Devils*, without Hamlet by Shakespeare, *Don Quixote* by Cervantes, *Bauft* by Goethe, some plays by F. Schiller, etc. The class traces the influence of Western ideas on Dostoevsky and his influence on such Western thinkers as Nietzsche and Freud.

Format: Lecture and discussion 2 hours

RUSS 3090.03A: Soviet Society Today. Basic institutions of Russian society are considered in their historical context, with special attention to the role of official culture and literature, the workings of the economy, and social stratification.

Instructor: N.G.O. Pereira

Format: Seminar 2 hours

Prerequisite: Reading knowledge of Russian and some Russian history

Recommended: RUSS 1000.06, 2nd year Russian, part of the Fall Intensive Russian Programme

Cross-listing: HIST 3090.03

***RUSS 3102.03A or B: Pushkin and his Age.** Conducted in English with section in Russian for majors. A close study of the poetry and prose of Russia's greatest poet, and other writers of the "Golden Age of Russian Poetry." Works to be read will include the major narrative poems, Eugene Onegin, the "Little Tragedies," Boris

Godunov, The Belkin Tales, as well as the poetry of Baratynskii, Batiushkov, Del'vig, and Izzykov. No knowledge of Russian is required.

Format: Lecture and discussion

Exclusion: RUSS 2100.03

RUSS 3121.03A: 19th Century Russian Prose and Poetry. Conducted in Russian. Students read, translate, and critically interpret representative works of the nineteenth century. Original texts are supplied with vocabularies and grammatical notes.

Instructor: Staff

Format: Lecture and discussion, 3 hours

Prerequisite: 2 years of Russian

Exclusion: RUSS 3120.03

RUSS 3122.03A: 20th Century Russian Prose and Poetry. Conducted in Russian. Students read, translate, and critically interpret representative works of the twentieth century. Original texts are supplied with vocabularies and grammatical notes.

Instructor: Staff

Format: Lecture and discussion, 3 hours

Prerequisite: 2 years of Russian

Exclusion: RUSS 3120.03

***RUSS 3520.03A or B: Chekhov and Turgenev.** Conducted in English. Close analysis and discussion of the major works of Turgenev, sensitive portrayer of socio-political and psychological issues of the second half of the nineteenth century in Russia, and Chekhov, unequaled short-story writer and radical innovator in modern theatre.

Format: Lecture and discussion 3 hours

RUSS 3900.03A or B: Gogol and His Tradition. Author of "Overcoat," "Nose," "Taras Bulba, Dead Souls. Gogol has been proclaimed "a pathological liar and honest anatomist of the soul, jejune jokester and tragic poet, realist and fantast". An in-depth study of this major writer.

Format: Lecture and discussion 3 hours

***RUSS 4240.03A or B: Theories of Literature.** Conducted in English. This class surveys Russian thought about literature from mediaeval times to the end of the nineteenth century, then concentrates on a more detailed study of twentieth century theories. Emphasis is on the complex interrelationships of modern Russian theories of literature with their Western counterparts, e.g. Formalism and American "New Criticism". Topics treated include Formalism, early Marxist criticism, Socialist Realism, Structuralism, Tartu School of semiotics and Bakhtin. Student discussions and papers apply the principles of a given school to practical criticism of works of their choice, demonstrating the strengths and weaknesses of each theory.

Format: Lecture and discussion 2 hours

Exclusion: RUSS 2240.03

***RUSS 4302.03A or B: Russian Poetry.**

Conducted in Russian. Required for honours

candidates. A combination of an introduction to the theory of poetry with close analysis of masterpieces of nineteenth and twentieth century Russian poetry chosen to fit the interests of the individual student.

Format: Lecture and discussion

Prerequisite: Permission of the instructor

RUSS 4950.03A or B, RUSS 4960.03A or B, RUSS 4990.06R: Russian Special Topics.

Conducted in Russian. Offers the student an opportunity to work with an advisor in researching subjects which are not regularly taught in the Department. Past topics have included Old Church Slavonic, the historical phonology and morphology of Russian, and Russian symbolism. Students who wish to register for a specific programme should consult the chair of the Department.

Prerequisite: Permission of the instructor

Intensive Russian Programme

Coordinator

N.G.O. Pereira (494-3354)

Assistant to the Coordinator

W. Hebb (494-3679)

Introduction

The Intensive Russian Programme (the first of its kind in Canada), is an inter-disciplinary course of instruction which allows students to undertake intensive study of the Russian language both here and in Russia at Moscow Pedagogical University or St. Petersburg University. This programme is now offered at both the second year level of language study for students who have already successfully completed (mark of "B") one year of Russian or its equivalent, and at the third year level of language study for students who have successfully (mark of "B") completed two years of Russian or its equivalent.

The second year group students are required to enroll in an intensive fall preparatory session at Dalhousie prior to going to Russia with the programme for the winter term. Students in the third year group must enroll in a similar third year intensive fall preparatory session at Dalhousie prior to going to Russia.

If students from elsewhere wish to join the third year programme only in Russia, they may do so after successful completion of application requirements. Second year students from elsewhere, however, must participate in the fall session at Dalhousie. Enquiries and applications should be addressed to the Coordinator of the Programme.

Classes at Dalhousie

(September to December)

Students entering at the 2nd year level are required to take:

- RUSS 2002.03A: Grammar;
- RUSS 2039.03A: Conversation;
- RUSS 3090.03A: Russian Society Today
- one 2000 level class (with Russian section) in Russian literature;
- an additional class in Russian history (RUSS 2072.03A: Imperial Russia to 1917 OR a 2000 level class in Russian literature.

Students entering at the 3rd year level are required to take:

- RUSS 3002.03A: Grammar;
 - RUSS 3029.03A: Conversation;
 - RUSS 3121.03A: 19th Century Russian Prose and Poetry
- OR
- RUSS 3122.03A: 20th Century Russian Prose and Poetry;
 - RUSS 3090.03A: Russian Society Today;
 - one additional A-term class in History or Russian Literature.

Classes at the Moscow Pedagogical University or St. Petersburg State University

(February to June)

Second year students take 2000 level classes; third year students take 3000 level classes.

RUSS 2010.06B/3010.06B: Grammar. Intensive study of the finer points of Russian grammar. Topics include verbs of motion, aspect, impersonal constructions, government and agreement, and other themes. This is a six-credit hour class.

RUSS 2031.03B/3031.03B: Conversation. Systematic development of conversational ability on everyday themes: transport, city services, theatre, sport, shopping, the library, the educational system, the structure of the government, etc.

RUSS 2032.03B/3032.03B: Translation. Work on translation of literary, business and journalistic texts.

RUSS 2035.03B/3035.03B: Literature: Reading and Analysis. Reading and analysis of literary texts.

Science, Interdisciplinary

SCIE 1000.06R: Introduction to Environmental Studies. The intention of this full-credit course is to provide students with an entry-level introduction to the scope and importance of environmental issues that affect us at the local, regional, national and global levels. The course content will consist of introductory material on basic sciences (biology, earth sciences, atmospheric science and oceanography) and will follow with three groups of environmental issues; (i) the human population and sociocultural patterns. (ii) sustainability and use of renewable and non-renewable natural resources, and (iii) environmental degradation caused by pollution and disturbance. The course will be multi-disciplinary in nature, with specialists dealing with issues that reflect their particular expertise. However, this course will also build upon the connections among specific disciplines. The instructional format will involve two lectures per week. Grading will be by examination at the end of each module (about 4-6 exams each term).

Instructors: D. Scott and Staff

SCIE 1200.06R: An Overview of the Cosmos, Earth, and Life. Students are introduced to selected concepts central to the disciplines of Earth Sciences, Biology, Physics and Astronomy. The common thread that connects these disciplines is the sequential and connected evolution of the universe itself, our planet earth and the origin and evolution of life on Earth. Emphasis is placed on developing an understanding of the scientific method, its limitations, and its application in society. The principles will be related to environmental concerns. For example, the properties of light and radiation are applied to a discussion of global warming; knowledge of molecular biology is used to study evolution of organisms and change in habitats.

Instructors: R. Harding, R. March, P. Ryall

Prerequisites: There are no prerequisites for this class

Exclusion: This class does not serve as a prerequisite for any other science class.

SCIE 3000.06R: Science Fundamentals. (Not offered in 1995-96) SCIE 3000.06 is an interdisciplinary class for Honours students in the Faculty of Science. It stresses the motivations, skills, methodologies, and responsibilities of scientists, provides extensive formal instruction and practice in the written and oral presentation of scientific material, and promotes common bonds among scientists facing the complex problems of the future.

The class material covers three broad areas:

Scientific History, Philosophy, and Methodology consisting of Our Roots: A Brief History of Science; Major Scientific Revolutions; The Scientific Method: Experimental Design and Execution; Comparison of Scientific Methodologies; Logic: Inductive and Deductive Reasoning; Methods of Handling and Interpreting Numerical Data

Scientific Communication Skills dealing with Awareness of the Scientific Literature: Library, Set Theory, Database Searching Skills; Communication of Scientific Results I: Scientific and Technical Writing; Communication of Scientific Results II: Oral Presentations; Maintaining Competence after Graduation: Journals, Conferences, Exchanges, Electronic Bulletin Boards

Scientific Politics and Practicalities in which we discuss Research Environments: Government, Private Sector, University; Scientific Drives: Curiosity, Necessity, Money, Fame; Basic vs. Applied Research; Research Costs; Funding of Scientific Research in Canada: Grants vs. Contracts; Science and Technology: Patents and Technology Transfer; Science in the Service of People; Social Responsibilities of Scientists; Ethical Issues for Scientists: Working with People, Animals, Data; Major Scientific Questions of Today

Instructors for this class are experts from a wide range of disciplines, both from within the university and outside. For further information, contact the co-ordinator.

Format: Writing Intensive, lecture 3 hours

Instructors: D.B. Clarke and others

Restriction: 3rd and 4th year Honours students in the Faculty of Science

SCIE 4000.03B: The History of Modern Science. Science became separated from general knowledge about 1500 and the early 19th century. It has proved to be a remarkably powerful cultural force from the time of the first Scientific Revolution of the 17th century until our own times. This class examines the ways that science and scientists have given us knowledge of the natural world from the time of Copernicus to the development of evolutionary theory and relativistic physics in the 19th and 20th centuries. It is intended for students interested in interdisciplinary knowledge who are prepared for extensive reading.

Instructor: E. L. Mills

Format: lectures 3 hours

Cross-listings: BIOL 3402.03, HIST 3072.03

SCIE 4001.03B: History of Marine Sciences. This class outlines the major developments leading to the present state of knowledge in biological, chemical, physical and geological science of the ocean. Events and changes are related to their cultural and social contexts. It asks how scientific facts, institutional

400 Science, Interdisciplinary

developments, and social influences have affected acquisition of knowledge about the oceans.

Instructor: E.L. Mills

Format: lectures 3 hours

Cross-listings: BIOL 4664.03, OCRA
4331.03/5331.03

The following classes address the subject matter in an interdisciplinary manner. Consult department listings for full descriptions.

BIOL 3601.03A: Nature Conservation

CHEM 3303.03A or B: Materials Science

COMP 1000.03A or B: Microcomputer Applications

ECON 3338.03A: Introductory Econometrics I

MATH 1001.03A/1002.03B: Mathematics for Liberal Arts Students

MATH 2600.03A or B: Theory of Interest

Sociology and Social Anthropology

Location: South-East Corner of South and Seymour Streets, Halifax, N.S.

Introduction

Social Anthropology and Sociology are related and overlapping disciplines. Although in some universities they are found in separate departments, this Department and many of its classes blur the distinction between them and emphasize the areas of overlap. The Department

is committed to a programme which stresses the areas of convergence between the two disciplines.

Sociology and Social Anthropology provide an academic training which is rigorous and cosmopolitan. Students develop research skills along with a general intellectual preparation which stands them in good stead for graduate work in the disciplines or for a broad range of professions such as law, medicine, social work or journalism.

Sociology

From its inception in the nineteenth century, sociology has been concerned with understanding the growth and evolution of modern societies. Classical sociologists attempted to identify universal laws of human behaviour which would help them to understand the nature of social change and of social order, the role of the individual vis-a-vis the broader society, and the production and reproduction of social inequalities. While contemporary sociologists have abandoned the search for universal laws, the discipline continues to study the social context of human action, and has contributed substantially to knowledge and understanding of our own world.

Social Anthropology

Anthropology is composed of four subfields, social/cultural, archaeological, biological, and linguistic. The strength of our programme is the concentration upon Social Anthropology, the area most complementary to Sociology. Social Anthropology, with its emphases on global context, continuity and change, questions of human and group identity, and views on human nature, may focus on local cultures or entire civilizations. For example, some Social Anthropologists study historical and contemporary conditions of indigenous groups, tribal or peasant societies, others conduct their research within industrial societies. Our programme provides the opportunity for students to become conversant with the comparative cultural implications of modern societies such as different forms of family and kinship practices, changing gender relations, the organization of work, law and social injustice, medicine and health, religion, and political economy. How do people in different places and times react, resist, and adapt to change?

Degree Programmes

The department's BA degree program is offered as a 15 credit major or a 20 credit advanced major in Sociology and Social Anthropology. The BA honours degree is offered through more specialized programs of study in Sociology or in Social Anthropology. Dalhousie graduates wishing to upgrade from a 15 credit major may complete an additional five credits to

be awarded the Advanced Major Certificate or the Honours Certificate. An honours degree is normally the required preparation for graduate study.

All Bachelors degree programs are governed by the general Requirements for Degrees set out in the University Calendar, in addition to the departmental requirements stated below.

See "Degree Requirements" section for complete details.

Note: Revisions to the requirements for all degree programs were made in 1994. Students who registered in the honours program before 1994 should consult the Undergraduate Advisor about changes to their program to meet new requirements. Majors and honours students who have already taken any one of the previously required classes SOSA 2010.03, SOSA 2240.03, SOSA 2250.03, SOSA 2011.0, are exempted from the 2000 level requirements stated below.

Note:

- (a) No more than one credit may be obtained for introductory classes from SOSA 1000.06, 1050.06, 1100.06, 1200.06 or King's Foundation Year.
- (b) Students may obtain credit for both SOSA 2001.06 and 2002.06, and those proposing to apply to the honours programme are particularly encouraged to acquire a foundation in both disciplines.

Honours BA Programme

Students with a grade point average of B (GPA 3.00) or better are encouraged to consider applying for the honours program. They should consult with the Department's Undergraduate Advisor, preferably during their second year of study, and should plan to take the 3000 level classes required for honours during their third year. The Advisor will assist the student to design a program of study with a concentration in Social Anthropology or Sociology meeting the general Faculty requirements and the specific requirements for each program as set out below. The honours thesis paper is produced for the class SOSA 4500.06 (Sociology) or SOSA 4000.06 (Social Anthropology). This fulfils the College of Arts and Science Honours Qualifying Examination requirement. Students with the honours concentration Sociology may not declare Social Anthropology as their minor subject; students with the honours concentration Social Anthropology may not declare Sociology as their minor subject. Combined and unconcentrated honours programs may be arranged in consultation with the Undergraduate Advisor and the other departments concerned. See Colleges of Arts and Science Regulations 1.3 for general information and requirements.

Note: Basic computer literacy is required of all honours students and can be acquired through special modules. These modules will include

such topics as: SPSS, E-Mail, News Groups, Nova Net/Socio Files, WordPerfect, etc. Consult the undergraduate advisor for details on lab times and arrangements.

Departmental requirements:

Classes required in Concentrated Honours in Social Anthropology:

- 1000 level:** One of: SOSA 1000.06, 1050.06, 1100.06, 1200.06, or King's Foundation Year Programme.
- 2000 level:** Either SOSA 2001.06 or 2002.06; as well as at least one additional 2000 level credit.
- 3000 level:** SOSA 3400.03, SOSA 3402.03, SOSA 3403.03
- 4000 level:** SOSA 4003.03, SOSA 4000.06, and a minimum of one additional SOSA 4000-level seminar (.5 credit).

In total a minimum of 9 and a maximum of 11 SOSA credits beyond the 1000 level are required.

Classes required in Concentrated Honours in Sociology:

- 1000 level:** One of: SOSA 1000.06, 1050.06, 1100.06, 1200.06, or King's Foundation Year Programme.
- 2000 level:** Either SOSA 2001.06 or 2002.06; as well as at least one additional 2000 level credit.
- 3000 level:** SOSA 3402.03, SOSA 3403.03, SOSA 3401.03, SOSA 3405.03
- 4000 level:** SOSA 4003.03 or SOSA 4001.03, SOSA 4500.06, and a minimum of one additional SOSA 4000-level seminar (.5 credit).

In total a minimum of 9 and a maximum of 11 SOSA credits beyond the 1000 level are required.

Note: Students considering graduate work in Sociology are strongly advised to take SOSA 4002.03: Social Statistics, since statistical competence is often required as a component of graduate social science programs.

Honours Certificate in Sociology or Social Anthropology

This program permits Dalhousie graduates to undertake an additional five credits upgrading their qualifications from Major to Honours. Students must meet the usual conditions for admission to honours, and complete the full set of Honours requirements in either Sociology or Social Anthropology. Interested students should consult the Undergraduate Advisor.

Advanced Major in Sociology and Social Anthropology

Departmental requirements:

Classes required in Advanced Major:

- 1000 level:** One of: SOSA 1000.06, 1050.06, 1100.06, 1200.06, or King's Foundation Year Programme.
- 2000 level:** Either SOSA 2001.06 or 2002.06; as well as at least one additional 2000 level credit.
- 3000/4000 level:** a total of three full SOSA credits

In total a minimum of 6 and a maximum of 9 SOSA credits beyond the 1000 level are required.

Advanced Double Major Degree

Students must obtain at least ten and no more than thirteen credits beyond the 1000 level in two allied subjects, with no fewer than four and no more than nine in either.

- 1000 level:** One of: SOSA 1000.06, 1050.06, 1100.06, 1200.06, or King's Foundation Year Programme.
- 2000 level:** Either SOSA 2001.06 or 2002.06; as well as at least one additional 2000 level credit.
- 3000/4000 level:** a total of two full SOSA credits.

Advanced Major Certificate

This program permits Dalhousie graduates to undertake an additional year of study upgrading their qualifications from Major to Advanced Major. Students must meet the full set of Advanced Major requirements.

Major in Sociology and Social Anthropology

Departmental Requirements

Classes required in Major:

- 1000 level:** One of: SOSA 1000.06, 1050.06, 1100.06, 1200.06, or King's Foundation Year Programme.
- 2000 level:** Either SOSA 2001.06 or 2002.06; as well as at least one additional 2000 level credit.
- 3000 level:** a total of two full SOSA credits

In total, a minimum of 4 and a maximum of 8 SOSA credits beyond the 1000 level are required.

Interdisciplinary Studies

The department cooperates with other departments in the Faculty to offer three interdisciplinary programmes. Some classes are cross listed. Students interested in these programmes may like to consider double advanced major or combined honours degrees, with Sociology and Social Anthropology as a component. Consult the Undergraduate Advisor for details of the following programs:

Canadian Studies (Major)

International Development Studies (Major and Honours)

Women's Studies (Major)

Classes Offered

Some classes listed may not be offered in a given academic year. Consult the timetable for details. Where pre-requisites apply, students requesting exceptions must obtain permission directly from the instructor involved.

SOSA 1000.06R: Culture and Society. An introduction to the comparative study of human society from the parallel perspectives of Sociology and Social Anthropology.

Format: Lecture 3 hours
Exclusion: SOSA 1050.06, SOSA 1100.06 and SOSA 1200.06

SOSA 1050.06R: Explorations in Culture and Society. This class covers the same topics as SOSA 1000.06R but partly in a seminar format. There are bi-weekly written assignments. This class fulfils the first-year writing requirement.

Format: Lecture and seminar 3 hours
Exclusion: SOSA 1000.06, SOSA 1100.06, and SOSA 1200.06

SOSA 1100.06R: Introduction to Anthropology. This class introduces students to all subfields of anthropology while emphasizing the socio-cultural. Topics considered include: the variety of human cultures and societies and how they are organized and function, the relationship between ecology and culture, human evolution, nonhuman primate behaviour, principles of archaeology, and the study of languages around the world as they relate to the cultures of which they are part.

Format: Lecture 3 hours
Exclusion: SOSA 1000.06, SOSA 1050.06, and SOSA 1200.06

SOSA 1200.06R: Introduction to Sociology. This class introduces students to basic sociological concepts, the logic of social inquiry, and major theoretical and methodological issues in the field. Substantive class contents may include the study of culture, socialization, deviance, social organizations, institutions, social roles, and demography. Emphasis is on the study of modern industrial societies with special attention given to Canadian society.

Format: Lecture 3 hours
Exclusion: SOSA 1000.06, SOSA 1050.06, and SOSA 1100.06

2000 Level Classes

SOSA 2001.06R: Ethnography in a Global Context. Ethnography describes how people conduct their lives in a particular time and place. This class examines the challenge, complexity, strengths, and limitations of ethnographic knowledge and writing in Social Anthropology. Students will learn about a number of different

ethnographic settings which may vary from year to year. A selection of ethnographies, films, autobiographical writing, and critical commentaries will be used to reveal how social anthropologists generate ethnographic knowledge about past and present societies, and why research priorities shift.

Format: Lecture 3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

SOSA 2002.06R: The Sociological Perspective: Thinking and Doing Sociology. Sociologists are interested in understanding the social world. They do not rely on preconceived ideas alone to enrich this understanding, but see the need to conduct studies, carry out investigations, make observations, analyze findings, formulate ideas, and construct theories and interpretations about what they find. This class looks at the ways sociologists go about their work. What are some of the dominant ways of thinking current in sociology today? What are the relationships between such ways of thinking and what are seen as questions to investigate? How do sociologists do their research? What are social surveys, interviews, theories, sociological ideas? What is distinctive about a sociological way of looking at a problem?

Format: Lecture 3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

SOSA 2060.03A or B: Social Gerontology. A general introduction to social gerontology, in which emphasis will be placed upon the historical and philosophical development of the study of aging in Canada, theories of aging, current social and economic programmes for the elderly both in Canada and to some extent cross-culturally, and various pertinent social-psychological aspects of the aging process. The class familiarizes students with some of the problems people experience as a consequence of aging in Canadian society and provides an understanding of the socio-economic factors relevant to these problems.

Format: Lecture 3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Cross-listing: HLTH 4900.03

SOSA 2100.06R: Environment and Culture. This class deals with the ways in which different environments affect how people live, relate to one another, think, and organize themselves. The major focus is on how cultural choices are influenced and constrained by the relationships among ecology, technology, and how people are making a living. Examples of hunter-gatherer, horticulturalist, rancher and farmer cultures are used as illustrations.

Format: Lecture 3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

SOSA 2161.06R: Tinker, Tailor, Soldier: Divisions of Labour in a Changing World.

Work is a fundamental aspect of all human societies and a key aspect to the development of social inequalities, be they based on gender, class, ethnicity, or cultural difference. Work has been seen as a main component of an individual's identity, but what do we mean by work? Against a backdrop of international and historical patterns, this class considers the changing nature of work and occupations. Topics which may be covered include: agrarian societies; home based labour; work patterns in family life; labour migration and citizenship; international divisions of labour; shifts in occupational structures such as shop floors, typing pools, or professions; managerial and union strategies; the relationship between education and employment; and, how occupational status, employment, and unemployment limit or enhance a person's political power.

Format: Lecture 3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Exclusion: SOSA 2160.03
Cross-listing: WOST 2400.06

SOSA 2180.06R: Criminology. How much crime is there? Why is it increasing? Are criminals different? Can we control or prevent crime? Criminology attempts to answer these questions through the social scientific study of crime and criminal justice as a social phenomena. This course introduces students to a broad variety of critical thinking, research and descriptive material on thematic issues such as the social causes of crime (eg poverty, culture, power, socialization), different types of crime (eg public, private and corporate), the structure and impact of the criminal justice system (eg police, courts and corrections) and public policy options and debates (eg, capital punishment, Young Offenders Act, decriminalizing of drugs and prostitution). This class provides a general understanding of the sociology of crime and criminal justice and a sound basis for further study in the area of social order and human justice.

Format: Lecture 3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

SOSA 2190.06R: Comparative Perspectives on Gender. Applying theoretical perspectives drawn from anthropology and sociology, this class considers the underlying conditions for and consequences of gender inequalities in different historical & cultural contexts. The class begins with an overview of the study of gender relations in anthropology and sociology. Themes around which the class will be organized include the relationship between gender and: culture and difference; sexuality and reproduction; labour; gender politics, power relations and political discourse; and gender in the global political economy.

Format: Lecture 3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Cross-listing: WOST 2800.06

SOSA 2200.06R: The Family in Comparative Perspective. This class examines the family as a cultural, political and economic institution. It questions the familiar. What is the family? Is it universal? How have families changed? Why are families so diverse? why do people marry? Why do they have children? Why is a woman's work never done? Is the family in a state of crisis? Adopting a comparative perspective, and using concepts from anthropology and sociology, the class addresses these questions in a global context, drawing upon data and examples from Canada and around the world.

Format: Lecture 3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

SOSA 2221.06R: Society and the Self. Groups influence individuals and individuals react to these influences. This is the field of Social Psychology. The processes involved in such person-group relationships are explored in a number of different settings, such as the family, mental hospitals, and universities. The class will focus on a critical review of research and theorizing.

Format: Lecture 3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Exclusion: SOSA 2220.03

SOSA 2291.06R: Goblins, Ghosts, Gods and Gurus. Societies and groups within societies differ in terms of what their members believe, how people view the world and their places in it, the sources of knowledge, attitudes towards the supernatural and the sacred, the status and authority of different sorts of knowledge and what it all means. What makes religion different from science? What makes them similar? What is commonsense? What are magic and witchcraft? What are the relations between beliefs and actions? What is the status of religious authority and power? What are altered states of consciousness? What are religious groups all about? Why do people belong to them, join them, leave them? What is involved in conversion and commitment? This class considers such questions drawing on a wide variety of societies, cultures and groups, western and non-western.

Format: Lecture 3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Exclusion: SOSA 2290.03

SOSA 2300.06R: Introduction to Social Problems. The study of social problems uses sociological theory and research to examine the social dynamics and consequences of a variety of contemporary issues. Though the class content will vary year by year, students can expect to

deal with social problems such as poverty, drug abuse, gender and race relations, work and alienation, and environmental issues.

Format: Lecture 3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

SOSA 2400.06R: Health and Illness Across Cultures. Every culture has its own concepts of health and nutrition, its own treatments and practices. The strengths and weaknesses of our own system grow clearer when medical anthropologists compare it with that of other societies. This class's specific topics vary from year to year but always include: native theories of the etiology of illness, transcultural versus culture-specific disease syndromes, pregnancy and childbirth in other cultures and our own; senescence and death viewed cross-culturally, the conflict between traditional medical systems and the Western physician and hospital, patients' expectations and the medical subculture, the physician as secular priest, and food and nutrition across cultures.

Format: Lecture 3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

SOSA 2501.06R: Sociology of Health and Illness. An introduction to sociological analyses of health, illness, and health care. Class topics include the experience of illness, socioeconomic and cultural variations in patterns of illness, social behaviour and its effects on health, the social production of health and illness, occupational hazards, the relationship between mental and physical health, the organization of health care, hospital and community care, health care workers, inequalities in health and health care.

Format: Lecture 3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Exclusion: SOSA 2500.03

3000 Level Classes

SOSA 3001.03A or B: Socialization. Socialization is the process by which a society's values and customs are perpetuated, passed along to the younger generation. This is seen as the function of certain institutions, such as the family, the churches, and the schools. These, however, require support from the larger social milieu. Our own rapidly changing society appears to be at a point of crisis in this regard. Recent social changes have undermined traditional means by which children acquire a sense of allegiance to their elders, and take to themselves the society's major values.

Format: Lecture 2-3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Exclusion: SOSA 2070.06

SOSA 3002.03A or B: Native Peoples of Canada. A survey of the cultures of the peoples who inhabited Canada at the time Europeans came to

this continent. Following a review of prehistory, the class uses an ecological perspective to examine the geographic culture areas and representative tribes in them. As time permits, information on ethnohistory and the situation of contemporary native peoples is incorporated. This class should be taken with SOSA 3003A or B to gain an overall ethnographic knowledge of North America.

Format: Lecture 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.
Exclusion: SOSA 2350.03

SOSA 3003.03A or B: Native Peoples of the United States. A survey of the cultures of the peoples who inhabited the area that is now the United States at the time Europeans came to this continent. Following a review of prehistory, the class uses an ecological perspective to examine the geographic culture areas and representative tribes in them. As time permits, information on ethnohistory and the situation of contemporary native peoples is incorporated. This class should be taken with SOSA 3002.03A or B to gain an overall ethnographic knowledge of North America.

Format: Lecture 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.
Exclusion: SOSA 2360.03

SOSA 3004.03A or B: Communities. An examination of a wide variety of territorially based residential groups such as the large metropolitan centre, the rural village, and the intentional community. Major themes include: evolution of the modern city, urbanization, rural depopulation, ecology of the city, neighbourhood social networks, behaviour in public places, minority subcommunities, and urban planning.

Format: Lecture 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.
Exclusion: SOSA 2080.06

SOSA 3005.03A or B: Approaches to Post Industrial Society. The current structure of complex industrial societies is a matter of widespread debate in the social sciences. As manufacturing sectors in North America and Europe shed workers, and businesses on the Pacific Rim begin to compete on world markets, we are reconsidering our basic assumptions about industrial systems. Major topics in this class will include theories of post-industrialism and advanced capitalism; the contemporary corporation and the future of trade unionism. The role of the state is also highlighted.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.
Exclusion: SOSA 2140.03, SOSA 2141.03

SOSA 3006.03A or B: Comparative Perspectives on Gender and Work. This seminar will use comparative perspectives to explore a range of

topics relating to the gendering of work: wage-work, household-based labour, the informal sector, masculinity and femininity in the workplace, occupational segregation, employment policies directed at changing the status quo (such as affirmative action, pay equity), and unionization. The context will be the changing global political economy and its consequences for the strategies of different groups (such as nation states, but also trade unions, feminist groups and employer groups).

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.
Exclusion: SOSA 2140.03, SOSA 2141.03

SOSA 3007.03A or B: Mass Society. The origin of modern, post-industrial mass society is reviewed. Problems associated with industrialization, cybernation, leisure, technology, and environmental degradation are examined in detail. Various attempts at solution of these problems are analyzed. The rise of the expert and of counter-cultural movements are given particular attention. Theoretical and methodological innovations for future forecasting are introduced.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.
Exclusion: SOSA 2150.03

SOSA 3008.03A or B: Canadian Society and Politics. This class about the nature of Canadian society has as its focus the study of structures and events which shape social and political organization in Canada. There is not only one way to understand Canadian society: generations of historians, political scientists and economists have provided valuable insights as to why Canadians have believed or acted or voted in one way or another. Sociology has helped to understand Canada in terms of contexts and conditions of life which have shaped the evolution of society as we know it. The class explores issues, events, discontents and groups which have produced the recurrent themes that underlie social life in Canada.

Format: Lecture 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.
Exclusion: SOSA 2110.06

SOSA 3011.03A or B: Political Sociology. The focus of this class is upon the study of politics and political structures. The study of power is central to understanding social organization, the challenge to the survival of national societies is to manage the development of their economies and the distribution of power among competing interest groups. The class examines the role of power and political cohesion in Western societies as they relate to social inequality, ethnicity and regionalism. The class also explores political transformation as a social process in terms of the place of social conflict, social movements, the

political interest groups and voting trends as components of national development and change.

Format: Lecture 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.
Exclusion: SOSA 2170.03

SOSA 3012.03A or B: Social Stratification. Aspects of social inequality in modern industrial society are explored. The formation of classes, status groups, and organized political expressions is considered. Questions of the distribution of power and wealth in society, the existence of power elites or governing classes, the impact of bureaucracy on class relations, the extent to which major economic inequalities have been reduced in this century, and problems of the mobility of individuals and groups through the stratification systems are analyzed. Theoretical discussions in the class are largely concerned with the ideas of Karl Marx and Max Weber, but attention is also paid to contemporary theoretical approaches to stratification.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.
Exclusion: SOSA 2040.06

SOSA 3013.03A or B: Religion in Contemporary Society. Religion is alive and well in society today; some religious organizations are in decline but others appear to be flourishing. How can these tendencies be accounted for? Do we live in a secular age or is that just a flip expression? What does religion mean to people in contemporary society? Is there a search going on for spiritual growth, spiritual awareness, spiritual expression? If so, what forms does this search take? What can we learn by thinking about religion sociologically? What are the trends in religion telling us about the character of late twentieth century society?

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

SOSA 3014.03A or B: Rethinking Culture and Class. Critical cultural studies has become a vigorous focus of interdisciplinary scholarship drawing on the fields of history, anthropology, sociology, geography, and literary criticism. Researchers in all of these areas are reconsidering the significance of symbolic aspects of social life and how the collective experiencing of cultural forms is related to changes in capitalism and modernity. For example, what is the significance of popular music in different class, gender, and ethnic contexts? How do commitments to kin and community relate to expressions of culture and class consciousness? Are boundaries between work and leisure mutable in terms of class, gender and ethnic processes?

Format: Seminar 2-3 hours

Prerequisites: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

SOSA 3031.03A or B: Social Problems and Social Policy. This class focuses on the nature of social problems and social policy in advanced industrial societies. It adopts a social movement perspective, exploring the processes whereby agitation on behalf of undesirable but remedial social conditions leads to changes in social policy. Among the areas treated in depth are crime prevention, the quality of work life, race relations, deviance, and poverty and inequality.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.
Exclusion: SOSA 3030.06

SOSA 3060.03A or B: Social Change and Development. This class considers theories of social change and development; approaches to the analysis of rural and urban livelihoods at the micro level; and the examination of community, class, patronage and gender relations in both their economic and cultural aspects. The constructive uses of social analysis in the support and design of development initiatives are also discussed.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06; or IDS 2000.06.

Cross-listing: SOSA 5306.03

SOSA 3070.06R: Human Nature and Anthropology. Can anthropologists explain why we feel sexual jealousy or why we tend to follow a dominant leader in times of stress? Can the evolutionary theories explaining why we have fingerprints and flat nails explain our behavioral traits? This class reviews theory and data on the evolution of human mind and culture in order to construct a theory of human nature. Its perspective and contents include much of what some have categorized as "human sociobiology," "Darwinian anthropology," and "Darwinian psychology."

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06; or an introductory class in Psychology or Biology

Cross-listing: SOSA 5070.06

SOSA 3081.03A or B: Sociolinguistics. This seminar considers the relation of language and culture in both western and non-western societies. Topics covered may vary from year to year but usually include: the origin of language, language acquisition, class differences in spoken language, bilingualism, diglossia, dialects, language and world view, linguistic relativism, and language change.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Exclusion: SOSA 3080.06

SOSA 3091.03A or B: Sociology of Culture. The Sociology of Culture deals with the symbolic aspects of social activity. The class will examine major contributions to this field by intellectuals from the western industrial systems. This overview will include consideration of works by Bourdieu, Habermas, Lasch, McLuhan and Williams. We will also look at the ongoing debates regarding popular culture, and the new interest in theories of postmodernity.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Exclusion: SOSA 3090.06

SOSA 3095.03A or B: Demographic Techniques. This class will explore the demographic techniques used to describe the dynamics of population structure. Various demographic sources ranging from census to church records will be examined. Basic techniques for determining rates and measures of fertility, mortality, morbidity and growth as well as more advanced methods using computer programmes and simulations will be discussed. Students will be expected to complete a project using primary sources. A knowledge of logarithms and high school algebra is required.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Cross-listing: SOSA 5095.03

SOSA 3100.03A or B: Feminist Perspectives in Anthropology and Sociology: Current Debates. This class examines more recent critical debates in feminist theories. Readings map out new theoretical agendas and/or provide critical reflection on previous priorities in feminist scholarship. Relevant current issues include re-conceptualizing patriarchy; re-working dualistic models; work, domestic labour and sexuality debates; sexism, racism, class; rethinking kinship and reproduction; feminism, culture, and political economy; post-modernism, voice, difference; beyond colonialism and imperialism; beyond women as victims; resistance; and feminist research and praxis.

Format: Seminar 2-3 hours
Prerequisite: SOSA 2190.06/WOST 2800.06, or permission of the instructor.

Cross-listing: WOST 3805.03, SOSA 5100.03

SOSA 3120.03A or B: Social Conflict. This class introduces students to the various analytical perspectives sociologists have employed to understand the patterning and consequences of conflict in society. In this regard particular attention is devoted to the functional, coercion, and Mardian theories of conflict. This class is also concerned with conflict in contemporary society, with special reference to patterns of conflict and change in Canada.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Cross-listing: SOSA 5120.03

SOSA 3135.03A or B: The Social Organization of Health Care. The social organization of medicine and the politics of health are examined. Particular attention is paid to environmental and occupational health issues in light of technological and social change. Epidemiological patterns of morbidity and mortality are assessed. Students are responsible for seminar presentations in areas of interest.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Cross-listing: SOSA 5135.03

SOSA 3141.03A or B: Sociology of Mental Disorders. Mental disorders as both a social and sociological problem. Social factors in the definition, incidence, etiology, and treatment of mental disorders are examined. Societal views toward and responses to so-called mental illness are reviewed and analyzed from a sociological perspective. Other topics include the social role of the mental patient and the development of mental health policy in Canada.

Format: Lecture 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Exclusion: SOSA 3140.06

SOSA 3145.03A or B: Gender and Health. The class focuses upon 3 major areas in the relationship between gender and health: (a) the relationships among gender stereotypes and food, sexuality and body image, dieting and health; (b) reproduction and childcare including birth control, menstruation, menopause, reproductive technology, childcare and child health; (c) health care and health care workers - an analysis of caring, both paid and unpaid. Topics include sexual inequality in health care, health policy, family relationships and health care responsibilities.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Cross-listing: WOST 3800.03, SOSA 5145.03

SOSA 3150.03A or B: Sociology and Anthropology of the Body. This class will consist of a micro-sociological examination of the human body as a socio-cultural construction. Topics include: bodily self image, cultural definitions of physical attractiveness, stigmatization, proxemic behaviour, non-verbal communications, body hygiene and pollution taboos, and cultural aspects of human reproduction and sexuality. Special attention will be paid to class, gender and ethnicity and their relationship to body politics.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

SOSA 3180.03A or B: Issues in the Study of Society. This seminar consists of an intensive examination of a selected substantive issue within Sociology and/or Social Anthropology. Since the specific topic or research problem

which receives special treatment will differ from year to year, students are advised to consult the department prior to registration.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Cross-listing: SOSA 5180.03

SOSA 3186.03A or B: Issues in the Study of Native Peoples of North America. This seminar is concerned with the historical background of the Native-European contact situation in North America and with issues arising from this background. Students will research and present reports on issues which are significant to themselves and important to Native groups. Topics covered may vary from year to year, but will normally include a combination of historical issues such as culture change and acculturation among specific groups, and contemporary issues such as land claims, government policy, and social conditions of Natives.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06; and SOSA 3002.03, or 3003.03

Exclusion: SOSA 3185.06

Cross-listing: SOSA 5186.03

SOSA 3190.03A or B: Social Movements. The general topic of unstructured group activity encompasses phenomena traditionally classified as collective behaviour incidents, as well as reformist and revolutionary social movements. Although there is considerable overlap, the collective behaviour literature tends to focus on relatively brief and spontaneous activities, such as panics, disasters, and crazes, while work on social movements examines relatively more organized and enduring group activities which still fall outside the realm of normal institutions. This class investigates problems emerging from both areas of concern. Emphasis is given to relevant Canadian materials.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Cross-listing: SOSA 5190.03

SOSA 3205.03A or B: Ethnicity, Nationalism, and Race. This class begins with a consideration of the concepts of ethnic group and race, and proceeds to a view of ethnic group formation and change. Next, systems of ethnic stratification are surveyed. The class concludes with the study of policies concerning ethnic relations, ethnic nationalist movements, and problems of race and ethnic relations. Both Canadian and comparative data, particularly from developing countries, are included.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Cross-listing: SOSA 5205.03

SOSA 3211.03A or B: Continuity and Change in Rural Societies. The majority of the world's population, even today, lives in rural settings

and depends upon primary production as the principal source of livelihood. This does not mean, however, that rural life has remained static and unchanging over the centuries. All rural societies, even those remote from centres of world power, have long been caught up in the world economic system and involved, in particular ways, with capitalist relations of production. This class examines continuity and change in a range of rural contexts across several continents including North America, and encourages students to consider the notion of "development" from alternative perspectives.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06; or INTD 2000.06

Exclusion: SOSA 3210.06

Cross-listing: SOSA 5211.03

SOSA 3220.03A or B: Coastal Communities in the North Atlantic. Coastal communities as a social/ecological type are examined as populations, and social structures (territorial, economic, occupational, political) as they have developed in response to particular ecological and social circumstances. Various perspectives which have been applied to coastal communities are examined with regard to the contribution they may make to understanding the dynamics of these communities. The focus is on North Atlantic communities.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Cross-listing: ENVI 5180.03, SOSA 5220.03

SOSA 3231.03A or B: Psychological Anthropology. The class examines the overlap between psychology and anthropology. Topics include: culture and personality, culture and mental health, psychiatry in other cultures, cross-cultural differences in learning, and the evolution of human psychological characteristics.

Format: Lecture 2-3 hours
Prerequisites: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Exclusion: SOSA 2230.06, 3230.06

SOSA 3245.03A or B: Women and Aging. As women grow older, the experience of aging is generally more difficult for them than for men. This class will explore the issues related to socio-economic factors that are major determinants of the well-being of aging women. Topics will include: aging as a process; menopause, violence against older women; older women and housing; self-image and sexuality; health and the aging woman; and older women and poverty.

Format: Lecture 2-3 hours
Prerequisites: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06; or two classes in Women's Studies

Cross-listing: WOST 3810.03, NURS 4370.03, SOSA 5245.03

410 Sociology and Social Anthropology

SOSA 3250.03A or B: Sociology of Science. Science involves human thought and human organization, socially generated and transmitted knowledge, social communities. It is a social institution. This seminar raises questions about science as a social phenomenon. How is science constructed; how, and why, are some activities and ideas defined as scientific in contrast to others which are not; how does the scientific community operate as a social community; what are the patterns of influence and authority in such communities, how is knowledge "established", how do scientific disciplines arise?

Format: Seminar 2-3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Cross-listing: SOSA 5250.03

SOSA 3275.03A or B: Crime and Public Policy. This class deals with the dynamics of change in the criminal justice system that reflect three major factors namely social movements (e.g., the victims movement, the women's movement), social forces (e.g. aging, multiculturalism), and internal processes (e.g., professionalism, rationalization). The class focuses on how outside pressures modify, and are channelled by, the criminal justice system.

Format: Seminar 2-3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Cross-listing: SOSA 5275.03

SOSA 3281.03A or B: Youth Crime. This class deals with criminal offenses committed by young persons. Etiologies drawn from various disciplines are examined and evaluated. A secondary focus concerns the criminal justice system as it applies to young offenders.

Format: Lecture 2-3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Exclusion: SOSA 3280.06

SOSA 3286.03A or B: Sociology of Criminal Law. The increasingly expansive and powerful role of criminal law in the maintenance of social order in Canadian society makes it an important topic of study. The law is examined as a social institution, influenced by socio-political forces and used as a instrument of social control and change. Emphasis is placed on the production of "criminal justice" through the criminal courts system by focusing on the role, responsibilities and negotiated interactions of the various actors in the court process (the accused, victims, defence council, crown prosecutor and the judge). In addition to gaining a realistic understanding of the limits and possibilities of criminal law, students will be engaged in recent debates about law reform (gender justice, sentencing controversies, victims and offender rights etc).

Format: Lecture 2-3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Exclusion: SOSA 3285.06

SOSA 3295.03A or B: Society and the Police.

The police play an increasingly powerful role in the maintenance of social order in contemporary Canadian society. This class introduces students to sociological theory and research on: a) the role of police in social development and social control; b) the historical and political development of public policing; c) the nature and structure of police work; d) control and accountability and e) selected issues in policing such as, policing the family, minorities and the police, community based policing and police discretion.

Format: Seminar 2-3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Cross-listing: SOSA 5295.03

SOSA 3310.03A: Indian Society: Change and Continuity. The objective of this class is to introduce students to the society and culture of India from an interdisciplinary perspective. India presents a society of enormous complexity and an unbroken living civilization.

Format: Lecture and Seminar

Prerequisite: Second year Arts and/or Science class

Cross-listed: International Development Studies

SOSA 3400.03A or B: History of Anthropological Theory. This class considers the foundations and development of social anthropology. Major theoretical schools and the work of prominent anthropologists in those schools are considered, including Cultural Evolution, Historical Particularism, Functionalism, Culture and Personality, Structuralism, Symbolism, Cultural Materialism, and the directions in which contemporary sociocultural anthropology point.

Format: Lecture 2-3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06; and SOSA 2001.06 or 2002.06.

Exclusion: SOSA 2250.03

SOSA 3401.03A or B: History of Sociological Thought. Towards the middle of the nineteenth century a novel way of thinking about human existence began to emerge. Primacy was given to the understanding that humans are social beings, their lives and thoughts bounded and patterned by their social environments. This approach formed the basis for a new discipline of analysis eventually named Sociology. This class considers some of the main ideas of the earlier contributors to the new way of thinking: Comte, Marx, Durkheim, Weber, Simmel, Mead, Manheim and, more recently, Parsons and Schutz. Modern sociology rests largely on the intellectual legacy of these thinkers. They raise questions and formulate answers to them which remain relevant to the sociological enterprise today.

Format: Lecture 2-3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06; and SOSA 2001.06 or 2002.06

SOSA 3402.03A or B: Figuring Out Society. This class provides an introduction to issues of research design, including the relationship of theory to the choice of methodology. Students are exposed to basic tools and procedures which will help them to analyze the numerical tables and graphs they may come across in sociological or anthropological journals. Other relevant issues will be included, such as, whether it is possible to achieve scientific objectivity when studying human behaviour. Emphasis in the class will be placed on the progressive refinement of a research project of the student's choice.

Format: Lecture 2-3 hours; lab as required.

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06; and SOSA 2001.06 or 2002.06

Exclusion: SOSA 2011.03

SOSA 3403.03A or B: Qualitative and Field Methods. Research is a craft requiring many skills. This class focuses on skills complementary to those discussed in SOSA 3402.03 (Figuring out Society). Topics may include: theory and the choice of method; applied social science; fieldwork; ethnography; use of interpreters; interviewing; life histories; note taking; analysis of texts; feminist methodologies.

Format: Lecture 2-3 hours; lab as required.

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06; and SOSA 2001.06 or 2002.06.

SOSA 3405.03A or B: Contemporary Social Theory. A variety of approaches constitute theory in contemporary sociology. Among them are those called functionalist, interactionist, ethnomethodological, formal, structuralist, critical, feminist, and those based on processes of social exchange. This class considers the contributions of approaches such as these to the enterprise of modern sociology. What are the main premises of particular sociological theories? What are their implications for the study and understanding of the social world?

Format: Lecture 2-3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06; and SOSA 2001.06 or 2002.06

4000 level Classes

SOSA 4000.06R: Honours Seminar in Social Anthropology. The seminar provides an opportunity for students to engage in sustained investigative scholarship requiring an independent research initiative, while requiring them to locate their special topic within a broader set of theoretical and methodological debates in the discipline. The first term is devoted to general seminar discussions. The

second term is devoted to students' research and writing activities in preparing the required essay for honours' graduation, and class time is used for students to make "in progress" reports and presentations about their chosen topics. There will be no restriction on topic and no assignment of topics by the instructor. This class carries two separate credits, a "class" credit and an "honours" credit (a University requirement for all honours students SOSA 8880.00).

Format: Seminar 2-3 hours

Prerequisite: Honours registration in Social Anthropology or permission of the instructor.

SOSA 4001.03A or B: Survey Methods. This class will examine techniques and issues in survey methods. Topics covered will include sampling designs, questionnaire construction, measurement theory, data collection, and pre-tests. As well, this class provides instruction in the organization and presentation of quantitative data, including graphs, charts, and tables using computer software such as SPSS and Harvard Graphics. Depending on the instructor, practical experience in survey methods is provided through secondary analysis of an existing data set, or through a class project.

Format: Seminar 2-3 hours

Prerequisite: SOSA 3402.03

Exclusion: SOSA 3115.03

SOSA 4002.03A or B: Social Statistics. This class develops statistical approaches to social science data, focusing on correlation/regression analysis. Beyond developing a basic competence in statistical analysis, the class stresses the creative process of constructing solid scholarly arguments using statistical principles, as well as uncovering artifacts which weaken them. In lieu of a term paper, weekly assignments are given using existing social science data which provides students the opportunity to participate in this process. The class includes both lectures, in which the logic of statistical reasoning is presented, and laboratories, in which statistical techniques are applied to social science data using computer software programmes such as SPSS.

Format: Lectures and labs 2-3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06; and SOSA 3402.03 and SOSA 4001.03

Exclusion: SOSA 3415.03

SOSA 4003.03A or B: Contemporary Perspectives in Ethnography. Ethnographies and critical writings which grapple with questions of theory and interpretation in a range of contexts - near and far, familiar and strange, local and global - will be examined in this class.

Format: Seminar 2-3 hours

Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06; SOSA 2001.06 or 2002.06; and Honours or

412 Sociology and Social Anthropology

Advanced Major Registration in Sociology or Social Anthropology

SOSA 4004.03A or B: Issues in Work, Industry and Development. Consult department for class description.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06 and Honours or Advanced Major Registration in Sociology or Social Anthropology

SOSA 4005.03A or B: Issues in Social Disorder and Human Injustice. Consult department for class description.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06 and Honours or Advanced Major Registration in Sociology or Social Anthropology

SOSA 4006.03A or B: Issues in Health and Illness. Consult department for class description.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06 and Honours or Advanced Major Registration in Sociology or Social Anthropology

SOSA 4011.03A or B: Issues in Social Theory.

This seminar consists of an intensive examination of one or more selected bodies of theory, and makes links between theory and current trends in research in sociology and/or social anthropology.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06 and Honours or Advanced Major registration in Sociology or Social Anthropology

SOSA 4012.03A or B: Special Topics in Sociology and Social Anthropology. This seminar consists of an intensive examination of a selected substantive issue within Sociology and Anthropology. Since the specific topic or research problem which receives special treatment will differ from year to year, students are advised to consult the department prior to registration.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06 and Honours or Advanced Major registration in Sociology or Social Anthropology

SOSA 4013.03A or B: Issues in Sociology and Social Anthropology. This seminar consists of an intensive examination of selected substantive issue within Sociology and Social Anthropology. Since the specific topic or research problem

which receives special treatment will differ from year to year, students are advised to consult the department prior to registration.

Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06, and Honours or Advanced Major registration in Sociology and Social Anthropology

SOSA 4500.06R: Honours Seminar in Sociology. The seminar provides an opportunity for students to engage in sustained investigative scholarship requiring an independent research initiative, while requiring them to locate their special topic within a broader set of theoretical and methodological debates in the discipline. The first term is devoted to general seminar discussions. The second term is devoted to students' research and writing activities in preparing the required essay for honours' graduation, and class time is used for students to make "in progress" reports and presentations about their chosen topics. There will be no restriction on topic and no assignment of topics by the instructor. This class carries two separate credits, a "class" credit and an "honours" credit (a University requirement for all honours students SOSA 8880.00).

Format: Seminar 2-3 hours
Prerequisite: Honours registration in Sociology or permission of the instructor.

SOSA 4510.03A or B: Readings in Sociology/Social Anthropology. In a reading class the student is assigned to a member of staff for regular meetings to discuss readings in a selected area. Papers and research projects are expected.

Format: Individual instruction
Prerequisite: Honours registration in Sociology or Social Anthropology, permission of the instructor and permission of the Undergraduate Coordinator.

Cross-listing: SOSA 5510.03

SOSA 4520.03A or B: Readings in Sociology/Social Anthropology. In a reading class the student is assigned to a member of staff for regular meetings to discuss readings in a selected area. Papers and research projects are expected.

Format: Individual instruction
Prerequisite: Honours registration in Sociology or Social Anthropology, permission of the instructor and permission of the Undergraduate Coordinator.

Cross-listing: SOSA 5520.03

Introduction

The Maritime School of Social Work was founded in 1941 to meet a need for professionally educated social workers in the Atlantic region. The School amalgamated with Dalhousie University in 1969. The undergraduate programme leading to the

Departments/Schools/Colleges

Bachelor of Social Work degree was introduced in the late 1970's to provide basic professional education in Social Work. General courses in the humanities and social sciences, and more specialized courses in social policy, professional values, and practice methods equip students with knowledge and skills essential to employment in a wide range of human services. Critical analysis of human behaviour and social environment provides a foundation for the development of helping skills that assist people in solving or coping more effectively with problems and skills that support broader social change.

The School also offers a Master's degree programme for advanced, specialized study in Social Work, and a Continuing Education programme of thematic regional workshops.

Both the undergraduate and graduate programmes are accredited by the Canadian Association of Schools of Social Work.

Maritime School of Social Work Regulations

All students are required to observe the University and Academic Regulations as described in this calendar.

1. Grade Point Average Requirements

The University grade point average system is described in the Academic Regulations section of this calendar. Faculty/School grading regulations apply to students whose initial registration in the School was in the Fall of 1990 or earlier. (Please consult calendar for the appropriate year.)

2. Grade Requirements for Social Work Courses

A student must obtain at least a C grade in each Social Work course for that course to be counted as a credit for the BSW degree. A student who earns a grade of less than C in a Social Work course but is otherwise still eligible to continue in the programme must repeat the course until a grade of at least C is attained. Social Work courses are all courses taken under BSW study which are not designated as general admission credits.

3. Requirements of Field Instruction Courses

Field Practice courses SLWK 3020.06 and SLWK 4020.15/ 4030.12 are graded on a pass/fail system. A student must obtain a passing grade in each Field Practice course in order to be eligible to proceed in the programme. Field courses are neutral in the calculation of GPA.

4. Required Withdrawal

A student who fails to meet sessional GPA standards as defined in the Academic

Regulations section of this calendar must withdraw from the School. As well a student who fails a repeated class (academic or field work) must normally withdraw from the School.

5. Required Withdrawal on the Grounds of Unsuitability

The MSSW acting through its BSW Programme Committee and its Director may require a student to withdraw if judged to be unsuitable in aptitude and fitness for the profession of Social Work. Because of the nature of the study and practice of Social Work, which places clients in a position of special trust in relation to social workers and social work, certain impairments or some types of conduct unbecoming to a member of the social work profession may be grounds for dismissal, or suspension. Aptitude and fitness for the profession of Social Work, as determined by the BSW Programme Committee, are requirements for continuation in the programme.

The following list of examples illustrates the criteria used to assess unsuitability in aptitude and fitness. This list should not be considered to exclude other such behaviours:

- (i) conviction of criminal activity (e.g. assault, sexual assault, fraud and drug trafficking).
- (ii) persistent substance abuse (e.g. alcoholism, drug addiction, use of illegal drugs),
- (iii) any medical condition which affects an individual's ability to perform as a social worker if that condition is chronic and/or recurring and affects judgement.
- (iv) unethical behaviour (see C.A.S.W. Code of Ethics, 1983).

The Committee will consider the student's situation in confidence and shall determine whether the student is fit for the study and practice of Social Work. The principles of natural justice and due process will be observed in all committee deliberations.

6. Readmission After Voluntary Withdrawal

Students who have withdrawn from the programme for one to three years and who wish to be reinstated are required to submit a new application form, to be returned with a letter to the Chairperson, BSW Committee, requesting re-entry to resume their BSW degree studies.

Students who have not registered in the programme for three years or more and who wish to be reinstated are required to reapply, normally by the March 1st admission deadline date. The application and supporting documentation must be accompanied by a letter explaining the reasons for the interruption in the student's studies and the decision to resume the BSW degree programme.

Because of the relation of the BSW programme to the attainment of professional qualifications, each application is evaluated separately by the BSW Committee, and the

student informed by letter of its decision. Due to the competitive nature of the enrolment process, readmission of students is not guaranteed. Curriculum requirements of reaccepted students may be adjusted effective from the date of readmission.

7. Appeals

A student wishing to appeal a decision based on School regulations, should consult with the Chairperson of the Academic Appeals Committee for advice on appeal procedures.

8. Duration of Undergraduate Study

Students are normally required to complete the BSW degree within 10 years of their first registration (see Duration of Undergraduate Studies, Regulation 17).

9. Workload Regular Academic Year

Five (5) full credit classes per academic year (except in the first year where 5 1/2 credits are permitted) shall be regarded as constituting a normal workload for a full-time student, and may not be exceeded without written permission from the Committee on Studies of the Maritime School of Social Work. Written permission is also required if the planned workload in any term would amount to six half-credit classes (i.e. 3 full credits). In addition to the regular timetable, labs or workshops may be offered throughout the fall/winter terms.

For Spring/Summer Session workload see Academic Regulation 4.2.

Bachelor of Social Work Degree Programme

Admission

The BSW programme requires three years of full time study for persons entering with the minimum academic prerequisite of five general non-social work credits completed at a GPA of 2.70 or B- average. Persons holding an undergraduate degree on entry with relevant Social Work content normally may complete the programme in two full-time years or the equivalent on a part-time basis.

Enrollment is limited to a specified number of places that are offered once a year to the best qualified candidates, selected by the admissions process. Equal consideration is given to part-time and full-time applications. Information on recommended academic preparation is available in the BSW programme brochure. Information on admissions and application procedures is contained in the Admissions Requirements - Maritime School of Social Work section, near the front of this calendar.

Students in Other Degree Programmes

Students enrolled in Dalhousie degree programmes that accept Social Work credits as electives may take SLWK 3011.03, 3012.03, 3081.03, 3082.03 and 3090.03 with prior permission of their major department and the School. All other classes are normally restricted.

Special Students "Non-Degree"

Social Work classes are not available to special "non-degree" students with the exception of agency field instructors and other qualified social work professionals who are able to satisfy normal admission requirements. Permission of the BSW chairperson is also required.

Audit by Agency Field Instructors

The MSSW permits Agency Field Instructors to audit social work courses. Prior permission of the instructor concerned is required. If the field instructor wishes this audit to show on a Dalhousie University transcript, he/she must abide by the University audit regulation and fee as outlined in the current Dalhousie University Undergraduate/Graduate Calendars.

Programme Objectives

The BSW programme is designed to enable students to develop a range of basic general skills and theoretical perspectives that are adaptable to a variety of social work job settings. Although a focus of study is placed on the people, the communities and the service network of the Maritime provinces, graduates are qualified to practice social work throughout Canada and elsewhere. Opportunity for the interaction of theory with practice is provided in two supervised field placements, one early in the curriculum and one towards the end of the programme.

Students learn to integrate values, theory and practice skills through development of:

- Ability to assess their own learning needs, and to draw wider implications from their practice and life experiences.
- Understanding and appreciation of a wide range of social work roles and interventive methods.
- Understanding of both the psychological and socio-economic forces which impinge on clients' lives.
- Critical, well-founded awareness of the probable impact of various interventions on clients.
- Ability to implement, or cause to implement, a variety of interventive skills.
- Ability to judge which interventive methods are appropriate in each concrete situation.
- Ability to understand and deal with the policies and administrative structures which affect the delivery of social services.

Relationship to the MSW Programme

The BSW provides the academic prerequisite for graduate study in Social Work. Admission to the MSW programme normally necessitates that the candidate have a BSW degree followed by two years of postbaccalaureate social work experience in the area of preferred graduate study concentration.

Full-time and Part-time Studies

A full-time programme of study usually consists of either 5 credits (i.e. 30 credit hours) or 5.5 credits (33 credit hours) during the regular Fall/Winter session.

Part-time study may consist of .5 to 3 credits (i.e. 3 to 18 credit hours) during the Fall/Winter session.

Required academic courses are generally scheduled in the late afternoon or evening. Daytime sections for the three Social Work practice classes are also available. Students are required to undertake two field placements during regular daytime working hours.

Curriculum Requirements

The BSW degree programme consists of 15 Social Work credits. The latter are reduced by the amount of transfer credit and/or competency credit for which the student may be eligible. Maximum credit from all outside sources is limited by the regulation that any student with a previous degree is required to complete a minimum of six credits under Dalhousie instruction and any student without a degree, a minimum of seven and one-half credits under Dalhousie instruction.

Students generally fit into either a two-year or three-year BSW programme, as follows:

Two-Year or 10-Credit Programme

Entrants with a previous undergraduate degree and a cumulative GPA of 2.70, average of B- or 65% are required to complete 10 Social Work credits (i.e. 60 credit hours), consisting of:

- (a) Six compulsory credits as follows:
- SLWK 2000.06R: Introduction to Social Work (1 credit)
 - SLWK 3020.06R: Field Instruction I (1 credit)
 - SLWK 3030.06R: Foundation of Social Work Practice (1 credit)
 - SLWK 4010.06R: Advanced Social Work Practice (1 credit)
 - SLWK 4030.12R: Field Instruction II (2 credits); and
- (b) Four core credits, from the following group, to be determined after the assignment of transfer credit during registration week:
- SLWK 2010.03A or B: An Introduction to Community Development (½ credit)
 - SLWK 3011.03A: Perspectives on Social Welfare Policy I (½ credit)

SLWK 3012.03B: Perspectives on Social Welfare Policy II (½ credit)

SLWK 3040.06R: People in Society (1 credit)

SLWK 3050.03A or B: Social History of Atlantic Canada (½ credit)

SLWK 3070.03A or B: Social Service Delivery Analysis (½ credit)

SLWK 3081.03A: Science and Testing of Practice I (½ credit)

SLWK 3082.03B: Science and Testing of Practice II (½ credit)

SLWK 3090.03A or B: Social Statistics (½ credit)

SLWK 3100.03A or B: Political Economy of Social Welfare in Canada (½ credit)

SLWK 3220.03A or B: Cross-Cultural Issues and Social Work Practice (½ credit)

Three-Year or 15-Credit Programme

Entrants with 5 general credits and a GPA of 2.70 (or B- or 65%) are required to complete 15 Social Work credits (i.e. 90 credit hours), consisting of:

- (a) Six compulsory credits, as above;
- (b) Six core credits, as listed above; and
- (c) Three elective credits, as follows:

Social Work in a Special Field of Practice Elective: (½ credit) Usually an elective offered by the School to provide in-depth study of unmet needs and emerging social work roles in a specific field of practice.

Social Problem Electives: (1 credit or 2 x ½ credits) May be social work electives, or electives offered by other Departments or Schools, to provide in-depth study of contemporary social problem issues. Examples of social problem electives are: Child Welfare, Deviancy, Women's Issues.

Free Electives (1½ credits or 3 x ½ credits). Free electives may be chosen from any subject area, including Social Work.

Sequencing of Course Credits

All students accepted into the programme are expected to commence their Social Work credits during the regular academic session which begins in September.

It is the policy of the BSW Committee that:

- (i) SLWK 2000.06R: Introduction to Social Work - is the first class to be completed by part-time students.
- (ii) SLWK 2000.06R: Introduction to Social Work - is completed prior to the commencement of SLWK 4010.06R: Advanced Social Work Practice, and that
- (iii) SLWK 3020.06: Field Instruction I, is completed prior to the commencement of SLWK 4030.12: Field Instruction II.

The sequencing of course work is otherwise largely dependent on each student's needs within the following guidelines:

- (i) Students are advised to take 4010.06R - Advanced Social Work Practice after SLWK 3030.06R: Foundations of Social Work Practice.
- (ii) SLWK 4030.12R: Field Instruction II - should be taken at the end of a student's programme.

Full-time students in the two-year programme complete SLWK 2000.06, and 3030.06 in year 1 and SLWK 4010.06 in year 2; full-time students in the three-year programme complete SLWK 2000.06 in year 1, SLWK 3030.06 in year 2, and SLWK 4010.06 in year 3.

New Student Advising Sessions

New students are assisted in planning their classes by curriculum advisors from the School who meet with each student during the initial stage of the scheduled Fall registration week. Decisions about which Social Work classes each student will require after the assignment of transfer credit are available at this time. The possible assignment of competency credits to be earned in the coming months is also discussed during this session. The advising session is mandatory for all new students and recommended for all returning students.

Faculty Advisors

Each student is assigned a faculty advisor for ongoing consultation concerning any issues or concerns that may arise throughout the year. For new students, the faculty advisor is the instructor of their SLWK 2000.06 class. For students enrolled in SLWK 4030.12: Field Instruction II - the faculty field instructor also serves as the faculty advisor.

Competency Credit

Credit for competency allows certain new students the opportunity to receive credit for various types of non-formal learning, provided that they are able to demonstrate its relevancy to the content of the BSW programme.

To be eligible, the student needs at least 24 consecutive months of full-time paid or unpaid employment in the human services, or equivalent, prior to acceptance. The number of competency credits for which the student may apply is limited both by the amount of transfer credit that he/she has on entry and by the type of previous work experience. A minimum of .5 credit to a maximum of 2 credits is possible. Eligibility is determined by the credit for competency coordinator.

New students may apply for competency credit no later than September 30th of the year of their first registration in the BSW programme. To be eligible, part-time students must be registered in SLWK 2000.06R: Introduction to Social Work. A fee equal to half the regular fee for a .5 credit class is submitted to the competency credit co-ordinator with each topic undertaken.

Competency credits successfully completed reduce the number of classes in the BSW curriculum that the student would otherwise be required to take.

Transfer Credit

Transfer credit is assessed on an individual basis according to established School policy. It is the student's responsibility if requested to provide course outlines and other documentation required by the School for the purpose of determining eligibility. The student's choice of classes in the first year is dependent upon the assignment of transfer credit.

Classes Offered

SLWK 2000.06R: Introduction to Social Work (compulsory) As the first practice class in the BSW programme, this class offers students a beginning examination of topics and issues that will be examined in greater depth in other classes during their BSW studies. The overall goal of the class is to facilitate the development of a social work practice which is (a) grounded in an understanding of power and oppression, and (b) understands that the experience of social work varies depending upon the age, gender, race, ethnicity, sexual orientation, class and ability of clients and workers.

Instructor: C. Campbell
Format: 2½ hrs lecture/discussion per week; 15 hrs workshop per term
Restriction: Restricted to Social Work students

SLWK 2010.03A or B: An Introduction to Community Development. Community Development within social work is the facilitation of meaningful change within communities to improve the quality of life for members of those communities. Using lectures, guest speakers and case studies, this class will discuss various elements of the change process and examine specific change strategies.

Instructor: C. Campbell
Format: 2½ hrs Lecture/discussion
Pre/Corequisite: SLWK 2000.06
Restriction: Restricted to Social Work students

SLWK 3011.03A: Perspectives on Social Welfare Policy I. This class provides a survey of the history of social welfare in Canada, with a focus on historical debates which shed light on present-day issues.

Instructor: TBA
Format: Lecture/group discussions

SLWK 3012.03B: Perspectives on Social Welfare Policy II. As an introduction to social policy analysis, this class provides a survey of a variety of perspectives on social problems and social policy issues, with a focus on the various definitions of human needs.

Instructor: TBA
Format: Lecture/group discussions

SLWK 3030.06R: Foundations of Social Work Practice. (compulsory) Topics include a review of some of the major theories of human behaviour, and application of structural/feminist theory to a set of core practice skills.

Instructors: B.K. Richard, J. Duplisea
Format: lectures, small and large group discussions, student presentations, role plays

Pre/Corequisite: SLWK 2000.06

Restriction: Restricted to Social Work students

SLWK 3040.03A or B: People in Society. (not offered in 1995-96)

SLWK 3050.03A or B: Social History of Atlantic Canada. An analysis of the peoples who settled the region, the problems they have faced and their reactions to them are presented, with a focus that gives historical perspective to contemporary social problems.

Instructor: TBA
Format: Seminar 2½ hours
Restriction: Restricted to Social Work students

SLWK 3070.03A or B: Social Service Delivery Analysis. The class develops an appreciation of the social worker's role and responsibility in planning and delivery of social services; an understanding of the ability to apply selected theoretical models of service delivery; proficiency in analyzing and influencing service delivery systems in which social workers participate; and familiarity with some of the recent service delivery innovations in various provinces of Canada.

Instructor: TBA
Format: Lecture/Small Groups
Substitute: A Social Work in a Special Field of Practice elective or an interdisciplinary class related to social work practice can be substituted for this class.

Restriction: Restricted to Social Work Students

SLWK 3081.03A: Science and the Testing of Practice I. The use of research in social work practice is explored considering systematic ways in which practice can be evaluated. Use of single-subject designs, structured assessments, well-defined databases and other forms of systematic inquiry are considered. The role such research might play in developing practice assumptions is discussed.

Instructor: R. O'Day, R. Carlson
Format: Discussion/Group Projects 2 ½ hours

Restriction: Restricted to Social Work students except by permission of the instructor.

SLWK 3082.03B: Science and the Testing of Practice II. The use of research to increase understanding of social programmes and social problems is the focus of this class. Consideration

is given to the nature of the scientific method and commonly used approaches to such research. The interrelationship between theory, research and practice is explored. Particular attention is given to biases frequently encountered in the use and non-use of research in planning and implementing social programmes.

Instructors: R. O'Day, R. Carlson
Format: Discussion/group projects; 2½ hours

Restriction: Restricted to Social Work students except by permission of the instructor.

SLWK 3090.03A or B: Social Statistics. This course develops an understanding of major basic statistical tools which facilitate interpretation of data derived from social work-related data bases or research. The ability to apply basic forms of analysis to the description of samples, and the ability to draw inferences from samples to populations are provided. Applications rather than mathematical derivations are examined in exploring the practical significance and limitations of statistics. Concepts explicated are: prediction, models, level of measurement, probability, inference, and quantification. Statistics developed include: measures of central location, dispersion, regression, association, confidence intervals, and selected tests of significance with emphasis on multivariate applications.

Instructor: R. Carlson
Format: Lecture
 Not offered in 1995-96 Regular session

SLWK 3100.03A or B: Political Economy of Social Welfare in Canada. This class offers and introduction to the analysis of structural oppression along the axes of class, gender, race and ability, especially the tension between universality as a policy goal and respect for diversity. Specific attention is focused on strategies of affirmative action, pay equity, discriminatory harassment and licensure.

Instructors: TBA
Format: Lecture/small groups
Prerequisite: SLWK 3012.03
Restriction: Restricted to Social Work students

SLWK 3220.03A or B: Cross-Cultural Issues and Social Work Practice. This core course provides an opportunity to: critically examine theoretical frameworks for viewing minority racial, ethnic and cultural groups in society; examine personal values as they relate to the above groups; develop skills in working effectively with minority groups, and understand social policies as they relate to minority groups.

Instructor: J. Graveline
Format: Seminar 2½ hours
Restriction: Restricted to Social Work students

SLWK 4010.06R: Advanced Social Work Practice. (compulsory) Social Work practice

problems are critically examined from a regional, feminist-structural perspective for the purpose of developing analytical and practical skills in preparation for professional practice.

Instructor: J. Cummings, Staff
Format: Lecture/Small Groups 2½ hours
Prerequisite: SLWK1000.09, SLWK 3020.06, SLWK 3030.06 (recommended)
Restriction: Restricted to Social Work students

Field Instruction

All part time and full time students are required to make arrangements to undertake the two field placements (SW3020.06 and 4030.12) during regular working hours. The field component of the programme is organized and supervised by the Maritime School of Social Work faculty. There is provision for seminars, workshops and consultations in order to assist the students with testing content from academic classes. Content necessary to a specific field of practice is introduced as required, including such topics as law and social work, housing policy, and employment policy and practice.

Equipment

All students should have access to a portable tape recorder for use in field instruction. Students may be expected to have the use of a car in order to do their field placements.

SLWK 3020.06R: Field Instruction I (compulsory) This initial field placement provides an opportunity for beginning social work practice under supervision of agency personnel in liaison with School faculty. The student develops beginning competencies in direct practice situations, working with individuals and small groups. Use of agency and community resources, policies and services are studied. Approximate length 200 hours. Students must indicate their intent to register for Field I to the Field Co-ordinator by the following dates:

- October 1 for registration in January
- January 1 for registration in the spring/summer terms
- March 1 for registration in September or January of their second or subsequent year(s).

Field I should be completed early in the student's programme.

Restriction: Restricted to Social Work students

SLWK 4030.12: Field Instruction II (compulsory) The major field placement offers a faculty-supervised opportunity for the development of counselling, social change and community action skills sufficient for responsible entry into practice upon graduation. The student becomes increasingly proficient in service situations requiring counselling, and can recognize the need for influencing policy,

programme or process within the place of field practice in order to carry out professional responsibilities in the community.

The student must develop a proposal to be submitted to the School and to be approved by the Field Coordinator prior to beginning the practicum. The Field II proposal must be submitted by the following deadline dates:

- March 1 for registration during either term of the regular academic session (Fall/Winter)
- January 1 for registration in the Spring term

Field placements requested in the spring/summer session are dependent upon the availability of faculty and field instructors.

Students who are working in non-social work positions must make arrangements early in their programme to be able to complete their 200-hour Field I placement and their 500-hour Field II placement. The student would normally be expected to request leaves of absence from his/her regular non-social work position. A Field manual is available to aid the student in preparing for the placement, as well as outlining the expectations for satisfactory completion of the practicum.

The Field II practicum is done at or near the end of a student's programme. Minimum of 500 hours. Proposals should be sent to: Field II Coordinator, Maritime School of Social Work, Dalhousie University, Halifax, N.S. B3H 3J5.

Restriction: Restricted to Social Work students

Credits for Competency

SLWK 2500.03: (A) Learning Through General Work Experience (½ credit)

SLWK 2510.03: (B) Self Analysis and Personal Development (½ credit)

SLWK 2520.03: (C) Specific Social Work Skills (½ credit)

SLWK 2530.03: (D) Non-credit Structured Learning Experiences (½ credit)

SLWK 2540.03: (E) Knowledge of Special Field of Practice (½ credit)

Eligible students complete A, and no more than three of B, C, D and E.

Students taking SLWK 2000.06 who are eligible to apply for an exemption from Field I are required to complete topics A and C.

Social Work in a Special Field of Practice Electives

Two elective classes, one in each term, are offered each year from the following:

SLWK 3170.03A or B: Feminist Counseling
Cross-listing: WOST 3855.03

SLWK 3180.03A or B: Family Counselling

SLWK 3200.03A or B: Law and Social Work

420 Social Work

SLWK 3210.03A or B: Social Work in the Medical Field

SLWK 3230.03A or B: Women and Social Change

Cross-listing: WOST 3850.03

SLWK 3250.03A or B: Social Work in Corrections

SLWK 3260.03A or B: Social Work in Industry

SLWK 3270.03A or B: Social Work in Addictions

SLWK 3280.03A or B: Social Planning: Theory and Applications

SLWK 3290.03A or B: Counselling in Social Work Practice

SLWK 3300.03A or B: Independent Study

SLWK 3310.03A or B: Rural Social Work

SLWK 3320.03A or B: Social Work and the Aging

SLWK 3340.03A or B: Social Work with Exceptional Children

SLWK 3350.03A or B: Social Work with Groups

SLWK 3370.03A or B: Child Welfare

Introduction

After Chinese and English, Spanish is the most widely spoken language in the world. It is the native tongue of well over 300 million people living in 22 countries.

Spanish-speaking nations are making international headlines and students of political science, economics, commerce, sociology, anthropology, literature, history, and other academic disciplines feel increasingly interested in this area of the world. Students from these departments are welcome to take our classes on Spanish and Latin American culture, civilization, history, and politics. These classes are conducted in English, the reading is in translation, and there are no prerequisites.

Knowledge of the Spanish language will be useful to all Canadians seeking careers as members of the foreign service, business, interpreters, translators, teachers, professors, critics, editors, journalists, and many others. Our beginning language class especially emphasizes conversational Spanish.

It is a widely recognized fact that some of the best novels and poetry are coming out of Latin America today, providing stimulating and challenging material for many of our literature classes.

If your tastes and abilities lie in the direction of Spanish or Latin American studies, you should consider the possibility of taking Spanish as an area of concentration in a General Bachelor's degree programme, a Bachelor's degree with Honours in Spanish, or with Honours in Spanish and another subject

combined. An undergraduate concentration in Spanish, followed by training in Management Studies, for example, could lead to a variety of possible careers in the Spanish-speaking world in international business and public service.

The Salamanca Programme at the Colegio de España

The Salamanca Programme is a special inter-disciplinary course of instruction designed to allow Dalhousie students to undertake both an intensive study of the Spanish language and classes in Hispanic culture. In order to participate, students must normally have completed SPAN 2010.03 with at least a standing of 'B'. The programme takes place during the fall, lasts for one term, and is offered at the Colegio de España in Salamanca, Spain. Dalhousie University will grant 2½ or 3 credits to those students who successfully complete their classes in Spain. Enquiries and applications should be addressed to the Coordinator of the Programme.

Spanish Studies to be taken at the Colegio de España

SPAN 3100.06A: Advanced Grammar (1 credit)

SPAN 3120.03A: Spanish Art (½ credit)

SPAN 3140.03A: Spanish Literature (½ credit)

SPAN 3160.03A: Spanish History (½ credit)

SPAN 3180.03A: Spanish Culture (½ credit)

Spanish Degree Programmes

Bachelor of Arts with Honours in Spanish

Departmental requirements:

Classes required in Honours:

1000 level: SPAN 1020.06, or equivalent experience

2000 level: SPAN 2000.03, 2010.03 plus 6 other credits at or above the 2000 level

3000 level: SPAN 3020.03, 3030.03, plus one other credit in Spanish at the 3000 level

Note: substitutions are acceptable with the advice and consent of the Department.

Honours Thesis.

Bachelor of Arts with Combined Honours in Spanish and Another Subject

Programmes may be arranged by consultation (as early as possible) with the departments concerned.

Notes

- The "other" classes chosen as electives in the programmes outlined above must satisfy general degree requirements.

422 Spanish

- Combinations of classes other than those set forth above may be chosen after consultation with the Department Chair.
- A student may, with the permission of the Department, be admitted to a Spanish class at an advanced point because of prior knowledge of the language. Such a student, however (except as he/she may be granted transfer credits in the usual way), must normally take the same total number of classes as other students in the same programme.

Advanced Major

Departmental requirements:

Classes required in Advanced Major:

- 1000 level:** SPAN 1020.06, or equivalent experience
- 2000 level:** Three credits at or above the 2000 level and not including classes listed below
- 3000 level:** Three credits at or above the 3000 level

Major in Spanish

Departmental Requirements

Classes required in Major:

- 1000 level:** SPAN 1020.06, or equivalent experience
- 2000 level:** Two credits in Spanish at or above the 2000 level
- 3000 level:** Two credits at or above the 3000 level

Programme should consist of at least four (4) full-credit, upper-level classes taken in the second and third year, four of which must be conducted in Spanish. Any student who wishes to deviate from these basic requirements should consult the Department Chair.

Classes Offered

Classes marked * are not offered every year. Please consult the current timetable on registration to determine if this class is offered.

SPAN 1010.03B: Advanced Beginning Spanish. For students with some slight prior knowledge of Spanish. Students join, at mid-year, classes of SPAN 1020.06 already in progress.

Instructor: Staff
Format: Discussion and conversation 3 hours, lab as needed.
Prerequisite: Knowledge of Spanish to the equivalent of first half of SPAN 1020.06.

SPAN 1020.06E: Beginning Spanish. For students wishing to achieve proficiency in both spoken and written Spanish.
Instructor: Staff

Format: Discussion and conversation 3 hours, language lab and computer-assisted language learning techniques as needed.
Prerequisite: For students with no knowledge or only a slight knowledge of Spanish.

***SPAN 1100.03A or B: Spanish Civilization.** Although it may sound self-evident to Canadian students, this class deals with Spain and the Spaniards. What Spain is and who the Spaniards are, however, may not be that clear-cut for Spaniards themselves. This class is a search for Spain throughout her history (Roman, Arab, Jewish, and Christian Spain), her art, literature, four main languages, and customs. The goal is a clearer picture of one of the most perplexing components of Western Civilization.

Instructor: A. Ruiz Salvador
Format: Lecture and discussion 2 hours, conducted in English.
Prerequisite: No prerequisites. Open to students in all departments. No knowledge of Spanish necessary.

***SPAN 1110.03A or B: Latin American Civilization.** The aim of this class is to provide the non-specialist with a basic understanding of this complex - and fascinating - world area. The first half of the class examines the development of Latin America from pre-Columbian times to the Mexican Revolution. In the second half, by means of a careful study of selected texts, the class examines the way in which the reality of Latin America has shaped a continental cultural identity, producing one of the most dynamic, "readable" world literatures.

Instructor: J. Kirk
Format: Lecture and discussion 2 hours, conducted in English.
Prerequisite: No prerequisites. Open to students in all departments. No knowledge of Spanish necessary.

SPAN 2000.03A: Intermediate Spanish. This class continues the work done in SPAN 1010.03 or SPAN 1020.06. Supplementary reading as necessary.

Instructor: Staff
Format: Discussion and conversation 3 hours, language lab as needed.
Prerequisite: Spanish 1020.06, or equivalent.

SPAN 2010.03B: Reading and Conversation. Emphasis is on perfecting conversational skills as the reading material is discussed in class.
Instructor: Staff
Format: Discussion and conversation 3 hours
Prerequisite: Spanish 2000.03, or equivalent

***SPAN 2069.03A or B: Central America to 1979.** Events in Central America are frequently covered in our media, causing people to believe that "the unrest" there is recent. This class seeks to examine the historical roots of the conflict from the colonial period until the 1970s. The aim

of the class is to provide students with a background knowledge of this area, so that they can better understand current developments there.

Instructor: J. Kirk
Format: Lecture and discussion 2 hours, conducted in English.
Prerequisite: No prerequisite. Open to students in all departments. No knowledge of Spanish necessary.

***SPAN 2070.03A or B: Area Studies on Mexico and Central America.** Following an examination of the Indian heritage, and the colonial legacy of the conquistadors, the class deals principally with the contemporary period, examining the Mexican Revolution and its aftermath, Petroleum Power, the Somoza dynasty, Nicaragua under the Sandinistas, the U.S. role in the region, the human rights situation in Central America, the current El Salvador crisis, and probable developments in the region. The class is designed to provide an understanding of the contemporary reality of this volatile region, in many ways a microcosm of the crucial situation of Latin America as a whole.

Instructor: J. Kirk
Format: Lecture and discussion, 2 hours, conducted in English.
Prerequisite: No prerequisites. Open to students in all departments. No knowledge of Spanish necessary.

***SPAN 2080.03A or B: The History of Modern Spain.** This class focusses on four main historical periods: the Republic of 1931, the Civil War (1936-1939), General Franco's Spain (1939-1975), and the post-Franco Restoration of the Monarchy.

Instructor: A. Ruiz Salvador
Format: Lecture and discussion 2 hours, conducted in English.
Prerequisite: No prerequisites. Open to students in all departments. No knowledge of Spanish necessary.

***SPAN 2100.03A or B: La Civilización de España.** Recommended to students planning to join the Salamanca Programme at the Colegio de España. This class is an exploration of Spain, one of Europe's most perplexing nations, with references to its history, art, literature, languages, and customs.

Instructor: A. Ruiz Salvador
Format: Lecture and discussion 2 hours, conducted in Spanish.
Prerequisite: SPAN 1020.06 and SPAN 2000.03 or equivalent facility in the Spanish language.

***SPAN 2109.03A or B: Cuba from Colonial Times to 1961.** While many people are aware of the impact of the Cuban Revolution of 1959, few are aware of the kind of society that existed in Cuba beforehand. This class seeks to examine the historical roots of the country from the colonial period until the 1960's, with particular attention

being paid to socio-cultural aspects. The objective is to provide students with a background knowledge of this country and its current reality.

Instructor: J. Kirk
Format: Lecture and discussion 2 hours, conducted in English.
Prerequisite: No prerequisites. Open to students in all departments. No knowledge of Spanish necessary.

***SPAN 2110.03A or B: The Cuban Cultural Revolution.** Cuba, the only Communist society in the Western Hemisphere, has undergone a dramatic political and economic transformation. The Revolution has also brought about changes in education, the arts, the role of women, race relations, and athletics. The class focuses on the problems and achievements of the Revolution, the peculiarities of Communism in a Caribbean society, and its effect on literature and the arts.

Instructor: J. Kirk
Format: Lecture and discussion 2 hours, conducted in English
Prerequisites: No prerequisites. Open to students in all departments.

***SPAN 2130.03A or B: Latin American Dictators in the Novel.** The history of Latin America since Independence has been characterized by the rise to power of countless dictators. Some of the best Latin American novels portray these almost mythical figures who to this day wield absolute power in many countries. The class examines the literature and history of this phenomenon with particular attention to the twentieth century, and attempts to discover its roots in militarism, underdevelopment, and imperialism.

Instructor: J. Kirk
Format: Lecture and discussion 2 hours, conducted in English.
Prerequisites: No prerequisites. Open to students in all departments. No knowledge of Spanish necessary.

SPAN 2200.03A or B: La Civilización de Hispanoamérica. The aim of this class is to provide a basic understanding of this varied and historic area. The class examines the development of Latin America from pre-Columbian times to the Mexican Revolution. It also, with the study of selected texts, examines the way in which the reality of Latin America has shaped a continental cultural identity.

Instructor: Staff
Format: Lecture, 2 hours, in Spanish
Prerequisites: SPAN 2000.03, or the equivalent, or permission of the instructor.

***SPAN 2210.03A or B: The Novel of the Mexican Revolution.** The Mexican Revolution (1910-1917) is the first people's revolution of the twentieth century. The prerevolutionary situation, the war, and its aftermath, resulted in some of the finest Latin American novels. This class views these works against the historical and social background of contemporary Mexico.

424 Spanish

Instructor: J. Kirk
Format: Lecture and discussion 2 hours, conducted in English.
Prerequisites: No prerequisites. Open to students in all departments. No knowledge of Spanish necessary.

***SPAN 2230.03A or B: Contemporary Latin American Prose.** This class samples short stories and novels of contemporary prose from throughout Latin America. Included are works by such outstanding experimental writers as Julio Cortázar, Juan Rulfo, Carlos Fuentes, Alejo Carpentier, García Márquez and José Donoso — authors whose vigorous narrative, technical innovation and synthesis of surrealism, myth, and magical realism evidence not only a "new consciousness" in Latin America, but perhaps a rejuvenation in prose art of global consequence.

Instructor: J. Holloway
Format: Lecture and discussion 2 hours, conducted in English
Prerequisite: No prerequisites. Open to students in all departments. No knowledge of Spanish necessary.

***SPAN 2240.03A or B: Contemporary Latin American Prose, Part II.** This class is a continuation of SPAN 2230.03, but may be taken independently of it.

Instructor: J. Holloway
Format: Lecture and discussion 2 hours, conducted in English.

***SPAN 2500.03A or B: Introduction to Spanish Literature.** Study of illustrative works.

Instructor: A. Ruiz Salvador
Format: Lecture and discussion 2 hours, conducted in Spanish.
Prerequisite: SPAN 2010.03, or equivalent

***SPAN 2510.03A or B: Introduction to Latin American Literature.** Study of illustrative works.

Instructor: J. Holloway
Format: Lecture and discussion 2 hours, conducted in Spanish.
Prerequisite: SPAN 2010.03, or equivalent

***SPAN 3010.03A or B: Workshop in Advanced Oral Spanish.** This class intends to build vocabulary, increase fluency and enhance the style of spoken Spanish through continued development and intensive use of oral Spanish skills.

Instructor: Staff
Format: Lecture and discussion 3 hours, conducted in Spanish
Prerequisite: SPAN 2010.03, or equivalent

SPAN 3020A or B: Translation. Exercises in translation from Spanish to English and from English to Spanish.

Instructor: Staff
Format: Lecture and discussion 3 hours
Prerequisite: SPAN 2010.03, or equivalent

SPAN 3030.03A or B: Composition. Training towards accuracy in writing Spanish. Vocabulary-building, free composition.

Instructor: Staff
Format: Lecture and discussion 3 hours
Prerequisite: SPAN 2010.03, or equivalent

***SPAN 3040.06R: Radio-Español.** This class integrates all of the aspects of language study (written, oral, and translation skills with conceptual and cultural comprehension) to put into practice the essence of language: communication. As a seminar group, students will receive instruction on the technical and artistic aspects of radio production, and will create in Spanish a half-hour long radio program of magazine format to be aired on CKDU weekly. This Spanish program will include news reports and cultural studies of the Spanish-speaking world, interviews with members of the local Spanish-speaking community, editorials, music, local news and weather, etc. Academic areas of focus include not only linguistic skills, but also independent research skills in both English and Spanish sources for the program's fixed segments.

Instructor: M. Jiménez
Format: Lecture and discussion 1 hour, radio show ½ hour

Prerequisite: Any two of SPAN 3010.03, SPAN 3020.03, and SPAN 3030.03, or permission of the instructor.

***SPAN 3060.03A or B: Español Avanzado: Puntos Gramaticales Problemáticos.** This class focuses on those particular points of the Spanish language and usage which continue to be difficult for the non-native speaker; i.e., *por/para, ser/estar*, use of the subjunctive, etc.

Instructor: Staff
Format: Lecture, 3 hours
Prerequisites: SPAN 2000.03 and 2010.03, or permission of the instructor

***SPAN 3070.03A or B: Contemporary Latin American History.** This class examines the underlying structures of Latin America through a consideration of the major political and social trends in the continent. After a brief historical overview it studies both general currents (e.g., the Church's role, militarism's growth, and U.S. influence) and specific developments, such as the Mexican and Cuban Revolutions, Chile under Allende and Pinochet, and the Sandinistas' Nicaragua. This helps the student understand the present-day reality of this important world area.

Instructor: J. Kirk
Format: Lecture and discussion 2 hours, conducted in English

Prerequisite: No prerequisites. Open to students in all departments. No knowledge of Spanish necessary.

***SPAN 3080.03A or B: Historia de la España Contemporánea.** This class focusses on four

main historical periods: the republic of 1931, the Civil War (1936-1939), General Franco's Spain (1939-1975), and the post-Franco Restoration of the Monarchy.

Instructor: A. Ruiz Salvador
Format: lecture/discussion, 2 hours, conducted in Spanish
Prerequisite: SPAN 2000.03 and 2010.03 or equivalent facility in Spanish
Exclusion: SPAN 2080.03

***SPAN 3215.03A or B: Seminar in Spanish American Literature.** This class studies in depth, selected topics in Spanish American prose and poetry, in their cultural and aesthetic contexts. Areas of special focus include modernismo, creacionismo and the prose of Quiroga and the Regionalist authors, as well as the more recent inheritors of these traditions; Neruda, Vallejo, Paz and novelists of the "Boom" generation.

Instructor: J. Holloway
Format: Lecture and discussion 2 hours, conducted in Spanish
Prerequisite: SPAN 2010.03, or equivalent

***SPAN 3225.03A or B: Seminar in Modern Spanish Literature.** This class studies in depth, selected topics in Modern Spanish prose and poetry, in their cultural and aesthetic contexts. The focus of the class falls especially on such figures as Galdos, Leopoldo Alas, and writers of the Generation of '98 such as Baroja, Unamuno, Ortega, Machado and Jiménez.

Instructor: A. Ruiz Salvador
Format: Lecture and discussion 2 hours, conducted in Spanish
Prerequisite: SPAN 2010.03, or equivalent

***SPAN 3230.03A or B: Literature of the Spanish Civil War.** A study of representative works.

Instructor: A. Ruiz Salvador
Format: Lecture and discussion 2 hours, conducted in Spanish
Prerequisite: SPAN 2010.03, or equivalent

***SPAN 3500.03A or B: Contemporary Spanish Literature.** A study of representative works.

Instructor: A. Ruiz Salvador
Format: Lecture and discussion 2 hours, conducted in Spanish
Prerequisite: SPAN 2010.03, or equivalent

***SPAN 3510.03A or B: Contemporary Spanish American Literature.** A study of representative works.

Instructor: J. Holloway
Format: Lecture and discussion 2 hours, conducted in Spanish
Prerequisite: SPAN 2010.03, or equivalent

***SPAN 3800.03A or B: Seminar in Spanish Film.** This class provides students with the basic elements of cinematic language and gives them a critical overview of the Spanish film production from the 1930's to the present day. The works of directors such as L. Buñuel, Carlos Saura, Victor

Erice, Mario Camus, Pedro Almodóvar, and others are previously viewed by students and discussed in class.

Instructor: M. Jiménez
Format: lecture/discussion, 2 hours, conducted in Spanish
Prerequisites: SPAN 2000.03 and 2010.03

***SPAN 3810.03A or B: Seminar in Latin American Film.** This class provides the student with the basic elements of cinematic language and gives them a critical overview of Latin American film production emphasizing that of Argentina, Mexico, and Cuba. Films by Leopoldo Torre-Nilsson, Leonardo Favio, A. Aristarain, M.L. Bernberg, Emilio Fernández, Paul Leduc, Tomas Gutiérrez-Alea, Humberto Solas, and others are previously viewed by the students and discussed in class.

Instructor: Maria Jiménez
Format: lecture/discussion, 2 hours, conducted in Spanish
Prerequisites: SPAN 2000.03 and 2010.03

SPAN 3900.03A or B: Tópicos en Estudios Hispánicos Avanzados. This class offers the student an opportunity to study aspects of hispanic culture not already included in other language offerings or in literature classes more narrowly defined by period, genre, etc. It takes advantage of special research interests of staff or the unique expertise of visiting faculty to provide instruction in Spanish not regularly available here.

Instructor: Staff
Format: Lecture, 2 hours, in Spanish
Prerequisite: SPAN 2010.03, or equivalent, or permission of the instructor

***SPAN 3910.03A or B: Tópicos en Estudios Hispánicos Avanzados, Part II.** This class for advanced Spanish students continues study of the nature described in Spanish 3900.03, but is independent of it and may be taken separately from it.

Instructor: Staff
Format: Lecture, 2 hours, in Spanish
Prerequisite: SPAN 2010.03, or equivalent, or permission of the instructor

***SPAN 3970.03R: Directed Reading in Spanish American Literature**

***SPAN 3975.03R: Directed Hispanic Studies**

***SPAN 3980.03R: Reading class for majors**

***SPAN 3990.03R: Reading class for majors**

***SPAN 4040.03A or B: Advanced Style and Syntax**

Instructor: Staff
Format: Lecture and discussion 2 hours
Prerequisite: SPAN 3020.03, or equivalent

***SPAN 4500.03A or B: Golden Age Theatre**

Instructor: Staff
Format: Lecture and discussion 2 hours
Prerequisite: SPAN 3020.03, or equivalent

426 Spanish

***SPAN 4510.03A or B: Golden Age Poetry and Prose**

Instructor: Staff

Format: Lecture and discussion 2 hours

Prerequisite: SPAN 3020.03, or equivalent

SPAN 4960.03R: Reading class for Honours students

***SPAN 4985.03R: Independent Advanced Hispanic Studies**

SPAN 4990.03R: Reading class for Honours students

 W. Blanchard, MSc (UBC)

Please refer to the entry for the Department of Mathematics, Statistics and Computing Science in this calendar for a full listing of the members of the Department and information on other programmes offered by the Department.

Degree Programmes

Statistics is the discipline which is concerned with the organization, display and interpretation of data. By a study of the uncertainty inherent in scientific hypotheses, statistics enables us to make inferences about these hypotheses based on observations with error.

There are several honours programmes, a 20-credit advanced major and a 15-credit major programme in Statistics available to students. Any student interested in such a course of study should consult the Director of Statistics, Department of Mathematics, Statistics and Computing Science.

Students should consult the "Degree Requirements" section of this calendar for specific regulations.

Honours in Statistics

The honours programme in Statistics will provide students with a comprehensive knowledge of both theoretical and applied statistics and will enable students to move easily into challenging employment or graduate work in statistics.

Departmental Requirements

Classes required in Honours:

- 1000 level: MATH 1000.03/1010.03 or 1500.06, STAT 1060.03*, COMP 1400.03/1410.03**
- 2000 level: MATH 2000.03 or 2500.03, MATH 2030.03/2040.03 or 2135.03, STAT 2060.03, 2080.03**, 2050.03** plus 2 to 6 other half credits in Statistics at or above the 2000 level but not including classes listed below.
- 3000 level: STAT 3340.03, 3350.03, 3360.03, 3380.03, 3460.03; MATH 3090.03; MATH 3080.03 or 3100.03
- 4000 level: STAT 4060.06, 4620.03

Honours qualifying exam.

*The requirement to take STAT 1060.03 may be waived for students entering the programme in their second year.

**Some students may take either COMP 1400.03/1410.03 and/or STAT 2050.03, STAT 2080.03 in the first year of their degree program.

It is recommended that students take STAT 2300.03 and COMP/MATH 3170.03 in either the second or third year of their degree programme.

Honours Comprehensive Examination

Prerequisite: Successful completion of the third year Honours Statistics programme. The student will carry out an independent statistical study or act as a major statistical contributor to a research project under the supervision of a faculty member. In addition the student will participate in the Statistical Consulting service through consulting workshops.

Combined Honours

Students interested in taking honours in Statistics combined with another subject should consult the Director of Statistics through whom a suitable course of study can be arranged.

Advanced Major in Statistics

Departmental Requirements

Classes required in Advanced Major:

- 1000 level: MATH 1000.03/1010.03 or 1500.06, STAT 1060.03*, COMP 1400.03/1410.03

- 2000 level:** MATH 2000.06, 2030.03/2040.03 or 2135.03; STAT 2060.03, 2080.03, 2050.03
- 3000 level:** STAT 3340.03, 3360.03, 3380.03 or 3350.03, 3460.06 and at least one more credit in Statistics at or above the 3000 level

*The requirement to take STAT 1060.03 may be waived for students entering the programme in the second year.

Note: Some students may take STAT 2050.03/2080.03, COMP 1400.03/1410.03 in their 1st year, of their degree programme. It is recommended that students take STAT 2300.03 and MATH 3170.03 in either the second or third year of their degree programme.

Major in Statistics

Departmental Requirements

Classes required in major:

- 1000 level:** MATH 1000.03/1010.03, STAT 1060.03.
- 2000 level:** MATH 2030.03 and 2040.03; STAT 2060.03, 2080.03 and 2050.03
- 3000 level:** STAT 3340.03, 3360.03, 3380.03 or 3350.03, 3460.03

Note: Some students may take STAT 2050.03 and/or STAT 2080.03 in the spring term of their 1st year if they have taken STAT 1060.03 in the fall term. Students are also advised to take MATH 2001.03/2002.03 (formerly MATH 2000.06), STAT 2300.03 and COMP 1400.03/1410.03 in their 2nd or 3rd year.

Co-Operative Education Programme

The Co-operative education programme integrates a 20-credit programme of 8 academic terms with 4 work terms of relevant industrial/laboratory employment. The work terms, each of 4 months duration, are spent in industrial, business and laboratory positions. The work experience helps students see the applicability of their training in statistics, mathematics, and computing science and helps them make intelligent career choices. Upon successful completion of the programme the University transcript indicates that the programme was a co-operative one.

Advanced Major students should complete a Co-op degree in 4½ years; Honours Statistics students should expect to take 5 years.

Students interested in a Co-op programme in statistics or a combined programme with statistics should consult the Director of Statistics or the Director of Co-op Education in the Department of Mathematics, Statistics and Computing Science, preferably early in their course of study.

Honours Co-op in Statistics

Classes required in Honours Co-op:

- Same as for the regular Honours in Statistics as above with the addition of the following:
- 4 Co-op Workterms: STAT 8891.00, 8892.00, 8893.00, 8894.00

Advanced Major Co-op in Statistics

Classes required in Advanced Major Co-op:

- Same as for the regular Advanced Major in Statistics with the addition of the following:
- 4 Co-op Workterms: STAT 8891.00, 8892.00, 8893.00, 8894.00

More details on the Co-op programme appear under the Co-operative Education in Science entry in this calendar.

Classes Offered

Credit may not be obtained twice for the same class even if the numbers have been changed.

STAT 1060.03A or B: Introductory Statistics for Science and Health Sciences. This course gives an introduction to the basic concepts of statistics through extensive use of real-life examples drawn from a variety of disciplines. The first part of the course is about designing experiments properly and then describing and summarizing the results of the studies by using descriptive statistics. From there we move to analyzing relationships between variables. In the final part of the course, we develop the basics of statistical inference explaining how to make valid generalizations from samples to populations. Both estimation and hypothesis testing are carried out for one and two sample problems for both means and proportions as well as for simple linear regression. Students will learn to use the statistical package MINITAB. Natural sequels for this class are STAT 2080.03, 2050.03 and 2060.03.

Format: Lecture 3 hours, tutorial 1 hour, MLC

Prerequisite: Nova Scotia Mathematics 442 or equivalent

Cross-listing: MATH 1060.03

STAT 2050.03A or B: Exploratory Data Analysis. This course is designed to introduce the student to exploratory data analysis and graphical techniques making extensive use of statistical software such as S or S-plus. Data sets from both experimental and observational studies will be used extensively and the emphasis will be on finding patterns and structure in the data. The student completing the class will be able to do sophisticated graphing, data reduction and data handling. The skills learned will be very useful in several of the advanced statistics classes.

Format: Lecture 3 hours

Prerequisite: STAT 1060.03

STAT 2060.03A or B: Introduction to Probability and Statistics. Rigorous introduction to probability and statistical theory.

Subject matter is developed systematically beginning with the fundamentals of probability and following with statistical estimation and testing. The interrelationship between probability theory, mathematical statistics and data analysis will be emphasized. Topics covered include elementary probability, random variables, distributions, estimation and hypothesis testing. Estimation and testing are introduced using maximum likelihood and the generalized likelihood ratio. Natural sequels for this class are STAT2080.03 and 3360.03

Format: Lecture 3 hours, MLC
Prerequisite: MATH 1000.03/1010.03 or 1500.06

Cross-listing: MATH 2060.03, ECON 2060.03

STAT 2080.03A or B: Statistical Methods for Data Analysis and Inference. This class introduces a number of techniques for data analysis and inference commonly used in the experimental sciences. The class begins with an introduction to model building in linear models and develops the techniques required for multiple regression. From here we consider analysis of variance, factorial designs, analysis of covariance using the general techniques for linear models. The last part of the class will include techniques for two and three way tables along with logistic regression. The use of a computer package for carrying out the computations will be an integral part of the course. Students will design and carry out a simple experiment as part of this class. A natural sequel for this class is STAT 3340.03.

Format: Lecture 3 hours, MLC
Prerequisite: STAT 1060.03 or STAT 2060.03
Cross-listing: MATH 2080.03, ECON 2280.03

STAT 2300.03B: Introduction to Mathematical Modelling Using Algebra. See class description for MATH 2300.03 in the Mathematics section of this calendar.

STAT 2600.03A or B: Theory of Interest. See class description for Math 2600.03 in the Mathematics section of this calendar.

SCIE 3000.06R: Science Fundamentals. See class description in Science, Interdisciplinary section of this calendar.

STAT 3340.03A: Regression and Analysis of Variance. A thorough treatment of the theory and practice of regression analysis. Topics include: fitting general linear models using matrices, optimality of least squares estimators (Gauss-Markov theorem), inferences, simple and partial correlation, analysis of residuals, case-deletion diagnostics, polynomial regression, transformations, use of indicator variables for analysis of variance and covariance problems, model selection, and an introduction to nonlinear least squares. This class makes extensive use of computer packages.

Format: lecture 3 hours
Prerequisite: STAT 2080.03, MATH 2030.03 and either MATH 1010.03 or STAT 2060.03

Cross-listing: MATH 3340.03

STAT 3350.03B: Design of Experiments. The aim of the class is to develop the fundamental statistical concepts required for designing efficient experiments to answer real questions. The first main subject is unit variation and control. The basic concepts of replication, blocking and randomization are each examined. The second main subject is treatment questions and structure. The ideas of factorial designs, split-plot and incomplete plot designs are presented. We conclude with a look at response surface methodology.

Format: lecture, 3 hours
Prerequisite: STAT 3340.03 or consent of instructor

Cross-listing: MATH 3350.03

STAT 3360.03A: Probability. The concepts and application of probability. Topics include the classical discrete and continuous distributions, including the binomial, hypergeometric, multinomial, Poisson, uniform, exponential and normal; definitions and properties of random variables; independence; sums of independent random variables, including the law of large numbers and central limit theorem; conditional probability; and the bivariate normal distribution. Examples will be taken from the natural and physical sciences.

Format: lecture 3 hours
Prerequisite: STAT 2060.03 and MATH 2000.06

Cross-listing: MATH 3360.03

STAT 3380.03A or B: Sample Survey Methods. The development of design and analysis techniques for sample surveys. Topics include simple, stratified and systematic random sampling, ratio and regression estimation, sub-sampling with units of equal and unequal size, double-multistage and multiphase sampling, non-sample errors and non-respondents.

Format: Lecture 3 hours
Prerequisite: STAT 2060.03
Cross-listing: MATH 3380.03

***STAT 3390.03A or B: Statistical Computing.** The class will provide an introduction to the principal computational methods which are important for data analysis. Major analyses usually require extensive computing; hence techniques which ensure the validity and accuracy of the computations are necessary. Topics covered will include, numerical computations, linear models, Monte Carlo methods and random number generators.

Format: Lecture 3 hours
Prerequisite: STAT 2080.03, MATH 2040.03, COMP 1210.03 or 1410.03

Cross-listing: COMP 3390.03

STAT 3460.03B: Intermediate Statistical Theory. This class provides an intermediate level coverage of statistical theory to provide a framework for valid inferences from sample data. The methods developed are based on the likelihood function and are discussed from the frequentist, likelihood, and Bayesian approaches. The problems of point estimation, interval estimation and hypothesis testing and the related topics of sampling distributions, sufficiency, and Fisher Information are discussed.

Format: Lecture 3 hours
Prerequisite: STAT 3360.03
Cross-listing: MATH 3460.03

STAT 4060.06R: Advanced Statistical Theory. This class is intended to provide a solid basis in statistical theory. The classical theory of estimation and testing provides a starting point. The Rao-Blackwell theory, Cramer-Rao bound, Neyman-Pearson theory and uniformly most powerful tests will be covered. From here, conditioning and invariance will be used to obtain good procedures in more complex situations. The theory will be developed in the context of specific problems including the general linear model.

Format: Lecture 3 hours
Prerequisite: STAT 3460.03
Cross-listing: MATH 4060.06, STAT 5060.06

STAT 4070.03A or B: Multivariate Distributions. This course deals with the distribution theory of the observations on more than one variable. Topics covered include: Multivariate Normal Distribution, The Wishart Distribution, Hotelling's T, Distributions Associated with Regression, Canonical Correlations and Discriminant Analysis.

Format: Lecture 3 hours
Prerequisite: STAT 3460.03

STAT 4090.03A or B: Probability. The theory of probability in Euclidean space. Topics include measure and integration, probability measures, the definitions and properties of random variables and distribution functions, convergence concepts, Borel-Cantelli lemmas, laws of large numbers, characteristic functions and central limit theorems, conditional probability and expectation.

Format: lecture 3 hours
Prerequisite: STAT 3360.03 and a third year analysis class, instructor's consent
Cross-listing: MATH 4090.03/5090.03, STAT 5090.03

STAT 4100.03A or B: Survival Analysis. This course is an introduction to survival analysis methods and will cover both the statistical theory behind the methods, and the application of various techniques. Topics to be discussed include survivorship and hazard functions and their relationship to lifetime distributions and densities; modes of censoring; the Kaplan-Meier estimate of the survivor function; parametric survival time distributions; proportional hazard

models and their semi-parametric estimation; accelerated life models, log rank tests, including the Mantel-Haenszel test; and goodness of fit measures.

Format: Lecture 3 hours
Prerequisite: STAT 3340.03 and STAT 3460.03, or equivalent
Cross-listing: STAT 5100.03

STAT 4200.03A or B: Nonlinear Regression. This course is intended to familiarize the student with methods for the design and analysis of experiments using nonlinear regression models. Topics include a review of the geometry of linear regression and its extension to nonlinear regression, numerical methods for finding the least squares estimates, exact and approximate methods for confidence region construction, optimal design for precise parameter estimation, assessing influence, and insights from differential geometry such as curvature measures.

Format: Lecture 3 hours
Prerequisite: STAT 3340.03 and 3460.03 or permission of the instructor
Cross-listing: STAT 5200.03

STAT 4350.03A or B: Applied Multivariate Analysis. The class deals with the stochastic behaviour of several variables in systems where their interdependence is the object of analysis. Greater emphasis is placed on practical application than on mathematical refinement. Topics include classification, cluster analysis, categorized data, analysis of interdependence, structural simplification by transformation or modelling and hypothesis construction and testing.

Format: Lecture 3 hours
Prerequisite: STAT 3340.03 and MATH 2135.03 or 2040.03
Cross-listing: STAT 5350.03

STAT 4360.03A or B: Robust Statistics. Robust Statistics are those which provide protection against violation of assumptions underlying the statistical procedure. We will develop basic concepts including sensitivity, influence and breakdown of estimates and tests. Classical procedures will be evaluated in terms of robustness and alternate techniques developed based on weighted least squares and/or median based generalizations. Starting from the location problem, we will move on to regression and to multivariate problems by means of robust covariance estimates. We will also consider robust techniques in time series. Some simple programming will be required to implement various procedures.

Format: Lecture 3 hours
Prerequisite: STAT 3460.03 and 3340.03
Cross-listing: STAT 5360.03

STAT 4370.03A or B: Stochastic Processes. The theory and application of stochastic processes. Topics to be discussed include the Poisson process, renewal theory, discrete and continuous

time Markov processes, and Brownian motion. Applications will be taken from the biological and physical sciences, and queueing theory.

Format: lecture 3 hours
Prerequisite: STAT 3360.03 or instructor's consent

Cross-listing: STAT 5370.03

STAT 4390.03A or B: Time Series Analysis I. Time series analysis in both the time and frequency domain is introduced. The course is applied and students are required to develop their own computer programs in the analysis of time series drawn from real problems. Topics to be discussed include the nature of time series, stationarity, auto and cross covariance functions, the Box-Jenkins approach to model identification and fitting, power and cross spectra and the analysis of linear time-invariant relationships between pairs of series.

Format: Lecture 3 hours
Prerequisite: STAT 3340.03, 3460.03, or instructor's consent

Cross-listing: OCEA 4210.03/5210.03, STAT 5390.03

STAT 4400.03A or B: Time Series Analysis II. This course is concerned with the analysis of multivariate time series, and provides an advanced coverage of the statistical theory behind time series methods. Topics to be covered include theoretical aspects of Box-Jenkins models, Kalman filtering and the state space model, and the frequency domain approach to transfer function estimation.

Format: Lecture 3 hours
Prerequisite: STAT 4390.03, 4350.03, or instructor's consent

Exclusion: Credit may be given for only one of STAT 4400.03 and old STAT 4080.03.

Cross-listing: OCEA 4080.03

STAT 4410.03A or B: Advanced Topics in Time Series Analysis. This is an advanced course in the analysis of time series and related stochastic processes. The topics will vary from year to year, and may include spatial time series, nonstationary time series, nonlinear and non-Gaussian models, fitting of dynamical systems models, ployspectra, filtering and smoothing, and the analysis of point processes data.

Format: lecture 3 hours
Prerequisite: Stat 4390.03
Cross-listing: STAT 5410.03

STAT 4620.03A or B: Data Analysis. A variety of statistical models which are useful for the analysis of real data are discussed. Topics may include: generalized linear models, such as logistic regression and Poisson regression, models for multidimensional contingency tables, ordered categories and survival data.

Format: lecture 3 hours
Prerequisite: STAT 3340.03, 3460.03, or instructor's consent

Cross-listing: STAT 5620.03

STAT 8700.00: Co-op Seminar

STAT 8891.00: Co-op Work Term I

STAT 8892.00: Co-op Work Term II

STAT 8893.00: Co-op Work Term III

STAT 8894.00: Co-op Work Term IV

Introduction

The Dalhousie Theatre Department offers different ways to study the theatre:

- (1) You can undertake programmes that lead to a university degree: an Honours BA (4 years), a General BA (3 years);
- (2) You can enrol in a programme in Costume Studies which combines academic study and research skills with creative design interpretation and applied skills, leading to: a Certificate (2 years), a Diploma (3 years);
- (3) You can select certain theatre classes to reinforce and complement your studies in other disciplines offered by the university;
- (4) You can enrol in one class, from a special group, as a part-time or extension student.

Basically, the degree programmes involve a curriculum of theatre classes, and a selection of other classes in different disciplines. The university has a set of regulations which specify how these programmes must be arranged. These regulations are all listed earlier in this calendar, and prospective students should refer to them to become aware of the opportunities offered. There are a surprising number of different ways

to arrange one's studies; what we recommend is the basic structure you should follow if theatre is your primary interest.

Degree Programmes

BA in Theatre (Theatre Studies) (3 years; 4 years with Honours)

Departmental Requirements

Year 1: THTR 1000.06 and either THTR 1050.06 or 1800.06

BA with Honours in Theatre (4 years)

Students who wish to follow a programme of theatre studies that keeps the whole of the theatre in perspective choose this programme. They must maintain a high scholastic level of performance to remain in this programme (B- or better in all classes). Only theatre classes are listed. The Honours programme requires at least nine and not more than eleven theatre credits beyond the 1000 level, including two beyond the 3000 level. At least the equivalent of two full credits must be taken from each of the following three groupings:

History:

THTR 2011.03, 2012.03, 2400.06, 3400.06, 3500.06, 3900.06, 4500.03, 4501.03

Theory:

THTR 2300.06, 2900.06, 3510.03, 3511.03, 4700.06, 4900.06, 4910.06

Performance:

THTR 2001.06, 2002.03, 3100.06, 3200.06, 3600.06, 4200.06, 4710.06, 4100.06

A comprehensive exam must also be passed.

BA with a Major in Theatre (3 years)

You can major in theatre in a three-year BA programme (15 classes). This requires at least four and not more than eight theatre classes beyond the 1000 level, including two beyond the 2000 level. You may also take an advanced major after consultation with the Undergraduate Advisor. At least the equivalent of one full credit must be taken from each of the three groupings listed above.

BA in Theatre (Acting) (3 years; 4 years with Honours)

There are two degree programmes in Acting. The BA in Acting (3 years) and the BA Honours Acting (4 years). These programmes share a common curriculum for the first two years. Auditions will be held at the end of the first year for admission into the upper years of study. At the end of the second year students will be advised as to their ability to succeed in the 4 year Honours Programme. Students who elect to complete their degree in 3 years will design a curriculum for their final year under faculty guidance which will include a performance credit.

BA with Honours in Theatre (Acting)

(4 years)

- Year 1:** THTR 1000.06, 1800.06, plus three classes in other subjects
- Year 2:** THTR 2800.06/2810.06, 2011.03, 2012.03, plus two classes in other subjects
- Year 3:** THTR 3800.06/3810.06/3820.06, plus two classes in other subjects
- Year 4:** THTR 4800.06/4810.06/4820.06, THTR 4100.06, plus one class in another subject

A comprehensive exam/thesis has to be completed as a 21st credit.

BA in Theatre (Acting) (3 years)

- Year 1:** THTR 1000.06, 1800.06, plus three classes in other subjects
- Year 2:** THTR 2800.06/2810.06, 2011.03, 2012.03, plus two classes in other subjects
- Year 3:** THTR 3100.06, two other Theatre electives one of which must be at or above the 3000 level, plus two classes in other subjects

The main objective of the Acting Programme is to satisfy the needs of those students who have decided to pursue a career in Theatre. The programme is progressive in nature, culminating in a company of student actors who perform in the DTDP Season in their third and fourth years. As it is a progressive programme students move through all four years together and must, in addition to meeting degree requirements, achieve adequate grades in all acting programme courses, as well as be recommended by the acting faculty in order to advance to the next year's course of study. The programme provides these students with a pre-professional training programme and the benefits of a liberal education at a major Canadian University.

BA in Theatre (Scenography & Technical Scenography) (3 years; 4 years with Honours)

People from very different backgrounds are attracted to the study of scenography. Students with considerable art school or architecture background are offered especially tailored programmes, and should contact the scenography professor to work out a suitable programme of studies in scenography. Students starting with a keen interest and little formal background in art or architecture are admitted if they meet the university entrance requirements, and should then plan to follow the following programme:

- Year 1:** THTR 1000.06, 1050.06; plus three classes in other subjects
- Year 2:** THTR 2700.06, 2011.03, 2012.03, 2060.06/2070.06; plus one class in another subject

Year 3: THTR 3060.06/3070.06; two other Theatre electives, plus one class in another subject.

Year 4 (optional): Three other Theatre electives (at least two of these must be on the 4000 level); plus two classes in other subjects.

A comprehensive exam/project has to be completed as a 21st credit.

Students wishing to pursue the scenography specialty are urged to make an appointment with the scenography professor before they register to ensure they plan their specific programme in line with their particular needs.

Combined BA and BEd

The Theatre Department in conjunction with the School of Education may offer a 4-year programme leading to the BA and BEd degrees. The outline of this programme is approximately as follows:

- Year 1:** (5 Credits) THTR 1000.06, 1800.06, introductory class in minor area* (1 full credit), and two Arts and Social Sciences electives (2 full credits).
- Year 2:** (5 Credits) THTR 2000.03 and 2001.03, 2900.06, further classes in minor area* (2 full credits), ½ credit class in educational foundations, ½ credit Arts and Science or other elective.
- Year 3:** (6 Credits) THTR 3200.06, 2011.03, 2012.03, further classes in minor area* (2 full credits at 2000* level), two ½ credit classes in educational foundations, and one credit Arts and Science or other elective.
- Year 4:** (6 credits) EDUC 4620.06, one credit class in Field Experience, one credit in methods area (elementary option: 2 credits), one credit in special education, ½ credit class in educational foundations, further class in minor area* (1 full credit), and ½ credit Arts and Science or other elective.

*The minor area must also be a recognized teachable subject.

For further information, consult the Undergraduate Advisor.

Costume Studies, Certificate in 2 years, Diploma in 3 years

This programme combines academic study and research skills necessary to the understanding of costume in its broadest context, with the creative interpretation of design and the applied skills of the costumer whose goal is the theatre, film, museums, or historical animation.

Students entering this programme must meet university entrance requirements. Students taking the two-year Certificate take all ten credits in two years. The third year, leading to a

Diploma in Costume Studies, is reserved for students who have a special interest in theatre design, wardrobe management/cutting, film coordination/continuity, or museum studies.

Some classes in Costume Studies are open to general BA students.

Please see class listings.

Students taking the two-year Certificate in Costume Studies are required to combine the classes in the following manner:

Year 1:

- THTR 1400.03A or B: Designers' Language
- THTR 1405.03A or B: Textile History: An Introductory Survey
- THTR 2400.06R: Costume and Identity: from Antiquity - 1700
- THTR 2405.03A or B: The Aesthetics of Contemporary Costume
- THTR 2450.06R: Costume Technology I
- THTR 2455.03A or B: Historical Introduction to Tailoring
- THTR 3405.06R: The Aesthetics of Historical Costume

Year 2:

- THTR 3408.03A or B: The Aesthetics of Ritual Costume
- THTR 3455.03A or B: Historical Introduction to Modern Tailoring
- THTR 3450.03A or B: Costume Technology II
- THTR 4400.06R: Costume and Identity: 1700-1950
- THTR 4450.03A or B: Costume Technology III
- THTR 4451.03A or B: The Fabrication of Textiles
- THTR 4452.03A or B: Costume as Sculpture
- THTR 4453.06R: Costume in Performance

Students taking the three-year Diploma in Costume Studies are required to take the following classes in their third year:

- THTR 4456.06R/4457.06R/4458.06R: Advanced Seminar in Costume Studies
- Elective
- Elective

The following classes are open to Costume Studies students only, except by special permission of Costume Studies instructors:

THTR 2450.06R: Costume Technology I. This class builds upon the knowledge gained in THTR 1405.03, emphasizing sewing skills and techniques, and exploring their multitudes of applications to historical and modern costume. This class is part of the Costume Studies Program.

Format: Lecture/lab 4 1/2 hours

Prerequisite: See Costume Studies class combinations

THTR 2455.03A or B: Historical Introduction to Tailoring. This class introduces the student to the process of tailoring as it originated in the Renaissance, and its development down through

the sixteenth, seventeenth, eighteenth, nineteenth and twentieth centuries. Emphasis is placed on the purpose of underpaddings, understructures and the techniques of fixing them in place. This class is part of the Costume Studies Programme.

Format: Lecture/lab 4½ hours

Prerequisite: See Costume Studies class combinations

THTR 3450.03A or B: Costume Technology II. In this year the student will apply the knowledge from THTR 1405.03 and THTR 2450.06 to create modern and historical costumes for the stage. This class is part of the Costume Studies Programme.

Format: Lecture/lab 4½ hours

Prerequisite: See Costume Studies class combinations

THTR 3455.03A or B: Historical Introduction to Modern Tailoring. The "Systems" of Pattern Drafting from the early nineteenth century to the twentieth century. Utilizing traditional tailoring techniques, the process of professional tailored garments is studied in detail. This class is part of the Costume Studies Programme.

Format: Lecture/lab 4½ hours

Prerequisite: See Costume Studies class combinations

THTR 4450.03A or B: Costume Technology III. This class extends the expertise in costume creation developed in THTR 1405.03, THTR 2450.06, and THTR 3450.03 to examine techniques of fine finish as students prepare their costume "masterpiece". This class is part of the Costume Studies Programme.

Format: Lecture/lab 4½ hours

Prerequisite: See Costume Studies class combinations

THTR 4451.03A or B: The Fabrication of Textiles. The analysis and creative exploration of textiles. Techniques of surface decoration are studied in preparation for original interpretation of Costume Design. Textile manipulation techniques of painting, quilting, beading and various theatrical applications of these techniques will be studied. This class is part of the Costume Studies Programme.

Format: Lecture 2½ hours, lab 2 hours

Prerequisite: See Costume Studies class combinations

THTR 4452.03A or B: Costume as Sculpture. Based less in abstract principles and more in creativity, this class examines sculptural forms in a human context to facilitate modern and historical costume design. The student works directly on the human body or mannequin to gain proficiency in modelling textiles to shape costume. This class is part of the Costume Studies Programme.

Format: Lecture/demonstration/lab 4½ hours

Prerequisite: See Costume Studies class combinations

THTR 4453.06R: Costume in Performance. In this class students will demonstrate their fluency in costume creation with design interpretations for theatrical production. Students will examine problems related to costume as an expression and extension of theatrical character development. The Theatre Department plays provide a venue for students to develop interpersonal and technical skills. Students work as an integral part of a team whose work will ultimately lead to "Opening Night". This class is part of the Costume Studies Programme.

Format: Lecture/lab 4½ hours
Prerequisite: See Costume Studies class combinations

THTR 4456.06R/4457.06R/4458.06R: Advanced Seminar in Costume Studies. Students showing an interest in and proficiency for theatre design, wardrobe management/cutting, film co-ordination/continuity, or museum studies may apply to take these classes as independent study. Using an integrative approach by applying the research, analytical, interpretive and creative skills learned in previous Costume Studies classes, students will explore costume in areas of special interest in theatre, film and museum studies, with the guidance of members of the faculty. These classes are part of the Costume Studies Programme.

Format: Seminar 9 hours
Prerequisite: Permission of Costume Studies Faculty

Facilities

The department is located in the theatre wing of the Dalhousie Arts Centre. The theatre wing is a self-sufficient unit involving one proscenium theatre, two studios, and supporting workshops.

The department is developing close collaboration in certain theatre work with the Neptune Theatre and other regional theatres.

Some theatre classes by the nature of the work involved have a restricted enrolment. All students wishing to take any class in theatre should therefore first consult with the department.

Please note: Theatre by its nature requires evening work. Students, especially in acting, scenography, and costume classes, are advised not to undertake other evening commitments.

Classes Offered

Note: Classes marked * are not offered every year. Please consult the current timetable on registration to determine if these classes are offered.

Classes in the Degree Programme

Year 1

THTR 1000.06R: A Survey of Dramatic Literature. The purpose of this class is twofold:

first, to introduce students to the study of dramatic literature, and to provide them with a knowledge of different styles and genres in various historical periods; and secondly, to instruct students in the methodology of writing in the humanities. Students will be able to address specific problems within their papers and discuss possible questions on an individual basis in writing tutorials. This class fulfils the writing requirement of Dalhousie University and is a prerequisite for all Theatre Majors.

Format: Writing Requirement, lecture/tutorial 3 hours

***THTR 1010.06R: An Introduction to Dramatic Literature.** (Summer Session only). The purpose of this class is to introduce students to the study of dramatic literature, and to provide them with a knowledge of different styles and genres in various historical periods. It is designed to serve as an elective for the student who wishes to take a single class in theatre. This class may serve as a prerequisite to advanced theatre classes in lieu of THTR 1000.06R.

Format: Lecture/discussion 10 hours

THTR 1050.06R: Introduction to Theatre Organization and Stagecraft. This class takes the student behind the scenes to understand how a play is brought to life. Scenography is discussed and explored. Students are introduced to construction, properties, sound, lighting and costume for the stage. How a script is staged determines how an audience will understand the ideas inherent to the script. Methods and procedures for theatre productions make up the substance of this class. This class is a prerequisite for the scenography classes.

Format: Lecture 3 hours

***THTR 1200.06R: The Nature of Acting.** (Summer Session only). This class is designed to be a basic exploration of the fundamental techniques required by the performer. It may be taken as a substitute for THTR 1800.06. Through the use of theatre games (C. Barker), introductory improvisational exercises (V. Spolin), and physical awareness work (R. Benedetti), the student develops the imaginative and emotional awareness that serves as the foundation of the performers' technique.

Format: Lecture 6 hours

THTR 1400.03A or B: Designers' Language. This class explores components of costume design, offering a discourse on design language, colour theory, symbolism, and thematic intent as it relates to theatre, and leads to an understanding of theatrical characterization. This class may be taken by general BA students, and is also part of the Costume Studies Programme.

Format: Lecture/demonstration 3 hours

THTR 1405.03A or B: Textile History: An Introductory Survey. An introduction to the history of the technology of textiles, through scientific study and exploration, this class provides an opportunity to discover the origins,

structure, and characteristics of fibres, through to the woven cloth. Fibres are analyzed from an historical perspective, beginning with the earliest primitive body coverings of man, moving through the natural fibres worn throughout the ages, and ending with the development of man-made fibres in the twentieth century.

Through the examination of source material such as artifacts from the eighteenth and nineteenth centuries, the student is enabled to acquire an in-depth knowledge of textiles in their cross-cultural and historical context. This class may be taken by general BA students, and is also part of the Costume Studies Programme.

Format: Lecture/lab 3 hours

THTR 1800.06R: An Introduction to Acting and Performance. This class offers an introduction to a variety of ways to understand performance. Practical exercises coupled with lectures and seminars provide a useful introduction to the communication and facilitation necessary for education students, and anyone interested in the inter-social dynamics of human behaviour. This class is a prerequisite for all acting classes. An auxiliary fee must be paid upon registration in this class.

Format: Lab/seminar 3 hours

Year 2

***THTR 2001.03A: Performance Drama I.** This class will examine major realistic and non-realistic approaches to performance in the twentieth century. Both theoretical and practical sides of the work will be explored. Consideration will also be given to performance as a factor in social interaction.

Format: Lecture/lab 6 hours

Prerequisite: THTR 1000.06

***THTR 2002.03B: Performance Drama II.** This workshop class will explore in greater depth and in practical terms some of the concepts of performance considered in THTR 2001.03. Some public performance is likely.

Format: Lecture/lab 6 hours

Prerequisites: THTR 2001.03

THTR 2011.03A or B: The History of the Theatre from its Origins to the Renaissance. This class gives students an opportunity to study various aspects of the early history of theatre. Specific topics covered include the origins of theatre, the Greek theatre, the Roman theatre, the medieval theatre and the theatres of the Italian Renaissance and of Shakespeare. Although there is no formal prerequisite for the class, students should normally be in their second year of study. A background in theatre, history, and/or dramatic literature will be an advantage.

Format: Lecture 3 hours

THTR 2012.03A or B: The History of the Theatre from Renaissance to the Twentieth Century. This class is in a sense the sequel to Theatre 2011.03, though that class is not a prerequisite. It aims to study the development of the theatre in Europe and North America from

the Renaissance to the twentieth century. There is no prerequisite, but students should normally be in at least the second year of study. A background in history, theatre and/or dramatic literature will be an advantage.

Format: Lecture 3 hours

***THTR 2020.06R: Jazz Dance I (Spring Session Only).** The theories and techniques of Jazz Dance: the use of space, rhythm, dynamics, and aesthetic awareness. Emphasis is on the development of personal expression through the medium of dance. Concentration is also placed on awareness of dance terminology and vocabulary.

Format: Lab/demonstration 4 hours

THTR 2060.06R/2070.06R: Technical Scenography I. This class is concerned with the progressively more complex problems of the preparation of theatre production in lighting, sound, construction, and properties. The theory behind the operation of these crafts, the advances in technology and their expense and adaptability, form part of this class. Lecture periods are concerned with Stage Management, Technical Drawing, Theatre Organization and Administration as well as other related topics. Workshop preparation in light and sound, properties, and construction is integrated with crew responsibilities in department productions. There are certain lab charges connected with this class. An auxiliary fee must be paid upon registration in this class.

Format: Lecture/lab 6 hours

Prerequisite: THTR 1000.06, THTR 1050.06

***THTR 2300.06R: Film Study.** The history and development of film, from its beginnings to its social function as a mass entertainment medium. The class examines film genres, the component elements of film, the influence of film on the perception and practice of theatre, and its impact on 20th century society.

Format: Lecture/lab 4 hours

Prerequisite: THTR 1000.06 or permission of instructor

THTR 2400.06R: Costume and Identity - from Antiquity to 1700. An introduction to the study of human social behaviour and its relationship to the development of body coverings. This survey class begins with the earliest Mediterranean cultures, Ancient Egypt, Greece and Rome, and continues through to the end of the seventeenth century. This class may be taken by general BA students, and is also part of the Costume Studies Programme.

Format: Lecture 2 hours

THTR 2405.03A or B: The Aesthetics of Contemporary Costume. By examining the aesthetics of contemporary costume, this class will enable the student to understand established systems used to create clothing, utilizing body image as principle means. Through the study and application of systematic principles, the student will gain a better understanding of

people's need to define body image in terms of ornamental self-expression and social identification. This class may be taken by general BA students, and is also part of the Costume Studies Programme.

Format: Lecture/lab 4½ hours

Prerequisite: THTR 1405.03, or permission of instructor.

THTR 2700.06R: Scenography I. Designed to give students basic visual judgement and understanding. In the first half, it follows the Bauhaus approach to graphic design but adapts it to the needs of three-dimensional theatre space. In the second half the class teaches perspective; the final project is to integrate all the previous material and apply it to simple stage composition. Throughout the year analysis and criticism of various works are encouraged. The texts followed are Gyorgy Kepes' *Language of Vision* and Johannes Ihen's *The Elements of Colour*. Students wishing to take this class should consult with the instructor. An auxiliary fee must be paid upon registration in this class.

Format: Lecture/lab 6 hours

Prerequisite: Permission of instructor

THTR 2800.06R/2810.06R: Acting I: The Discovery Year. The initial year of the Acting Degree Programme introduces students to the fundamental principles of acting through Acting, Improvisation, Voice and Movement. Emphasis is placed on the discipline that is the basis for a career in the professional theatre.

THTR 2800.06R: Acting and Improvisation. Through the use of theatre games, improvisation, sensory awareness exercises and basic scene work, students will begin to develop their physical, vocal and imaginative abilities. Emphasis will be placed on developing the imagination and accessing a broad range of emotional expression. An auxiliary fee must be paid upon registration in this class.

Format: Lecture/lab 6 hours per week

Corequisite: THTR 2810.06

THTR 2810.06R: Voice and Movement. This class will focus on developing vocal and physical spontaneity and expressiveness. **Voice:** The principles of effective voice use will be identified through kinaesthetic exploration of breath, resonance and articulation, and applied to a variety of text and language environments. **Emphasis** will be placed on allowing flexible and responsive vocal energy, and on identifying usage patterns that limit the spontaneous connection to the voice. **Singing:** Musical ability is explored through weekly classes in singing technique. **Movement:** Students are introduced to fundamental movement and dance technique. Attention is focused on correct alignment, good posture, and healthy body awareness. The students begin a practical exploration into a dance vocabulary repertoire. An auxiliary fee must be paid upon registration in this class.

Format: Lecture/lab 6 hours

Corequisite: THTR 2800.06

THTR 2900.06R: Dramaturgy: How to Read a Play. This class involves advanced study of dramaturgical practices introduced in 1st year Survey of Dramatic Literature. Plays are read as performance scripts to gain an understanding of the implicit theatrical and social conventions which they contain, and with an eye to connecting scripts from other societies to a contemporary audience. The plays studied will be taken from a wide range of historical periods, cultures, and styles. Students also work actively with the DTDP season of plays.

Format: Lecture/seminar 3 hours

Prerequisite: THTR 1000.06 or permission of instructor

Year 3

***THTR 3020.06R: Jazz Dance II.** (Spring Session only). Intermediate studies in the principles and techniques of Jazz Dance. Students must have a solid foundation in dance technique (Modern, Ballet or Jazz).

Format: lab/demonstration 4 hours

Prerequisite: Admission is subject to approval of instructor (Audition/Interview)

THTR 3060.06R/THTR 3070.06R: Technical Scenography II. An advanced class in production technology. Students work intensively in one of the areas of: construction, properties, lights and sound, or stage management. Lecture periods are devoted to Administration, Publicity, Advance Techniques, and other related topics. Lectures are common to all students. Each student serves as crew head for at least two departmental productions. An auxiliary fee must be paid upon registration in this class.

Format: Lecture/lab 6 hours

Prerequisites: THTR 2011.03, 2012.03, 2060.06/2070.06 or 2700.06

***THTR 3100.06R: Directed Studies in Performance I.** Under the guidance of the members of faculty the student explores in detail a particular area of performance work. The class may be structured around an earned role (or roles) in a DTDP or in an Independent Student Project (ISP). A suitable advising structure will be designed to suit the particular project. The class content may include specified research documentation and the successful completion of a paper.

Format: Seminar 6 hours

Prerequisites: Permission of the Department

***THTR 3200.06R: The Director in the Theatre.** This class explores in theoretical and practical terms the various functions of the director in creating a theatrical event. Topics include the historical role of the director, conceptualizing scripts, working with dramaturges, relationships with actors, and the script development process. Laboratory exploration of practical problems

related to the above topics will form an integral part of the class. An auxiliary fee must be paid upon registration in this class.

Format: Lecture/lab 4 hours

Prerequisites: THTR 2000.06 or permission of instructor

THTR 3405.06R: The Aesthetics of Historical Costume. A continuation of THTR 2405.03A or B, this class examines the aesthetics of historical costume, tracing the evolution of changing silhouettes and historical pattern-making techniques throughout the eighteenth and nineteenth centuries. The student will learn to appreciate artifacts as historical source material to re-create costumes of the eighteenth and nineteenth centuries. Primary research forms a significant component of this class. This class may be taken by general BA students, and is also part of the Costume Studies Programme.

Format: Lecture/Lab 4 1/2 hours

Prerequisite: THTR 2405.03; It is recommended to take this class in conjunction with THTR 4400.06.

THTR 3408.03A or B: The Aesthetics of Ritual Costume. This class will examine the role played by men's and women's formal attire in theatre and society. The classic suit, military uniforms, and religious dress will be analyzed, compared and contrasted through a variety of historical periods, with a view to gaining a better understanding of people's need to clothe themselves in formally conventional ways. This class may be taken by general BA students, and is also part of the Costume Studies Programme.

Format: Lecture/lab 4 1/2 hours

Prerequisite: THTR 1400.03, or permission of instructor

***THTR 3500.06R: The Modern Theatre.** The modern theatre has been characterized by successive bursts of creative energy and experiment. This class gives an opportunity to study these developments in detail and to examine several important theatrical theories and their application.

Format: Seminar 2-3 hours

Prerequisite: THTR 2011.03, 2012.03, or permission of instructor

***THTR 3510.03A: Tragedy.** A study of how and why the structure of plays has altered from the classical Greek period to the eclecticism of the 20th century. The content of the class will begin with Greek tragedy, cover the Elizabethan/Jacobean periods, the Spanish Golden Age, Neo-Classicism, 19th century Romanticism and modern drama.

Format: Seminar/discussion 3 hours

Prerequisite: Permission of instructor

***THTR 3511.03B: Comedy.** This class complements the class on tragedy. The main subject of the course is an in-depth analysis of comedy and other related dramatic genres such as farce, burlesque, parody, travesty and

tragicomedy. A substantial portion of class will be devoted to the investigation of classical theories of comedy and laughter.

Format: Seminar/discussion 3 hours

Prerequisite: Permission of instructor

***THTR 3600.06R: The Playwright in the Theatre.** The play as a vehicle for performance rather than as a literary work. Through weekly writing exercises dealing with specific dramaturgical problems, the craft of playwriting is explored. Simultaneously, a basis for understanding the nature of dramatic forms is provided through detailed analysis of the structure and techniques of plays representing a broad spectrum of styles, genres, and historical periods. With this background, the class then writes plays (both individually and collaboratively) which are then revised, critiqued, and given a public presentation by the 2000.06 and 3200.06 classes. An auxiliary fee must be paid upon registration in this class.

Format: Lecture/lab 4 hours

Prerequisite: THTR 2900.06 or permission of the instructor

***THTR 3710.06: Scenography.** For theatre honours and special scenography students only. It builds on the knowledge from the previous class in the field. THTR 2700.06R, as far as visual knowledge is concerned, and from technical knowledge acquired in THTR 2060.06/THTR 2070.06. Students concentrate on learning in more detail about three-dimensional theatrical space, its dynamics and composition. At the same time, they learn technical drawing for the theatre and the methods of executing constructionally a designed work. They are introduced to the directorial/scenographic relationship. The texts followed are John R. Walker's *Exploring Drafting: Basic Fundamentals* and Willis Wagner's *Modern Woodworking*. An auxiliary fee must be paid upon registration in this class.

Format: Lecture/lab 6 hours

Prerequisites: THTR 2011.03, 2012.03, 2060.06/2070.06, and 2700.06

THTR 3800.06R/THTR 3810.06R/THTR 3820.06R: Acting II. The Transformation Year. The third year of the Acting Programme is structured to build on the knowledge acquired in the previous two years of training. Students learn how to implement the freedom they have discovered as they gain further understanding of physical, vocal, and imaginative expression. Third year students may be invited to perform in the DTDP season, dependent upon the needs of the plays chosen and the student's readiness for the performance situation as assessed by the faculty.

THTR 3800.06R: Acting. This class is designed to build upon the creative and imaginative work done in the first two years of the Acting Class. Students explore personal self-awareness and physical expressiveness through the continued use of relaxation techniques, sensory exercises

and theatre games. Students continue to refine the physical, vocal, imaginative and psychological skills that must be focused within the actor's process. This is achieved through the in-depth study and exploration of written play scripts, (the actor as interpreter) and the use of the full face character mask, (the actor as creator). An auxiliary fee must be paid upon registration in this class.

Format: Lecture/lab 6 hours
Prerequisite: Permission of the department
Corequisites: THTR 3810.06, THTR 3820.06

THTR 3810.06R: Voice and Speech. Continued exploration of spontaneous voice connection through breath, resonance and articulation, while extending awareness of flexibility, range and power. Inhibiting usage patterns will be further identified and reduced as effective voice-use strategies become more habitual. A variety of texts will be investigated and emphasis placed on developing sensitivity to the stimulus of thought, image, emotion, sensation, and impulse which is embodied in language. A thorough investigation of the component sounds of spoken English will be undertaken, and an ability to utilize Canadian Stage Standard Speech developed. Singing: Musical ability is explored through weekly classes in singing technique. An auxiliary fee must be paid upon registration in this class.

Format: Lecture/lab 6 hours
Corequisites: THTR 3800.06, 3820.06

THTR 3820.06R: Movement/Dance. The class is designed to develop and enhance the student's movement knowledge. The student will learn a basic warm-up routine which includes exercises for focus, flexibility, alignment and balance. Practical exploration continues with intermediate dance technique and vocabulary. An auxiliary fee must be paid upon registration in this class.

Format: Lecture/lab 3.5 hours
Corequisites: THTR 3900.06, 3810.06

***THTR 3900.03A or B or R: Heroines and Actresses: Women in Drama and Theatre.** This class is intended to provide an opportunity for the study of theatrical events as representations of women's experience. Specific themes to be explored are: women as dramatic characters; the experience of women who attempted to pursue careers in the theatre in different countries at different times; and contemporary feminist theatre in Britain, the United States, and Canada.

Format: Seminar 2 hours
Prerequisite: Some background in dramatic literature and/or theatre studies is useful

Cross-listing: WOST 3900.06

Year 4

THTR 4100.06R: Directed Studies in Performance II. Under the guidance of the members of faculty the student explores in detail a particular area of performance work. The class may be structured around an earned role (or

roles) in a Dalhousie Theatre Department Production. The class content may include specified research documentation and the successful completion of a paper. An auxiliary fee must be paid upon registration in this class.

Format: Seminar 6 hours
Prerequisites: Permission of the Department

***THTR 4200.06R: Developmental Drama.** A class which shows anyone involved or interested in the development of children or adults how drama can be used both to guide personal development and to heighten learning ability. The class considers how best to adapt developmental drama to school situations or organized groups. Improvisation, theatre games and dramatizations of social issues make up part of the class; various approaches to drama in education are considered. Regular practice runs through the class, and each student must develop individual practical workshops.

Format: Seminar 3 hours
Prerequisite: THTR 2000.03, 2001.03
Cross-listing: EDUC 4620.06

THTR 4400.06R: Costume and Identity: 1700-1950. The development of dress in the eighteenth, nineteenth, and first half of the twentieth centuries, ending with Christian Dior's "New Look" in 1947. Throughout this class, emphasis will be placed on dress worn in England and France, but costume from other countries may be explored as individual topics of research. Emphasis will be placed on the social and cultural aspects of costume history, using slides of representative works of art and artifacts as visual documentation for each period. This class may be taken by general BA students, and is also part of the Costume Studies Program.

Format: Lecture 2 hours

***THTR 4500.03A or B: Canadian Drama.** A survey of the Canadian dramatic voice from its origins to the present as it has been shaped by the political, geographical and cultural milieu. As a primary focus, this class searches for a national voice in the works of contemporary authors such as Walker, Pollock, French, Tremblay, Ryga, Highway, Thompson etc.

Format: Seminar/discussion 3 hours
Prerequisite: Permission of instructor

***THTR 4501.03A or B: The History of Canadian Theatre.** A seminar class exploring the major developments in the history of Canadian theatre from its origin in aboriginal tradition, the major influences of British and American practices, through its post-war revival to the current fringe phenomenon.

Format: Seminar/discussion 3 hours
Prerequisite: THTR 2011.03, 2012.03, or permission of instructor

***THTR 4700.06R: Special Topics.** The student explores in detail particular areas of the theatre of special interest, with the guidance of members of the faculty. Frequency and the length of meetings are decided to meet the needs of the

particular topic or project under study. The class is open only to fourth-year honours theatre students.

Format: Seminar 6 hours
Prerequisite: Permission of the department

***THTR 4710.06R: Directing in Practice.** Students gain practical insight into the work of the contemporary theatre director by serving as apprentice assistant directors on two productions of the DTDP season of plays. Enrolment is by special application and limited to two. An auxiliary fee must be paid upon registration in this class.

Format: Discussion/lab 6 hours
Prerequisite: Permission of the Department

THTR 4800.06R/THTR 4810.06R/THTR 4820.06R: Acting III. The Interpretation and Performance Year. Having discovered and strengthened natural abilities students can now apply techniques to scripts of different styles. The students learn to communicate with an audience. This is achieved by applying the in-class work to the DTDP season. Students are expected to earn significant roles in Dalhousie Theatre Department productions.

THTR 4800.06R: Acting. The fourth year acting class is designed to continue the ongoing classroom work of problem solving, physical freedom, relaxation, concentration, character and textual analysis and the study of the "process of action." Through the continued use of practical scene work students will apply the techniques introduced in the third year of study to scenes chosen from both modern and classical texts. By gaining an understanding of the shape of drama students are encouraged to apply these techniques to the performance work done in the DTDP season. Students will also focus on audition technique for the professional situation. One hour per week will be assigned to the practical study of the Feldenkrais Technique. (Functional integration) An auxiliary fee must be paid upon registration in this class.

Format: Lecture/lab 15 hours per week, rehearsals week-nights and Saturdays

Corequisites: THTR 4810.06 or 4820.06

THTR 4810.06R: Voice and Speech. The class will further develop the principles of effective voice use in work on on-stage roles. Class work will focus on continuing to develop an awareness of effective voice use and extending flexibility, range and power. Further investigation of the role of language in theatre performance will enhance the actor's sensitivity to text and to the elements of speech. A practical study of the dialects and accents of spoken English will be undertaken and applied to roles either as part of the DTDP season or in a workshop situation. The performance of on-stage roles linked with individual voice coaching will further develop an ability to use the voice effectively. An auxiliary fee must be paid upon registration in this class.

Format: Lecture/lab 6 hours
Corequisites: THTR 4800.06 or 4820.06

THTR 4820.06R: Movement/Dance. The class is designed to further develop and enhance the student's knowledge of movement, incorporating performance, style, and a professional attitude. Emphasis will focus on an expanded practical vocabulary and movement repertoire. An auxiliary fee must be paid upon registration in this class.

Format: Lecture/lab 3½ hours
Corequisites: THTR 4800.06 or 4820.06

***THTR 4900.06R: Theory and Criticism of Drama and Theatre.** A writing intensive class that tackles the problems for evaluating theatre. It looks at the various hypotheses and critical strategies that have been devised hitherto, and attempts to judge their present worth. It also asks what critical values are necessary for the survival and future growth of the theatre.

Format: Seminar 2 hours
Prerequisite: THTR 2011.03, 2012.03, 2900.06

***THTR 4910.06R: Theatre Criticism from Aristotle to the Present.** A workshop oriented class in which students learn the principles of performance reviewing and theatre criticism using the examples of current productions and classical authors. The discussed critics include: Aristotle, Horace, Boileau, Lessing, Archer, Eslin, Tynan, Simon etc.

Format: Seminar 3 hours
Prerequisite: Permission of the Instructor

Introduction

Women's Studies is a dynamic and rapidly expanding interdisciplinary area of study. An alternative to the traditional curriculum, Women's Studies provides students with the opportunity to examine history, social structures, the sciences, language, literature and culture from new and illuminating perspectives. During the last twenty years Women's Studies programmes have been introduced in leading universities across North America. In Canada more than a dozen undergraduate programmes and several graduate programmes have been established since 1970.

At Dalhousie, students can currently enter a Major or an Advanced Major programme in

Women's Studies that includes courses in the disciplines of English, French, History, Philosophy, Political Science, Sociology and Social Anthropology and Theatre, and in interdisciplinary and professional fields, including Education, International Development, Law, Nursing, and Social Work. By the fall of 1995, the option of a Combined Honours programme in Women's Studies may be available as well.

Students in the Dalhousie Women's Studies programmes develop a critical understanding of gender as a category of analysis in scholarly enquiry, social dynamics, cultural expression and belief systems. They also investigate the ways in which gender intersects with other variables such as race, class and cultural difference. They study women's contributions to civilization in many fields of knowledge, and examine the social and ideological forces that have made these contributions "invisible" in the past. Through exposure to a rapidly growing body of research in a number of disciplines and fields, Women's Studies Majors gain a grounding in the methodologies and concepts shaping the organization and dissemination of knowledge.

Women's Studies classes also provide students with opportunities of uniting theory with social and cultural practice, addressing contemporary issues that individuals and institutions are grappling with in the changing world order of the 1990s. They provide a context in which women can find strength and insight through exchanging experiences and ideas with other women, and a context in which women and men together can further human understanding through exploring and respecting differences.

Do men take Women's Studies classes? Yes. At Dalhousie, male faculty members also regularly participate in the teaching of core and related classes in Women's Studies. Gender has operated as a fundamental category in the organization of knowledge, social systems, forms of representation and modes of production and consumption. The critical examination of gender is therefore relevant to men as well as women, in part because it involves the study of constructions of masculinity.

Degree Programmes

Women's Studies programmes provide preparation for careers in a variety of fields, as well as for professional schools or graduate programmes. For example, Women's Studies graduates can work as consultants, policy analysts, and officers in government and para-governmental organizations, in business and industry, and in educational institutions. The fields they enter include employment equity, public administration, health care, workplace conditions, personnel relations, publishing and editorial work, and public relations.

442 Women's Studies

For students interested in a preparatory degree, Women's Studies programmes provide appropriate preparation for professional schools and programmes in the fields of Education, Social Work, Counselling, Journalism, the Health Professions, and certain areas of Law. Women's Studies programmes also provide suitable preparation for graduate programmes in Interdisciplinary Studies, Cultural Studies, and Educational Studies, as well as in Women's Studies itself. Students interested in proceeding to graduate work should enter a four-year degree programme.

Students normally enter Women's Studies programmes in their second or third year of study. In many cases, students in these years may already have acquired some Women's Studies credits through taking classes in the traditional disciplines or in other interdisciplinary programmes that are cross-listed with Women's Studies core classes.

Students can currently enter three programmes in Women's Studies: a BA Major, a B.A. Advanced Major, and a B.A. Double Advanced Major combining Women's Studies with a traditional discipline or with another interdisciplinary program such as International Development Studies or Canadian Studies. By 1995 the option of a Combined Honours programme in Women's Studies and another area of study may also be available.

Note: The regulations in the "Degree Requirements" section of this calendar apply to students majoring in Women's Studies.

BA Major in Women's Studies (3-year 15-credit programme)

This degree is a general liberal arts degree with a concentration in Women's Studies. It permits a wide range of choice in course selection. A three-year degree in Women's Studies can prepare a student for work in the occupational areas described above, or it can be used as a preparatory degree for professional programmes such as Law and Social Work.

Departmental Requirements

- at least four and no more than eight credits beyond the 1000 level in Women's Studies of which two must be beyond the 2000 level
- at least three different disciplines shall be represented in a student's selection of cross-listed Women's Studies classes

BA Advanced Major (4-year, 20-credit programme)

This programme provides a more comprehensive grounding in Women's Studies than the B.A. Major programme. Students interested in applying to graduate programmes should enter a four-year degree program.

Departmental Requirements

- at least six and no more than nine credits beyond the 1000 level in Women's Studies of which at least three must be beyond the 2000 level
- at least three different disciplines shall be represented in a student's selection of cross-listed Women's Studies classes

BA Advanced Double Major (4-year, 20-credit programme)

Students can combine a concentration of Women's Studies classes with classes either in a traditional discipline or with another interdisciplinary program such as International Development Studies or Canadian Studies.

Departmental Requirements

- at least ten and no more than thirteen credits beyond the 1000 level in two allied subjects, one of which is Women's Studies, with no more than nine and no fewer than four in either
- at least two credits in each of the two subjects chosen shall be beyond the 2000 level
- at least three different disciplines shall be represented in a student's selection of cross-listed Women's Studies classes.

Classes Offered

Note: Classes marked * may not be offered every year. Please consult the current timetable on registration to determine if these classes are offered. More detailed information can be obtained from the Multidisciplinary Office.

In addition to the classes listed below, appropriate classes in other departments (for example, Special Topics classes on women and /or gender issues) may be taken as Women's Studies credits, with the permission of the Instructor concerned and the Coordinator. Students may also select Women's Studies classes at Saint Mary's or Mount Saint Vincent Universities, subject to the rules and regulations of the College of Arts and Science at Dalhousie regarding transfer credits and in consultation with the Women's Studies Coordinator.

Core Classes

WOST 2100.03A or B: Introduction to Gender Socialization. Identification and analysis of problems deriving from gender socialization in Canada form the core of this class. Attention is concentrated on informal (out of school) socialization in creating and perpetuating the problems.

Instructor: R. Gamberg

Format: Lecture, discussion, student participation

Restriction: Preference is given to majors in Education or Women's Studies.

Cross-listing: EDUC 4021.03/5241.03

WOST 2200.06R: Fictions of Development. Fictions of development are novels or short stories focusing on the crises and the conflicts involved in growing up, finding a vocation, and finding oneself. This class studies representative fictions of development ranging from 19th century classics like Jane Eyre to contemporary works like *The Color Purple*. Emphasis is given to the connections between psychological theories and literary depictions of human development, and to the ways in which gender, race and class shape social formation.

Instructor: M. Stone
Format: 2 hours lecture/discussion
Prerequisites: ENGL 1000.06 or permission of the Instructor

Restriction: preference is given to majors in Women's Studies and English

Cross-listing: ENGL 2221.06

WOST 2300.03A or B: Making Gender: Male and Female from Antiquity to Mary Wallstonecraft. This class examines the diverse and fascinating ways western cultures have shaped the meanings of gender. The history of women informs us about the once little-known history of femininity. And, as a result, historical changes in definitions of masculinity become visible. The meanings of gender are exposed in this class through topics such as: the origins of myths of western civilization, the Aristotelian one-sex model of physiology, patristic theology, the cult of courtly love, eighteenth century notions, and the rights of man.

Instructor: S.M. Tillotson
Format: Lecture/tutorials 3 hours
Cross-listing: HIST 2614.03

WOST 2301.03A or B: Making Gender: Male and Female from the American Revolution to the present. This class examines the diverse and fascinating ways western cultures have shaped the meanings of gender. The history of women informs us about the once little-known history of femininity. And, as a result, historical changes in definitions of masculinity become visible. The meanings of gender are explored in this class through topics such as: republican motherhood, respectability, the family wage, the homosexual, imperialism, citizenship, welfare dependency, and infertility.

Instructor: S.M. Tillotson
Format: Lecture/tutorials 3 hours
Cross-listing: HIST 2615.03

WOST 2400.06R: Tinker, Tailor, Soldier: Divisions of Labour in a Changing World. Work is a fundamental aspect of all human societies and a key aspect to the development of social inequalities, be they based on gender, class, ethnicity, or cultural difference. Work has been seen as a main component of an individual's identity, but what do we mean by work? Against a backdrop of international and historical patterns, this class considers the changing nature of work and occupations. Topics which may be covered include: agrarian

societies; home based labour; work patterns in family life; labour migration and citizenship; international divisions of labour; shifts in occupational structures such as shop floors, typing pools, or professions; managerial and union strategies; the relationship between education and employment; and, how occupational status, employment, and unemployment limit or enhance a person's political power.

Instructor: J. Jarman
Format: Lecture 3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06.

Exclusion: SOSA 2160.03
Cross-listing: SOSA 2161.06

***WOST 2500.03A or B: Philosophical Issues of Feminism.** An exploration and examination of some of the concepts, issues, and arguments underlying feminist claims and perspectives. Such topics as pornography, rape, mothering, the nature of gender, and feminism's response to racism will be considered.

Instructor: S. Sherwin, S. Campbell
Format: 2-3 hours lecture/discussion
Cross-listing: PHIL 2160.03

***WOST 2800.06R: Comparative Perspectives on Gender.** Applying theoretical perspectives drawn from anthropology and sociology, this class considers the underlying conditions for and consequences of gender inequalities in different historical and cultural contexts. The class begins with an overview of the study of gender relations in anthropology and sociology. Other themes around which the class will be organized include: gender, culture and difference; gender, sexuality and reproduction; gendered labour; gender in the global political economy; and gender politics, power relations and political discourse.

Instructor: P. Gardiner Barber
Format: 3 hours
Prerequisites: One of SOSA 1000.06, 1050.06, 1100.06, 1200.06; or Women's Studies Class
Cross-listing: SOSA 2190.06

WOST 2900.03A or B: Contemporary Women Poets. During the last few decades, an extraordinary number of powerful new women poets have transformed traditional poetic practices and subject matter. Approaching this body of poetry within the context of key theoretical writings generated by "Second Wave" feminism, this class surveys representative works by Canadian and American poets, and explores the ways in which monolithic ideas of "woman" have been challenged by individuals who are positioned differently by race, class, sexual orientation and national identity. It also considers recurrent topics in women's poetry, including mother-daughter relations, love, rape, the politics of food, the female body, and revisionary myth-making.

Instructor: M. Stone

444 Women's Studies

Format: 2 hours lecture/discussion
Prerequisite: ENGL 1000.06 or permission of the instructor
Cross-listing: ENGL 3050.03

WOST 3000.03A or B/3100L.03A or B/3002.06R: Directed Readings in Women's Studies. Readings and research in Women's Studies on selected topics. Students may take appropriate classes in other Departments under these numbers, with the permission of the Instructor and the Women's Studies Coordinator, or they may construct their own reading list and research project in consultation with an appropriate faculty member, and the Coordinator.

Format: Variable
Prerequisites: Variable

WOST 3100.03A or B: Gender Issues in Education. Central concerns in education include classroom practices, politics and ideology of the curriculum, family-school relations, and the transition from school to work. Recent feminist critiques have forced educators to re-examine these areas of concern. This class considers how gender analysis deconstructs and reconstructs our understanding of central economic, social and cultural issues in education.

Instructor: A. Manicom
Format: 2 hours lecture/discussion
Prerequisites: One previous class in Sociology or Women's Studies
Cross-listing: EDUC 4022.03

WOST 3250.03A or B: French Women Writers through the Centuries/ Les femmes écrivains: du temps des cathédrales à celui des Editions des femmes. A chronological survey based on the study of literary texts by French Women Writers, this class will attempt to analyze the society of the time, the way it portrayed women and their role, and the overall condition of women. Emphasis will be given each time to a special period/authors within the context of the survey. Students taking the class as a Women's Studies credit may write their essays and exams in English.

Instructor: N. Trèves
Format: 3 hours lecture/discussion
Recommended: FREN 2201.03 or FREN 2202.03
Cross-listing: FREN 3250.03

WOST 3300.03A or B: Family and Community in North America 1600-1900. The family in North American history from the period when the family was a model for social relations to the time when it was seen as a private refuge from society at large. Among the topics considered are the role of the family in rural and urban communities; the demographic transition from high fertility and mortality; the construction of the family's responsibilities in economic life and education; the role of ideology in shaping sex roles and child rearing; and the relations of family and community according to ethnic group, class and economic setting.

Instructor: J. Crowley

Format: 2 hours lecture/discussion
Prerequisites: 2000-level class in Canadian or American History
Cross-listing: HIST 3350.03

***WOST 3310.03A or B: Gender and Development in Africa.** This class examines the economic, political and social roles of women and men in Africa from precolonial to modern times. It analyzes the way women and men construct their lives and economic processes and contest and reinforce the definitions of womanhood and manliness in various African societies. The class will examine development and feminist/gender theory in light of recent debates over gender and development issues.

Instructor: J. Parpart
Format: 2 hours seminar
Prerequisites: 1000- or 2000-level History, IDS, or Women's Studies class
Cross-listing: HIST 3461.03/5461.03

***WOST 3500.03A or B: Theories of Feminism.** A study of the theoretical underpinning of the major feminist theories in critical comparison, concentrating on the ideological disputes and the implications for traditional approaches to social and political thought.

Instructor: S. Sherwin
Prerequisites: Two previous classes in Philosophy or Women's Studies
Cross-listing: PHIL 3170.03

***WOST 3600.03A or B: Women in Western Political Thought.** The role of women in political life has been vilified, praised or ignored by major thinkers. Pertinent texts will be read along with interpretations by modern feminists in order to assess why the formal political enfranchisement of women has not resulted in greater substantial equality.

Instructor: J. Arscott
Format: 2 hours lecture/discussion
Cross-listing: POLI 2327.03

***WOST 3800.03A or B: Gender and Health.** The class focuses upon 3 major areas in the relationship between gender and health: (a) the relationships among gender stereotypes and food, sexuality and body image, dieting and health; (b) reproduction and childcare including birth control, menstruation, menopause, reproductive technology, childcare and child health; (c) health care and health care workers - an analysis of caring, both paid and unpaid. Topics include sexual inequality in health care, health policy, family relationships and health care responsibilities.

Instructor: P. Gardiner Barber
Format: Seminar 2-3 hours
Prerequisite: One of SOSA 1000.06, 1050.06, 1100.06 or 1200.06
Cross-listing: SOSA 3145.03/5145.03

***WOST 3805.03A or B: Feminist Perspectives in Anthropology and Sociology: Current Debates.** This class examines more recent critical debates in feminist theories. Readings map out new

theoretical agendas and/or provide critical reflection on previous priorities in feminist scholarship. Relevant current issues include re-conceptualizing patriarchy; re-working dualistic models; work, domestic labour and sexuality debates; sexism, racism, class; rethinking kinship and reproduction; feminism, culture, and political economy; post-modernism, voice, difference; beyond colonialism and imperialism; beyond women as victims; resistance; and feminist research and praxis.

Instructor: P. Gardiner Barber
Format: Seminar 2-3 hours
Prerequisite: SOSA 2190.06/WOST 2800.06, or permission of the instructor
Cross-listing: SOSA 3100.03/5100.03

***WOST 3810.03A or B: Women and Aging.** As women grow older the experience of aging is generally more difficult for them than for men. This class will explore the issues related to socio-economic factors that are major determinants of the well-being of aging women. Topics will include: aging as a process, menopause, violence against older women ("granny bashing"), older women and housing, self-image and sexuality, health and the aging woman, and older women and poverty.

Instructor: B. Keddy
Format: 2-3 hours, seminar
Prerequisites: SOSA 1000.06, 1050.06, 1100.06, or 1200.06, or 2 credits in Women's Studies
Cross-listing: SOSA 3245.03/5245.03, NURS 4370.03

***WOST 3850.03A or B: Women and Social Change.** This class is designed to examine feminist critiques of selected social policies and services (policies such as those governing financial assistance or welfare programmes, child protection services, day care provision); evaluate the usefulness of feminist theories and methods for developing social policies and programmes which are more oriented to women; assist students in developing a critical analysis of social policy and human services from the perspective of women and feminism.

Instructor: J. Gilroy
Format: 2.5 hours lecture/seminar
Prerequisite: Preference is given to students registered in Social Work and in the third year of Women's Studies
Co-requisite: Related courses in Social Work, health and social sciences, and/or Women's Studies
Cross-listing: SLWK 3230.03

***WOST 3855.03A or B: Feminist Counselling.** This class examines feminist counselling theories and approaches, assesses these critically and assists students in the development of feminist frameworks for counselling.
Instructor: J. Gilroy
Format: 2.5 hours lecture/seminar

Prerequisite: Preference given to students in Social Work or Women's Studies
Co-requisite: Related classes in Social Work, health and social sciences, and/or Women's Studies
Cross-listing: SLWK 3170.03

***WOST 3900.06R: Heroines and Actresses: Women in Drama and Theatre.** This class is intended to provide an opportunity for the study of theatrical events as they represent women and their experiences. Specific themes to be explored are: women as dramatic characters; the experiences of women who have attempted to pursue careers in the theatre in different countries at different times; and contemporary feminist theatre in Britain, the United States and Canada.

Instructor: A. Andrews
Format: 2 hours
Recommended: Some background in dramatic literature and/or theatre studies is useful
Cross-listing: THTR 3900.06

WOST 4000.03A or B / WOST 4100.03A or B / WOST 4200.06R: Selected Topics in Women's Studies. Advanced readings and research in Women's Studies on selected topics. Students may take appropriate classes in other Departments under these numbers, with the permission of the Instructor and the Women's Studies Coordinator, or they may construct their own reading list and research project in consultation with an appropriate faculty member, and the Coordinator.

Format: Variable
Prerequisites: Variable
Restriction: Restricted to senior students

***WOST 4250.03A or B: Québec women Writers/Écrivaines québécoises.** This class will explore the condition of women as revealed in texts by Québec women writers. In any given year different writers and time periods will be covered, and a variety of genres may be included.
Instructors: B. Bednarski, I. Oore
Format: 2 hours lecture/discussion
Recommended: FREN 2201.03/2202.03 and at least one third-year literature class, preferably French Canadian
Cross-listing: FREN 4904.03

WOST 4300.03A or B: Introduction to Women and the Law. The first half of the class focuses on theory and comprises a broad overview of some of the main themes that have been considered in feminist jurisprudence. For example, feminist epistemology and its relationship to legal method, equality, and feminism in legal education will be examined in detail. In addition, considerable emphasis is placed upon feminism and its integration with race, class, sexual orientation, and disability. In order to provide context for discussion, a legal historical review of feminism, particularly in

446 Women's Studies

Canada, is also presented throughout. The second half of the class develops these ideas by examining specific issues of current interest in feminist scholarship and case law such as pornography, violence against women, workplace issues, and abortion.

Instructor: A. LaForest or D. Ginn
Format: 2 hours lecture, discussion
Prerequisite: Open to all 2nd and 3rd year Law students as well as students eligible to take classes listed as Women's Studies core classes
Cross-listing: LAWS 2125.03

WOST 4320.03A or B: Feminism, Postmodernism and Development. In the last decade poststructural and postmodern critiques have increasingly dominated the world of scholarship. The grand theories of the past have been called into question; universals have been overtaken by particularities and difference(s). Feminist scholars have reacted to these critiques in a number of ways. Some reject them outright, which others call for a synthesis. Scholars and activists concerned with international development issues have for the most part rejected both feminism and postmodernism. This class will explore the debates between the two perspectives and the possibility that they may have important insights to offer to both the theory and practice of development, especially the development of women.

Instructor: J. Parpart
Format: 2 hour seminar
Cross-listing: HIST 4320.03

WOST 4400.06R: The Place of Women in Contemporary French Critical Theory. This course will concentrate on some of feminism's most challenging voices, those that have emerged from France in this century: Beauvoir, Kristeva, Cixous and Irigaray. The course will attempt to illuminate the intellectual background against which these women write, particularly in the areas of linguistic and anthropological structuralism, and in psychoanalytic theory. The course will be organized in part by the historical evolution of feminist thought, in part by the consideration of central feminist concerns.

Instructor: E. Edwards
Format: lectures and tutorials
Exclusion: the former CSP 2030.06
Cross-listing: CSP 4300.06

WOST 4450.03A or B: Writing Women/Women Writing 1580-1640. The objective of this class is to explore the context and range of writings by Renaissance Englishwomen in the late sixteenth and early seventeenth centuries. Adopting a multidisciplinary approach, we will examine a range of cultural documents by and about women, from non-fiction prose (witchcraft trials, medical pamphlets, antifeminist tracts and protofeminist defenses) to address the following questions. Why and how did some Renaissance women write, and for what audience? What was the climate in Renaissance England like for

women who wanted to write? What models were available to women writers, and how did they modify or transform them for their own purposes? Is women's writing different from men's writing of the same period? What perceptions of gender — and of life — emerge from women's writing? What shapes does Renaissance "feminism" take? Women writers to be studied in depth will include Lady Mary Wroth, Lady Elizabeth Cary, and Aemilia Lanier.
Instructor: C. Luckyj
Format: Seminar
Prerequisite: English 1000 or permission of the instructor
Cross-listing: ENGL 4007.03

WOST 4500.003A or B: Topics in Feminist Philosophy. In this class we shall explore some of the current research in a focused area of feminist philosophy such as feminist ethics, feminist epistemology, feminist philosophy of science, or postmodern feminism.

Instructor: S. Sherwin
Format: 2 hour seminar
Prerequisite: Strong background in philosophy or feminist theory (normally including at least one previous class in feminist philosophy or permission of the instructor).

Cross-listing: PHIL 4500.03/5500.03

Related Classes

These classes are subject to change; consult the programme office for offerings.

Classes Offered at Mount Saint Vincent University and Saint Mary's University

Classes offered within the Women's Studies programmes at these universities are available to Women's Studies majors at Dalhousie. Classes offered are subject to change. Please consult Women's Studies, Mount Saint Vincent, (902) 457-6788 or Women's Studies, Saint Mary's University (902) 420-5400. These classes must be taken on a letter of permission (see the Dalhousie Women's Studies Programme Coordinator).

450 Index of Awards

A	
Acadian Lines Limited Scholarship.....	57
Aitchison, James H., Award.....	63
Aldous Prize	59
Allen, John David and Ellen Matheson, Endowment Fund.....	74
Alumnae Award (Nursing).....	67
Alumni Swimming Award	57
Amoco Canada Petroleum Company Ltd. Award	60
Amoco Canada Undergraduate Scholarship in Earth Sciences.....	54
Anonymous Economics Prize.....	60
Apotex Inc./P.A.C.E. Bursaries	75
Archibald, Dr. William J., Prize in Physics	62
Ashkins, Eva and David, Memorial Bursary.....	76
Ashkins, Nathan T. A., Scholarship	52
Association of Professional Engineers of Nova Scotia Award	60
Avery Prize.....	64
B	
Bnal B'rith Prize	59
Barclays McConnell Limited Bursary	76
Barclays McConnell Limited Scholarship	57
Barlow, David, Memorial Award	60
Barrett, John Hamilton, Prize	59
Beaver Foods Awards	70
Beer, Annie L., Prize.....	57
Bell, Hugh P., Scholarship in Biology.....	53
Bellefleur, Anthea, Award for Excellence in Student Teaching.....	70
Belzer, E.G., Jr. Prize	70
Berman, Wilfred, Memorial Prize	71
Berman, Wilfred, Scholarship.....	57
Bernoulli Prize	61
Beta Sigma Phi Scholarship to Dalhousie University	53
Bevan, Allan and Lura, Memorial Scholarship	55
Biochemistry	59
Biology	53, 59
Birks Family Foundation Bursaries	76
Black and Gold Awards	57
Blanchard, Jotham, Bursary	77
BMS Pharmacy Award	64
Boehringer Ingelheim (Canada) Ltd. Bursary	75
Boyd, George, Bursary.....	77
Bredin, Jeff, Memorial Bursary	76
Brehaut, Ernest, Memorial Bursaries	74
Brimer Memorial Prize in Psychology	63
Brown, Isabel, Scholarship	52
Bruce, Robert Scholarships.....	49
Bruce, Robert, Bursaries	74
Bruce, Robert, Scholarship	52
Burbidge, Dean George A., Memorial Award	64
Burbidge, Minnie F., Scholarships	52
Burroughs Wellcome Scholarship.....	56
Bursaries.....	73
Buttenshaw, Katherine M., Prize.....	62
C	
Campbell, George H., Memorial Scholarship	52
Campbell, James and Abbie, Bursaries.....	74
Campbell, James and Abbie, Memorial Scholarships	49
Campbell, James and Abbie, Memorial Scholarships and the James and Abbie Campbell/Department of Music Scholarships	55
Campbell, James and Abbie, Prize, Campbell Incentive Award	62
Canada Scholarships.....	51
Canada Student Loan for Part-Time Students.....	78
Canada Student Loans Plan.....	78
Canadian Association for Health, Physical Education and Recreation Student Award.....	70
Canadian Association of Occupational Therapists Book Prize.....	68
Canadian Institute of Mining and Metallurgy Earth Science Scholarship for New Brunswick Students.....	54
Canadian Merit Scholarship Foundations	51
Canadian Physiotherapy Association Award	69
Canadian Physiotherapy Cardiorespiratory Society Book Prize	70
Canadian Society for Chemistry Silver Medal	59
Canadian Society for Exercise Physiology	70
Canadian Society of Exploration Geophysicists Scholarship	54
Canadian Society of Petroleum Geologists Award.....	60
Canadian Society of Petroleum Geologists Student Industry Field Trip.....	60
Cassidy, Norma, Prize.....	69
Chandler, R. Frank, Award	65
Chemistry	54, 59
Chute, Walter J., Prize in Chemistry	59
Clarke, Enid Hager, Textbook Fund	77
Class of '85 Award	68
Classics	59
Clayden, F.R., Prize	65
Clinical Pharmacy Award.....	65
Coade-Dessauer, Janet Gwendolyn, Memorial Prize	61
Cohn, Rebecca, Bursary Fund	77
Collins, Bert and Betty, Bursary	75
Commerce.....	57, 71, 76
Commerce Alumni Association Awards.....	71
Computing Science	55
Continuing Education	78
Cooke, Dean J. Esmonde, Award	65
Copp, Walter P., Memorial Prize	61
Corston, Helen, Marshall Award in Pharmacy.....	61

Covert, Patricia Stanfield, Award in Physiotherapy	69
Criteria for Entrance Scholarships.....	48
Crowe, Belle, Scholarships in Chemistry..	52
Crowe, Belle/Department of Chemistry Scholarships.....	54
Crowell, Robert G., Memorial Pharmacy Award	65
Currie, Honourable L.D., Memorial Scholarship in Music.....	55
D	
Daley, Dale, Pharmacy Award for Excellence	65
Dalhousie Alumni Association (Women's Division) Medal in Music.....	62
Dalhousie Alumni Association Bursaries	77
